Federal Register

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.archives.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** *www.gpoaccess.gov/nara,* available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via e-mail at *gpoaccess@gpo.gov.* The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 69 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington DC 20402, along with the entire mailing label from the last issue received.

Presidential Documents

Title 3—

The President

Proclamation 7845 of November 9, 2004

World Freedom Day, 2004

By the President of the United States of America

A Proclamation

Fifteen years ago, the people of East and West Germany tore down the Berlin Wall, and freedom triumphed over Communism. The dismantling of the Berlin Wall reunited Germany and helped spread freedom across Central and Eastern Europe. With free elections and the spread of democratic values, these countries won their liberty, and their people became free. These democracies today contribute to a strong Europe, and the United States values their friendship and their partnership.

On World Freedom Day, we recognize all of those who fought for liberty and helped end the oppression of Central and Eastern Europe. We stand by those who today are enjoying the blessings of liberty. And we reaffirm our commitment to extending peace and freedom in the world.

NOW, THEREFORE, I, GEORGE W. BUSH, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim November 9, 2004, as World Freedom Day. I call upon the people of the United States to observe this day with appropriate ceremonies and activities and to reaffirm their dedication to freedom and democracy.

IN WITNESS WHEREOF, I have hereunto set my hand this ninth day of November, in the year of our Lord two thousand four, and of the Independence of the United States of America the two hundred and twenty-ninth.

RIN 0572–AB96

Definition Clarification of State Nonmetropolitan Median Household Income (SNMHI)

AGENCY: Rural Housing Service, Rural Business-Cooperative Service, Rural Utilities Service, and Farm Service Agency, USDA.

ACTION: Final rule.

SUMMARY: The Rural Housing Service (RHS), Rural Business-Cooperative Service (RBS), and the Rural Utilities Service (RUS), agencies delivering the United States Department of Agriculture's Rural Development housing, business, and utilities programs, amend their regulations to reflect the clarification of the definition of Statewide Nonmetropolitan Median Household Income, which shall be defined as ''the median household income of the state's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places of 50,000 or more population.'' This modification will enable Rural Development to more effectively serve communities across rural America. The loan and grant eligibility or priority scoring will be positively impacted for Rural Development Housing, Business, and Utilities Programs.

DATES: *Effective Date:*

FOR FURTHER INFORMATION CONTACT: Linda Scott, Loan Specialist, Water Programs Division, Rural Utilities Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Room 2235–S, Stop 1570, Washington, DC 20250–1570. Telephone (202) 720–9639. E-Mail: *Linda.Scott@usda.gov.*

SUPPLEMENTARY INFORMATION:

Executive Order 12866

This rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget (OMB).

Catalog of Federal Domestic Assistance

The programs described by this rule are listed in the Catalog of Federal Domestic Assistance Programs under numbers 10.760—Water and Waste Disposal Systems for Rural Communities; 10.761—Technical Assistance and Training Grants; 10.762 ''Solid Waste Management Grants; 10.763—Emergency Community Water Assistance Grants; 10.766—Community Facilities Loans and Grants; 10.767—Intermediary Relending Program; and 10.770—Water and Waste Disposal Loans and Grants (Section 306C). This catalog is available on a subscription basis from the Superintendent of Documents, the United States Government Printing Office, Washington, DC, 20402–9325, telephone number (202) 512–1800.

Executive Order 12372

The programs described by this rule that are subject to the requirements of Executive Order 12372, ''Intergovernmental Review of Federal Programs,'' as implemented under USDA's regulations at 7 CFR part 3015, are 10.760—Water and Waste Disposal Systems for Rural Communities; 10.763—Emergency Community Water Assistance Grants; 10.766—Community Facilities Loans and Grants; 10.767—Intermediary Relending Program; and 10.770—Water and Waste Disposal Loans and Grants (Section 306C).

Executive Order 12988

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. RUS has determined that this rule meets the applicable standards provided in section 3 of the Executive Order. In addition all State and local laws and regulations that are in conflict with this rule will be preempted; no retroactive effect will be given to the rule; and, in accordance with Section 212(e) of the Department of Agriculture Reorganization Act of 1994 (7 U.S.C. 6912(e)) administrative appeal procedures, if any are required, must be exhausted prior to initiating any action against the Department or its agencies.

Regulatory Flexibility Act Certification

This rule has been reviewed with regard to the requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612). The undersigned has determined and certified by signature of this document that this rule will not have a significant economic impact on a substantial number of small entities since this rulemaking action does not involve a new or expanded program.

Information Collection and Recordkeeping Requirements

This rule contains no new reporting or recordkeeping burdens under OMB control numbers 0572–0109, 0572–0110, 0572–0112, 0572–0121, 0575–0015, 0575–0173, and 0570–0021 that would require approval under the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35).

National Environmental Policy Act Certification

The Administrator of RUS has determined that this rule will not significantly affect the quality of the human environment as defined by the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*). Therefore, this action does not require an environmental impact statement or assessment.

Unfunded Mandates

This rule contains no Federal mandates (under the regulatory provision of title II of the Unfunded Mandates Reform Act of 1995) for State, local, and tribal governments or the private sector. Thus this rule is not subject to the requirements of section 202 and 205 of the Unfunded Mandates Reform Act of 1995.

Executive Order 13132, Federalism

The policies contained in this rule do not have any substantial direct effect on states, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Nor does this rule impose substantial direct compliance costs on State and local governments. Therefore, consultation with states is not required.

Background

The purpose of this final rule is to create a standard definition of Statewide Nonmetropolitan Median Household Income (SNMHI) that is more representative of the rural areas in a State. With respect to Rural Utilities Service Water and Environmental Programs (WEP), the definition will be used in priority scoring for WEP Technical Assistance and Training Grants (7 CFR part 1775), Section 306C Water and Waste Disposal Loans and Grants (7 CFR part 1777), and Emergency and Imminent Community Water Assistance Grants (7 CFR part 1778), and for loan and grant eligibility determinations for Water and Waste Loans and Grants (7 CFR part 1780). For the Rural Housing Service Community Facilities (CF) and Rural Business-Cooperative Service Intermediary Relending Programs (IRP), the standard definition will be used in priority scoring for the Community Facilities Loan Program (7 CFR part 1942), Community Facilities Grant Program (7 CFR part 3570) and the Intermediary Relending Program (7 CFR part 4274). Standardizing the definition of SNMHI will allow for more efficient administration of these loan and grant programs consistent with the purposes of the Consolidated Farm and Rural Development Act (codified at 7 U.S.C. 1921 *et. seq.*). With respect to 7 CFR parts 1775, 1778, and 1780, 1942, 3570 and 4274, the rule will be effective upon publication in the **Federal Register**. For 7 CFR part 1777, the rule will be effective 30 days after such publication.

Pursuant to 44 U.S.C. 3504(e)(3), 31 U.S.C. 1104(d) and Executive Order No. 10253 (June 11, 1951), the Office of Management and Budget (OMB) defines Metropolitan Statistical Areas (MSA), Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas for use in Federal statistical activities. Once each decade, OMB performs a comprehensive review of statistical area standards and definitions, and publishes a list which includes counties where MSAs are located, with periodic updates between decennial censuses based on Census Bureau data.

As a consequence of the 2000 census, the definitions of metropolitan areas were revised, resulting in larger geographical areas being considered metropolitan. These enlarged metropolitan areas include areas which are rural areas under the definition of ''rural areas'' in section 343 (13) of the Consolidated Farm and Rural Development Act (7 U.S.C. 1991 *et seq*). The expansion of the generally more affluent metropolitan areas and their consequent removal from the computation of nonmetropolitan income in the SNMHI caused the SNMHI to increase proportionately less than the increase in median household income experienced by rural communities in the metropolitan areas. While the income characteristics of the rural communities in the metropolitan areas and their need for WEP, CF and IRP assistance may not have changed, the proportionately lesser increase in SNMHI makes it less likely that a rural community in a metropolitan area can successfully compete for such assistance.

The inclusion of these rural areas within the enlarged metropolitan areas, and the consequent effect on the SNMHI, affects the eligibility of some WEP applicants for grant and lower interest rate loans. Based upon a review of applications on hand, and using the 2000 census median household income data for nonmetropolitan counties, there was an approximately 25 percent reduction in the number of communities eligible for grants, and a 50 percent reduction in the number of communities eligible for reduced interest rates. Additionally, priority scoring for all WEP programs is affected by the comparison of an area's income with the SNMHI.

The inclusion of these rural areas within the enlarged metropolitan areas did not affect the eligibility of these rural areas for CF and IRP assistance. However, applicants for CF and IRP assistance (*see* 7 CFR 1942,1(c)(2)(iii)(C)(2) for CF and 7 CFR 4274.344(c) for IRP) receive priority points in application selection criteria based on a comparison of the area's income with the SNMHI. The assignment of priority points may be negatively affected by the comparison of these rural areas within the enlarged metropolitan areas with the SNMHI.

The SNMHI calculations resulting from this definition modification will greatly reduce the negative impacts to numerous rural communities, and will enable such communities to continue to be eligible and receive priority points for WEP, CF and IRP loan and grant programs.

A proposed rule was published in the **Federal Register** on Monday, August 9, 2004, at 69 FR 48174. The comment period lasted 30 days and ended on September 8, 2004. Five comments were received. Each of the five comments supported the definition clarification of State Nonmetropolitan Median Household Income (SNMHI). Four of these favorable comments were from local towns, and one was from an engineering and architectural firm.

■ For reasons set forth in the preamble, RUS amends 7 CFR chapters XVII, XVIII, and XVIV as set forth below:

CHAPTER XVII—RURAL UTILITIES SERVICE, DEPARTMENT OF AGRICULTURE

PART 1775—TECHNICAL ASSISTANCE AND TRAINING GRANTS

■ 1. The authority citation for part 1775 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989; 16 U.S.C. 1005.

■ 2. Amend § 1775.4 by adding a definition for ''Statewide Nonmetropolitan Median Household Income'' in alphabetical order to read as follows:

§ 1775.4 Definitions.

* * * * *

Statewide Nonmetropolitan Median Household Income (SNMHI). Median household income of the State's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places of 50,000 or more population.

PART 1777—SECTION 306C WWD LOANS AND GRANTS

■ 3. The authority citation for part 1777 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989; 16 U.S.C. 1005.

■ 4. Amend § 1777.4 by adding a definition for ''Statewide Nonmetropolitan Median Household Income'' in alphabetical order to read as follows:

§ 1777.4 Definitions.

* * * * *

Statewide Nonmetropolitan Median Household Income (SNMHI). Median household income of the State's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places of 50,000 or more population.

PART 1778—EMERGENCY AND IMMINENT COMMUNITY WATER ASSISTANCE GRANTS

■ 5. The authority citation for part 1778 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989; 16 U.S.C. 1005.

■ 6. Amend § 1778.4 by adding a definition for ''Statewide Nonmetropolitan Median Household Income'' in alphabetical order to read as follows:

§ 1778.4 Definitions.

* * * * *

Statewide Nonmetropolitan Median Household Income (SNMHI). Median household income of the State's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places of 50,000 or more population.

PART 1780—WATER AND WASTE LOANS AND GRANTS

Subpart A—General Policies and Requirements

■ 7. The authority citation for part 1780 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989; 16 U.S.C. 1005.

■ 8. Amend § 1780.3 (a) by revising the definition for ''Statewide Nonmetropolitan Median Household Income'' to read as follows:

§ 1780.3 Definitions and grammatical rules of construction.

(a) * * *

Statewide nonmetropolitan median household income means the median household income of the State's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places of 50,000 or more population.

* * * * *

CHAPTER XVIII—RURAL HOUSING SERVICE, RURAL BUSINESS—COOPERATIVE SERVICE, RURAL UTILITIES SERVICE, AND FARM SERVICE AGENCY, DEPARTMENT OF AGRICULTURE

PART 1942—ASSOCIATIONS

Subpart A—Community Facility Loans

■ 9. The authority citation for part 1942 continues to read:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989.

■ 10. Amend subpart A by adding a new § 1942.21 to read as follows:

§ 1942.21 Statewide Nonmetropolitan Median Household Income.

Statewide Nonmetropolitan Median Household Income means the median household income of the State's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places, of 50,000 or more population.

CHAPTER XXXV—RURAL HOUSING SERVICE, DEPARTMENT OF AGRICULTURE

PART 3570—COMMUNITY PROGRAMS

Subpart B—Community Facilities Grant Program

■ 11. The authority citation for part 3570 continues to read:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989.

■ 12. Amend § 3570.53 by revising the definition for ''State nonmetropolitan median household income'' to read as follows:

§ 3570.53 Definitions.

* * * * *

State nonmetropolitan median household income. The median household income of the State's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places of 50,000 or more population.

* * * * *

CHAPTER XLII—RURAL BUSINESS—COOPERATIVE SERVICE AND RURAL UTILITIES SERVICE, DEPARTMENT OF AGRICULTURE

PART 4274—DIRECT AND INSURED LOANMAKING

Subpart D—Intermediary Relending Program (IRP)

■ 13. The authority citation for part 4274 continues to read:

Authority: 5 U.S.C. 301; 7 U.S.C. 1932 note; 7 U.S.C. 1989.

■ 14. Amend § 4274.302 (a) by adding a definition for ''Statewide Nonmetropolitan Median Household Income'' in alphabetical order to read as follows:

§ 4274.302 Definitions and abbreviations.

(a) * * *.

Statewide Nonmetropolitan Median Household Income (SNMHI). Median household income of the State's nonmetropolitan counties and portions of metropolitan counties outside of cities, towns or places of 50,000 or more population.

* * * * *

Dated: November 5, 2004.

Gilbert G. Gonzalez,

7 CFR Part 1955

RIN 0560–AG78

2002 Farm Bill Regulations—General Credit Provisions; Correction

AGENCIES: Rural Housing Service, Rural Business-Cooperative Service, Rural Utilities Services, and Farm Service Agency, USDA.

ACTION: Final rule; correcting amendment.

SUMMARY: This document corrects the final regulations published in the **Federal Register** on February 18, 2003, implementing certain provisions of the Farm Security and Rural Investment Act of 2002 (2002 Act).

DATES: *Effective Date:* February 18, 2003.

FOR FURTHER INFORMATION CONTACT: Constance Beckwith, Senior Loan Officer, USDA/FSA/DAFLP/LSPMD/STOP 0523, Washington DC 20250–0523; telephone 202–720–9769; Facsimile: 202–690–1196; E-mail: *constance_beckwith@wdc.usda.gov.* Persons with disabilities who require alternative means for communication (Braille, large print, audio tape, etc.) should contact the USDA Target Center at (202) 720–2600 (voice and TDD).

SUPPLEMENTARY INFORMATION:

Background

Section 5310 of the 2002 Act changed the definition of qualified beginning farmer or rancher by increasing the acres of land that these applicants could own to a maximum of 30 (instead of 25) percent of the average farm or ranch size in the county.

Need for Correction

As published, the final regulations amended the definition of ''Beginning farmer or rancher'' in 7 CFR 762.102, 1941.4 and 1943.4 to comply with the requirements of the 2002 Act. The definition of ''Beginning farmer or rancher'' is also included in 7 CFR 1955.103; however, the necessary amendment was inadvertently not included in the February 18, 2003, final rule.

List of Subjects in 7 CFR Part 1955

Government acquired property, Sale of government acquired property, Surplus government property.

■ Accordingly, chapter XVIII, title 7, Code of Federal Regulations is corrected as follows:

PART 1955—PROPERTY MANAGEMENT

■ 1. The authority citation for part 1955 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989, 42 U.S.C. 1480.

Subpart C—Disposal of Inventory Property

■ 2. Amend § 1955.103 by removing the number ''25'' from the first sentence of paragraph (5) of the definition ''Beginning farmer or rancher'' and adding in its place the number ''30.''

Dated: November 5, 2004.

Gilbert Gonzales,

Acting Under Secretary for Rural Development.

Dated: November 3, 2004.

J.B. Penn,

Under Secretary for Farm and Foreign Agricultural Services.

RIN 2120–AA64

Airworthiness Directives; Boeing Model 737–700 and –800 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Boeing Model 737–700 and -800 series airplanes. This AD requires doing an initial inspection for pitting and cracks of the lower skin panel at the lap joint; trimming the inner skin; installing exterior doublers; replacing the fuselage skin assembly; doing repetitive supplemental inspections; and repairing if necessary; as applicable. This AD is prompted by a report indicating that localized pitting in the lower skin panels was found during production on a limited number of airplanes. We are issuing this AD to detect and correct premature fatigue cracking at certain lap splice locations and consequent rapid decompression of the airplane.

DATES: This AD becomes effective December 20, 2004.

The incorporation by reference of a certain publication listed in the AD is approved by the Director of the Federal Register as of December 20, 2004.

ADDRESSES: For service information identified in this AD, contact Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124–2207. You can examine this information at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

You can examine the contents of this AD docket on the Internet at http://dms.dot.gov, or at the Docket Management Facility, U.S. Department of Transportation, 400 Seventh Street, SW., room PL–401, on the plaza level of the Nassif Building, Washington, DC.

FOR FURTHER INFORMATION CONTACT: *Technical information:* Sue Lucier, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 917–6438; fax (425) 917–6590.

Plain language information: Marcia Walters, *marcia.walters@faa.gov.*

Examining the Docket

The AD docket contains the proposed AD, comments, and any final disposition. You can examine the AD docket on the Internet at *http://dms.dot.gov,* or in person at the Docket Management Facility office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Docket Management Facility office (telephone (800) 647–5227) is located on the plaza level of the Nassif Building at the DOT street address stated in the **ADDRESSES** section.

SUPPLEMENTARY INFORMATION: The FAA proposed to amend 14 CFR Part 39 with an AD for certain Boeing Model 737–700 and –800 series airplanes. That action, published in the **Federal Register** on September 3, 2004 (69 FR 53855), proposed to require doing an initial inspection for pitting and cracks of the lower skin panel at the lap joint; trimming the inner skin; installing exterior doublers; replacing the fuselage skin assembly; doing repetitive

supplemental inspections; and repairing if necessary; as applicable.

Comments

We provided the public the opportunity to participate in the development of this AD. No comments have been submitted on the proposed AD or on the determination of the cost to the public.

Conclusion

We have carefully reviewed the available data and determined that air safety and the public interest require adopting the AD as proposed.

Costs of Compliance

This AD will affect about 4 airplanes worldwide and 2 airplanes of U.S. registry. The following table provides the estimated costs to comply with this AD.

The average labor rate is $65 per work hour. The cost impact of the AD on U.S. operators is estimated to be $83,855.

TABLE.—COST IMPACT

For airplanes listed in the referenced service bulletin as group	Work hours	Parts cost	Per airplane cost
1	Inspection: 2	None	$130
	Modification: 38	105	2,575
2	Inspection: 2	None	130
	Modification: 30	104	2,054
3	Inspection: 2	None	130
	Modification: 42	106	2,836
4	Repair: 920	16,200	76,000

Regulatory Findings

We have determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866;

(2) Is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

We prepared a regulatory evaluation of the estimated costs to comply with this AD. See the **ADDRESSES** section for a location to examine the regulatory evaluation.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

■ Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2004–23–10 Boeing: Amendment 39–13865. Docket No. FAA–2004–18996; Directorate Identifier 2004–NM–40–AD.

Effective Date

(a) This AD becomes effective December 20, 2004.

Affected ADs

(b) None.

Applicability

(c) This AD applies to Boeing Model 737–700 and -800 series airplanes, certificated in any category; having variable and serial numbers listed in Table 1 of this AD.

TABLE 1.—APPLICABLE VARIABLE AND SERIAL NUMBERS.

Variable number	Serial number	Group
YA004	27837	1
YA005	27836	2
YA201	28004	4
YC003	27977	3

Unsafe Condition

(d) This AD was prompted by a report indicating that localized pitting in the lower skin panels was found during production on a limited number of airplanes. We are issuing this AD to detect and correct premature fatigue cracking at certain lap splice locations and consequent rapid decompression of the airplane.

Compliance

(e) You are responsible for having the actions required by this AD performed within the compliance times specified, unless the actions have already been done.

Initial Inspection and/or Repair

(f) At the applicable times specified in Table 1 of paragraph 1.E., ''Compliance,'' of Boeing Special Attention Service Bulletin 737–53–1256, dated September 18, 2003, do the applicable actions specified in Table 2 of this AD in accordance with the Accomplishment Instructions of the service bulletin.

TABLE 2.—INITIAL INSPECTION AND/OR REPAIR

For airplanes identified in the service bulletin as—	Requirements—
(1) Groups 1, 2, and 3	Do an external ultrasonic inspection for pitting and cracks of the lower skin panel at the lap joint.
(2) Groups 1 and 2	Trim the inner skin and install two exterior doublers (including related investigative actions).
(3) Group 3	Install three exterior doublers.
(4) Group 4	Replace the fuselage skin assembly with a new assembly.

Repetitive Inspections

(g) For Groups 1, 2, and 3 airplanes identified in Boeing Special Attention Service Bulletin 737–53–1256, dated September 18, 2003: At the applicable times specified in Table 2 of paragraph 1.E., ''Compliance,'' of the service bulletin, do the repetitive supplemental inspections of the lower skins and external doublers for discrepancies in accordance with the Accomplishment Instructions of the service bulletin.

Corrective Action

(h) If any discrepancy is found during any action required by this AD, before further flight, repair per a method approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA; or per data meeting the type certification basis of the airplane approved by a Boeing Company Designated Engineering Representative (DER) who has been authorized by the Manager, Seattle ACO, to make such findings. For a repair method to be approved, the approval must specifically reference this AD.

Alternative Methods of Compliance (AMOCs)

(i)(1) The Manager, Seattle ACO, FAA, has the authority to approve AMOCs for this AD, if requested in accordance with the procedures found in 14 CFR 39.19.

(2) An AMOC that provides an acceptable level of safety may be used for any repair required by this AD, if it is approved by a Boeing Company DER who has been authorized by the Manager, Seattle ACO, to make those findings. For a repair method to be approved, the approval must specifically refer to this AD.

Material Incorporated by Reference

(j) You must use Boeing Special Attention Service Bulletin 737–53–1256, dated September 18, 2003, to perform the actions that are required by this AD, unless the AD specifies otherwise. The Director of the Federal Register approves the incorporation by reference of this document in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. For copies of the service information, contact Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124–2207. For information on the availability of this material at the National Archives and Records Administration (NARA), call (202) 741–6030, or go to *http://www.archives.gov/federal_ register/code_of_federal_regulations/ibr_locations.html.* You may view the AD docket at the Docket Management Facility, U.S. Department of Transportation, 400 Seventh Street SW, room PL–401, Nassif Building, Washington, DC.

Issued in Renton, Washington, on November 1, 2004.

Kalene C. Yanamura,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Airworthiness Directives; McDonnell Douglas Model DC–9–14 and DC–9–15 Airplanes; and Model DC–9–20, DC–9–30, DC–9–40, and DC–9–50 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain McDonnell Douglas Model DC–9–14 and DC–9–15 airplanes; and Model DC–9–20, DC–9–30, DC–9–40, and DC–9–50 series airplanes. This AD requires repetitive high frequency eddy current inspections to detect cracks in the vertical radius of the upper cap of the center wing rear spar, and repair if necessary. This AD is prompted by reports of cracks in the upper cap of the center wing rear spar that resulted from stress corrosion. We are issuing this AD to detect and correct cracking of the left or right upper cap of the center rear spar, which would cause a possible fuel leak and structural failure of the upper cap, and result in reduced structural integrity of the airplane.

DATES: This AD becomes effective December 20, 2004.

The incorporation by reference of a certain publication listed in the AD is approved by the Director of the Federal Register as of December 20, 2004.

ADDRESSES: For service information identified in this AD, contact Boeing Commercial Airplanes, Long Beach Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Data and Service Management, Dept. C1–L5A (D800–0024). You can examine this information at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

You can examine the contents of this AD docket on the Internet at *http://dms.dot.gov,* or at the Docket Management Facility, U.S. Department of Transportation, 400 Seventh Street, SW., room PL–401, on the plaza level of the Nassif Building, Washington, DC.

FOR FURTHER INFORMATION CONTACT:

Technical information: Wahib Mina, Aerospace Engineer, Airframe Branch, ANM–120L, FAA, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California 90712–4137; telephone (562) 627–5324; fax (562) 627–5210.

Plain language information: Marcia Walters, *marcia.walters@faa.gov.*

Examining the Docket

The AD docket contains the proposed AD, comments, and any final disposition. You can examine the AD docket on the Internet at *http://dms.dot.gov,* or in person at the Docket Management Facility office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Docket Management Facility office (telephone (800) 647–5227) is located on the plaza level of the Nassif Building at the DOT street address stated in the **ADDRESSES** section.

SUPPLEMENTARY INFORMATION: The FAA proposed to amend 14 CFR part 39 with an AD for certain McDonnell Douglas Model DC–9–14 and DC–9–15 airplanes; and Model DC–9–20, DC–9–30, DC–9–40, and DC–9–50 series airplanes. That action, published in the **Federal Register** on September 3, 2004 (69 FR 53853), proposed to require repetitive high frequency eddy current inspections to detect cracks in the vertical radius of the upper cap of the center wing rear spar, and repair if necessary.

Comments

We provided the public the opportunity to participate in the development of this AD. No comments have been submitted on the proposed AD or on the determination of the cost to the public.

Explanation of Change Made to the Final Rule

We have updated the manufacturer name from McDonnell Douglas to Boeing for Service Bulletin DC9–57–223, dated July 21, 2003, which is referenced in this AD as the appropriate source of service information for the required actions. This change is necessary to adhere to the Office of the Federal Register's guidelines for materials incorporated by reference.

Conclusion

We have carefully reviewed the available data and determined that air safety and the public interest require adopting the AD with the change described previously. We have determined that this change will neither increase the economic burden on any

operator nor increase the scope of the AD.

Costs of Compliance

This AD affects about 396 airplanes of U.S. registry and 963 airplanes worldwide. The required inspection will take about 3 work hours per airplane, per inspection cycle, at an average labor rate of $65 per work hour. Based on these figures, the estimated cost of the AD for U.S operators is $77,220, or $195 per airplane, per inspection cycle.

Regulatory Findings

We have determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866;

(2) Is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

We prepared a regulatory evaluation of the estimated costs to comply with this AD. *See* the **ADDRESSES** section for a location to examine the regulatory evaluation.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

■ Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2004–23–11 McDonnell Douglas: Amendment 39–13866. Docket No. FAA–2004–18994; Directorate Identifier 2003–NM–210–AD.

Effective Date

(A) This AD becomes effective December 20, 2004.

Affected ADs

(b) None.

Applicability

(c) This AD applies to certain McDonnell Douglas Model DC–9–14, DC–9–15, DC–9–21, DC–9–31, DC–9–32, DC–9–32 (VC–9C), DC–9–32F, DC–9–33F, DC–9–34, DC–9–34F, DC–9–32F (C–9A, C–9B), DC–9–41, and DC–9–51 airplanes, certificated in any category; as listed in Boeing Service Bulletin DC9–57–223, dated July 21, 2003.

Unsafe Condition

(d) This AD was prompted by reports of cracks in the upper cap of the center wing rear spar that resulted from stress corrosion. We are issuing this AD to detect and correct cracking of the left or right upper cap of the center rear spar, which could cause a possible fuel leak and structural failure of the upper cap, and result in reduced structural integrity of the airplane.

Compliance

(e) You are responsible for having the actions required by this AD performed within the compliance times specified, unless the actions have already been done.

Inspection

(f) At the later of the times specified in paragraph (f)(1) or (f)(2) of this AD: Do a high frequency eddy current inspection to detect cracks in the vertical radius of the upper cap of the center wing rear spar, in accordance with the Accomplishment Instructions of Boeing Service Bulletin DC9–57–223, dated July 21, 2003.

(1) Before the accumulation of 25,000 total flight cycles.

(2) Within 15,000 flight cycles or 5 years after the effective date of this AD, whichever occurs first.

Corrective Action

(g)(1) If no crack is found, then repeat the inspection thereafter at intervals not to exceed 15,000 flight cycles or 5 years, whichever occurs first.

(2) If any crack is found, before further flight, repair per a method approved by the Manager, Los Angeles Aircraft Certification Office (ACO), FAA. For a repair method to be approved by the Manager, Los Angeles ACO, as required by this paragraph, the Manager's approval letter must specifically refer to this AD.

Alternative Methods of Compliance (AMOCs)

(h) The Manager, Los Angeles ACO, FAA, has the authority to approve AMOCs for this AD, if requested in accordance with the procedures found in 14 CFR 39.19.

Material Incorporated by Reference

(i) You must use Boeing Service Bulletin DC9–57–223, dated July 21, 2003, to perform the actions that are required by this AD, unless the AD specifies otherwise. The Director of the Federal Register approves the incorporation by reference of this document in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. For copies of the service information, contact Boeing Commercial Airplanes, Long Beach Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Data and Service Management, Dept. CI–L5A (D800–0024). RIN 2120–AA64

Airworthiness Directives; Airbus Model A319 and A320 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Airbus Model A319 and A320 series airplanes, that requires a modification and replacement affecting all fuel tanks. All affected airplanes require the installation of fuses in the wiring of the fuel quantity indicating probes of all fuel tanks. Some affected airplanes also require replacement of the high-level sensors of the additional center tanks (ACTs) with new sensors. For all affected airplanes, these actions are necessary to prevent overheating of the fuel probes due to a short circuit. For some affected airplanes, these actions are necessary to prevent fuel leakage due to inadequate space for thermal expansion within the ACTs. Such conditions could result in fuel vapors or fuel contacting an ignition source and/or consequent fire/explosion in the center fuel tanks. These actions are intended to address the identified unsafe condition.

DATES: Effective December 20, 2004.

The incorporation by reference of certain publications listed in the

regulations is approved by the Director of the Federal Register as of December 20, 2004.

ADDRESSES: The service information referenced in this AD may be obtained from Airbus, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

FOR FURTHER INFORMATION CONTACT: Dan Rodina, Aerospace Engineer, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington 98055–4056; telephone (425) 227–2125; fax (425) 227–1149.

Relationship of This AD to SFAR 88

The FAA has examined the underlying safety issues involved in recent fuel tank explosions on several large transport airplanes, including the adequacy of existing regulations, the service history of airplanes subject to those regulations, and existing maintenance practices for fuel tank systems. As a result of those findings, we issued a regulation titled ''Transport Airplane Fuel Tank System Design Review, Flammability Reduction and Maintenance and Inspection Requirements'' (67 FR 23086, May 7, 2001). In addition to new airworthiness standards for transport airplanes and new maintenance requirements, this rule included Special Federal Aviation Regulation No. 88 (SFAR 88).

Among other actions, SFAR 88 requires certain type design (*i.e.*, type certificate (TC) and supplemental type certificate (STC)) holders to substantiate that their fuel tank systems can prevent ignition sources in the fuel tanks. This requirement applies to type design holders for large turbine-powered transport airplanes and for subsequent modifications to those airplanes. It requires them to perform design reviews and to develop design changes and maintenance procedures if their designs do not meet the new fuel tank safety standards. As explained in the preamble to the rule, we intended to adopt airworthiness directives to mandate any changes found necessary to address unsafe conditions identified as a result of these reviews.

In evaluating these design reviews, we have established four criteria intended to define the unsafe conditions associated with fuel tank systems that require corrective actions. The percentage of operating time during which fuel tanks are exposed to flammable conditions is one of these criteria. The other three criteria address the failure types under evaluation: single failures, single failures in combination with another latent condition(s), and in-service failure experience. For all four criteria, the evaluations included consideration of previous actions taken that may mitigate the need for further action.

Based on this process, we have determined that the actions identified in this AD are necessary to reduce the potential of ignition sources inside fuel tanks, which, in combination with flammable fuel vapors, could result in fuel tank explosions and consequent loss of the airplane.

Proposed AD

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Airbus Model A319 and A320 series airplanes was published in the **Federal Register** on November 17, 2003 (68 FR 64823). That action proposed to require a modification and replacement affecting the center and wing fuel tanks. All affected airplanes would require modification of the wiring of the fuel quantity indicating probes of the center and wing fuel tanks. Some affected airplanes would also require replacement of the high-level sensors of the additional center fuel tank with new, improved sensors.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Supportive Comments

One commenter supports the proposed AD; one commenter supports the intent of the proposed AD.

Requests To Extend Compliance Time

One commenter notes a large disparity between the two limitations in the proposed accomplishment time of ''Within 4,000 flight hours or 30 months after the effective date of the AD, whichever is first.'' The commenter suggests that the FAA consider changing the timeline to flight hours or a calendar month, which is more closely tied to actual airplane utilization. The commenter adds that utilization of these airplanes could be as high as 9,000 flight hours during the proposed 30-month compliance time. The commenter asks that the compliance time be changed to 9,000 flight hours or 30 months, whichever is first. Another commenter also recommends that the compliance time be changed to 9,000 flight hours or 30 months, whichever is first, and provided no justification for the recommendation.

A third commenter states that, based on airplane utilization, the flight-hour threshold will occur first, and result in a 14-month schedule for completion. The commenter adds that, based on the instructions outlined in Airbus Service Bulletin A320–28–1087, accomplishment of the actions is possible only during a base maintenance visit. The commenter notes that the compliance limits will penalize operators with long-to-medium-range missions. The commenter recommends that the compliance time be extended to 5,500 flight hours or 30 months after the effective date of the AD, whichever occurs first. The commenter states that this will allow operators to utilize routine base maintenance visit opportunities where appropriate tooling, ground equipment, and qualified skill set are available.

A fourth commenter states that including a flight-hour limit in the compliance time suggests that the failure mode being addressed by the mandatory activity is sensitive to flight hours in service. The commenter notes that the failure mode addressed by Service Bulletin A320–28–1087 (wiring insulation breakdown/damage) is primarily related to calendar age. The commenter adds that, while the flight-hour limit may have value, it is not the crucial parameter. The commenter's in-service airplanes average about eight hours of flying per day, which means that the 4,000-flight-hour limit would require that the actions be done on all affected airplanes within about 500 days. This period is 55 percent of the calendar time afforded by the compliance time, and is less than the C-check interval. The commenter states that doing the actions on all airplanes within 4,000 flight hours would put an additional burden and cost on its operation. The commenter suggests extending the compliance time to 6,000 flight hours, which will not compromise the level of safety.

We do not agree with the commenters. In developing an appropriate compliance time for this action, we considered the safety implications, operators' normal maintenance schedules, and the compliance time

recommended by the airplane manufacturer for the timely accomplishment of the required actions. The compliance time is based on airplane utilization overall. In addition, operators provided no data to support that a compliance time extension will ensure safety. In consideration of these items, we have determined that compliance within 4,000 flight hours or 30 months after the effective date of this AD, whichever is first, will provide an acceptable level of safety and is an appropriate interval of time wherein the required actions can be accomplished during scheduled maintenance intervals for the majority of affected operators. However, according to the provisions of paragraph (b) of this AD, we may approve requests to adjust the compliance time if the request includes data that justify that a different compliance time would provide an acceptable level of safety. No change to the AD is made in this regard.

Request To Delay Issuance of the Proposed AD

One commenter states that it previously elected not to do the actions required by the proposed AD on affected airplanes (reference Service Bulletin A320–28–1087, Revision 02). This was because the Direction Générale de l'Aviation Civile (DGAC), which is the airworthiness authority for France, found the Special Federal Aviation Regulation No. 88 (''SFAR 88,'' Amendment 21–78, and subsequent Amendments 21–82 and 21–83) compliance solution proposal submitted by Airbus to be sufficient for compliance with French airworthiness directive 2002–220(B) R1, dated October 15, 2003; although further discussions with the FAA and the DGAC were necessary. These discussions were expected to include the possibility of a requirement to install transient suppression units. Correspondence between the commenter and Airbus confirmed that, in the event that transient suppression units were specified in future rulemaking, the fused adapter/connection installation specified in the service bulletin would be revised. The commenter adds that, according to its cost model, the proposed AD would cost over $500,000 for its fleet. The commenter objects to spending the money if the solution is only interim, with introduction of transient suppression units to follow. The commenter strongly encourages a permanent solution to be introduced and regulated, and is not aware of any in-service data that would suggest that airplane safety could be compromised by delaying the interim solution until introduction of a permanent solution.

We do not agree with the commenter that an alternate solution is necessary, as the modification required by the proposed AD is not an interim action. We have examined the underlying safety issues involved in fuel tank explosions on several transport airplanes. As a result of those findings, we issued a regulation titled ''Transport Airplane Fuel Tank System Design Review, Flammability Reduction and Maintenance and Inspection Requirements.'' In addition to new airworthiness standards for transport airplanes and new maintenance requirements, this rule included SFAR No. 88. Among other actions, SFAR 88 requires certain type design holders to perform design reviews, and to develop design changes and maintenance procedures if necessary. We intend to adopt ADs to mandate any changes found necessary to address unsafe conditions identified during these reviews. Based on this process, we have determined that the modification required by this AD is necessary to address the identified unsafe condition.

Request To Clarify Summary Section

One commenter states that the Summary section of the proposed AD has significant inaccuracies due to the assimilation of two independent unsafe conditions, as identified in the referenced French airworthiness directive. The unsafe conditions require mandatory action, which is achieved by applying the two service bulletins referenced in the proposed AD. The commenter notes that the reason there are two service bulletins, and only one French airworthiness directive, is to minimize the cost impact on the three airplanes requiring correction of both unsafe conditions.

Additionally, the commenter states that the Summary section does not properly distinguish between additional center tanks (ACTs) and center wing tanks, which could lead to misinterpretation of any corrective action necessary. The commenter notes that Airbus Service Bulletin A320–28–1086, Revision 01, dated October 23, 2002 (cited in the proposed AD as an appropriate source of service information for accomplishment of certain actions), affects the ACTs on the three airplanes specified above only. The commenter adds that the identified modifications reposition the high-level sensors to ensure there is a minimum of two percent expansion space in the applicable ACT, and correct a non-compliance to Joint Aviation Regulation (JAR) 25.969. This non-compliance issue could result in fuel overflowing from the ACT to the left wing surge tank in the event of thermal expansion of the fuel in the ACT. The commenter also adds that the bracket that the high-level sensor is attached to, not the high-level sensor, is the part that has been improved.

The commenter also states that Airbus Service Bulletin A320–28–1087, Revision 02, dated June 10, 2003 (cited in the proposed AD as an appropriate source of service information for accomplishment of certain actions), affects all fuel tanks (all wing tanks and all ACTs), on the affected airplanes. The modification identified is to install fuses in the fuel quantity indicating (FQI) harnesses at or near the fuel tank walls, which corrects a non-compliance with JAR 25.981. This non-compliance issue could result in the ignition of flammable fuel vapors in a fuel tank in the event of a short circuit between the FQI wiring and an unprotected 28-volt supply.

In conclusion, the commenter states that the Summary section should clearly distinguish between these two unsafe conditions and should provide certain wording to more clearly define the two unsafe conditions.

We agree with the commenter and have changed the applicable sections in this AD, for clarification, to separate the two unsafe conditions.

Request To Change Paragraph (a) of This AD

In following up on his request to distinguish the two unsafe conditions, the commenter requests the following changes, which would include a new paragraph (b):

''(a) Within 4,000 flight hours or 30 months after the effective date of this AD, whichever is first: Do the applicable actions specified in paragraph (a)(1) of this AD. Accomplishment of the modification before the effective date of this AD per Airbus Service Bulletin A320–28–1087, dated July 17, 2001, or Revision 01, dated March 3, 2003; is acceptable for compliance with the corresponding action specified in paragraph (a)(1) of this AD.

(1) For airplanes defined in Airbus Service Bulletin A320–28–1087, Revision 02, dated June 10, 2003: Modify the wiring of the fuel quantity indicating probes of all the fuel tanks by doing all the actions specified in paragraphs 3.A. through 3.D. (including operational testing and any applicable repair) of the Accomplishment Instructions of the service bulletin. Any applicable repair must be done before further flight.

(b) Within 4,000 flight hours or 30 months after the effective date of this

AD, whichever is first: Do the applicable actions specified in paragraph (b)(1) of this AD. Accomplishment of the replacement before the effective date of this AD per Airbus Service Bulletin A320–28–1086, dated November 30, 1999; as applicable; is considered acceptable for compliance with the corresponding action specified in paragraph (b)(1) of this AD.

(1) For airplanes defined in Airbus Service Bulletin A320–28–1086, Revision 01, dated October 23, 2002: Prior to or concurrent with accomplishment of paragraph (a)(1) of this AD, replace the high-level sensors of the additional center fuel tanks by doing all the actions specified in paragraphs 3.A through 3.D. (including operational testing and any applicable repair) of the Accomplishment Instructions of the service bulletin. Do the actions per the service bulletin. Any applicable repair must be done before further flight.'' The commenter provided no justification for the requested changes.

After reviewing the commenter's suggested changes to paragraph (a) of the proposed AD, we find that specifying ''all the fuel tanks'' instead of ''the center and wing fuel tanks,'' is the only significant change. We also find that moving the service bulletin references around, as suggested by the commenter, does not clarify the requirements of that paragraph. Therefore, we have changed the wording in paragraph (a)(1) of this AD to specify ''all the fuel tanks,'' for clarification; we made no further changes to paragraph (a) of this AD.

Request To Clarify Certain Sections in the Preamble

The same commenter reiterates certain wording regarding compliance with JAR 25.989, as specified in the Discussion section of the proposed AD, and notes that the wording is incorrect. The commenter states that the referenced testing is specific to some ACTs that can be fitted only to Model A319 series airplanes with Airbus Modification 28238 installed, and does not relate to other ACTs fitted to Models A319 and A320 series airplanes, or to center (wing) tanks. The commenter adds that the correct reference is JAR 25.969, not 25.989. The commenter notes that the high-level sensor is not improved and has no regulatory deficiency, and adds that it is the bracket that the sensor is attached to that is improved to provide the required expansion space. In addition, the commenter states that there is no connection between changing the high-level sensor position and the overheating of the FQI fuel probes in the event of an external 28-volt short circuit to the FQI fuel probe wiring. The commenter adds that there is no risk of the high-level sensor overheating in the event of an external 28-volt short circuit to its wiring.

The commenter also states that there is no risk of fuel spillage resulting from inadequate expansion space, which could result in fuel vapors or fuel contacting an ignition source, and/or consequent fire/explosion in the center fuel tank. Any fuel spillage will be contained within the fuel vent system until the left wing surge tank is overfilled and subsequent limited fuel spillage from the surge tank through a flame arrestor could occur. The commenter adds that in the event of fuel spillage from the surge tank, and in the presence of an ignition source on the ground, a ground fire could be ignited. In the event of a ground fire, the flame arrestor installed for this purpose will eventually protect the fuel tank.

The commenter notes that the section titled **ADDRESSES** incorrectly identifies the airplane manufacturer as ''Airbus Industrie.'' The airplane manufacturer should be identified as ''Airbus.''

The same commenter states that the Explanation of Relevant Service Information section in the preamble of the proposed AD is unclear in identifying which tanks apply to Service Bulletin A320–28–1087, Revision 02. The commenter states that the text should read, ''Airbus has issued Service Bulletin A320–28–1087, Revision 02, which describes procedures for modification of the wiring of the FQI probes of all fuel tanks.'' The modification includes the following:

- Installation of fused plug connectors for the FQI probes of the wing tanks; and
- Installation of fused adapters between the external wiring harness and the in-tank wiring of the connectors on the ACT and center wing fuel tank walls.

The commenter notes that the term ''center tank'' is imprecise, as it could be interpreted to mean the center wing tank and not the ACT. This could lead to the exclusion of necessary corrective action for some fuel tanks. The fact that the modification is applicable to all fuel tanks is explicitly described by using the word ''all.''

We acknowledge and agree with the commenter's remarks on the preamble of the proposed AD; however, most of the sections referred to are not restated in this final rule. The name of the airplane manufacturer specified in the **''ADDRESSES''** section has been changed to Airbus. No other change to the AD is made in this regard.

Inadequate Technical Information Provided in the Service Bulletins

One commenter states that it is apparent that the information in the service bulletins lacks adequate technical detail for the commenter to form an opinion relative to the content. The commenter adds that Service Bulletin A320–28–1087 specifies adding fused connectors/adapters to protect the fuel gauging lines from hot shorts to 28 volt direct current that enter the fuel tanks. However, there is no information regarding compliance with Advisory Circular (AC) 25.981, which provides guidance for the overall safe design of fuel systems under certain conditions. The commenter notes that compliance with the AC may require a different design approach, in which case issuance of the proposed AD, although improving the level of safety, would be premature and would cause an unnecessary financial burden for operators. The commenter is unable to render a sound technical opinion as to the accuracy of the proposed AD, due to insufficient data.

We appreciate the commenter's concerns; however, it is not standard practice to provide technical details for design changes in service bulletins. The modification required by this AD is intended to prevent excessive currents from entering the FQI probes. Investigations have shown that a short of 28-volt direct current to the probes could cause certain parts of the probe to heat up to a temperature in excess of 200 degrees centigrade. Additionally, all FQI probe wiring installed on Model A319 series airplanes is co-routed with 28-volt direct current. The service bulletin was issued to provide procedures to modify the airplane to the approved type design. We do not agree that this AD is premature. In this case, we find that to withdraw this AD and initiate new proposed rulemaking (providing for public opportunity to comment) would significantly delay the rulemaking process and would be inappropriate in light of the identified unsafe condition. We have determined that issuance of this AD is appropriate and warranted.

Request To Revise Cost Impact Section

One commenter states that there are presently no airplanes registered in the U.S. for which Service Bulletin A320–28–1086 applies (Models A319–115 and A319–133 series airplanes). The commenter requests that the Cost Impact section of the proposed AD be revised to provide, for future imported

airplanes, accomplishment of the proposed actions through a Certificate of Airworthiness.

We do not agree to provide for accomplishment of the proposed actions through a Certificate of Airworthiness for future imported Models A319–115 and A319–133 series airplanes. We do agree that those airplanes are not U.S.-registered; therefore, we have added a new paragraph to the Cost Impact section to provide the estimated costs for those airplanes should the airplanes be imported and placed on the U.S. Register in the future.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the changes described previously. We have determined that these changes will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

We estimate that 468 Model A319–111, –112, –113, –114, –131, and –132 and Model A320 series airplanes of U.S. registry will be affected by this AD.

It will take between 10 and 22 work hours per airplane to accomplish the modification, at an average labor rate of $65 per work hour. Required parts will cost between $670 and $5,750 per airplane. Based on these figures, the cost impact of the modification required by this AD on U.S. operators is estimated to be between $617,760 and $3,360,240, or between $1,320 and $7,180 per airplane.

If an operator is required to replace the high-level sensors, it will take about 80 work hours, at an average labor rate of $65 per work hour. Required parts are free of charge. Based on these figures, the cost impact of the replacement required by this AD is estimated to be $5,200 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Currently, there are no affected A319–115 and A319–133 series airplanes on the U.S. Register. However, if an affected airplane is imported and placed on the U.S. Register in the future, the required modification would take between 10 and 22 work hours per airplane, at an average labor rate of $65 per work hour. Required parts will cost between $670 and $5,750 per airplane. Based on these figures, we estimate the cost of this AD to be between $1,320 and $7,180 per airplane.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption ''**ADDRESSES.**''

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

■ Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. Section 39.13 is amended by adding the following new airworthiness directive:

2004–23–04 Airbus: Amendment 39–13859. Docket 2002-NM–153√AD.

Applicability: Model A319 and A320 series airplanes, certificated in any category; as listed in Airbus Service Bulletin A320–28–1087, Revision 02, dated June 10, 2003; and Airbus Service Bulletin A320–28–1086, Revision 01, dated October 23, 2002.

Compliance: Required as indicated, unless accomplished previously.

To prevent overheating of the fuel probes due to a short circuit, and fuel leakage due to inadequate space for thermal expansion within the additional center tanks, which could result in fuel vapors or fuel contacting an ignition source, accomplish the following:

Modification/Replacement

(a) Within 4,000 flight hours or 30 months after the effective date of this AD, whichever is first: Do the applicable actions specified in paragraphs (a)(1) and (a)(2) of this AD. Accomplishment of the modification before the effective date of this AD per Airbus Service Bulletin A320–28–1087, dated July 17, 2001; or Revision 01, dated March 3, 2003; or accomplishment of the replacement before the effective date of this AD per Airbus Service Bulletin A320–28–1086, dated November 30, 1999; as applicable; is considered acceptable for compliance with the corresponding action specified in paragraph (a)(1) or (a)(2) of this AD.

(1) For airplanes defined in Airbus Service Bulletin A320–28–1087, Revision 02, dated June 10, 2003: Modify the wiring of the fuel quantity indicating probes of all the fuel tanks by doing all the actions specified in paragraphs 3.A. through 3.D. (including operational testing and any applicable repair) of the Accomplishment Instructions of the service bulletin. Do the actions per the service bulletin. Any applicable repair must be done before further flight.

(2) For airplanes defined in Airbus Service Bulletin A320–28–1086, Revision 01, dated October 23, 2002: Prior to or concurrent with accomplishment of paragraph (a)(1) of this AD, replace the high-level sensors of the additional center fuel tanks by doing all the actions specified in paragraphs 3.A through 3.D. (including operational testing and any applicable repair) of the Accomplishment Instructions of the service bulletin. Do the actions per the service bulletin. Any applicable repair must be done before further flight.

Alternative Methods of Compliance

(b) In accordance with 14 CFR 39.19, the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, is authorized to approve alternative methods of compliance for this AD.

Incorporation by Reference

(c) Unless otherwise specified in this AD, the actions shall be done in accordance with Airbus Service Bulletin A320–28–1086, Revision 01, dated October 23, 2002; or Airbus Service Bulletin A320–28–1087, Revision 02, dated June 10, 2003; as applicable. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. For copies, contact Airbus, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Inspect copies at the FAA, Transport Airplane Directorate,

1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

Note 1: The subject of this AD is addressed in French airworthiness directive 2002–220(B) R1, dated October 15, 2003.

Effective Date

(d) This amendment becomes effective on December 20, 2004.

Issued in Renton, Washington, on November 1, 2004.

Ali Bahrami,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Airbus Model A300 B4–600R and A300 F4–600R Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD), applicable to Airbus Model A300 B4–600R and A300 F4–600R series airplanes, that currently requires a one-time detailed inspection for damage of the center tank fuel pumps and fuel pump canisters, and replacement of damaged fuel pumps and fuel pump canisters with new or serviceable parts. That AD also requires repetitive detailed inspections of the fuel pumps and repetitive eddy current inspections of the fuel pump canisters, and replacement of damaged fuel pumps and fuel pump canisters with new or serviceable parts. This amendment mandates modification of the canisters of the center tank fuel pumps, which would terminate the repetitive inspections required by the existing AD. The actions specified by this AD are intended to prevent damage to the fuel pump and fuel pump canister, which could result in loss of flame trap capability and could provide a fuel ignition source in the center fuel tank. This action is intended to address the identified unsafe condition.

DATES: Effective December 20, 2004.

The incorporation by reference of Airbus Service Bulletin A300–28–6069, Revision 01, dated May 28, 2002; and Airbus Service Bulletin A300–28–6061, Revision 04, dated August 1, 2002; as listed in the regulations, is approved by the Director of the Federal Register as of December 20, 2004.

The incorporation by reference of Airbus All Operators Telex (AOT) 28–09, dated November 28, 1998, as listed in the regulations, was approved previously by the Director of the Federal Register as of December 28, 1998 (63 FR 70639, December 22, 1998).

The incorporation by reference of Airbus Alert Service Bulletin A300–28A6061, dated February 19, 1999, as listed in the regulations, was approved previously by the Director of the Federal Register as of February 8, 2000 (65 FR 213, January 4, 2000).

ADDRESSES: The service information referenced in this AD may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

FOR FURTHER INFORMATION CONTACT: Tim Backman, Aerospace Engineer, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2797; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) by superseding AD 99–27–07, amendment 39–11488 (65 FR 213, January 4, 2000), which is applicable to all Airbus Model A300 B4–600R and A300 F4–600R series airplanes, was published in the **Federal Register** on September 9, 2003 (68 FR 53058). The action proposed to continue to require a one-time visual inspection for damage of the center tank fuel pumps and fuel pump canisters, and replacement of damaged fuel pumps and fuel pump canisters with new or serviceable parts. The action also proposed to continue to require repetitive detailed inspections for damage of the fuel pumps and repetitive eddy current inspections of the fuel pump canisters, and replacement of damaged fuel pumps and fuel pump canisters with new or serviceable parts. The action also proposed to mandate modification of the canisters of the center tank fuel pumps, which would terminate the repetitive inspections required by the existing AD.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Request To Change Compliance Time

One commenter requests that the compliance time for the terminating action (modification) specified in paragraph (d) of the proposed AD be changed to ''Prior to the accumulation of 5,000 total hours, time-in-service, or within 18 months after the effective date of this AD, whichever occurs later.'' The commenter notes that an equivalent level of safety is maintained by this change, as the change will still require the modification to be done prior to the first inspection required by AD 99–27–07. The commenter adds that this change will minimize the hardship of implementing the proposed AD.

The FAA does not agree, as repetitive inspections for cracks are not equivalent to replacement of the canisters of the center tank fuel pumps with improved canisters for continued operational safety. Cracked canisters continue to be detected during the mandated inspections, but in view of the potential unsafe condition, we find that modification of the canisters by installation of reinforced canisters that are not subject to cracking must be done. In addition, inclusion of a 5,000 flight hour compliance time could allow certain low-time airplanes an additional year before accomplishment of the canister replacement. We do not find it necessary to change the AD in this regard. However, the commenter may request approval of an alternative method of compliance from the FAA, in accordance with paragraph (g)(1) of this AD, if technical justification, substantiation of need, and a satisfactory retrofit status of the commenter's fleet with the new canister are provided.

Clarification of Terminating Action

One commenter states that paragraph (d) of the proposed AD (New Requirements of This AD) specifies that accomplishment of Airbus Service Bulletin A300–28–6069, Revision 01, dated May 28, 2002 (modification of the canisters of the center tank fuel pumps)

ends the repetitive inspections required by paragraph (b) of the proposed AD. The commenter adds that initial accomplishment of the paragraph (b) inspection would terminate the repetitive inspections required by paragraph (a) of the proposed AD. The commenter notes that, as written, the proposed AD seems to require the initial accomplishment of the inspection required by paragraph (b) to terminate the repetitive inspections. The commenter asks for clarification of the intent of the AD.

As requested, we provide the following clarification: The AD does require accomplishment of the initial inspection required by paragraph (b) of this AD to terminate the repetitive inspections required by paragraph (a) of this AD. The repetitive inspections specified in paragraphs (a) and (b) of the AD are required by AD 99–27–07 (Restatement of Requirements of AD 99–27–07), and continue to be required by this AD until the terminating action is done. The new requirements that mandate modification of the canisters of the center tank fuel pumps, as specified in paragraph (d) of this AD, terminate those repetitive inspections.

Request To Change Terminating Action to Optional

One commenter states that AD 99–27–07 addresses the unsafe condition identified by that rule, and adds that the proposed AD does not provide justification for mandating the terminating action. The commenter provides the following reasons for changing the terminating action in the proposed AD to an optional action.

- The proposed AD does not specifically identify an additional unsafe condition, so there is no need to add further financial burden for operators without justifiable cause.
- Operators favor the use of terminating action in lieu of repetitive inspections; however, where either solution offers the same level of safety, this decision becomes a matter of economics.
- There is no safety benefit identified for the terminating action, so the decision to continue to inspect, or implement the terminating action, should remain at the option of the operator.

The commenter adds that there is no reasonable basis for the 18-month compliance time for the terminating action, as it appears arbitrary. Due to the current economic conditions of the airline industry, operators should be given the option of replacing the canister with the improved design, or continuing the scheduled inspections and replacing the canister only if a crack is found during the inspection. The commenter adds that the scheduled inspections, when done in accordance with AD 99–27–07, will provide a level of safety equivalent to that provided by the proposed AD.

We do not agree. The unsafe condition specified in AD 99–27–07 has not been corrected; therefore, an additional unsafe condition does not need to be added to this AD, as there has been no final fix until now. Although we acknowledge the commenter's concerns regarding further financial burden on operators, the FAA, in conjunction with the Direction Générale de l'Aviation Civile (DGAC), which is the airworthiness authority for France, is mandating the terminating action based on the determination that, in this case, long-term continued operational safety would be better assured by a modification to remove the source of the problem, rather than by continued repetitive inspections. We consider the existing canisters of the center fuel tank to be a safety issue of sufficient significance to warrant modification of the canisters. Relying on continued repetitive inspections as an option to the modification does not ensure that affected airplanes will receive appropriately modified canisters in a timely manner, or at all.

The fuel pump canister is intended to contain or trap any potential fuel pump ignition sources and consequent flames in the canister, and keep them from entering the fuel tank. A crack in the fuel pump canister has the potential to eliminate the canister fire trap capability and provide an ignition source to the center tank fuel pump. The new, improved canisters have been strengthened by thicker and re-profiled webs, the fuel aperture corner radius has been increased, the non-return valve has been strengthened, and the attachment fasteners have been increased from four to six inches. A canister locating pin (foolproofing pin) is also installed by this modification, which will prevent the installation of unmodified fuel booster-pump canisters. Accordingly, no change to the AD is made in this regard.

Request To Change Cost Analysis

The same commenter states that the proposed AD lacks adequate cost analysis. The commenter states that the cost of the canister is omitted, and specifies the cost as $4,660 per canister. The commenter adds that the actual cost of the proposed AD, using actual industry wages and the omitted cost for parts, would be $10,548 per airplane or $886,032; not the $76,660 cost calculated by the FAA.

After considering the data presented by the commenter, we agree that the parts cost for the canisters was omitted. The cost of each canister is $4,660. The cost impact information, below, has been revised to indicate this higher amount.

Economic Analysis

The same commenter states that it appreciates the FAA economic analysis for using work time estimates consistent with industry experience; however, the FAA labor rate remains much lower than actual industry costs. The commenter adds that the average airline industry labor rate is currently $98 per work hour.

We point out that our estimate of $65 per work hour is the current burdened labor rate established for use by the Office of Aviation Policy, Plans, and Management Analysis. (The burdened labor rate includes the actual labor cost, overhead, and other related costs.) Because the labor rate used in our calculations accounts for the variations in costs among those in the airline industry, we consider that $65 per work hour is appropriate. Accordingly, no change to the AD is made in this regard.

Explanation of Change Made to Proposed AD

We have clarified the inspection requirement contained in the proposed AD. Whereas the proposed AD specifies a visual inspection, we have revised this final rule to clarify that our intent is to require a detailed inspection. Additionally, a new note has been added to the final rule to define that inspection.

Conclusion

We have carefully reviewed the available data, including the comments that have been submitted, and determined that air safety and the public interest require adopting the AD with the changes described previously. We have determined that these changes will neither significantly increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

This AD will affect about 84 airplanes of U.S. registry.

The inspections that are required by AD 99–27–07 take about 2 work hours per airplane to accomplish, at an average labor rate of $65 per work hour. Based on these figures, the cost impact of the currently required actions is estimated to be $130 per airplane, per inspection cycle.

The inspections required by AD 99–27–07 were applicable to about 67 airplanes. Based on the figures discussed above, the cost impact of the current requirements of that AD on U.S. operators is estimated to be $8,710.

In this AD, the inspections are applicable to about 17 additional airplanes. Based on the figures discussed above, the new costs to U.S. operators that will be imposed by this AD are estimated to be $2,210.

The new modification required by this AD action will take about 11 work hours per airplane to accomplish, at an average labor rate of $65 per work hour. Required parts will cost about $9,620 per airplane. Based on these figures, the cost impact of the modification on U.S. operators is estimated to be $868,140, or $10,335 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

■ Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. Section 39.13 is amended by removing amendment 39–11488 (65 FR 213, January 4, 2000), and by adding a new airworthiness directive (AD), amendment 39–13863, to read as follows:

2004–23–08 Airbus: Amendment 39–13863. Docket 2002–NM–97–AD. Supersedes AD 99–27–07, Amendment 39–11488.

Applicability: Model A300 B4–600R and A300 F4–600R series airplanes, certificated in any category, on which Airbus Modification 4801 (trim tank system) has been accomplished.

Compliance: Required as indicated, unless accomplished previously.

To prevent damage to the fuel pump and fuel pump canister, which could result in loss of flame trap capability and could provide a fuel ignition source in the center fuel tank, accomplish the following:

Restatement of Requirements of AD 99–27–07

Inspections

(a) Prior to the accumulation of 5,000 total hours, time-in-service or within 250 hours time-in-service after February 8, 2000 (the effective date of AD 99–27–07, amendment 39–11488), whichever occurs later, perform a detailed inspection for damage of the center tank fuel pumps and fuel pump canisters, in accordance with Airbus All Operators Telex (AOT) 28–09, dated November 28, 1998. Repeat the inspection prior to the accumulation of 12,000 total hours time-in-service, or within 250 hours time-in-service after accomplishment of the initial inspection, whichever occurs later. Thereafter, repeat the inspection at intervals not to exceed 250 hours time-in-service, until accomplishment of the initial inspection required by paragraph (b) of this AD.

Note 1: For the purposes of this AD, a detailed inspection is: ''An intensive examination of a specific item, installation, or assembly to detect damage, failure, or irregularity. Available lighting is normally supplemented with a direct source of good lighting at an intensity deemed appropriate. Inspection aids such as mirror, magnifying lenses, etc., may be necessary. Surface cleaning and elaborate procedures may be required.''

(b) At the applicable time specified in paragraph (b)(1), (b)(2), or (b)(3) of this AD: Perform a detailed inspection to detect damage of the center tank fuel pumps and perform an eddy current inspection to detect damage of the fuel pump canisters, in accordance with Airbus Alert Service Bulletin A300–28A6061, dated February 19, 1999; or Airbus Service Bulletin A300–28–6061, Revision 04, dated August 1, 2002. Repeat the inspections thereafter at intervals not to exceed 1,500 flight cycles, until accomplishment of paragraph (d) of this AD. Accomplishment of the initial inspections required by this paragraph constitutes terminating action for the requirements of paragraph (a) of this AD.

(1) For airplanes that have accumulated 11,000 or more total flight cycles as of February 8, 2000: Inspect within 300 flight cycles after February 8, 2000.

(2) For airplanes that have accumulated 8,500 or more total flight cycles, but fewer than 11,000 total flight cycles, as of February 8, 2000: Inspect within 750 flight cycles after February 8, 2000.

(3) For airplanes that have accumulated fewer than 8,500 total flight cycles as of February 8, 2000: Inspect prior to the accumulation of 7,000 flight cycles, or within 1,500 flight cycles after February 8, 2000, whichever occurs later.

Corrective Action

(c) If any damage is detected during any inspection required by this AD, prior to further flight, replace the damaged fuel pump or fuel pump canister with a new or serviceable part in accordance with Airbus Alert Service Bulletin A300–28A6061, dated February 19, 1999; or Airbus Service Bulletin A300–28–6061, Revision 04, dated August 1, 2002.

New Requirements of This AD

Modification

(d) Within 18 months after the effective date of this AD: Modify the canisters of the center tank fuel pumps (including an operational test) by doing all the actions per paragraphs 3.A., 3.B., 3.C., and 3.D. of the Accomplishment Instructions of Airbus Service Bulletin A300–28–6069, Revision 01, dated May 28, 2002. Accomplishment of this modification ends the repetitive inspections required by paragraph (b) of this AD.

(e) Accomplishment of the modification before the effective date of this AD per Airbus Service Bulletin A300–28–6069, dated September 4, 2001, is acceptable for compliance with the modification required by paragraph (d) of this AD.

Alternative Methods of Compliance

(f)(1) In accordance with 14 CFR 39.19, the Manager, International Branch, ANM–116, FAA, is authorized to approve alternative methods of compliance for this AD.

(2) Alternative methods of compliance, approved previously in accordance with AD 99–27–07, amendment 39–11488, are approved as alternative methods of compliance with the applicable actions in this AD.

Incorporation by Reference

(g) The actions shall be done in accordance with the applicable service information listed in Table 1 of this AD, unless the AD specifies otherwise.

TABLE 1.—MATERIALS INCORPORATED BY REFERENCE

Airbus service information	Revision level	Date
All Operators Telex 28–09	Original	November 28, 1998.
Alert Service Bulletin A300–28A6061	Original	February 19, 1999.
Service Bulletin, A300–28–6061	04	August 1, 2002.
Service Bulletin, A300–28–6069	01	May 28, 2002.

(1) The incorporation by reference of Airbus Service Bulletin A300–28–6069, Revision 01, dated May 28, 2002; and Airbus Service Bulletin A300–28–6061, Revision 04, dated August 1, 2002; is approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51.

(2) The incorporation by reference of Airbus All Operators Telex (AOT) 28–09, dated November 28, 1998, was approved previously by the Director of the Federal Register as of December 28, 1998 (63 FR 70639, December 22, 1998).

(3) The incorporation by reference of Airbus Alert Service Bulletin A300–28A6061, dated February 19, 1999, was approved previously by the Director of the Federal Register as of February 8, 2000 (65 FR 213, January 4, 2000).

(4) Copies may be obtained from Airbus, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

Note 2: The subject of this AD is addressed in French airworthiness directive 2002–132(B), dated March 20, 2002.

Effective Date

(h) This amendment becomes effective on December 20, 2004.

Issued in Renton, Washington, on November 1, 2004.

Ali Bahrami,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 04–24930 Filed 11–12–04; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 2000–NM–169–AD; Amendment 39–13860; AD 2004–23–05]

RIN 2120–AA64

Airworthiness Directives; McDonnell Douglas Model DC–9–81 (MD–81), DC–9–82 (MD–82), DC–9–83 (MD–83), DC–9–87 (MD–87), and Model MD–88 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain McDonnell Douglas airplanes, that requires reversing the ground stud installation of the main battery, and installing a new nameplate on the cover of the battery. This action is necessary to prevent damage to equipment or possible fire in the electrical/electronics equipment compartment due to electrical arcing between the ground stud of the main battery and adjacent structure. This action is intended to address the identified unsafe condition.

DATES: Effective December 20, 2004.

The incorporation by reference of a certain publication listed in the regulations is approved by the Director of the Federal Register as of December 20, 2004.

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplanes, Long Beach Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Data and Service Management, Dept. C1–L5A (D800–0024). This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

FOR FURTHER INFORMATION CONTACT: Elvin Wheeler, Aerospace Engineer, Systems and Equipment Branch, ANM–130L, FAA, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California 90712–4137; telephone (562) 627–5344; fax (562) 627–5210.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain McDonnell Douglas airplanes was published in the **Federal Register** on June 18, 2003 (68 FR 36518). That action proposed to require reversing the ground stud installation of the main battery, and installing a new nameplate on the cover of the battery.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Support for Proposed AD

One commenter supports the proposed AD.

Request To Allow Equivalent Nameplates

One commenter requests that we allow operators to use equivalent nameplates in lieu of the original equipment manufacturer (OEM) nameplates. The commenter states that, in an effort to reduce costs, many operators manufacture equivalent nameplates with identical information, which they install at the location(s) specified in the applicable service bulletin(s) referenced in the proposed AD.

We acknowledge the operator's desire to minimize cost; however, we do not consider it appropriate to include various provisions in an AD to accommodate individual operators' unique methods for complying with the AD. However, according to paragraph (c) of this AD, operators may request to use a unique nameplate as an alternative method of compliance. We have not changed this final rule regarding this issue.

Request To Revise the Cost Impact Figures

The same commenter states that, while the proposed AD specifies two work hours for the proposed actions, the referenced service bulletin specifies three work hours for those actions. The commenter asserts that the figure specified in the referenced service bulletin more accurately reflects the time necessary to accomplish those actions.

From this comment, we infer that the commenter is requesting that we revise the Cost Impact section of the proposed AD. We do not agree. As stated in the preamble of the proposed AD, the cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. Those figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions. The work-hour figure listed in the referenced service bulletin includes time for access and close up. However, as we explain below, we have revised the labor rate used in the proposed AD.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the change previously described. The FAA has determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

Labor Rate Increase

After the proposed AD was issued, we reviewed the figures we have used over the past several years to calculate AD costs to operators. To account for various inflationary costs in the airline industry, we find it necessary to increase the labor rate used in these calculations from $60 per work hour to $65 per work hour. The cost impact information, below, reflects this increase in the specified hourly labor rate.

Cost Impact

There are approximately 1,224 Model DC–9–81 (MD–81), DC–9–82 (MD–82), DC–9–83 (MD–83), DC–9–87 (MD–87), and Model MD–88 airplanes of the affected design in the worldwide fleet. The FAA estimates that 600 airplanes of U.S. registry will be affected by this AD, that it will take approximately 2 work hours per airplane to accomplish the required actions, and that the average labor rate is $65 per work hour. Required parts will cost approximately $38 per airplane. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be $100,800, or $168 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions. The manufacturer may cover the cost of parts associated with this proposed AD, subject to warranty conditions. Manufacturer warranty remedies also may be available for labor costs associated with this proposed AD. As a result, the costs attributable to the proposed AD may be less than stated above.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

■ Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. Section 39.13 is amended by adding the following new airworthiness directive:

2004–23–05 McDonnell Douglas: Amendment 39–13860. Docket 2000–NM–169–AD.

Applicability: Model DC–9–81 (MD–81), DC–9–82 (MD–82), DC–9–83 (MD–83), DC–9–87 (MD–87), and Model MD–88 airplanes, as listed in McDonnell Douglas Alert Service Bulletin MD80–24A159, Revision 01, dated January 24, 2000; certificated in any category.

Compliance: Required as indicated, unless accomplished previously.

To prevent damage to equipment or possible fire in the electrical/electronics equipment compartment due to electrical arcing between the ground stud of the main battery and adjacent structure; accomplish the following:

Required Actions

(a) Within 1 year after the effective date of this AD, reverse the installation of the ground stud for the main battery and install a new nameplate on the cover of the battery; in accordance with McDonnell Douglas Alert Service Bulletin MD80–24A159, Revision 01, dated January 24, 2000.

Credit for Previously Accomplished Actions

(b) Accomplishment of the actions specified in paragraph (a) of this AD before the effective date of this AD, in accordance with McDonnell Douglas Service Bulletin MD80–24A159, dated March 15, 1996, is considered to be an acceptable method of compliance with paragraph (a) of this AD.

Alternative Methods of Compliance

(c) In accordance with 14 CFR 39.19, the Manager, Los Angeles Aircraft Certification Office, FAA, is authorized to approve alternative methods of compliance for this AD.

Incorporation by Reference

(d) The actions shall be done in accordance with McDonnell Douglas Alert Service Bulletin MD80–24A159, Revision 01, dated January 24, 2000. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Boeing Commercial Airplanes, Long Beach Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Data and Service Management, Dept. C1–L5A (D800–0024). Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

Effective Date

(e) This amendment becomes effective on December 20, 2004.

Issued in Renton, Washington, on November 1, 2004.

Ali Bahrami,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 04–24932 Filed 11–12–04; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 2002–NM–324–AD; Amendment 39–13862; AD 2004–23–07]

RIN 2120–AA64

Airworthiness Directives; Boeing Model 737–100, –200, –300, –400, and –500 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD), applicable to certain Boeing Model 737 series airplanes, that currently requires modification of certain fuselage support structure for the number 2 galley. This amendment requires modification of the same support structure using new methods based on new calculations. This amendment also expands the applicability of the existing AD to include additional airplanes. The actions specified by this AD are intended to prevent the galley from shifting, which could limit access to the galley door during emergencies, and result in injury to passengers and flightcrew. This action is intended to address the identified unsafe condition.

DATES: Effective December 20, 2004.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of December 20, 2004.

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124–2207. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

FOR FURTHER INFORMATION CONTACT: Keith Ladderud, Aerospace Engineer, ANM–150S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 917–6435; fax (425) 917–6590.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) by superseding AD 95–02–08, amendment 39–9127 (60 FR 8295, February 14, 1995), which is applicable to certain Boeing Model 737 series airplanes, was published in the **Federal Register** on May 7, 2004 (69 FR 25505). The action proposed to require modification of certain fuselage support structure for the number 2 galley. The action also proposed to expand the applicability of the existing AD to include additional airplanes.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Requests To Add an Option To Reduce the Weight Limit of the Galley as an Alternative to the Modification

One commenter states that the wording in the proposed AD and the referenced service bulletin is such that, if the allowable operating weight limit of a given airplane's galley is above a certain threshold value, the proposed modification would be required. The commenter suggests that the proposed AD specify that if a galley has a weight limit above the threshold value, the operator be given the option of reducing the weight limit to the threshold value and re-placarding the galley with the new limit, instead of modifying the airplane.

Another commenter proposes an option be included for operators to reduce the total weight limit of the galley, as opposed to doing the structural modification. The commenter adds that, for all airplanes other than Group 1, the proposed AD forces the operator to use Table A in the referenced service bulletin to determine the structural configuration of the airplane. Based on that configuration, and the allowable galley weight limit, the operator will do the applicable corrective action. The commenter proposes that the FAA specify a weight limit for all airplane groups which is similar to the Group 1 airplanes listed in the proposed AD. The commenter notes that, by doing this, the operator will have the option of either doing the modification and maintaining the current galley weight limit, or reducing the galley weight limit and avoiding the expensive modification.

We agree. We have added a new paragraph (d) to this AD that allows reducing the galley weight limit to 995 pounds or less as an alternative to doing the required modification. The reduction in the galley weight limit will require re-placarding to specify the maximum capacity limit of 995 pounds for the galley. If necessary, re-placarding is required to specify the load limit for individual compartments, to ensure that the total of the individual compartment weights does not exceed the maximum capacity for the galley.

Request To Change Applicability

One commenter states that the applicability section in the proposed AD specifies ''as listed in Boeing Special Attention Service Bulletin 737–53–1154, Revision 1, dated October 3, 2002,'' and paragraph (b) of the proposed AD requires doing the proposed modification within 18 months, per the referenced service bulletin. The commenter adds that the first step specified in the service bulletin is to determine the maximum operating weight of the number 2 galley; the proposed modification is only necessary on airplanes with that galley, and that have an allowable operating weight of more than 995 pounds. The commenter suggests adding further description to the applicability section of the proposed AD to avoid unnecessary research and inspection. The commenter also adds that the applicability specified in AD 95–02–08 includes a description of the galley

weight requirements which is similar to the requirements in this proposed AD.

We agree that the applicability section in this AD could be further clarified. We have changed that section to specify that the proposed AD is applicable to airplanes equipped with intercostal support structures at stringer 5R and having a number 2 galley weight that exceeds 995 pounds (including any attached equipment that imposes loads on the galley).

Request for Changes to Paragraph (c)

One commenter states that it would be helpful if the airplanes referenced in paragraph (c) of the proposed AD are identified. The commenter adds that there will be airplanes that are different from the specified configuration and those airplanes can be addressed in the alternative methods of compliance process.

We do not agree. We have determined that the service bulletin clearly identifies the specific group associated with each airplane in this AD. Identifying each airplane that has been modified, as noted in paragraph (c)(2) of this AD, would not relieve any burden on operators because we would still rely on operators to determine if the airplane was modified per the original issue of the referenced service bulletin. No change to the AD is made in this regard.

The same commenter asks that paragraph (c) be changed from ''* * * do the modification in paragraph (b) of this AD * * *'' to ''* * * modify the upper attachment support structure of galley 2 from body station 344 to 360 (inclusive) between right stringers 3 and 7.'' The commenter states that this change would prevent confusion.

We agree; we have changed paragraph (c) of this AD, as specified above, for clarification.

Conclusion

After careful review of the available data, including the comments noted above, we have determined that air safety and the public interest require the adoption of the rule with the changes previously described. These changes will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

There are approximately 583 airplanes of the affected design in the worldwide fleet. We estimate that 170 airplanes of U.S. registry will be affected by this AD.

The new actions that are required by this AD will take between 8 and 22 work hours per airplane to accomplish, depending on the airplane's configuration. The average labor rate is $65 per work hour. Required parts will cost between $5,200 and $23,790 per airplane, depending on the airplane's configuration. Based on these figures, the cost impact of the requirements of this AD on U.S. operators is estimated to be between $5,720 and $25,220 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

■ Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. Section 39.13 is amended by removing amendment 39–9127 (60 FR 8295, February 14, 1995), and by adding a new airworthiness directive (AD), amendment 39–13862, to read as follows:

2004–23–07 Boeing: Amendment 39–13862. Docket 2002-NM–324-AD. Supersedes AD 95–02–08, Amendment 39–9127.

Applicability: Model 737–100, –200, –300, –400, and –500 series airplanes; certificated in any category; equipped with intercostal support structures at stringer 5R and having a number 2 galley weight of 996 pounds or more (including any attached equipment that imposes loads on the galley).

Compliance: Required as indicated, unless accomplished previously.

To prevent the galley from shifting, which could limit access to the galley door during emergencies, and result in injury to passengers and flightcrew, accomplish the following:

Service Bulletin Reference

(a) The term ''service bulletin,'' as used in this AD, means the Accomplishment Instructions of Boeing Special Attention Service Bulletin 737–53–1154, Revision 1, dated October 3, 2002.

Modification

(b) Except as provided by paragraph (c) or (d) of this AD, as applicable: Within 18 months after the effective date of this AD, modify the upper attachment support structure of galley 2 from body station 344 to 360 inclusive, between right stringers 3 and 7, in accordance with the service bulletin.

(c) For airplanes listed in paragraphs (c)(1) through (c)(3) of this AD: Within 18 months after the effective date of this AD, modify the upper attachment support structure of galley 2 from body station 344 to 360 inclusive, between right stringers 3 and 7. Do the modification in accordance with a method approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA; or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company Designated Engineering Representative (DER) who has been authorized by the Manager, Seattle ACO, to make such findings. For a modification method to be approved, the approval must specifically reference this AD.

(1) Airplanes listed as Group 1 in the service bulletin, on which the galley has an allowable operating weight of 996 pounds or more.

(2) Airplanes listed as Group 2 in the service bulletin, on which the modifications specified in the initial release of the service bulletin have been incorporated.

(3) Airplanes listed as Groups 3 through 9 in the service bulletin for which the service bulletin specifies to contact Boeing.

Alternative to Accomplishing Modification

(d) Instead of accomplishing the modification required by paragraph (b) or (c) of this AD, as applicable: Within 18 months after the effective date of this AD, do the actions specified in paragraphs (d)(1), (d)(2), and (d)(3) of this AD, in accordance with a method approved by the Manager, Seattle ACO; or in accordance with data meeting the type certification basis of the airplane approved by a Boeing Company DER who has been authorized by the Manager, Seattle ACO, to make such findings.

(1) Reduce the total weight limit of the galley to a maximum capacity of 995 pounds or less.

(2) Re-placard to specify the maximum capacity limit for the galley.

(3) Re-placard to specify the load limit for individual compartments, as necessary, to ensure that the total of the individual compartment weights does not exceed the maximum capacity for the galley.

Alternative Methods of Compliance

(e) In accordance with 14 CFR 39.19, the Manager, Seattle ACO, is authorized to approve alternative methods of compliance (AMOCs) for this AD.

Incorporation by Reference

(f) Unless otherwise specified in this AD, the actions shall be done in accordance with Boeing Special Attention Service Bulletin 737–53–1154, Revision 1, dated October 3, 2002. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Boeing Commercial Airplanes, P.O. Box 3707, Seattle, Washington 98124–2207. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

Effective Date

(g) This amendment becomes effective on December 20, 2004.

Issued in Renton, Washington, on November 1, 2004.

Ali Bahrami,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 2002–NM–346–AD; Amendment 39–13864; AD 2004–23–09]

RIN 2120–AA64

Airworthiness Directives; Empresa Brasileira de Aeronautica S.A. (EMBRAER) Model EMB–135 and –145 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD), applicable to certain EMBRAER Model EMB–135 and –145 series airplanes, that currently requires determining whether a defective auxiliary power unit (APU) exhaust silencer is installed on the airplane; and corrective actions if necessary. For certain airplanes, this amendment requires modification of the APU exhaust silencer, and reidentification of the part number for the APU exhaust silencer once the modification is accomplished. For certain other airplanes, this amendment requires repetitive inspections to determine the structural integrity of the APU exhaust silencer; corrective actions, if necessary; eventual modification of the APU exhaust silencer, which terminates the repetitive inspections; and reidentification of the part number for the APU exhaust silencer once the modification is accomplished. This amendment also adds airplanes to the applicability of the existing AD. The actions specified by this AD are intended to prevent separation of the aft baffle assembly from the APU exhaust silencer and consequent separation of the assembly from the airplane, which could cause damage to other airplanes during takeoff and landing operations, or injury to people on the ground. This action is intended to address the identified unsafe condition.

DATES: Effective December 20, 2004.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of December 20, 2004.

ADDRESSES: The service information referenced in this AD may be obtained from Empresa Brasileira de Aeronautica S.A. (EMBRAER), P.O. Box 343—CEP 12.225, Sao Jose dos Campos—SP, Brazil. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

FOR FURTHER INFORMATION CONTACT: Todd Thompson, Aerospace Engineer, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–1175; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) by superseding AD 2002–16–06, amendment 39–12845 (67 FR 52398, August 12, 2002), which is applicable to certain EMBRAER Model EMB–135 and –145 series airplanes, was published in the **Federal Register** on April 6, 2004 (69 FR 17993). For certain airplanes, the action proposed to require modification of the APU exhaust silencer, and reidentification of the part number for the APU exhaust silencer once the modification is accomplished. For certain other airplanes, the action proposed to require repetitive inspections to determine the structural integrity of the APU exhaust silencer; corrective actions, if necessary; eventual modification of the APU exhaust silencer, which terminates the repetitive inspections; and reidentification of the part number for the APU exhaust silencer once the modification is accomplished. That action also proposed to add airplanes to the applicability of the existing AD.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Request To Accomplish Terminating Action Without First Doing the Inspections

The commenter, an operator, requests that the proposed AD be revised to allow operators to ''bypass'' the inspections in Part I of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003, and do just the modification in Part II of the Accomplishment Instructions of that service bulletin. The modification is the terminating action

for the repetitive inspections in the proposed AD.

We agree with the commenter's request to allow operators to do just the modification in Part II of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, instead of first doing the inspections in Part I of the Accomplishment Instructions. The purpose of this AD is to require operators to modify the auxiliary power unit (APU) exhaust silencer. The inspections specified in paragraphs (c) and (d) of the proposed AD are relieving actions that allow airplanes that do not have defective APU exhaust silencers to continue operating for a specified period of time before operators perform the terminating modification. The inspections are the means of determining whether an APU exhaust silencer is defective. We have revised paragraphs (c) and (d) of this AD to specify that operators that have done the terminating modification required by paragraph (e) of this AD do not have to do the inspections required by paragraphs (c) and (d).

Request for Credit for Accomplishment of Previous Revisions of Service Information

The commenter requests that the proposed AD be revised to give credit for actions accomplished previously per the original issue of EMBRAER Service Bulletin 145–49–0021, dated July 11, 2002; or per Change 01 of that service bulletin, dated July 31, 2002.

We agree with the commenter's request. We have determined that the Accomplishment Instructions are essentially the same in the original issue, Change 01, Change 02, and Change 03, of Service Bulletin 145–49–0021. The primary difference between the change levels is the effectivity of the airplanes. We have revised paragraph (g) of this final rule to include the original issue and Change 01 of Service Bulletin 145–49–0021 as additional appropriate sources of service information.

Conclusion

After careful review of the available data, including the comments noted above, we have determined that air safety and the public interest require the adoption of the rule with the changes previously described. We have determined that these changes will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

There are approximately 394 airplanes of U.S. registry that will be affected by this AD.

The repetitive inspections specified in Part I of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; and EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; that are required by this AD will take approximately 1 work hour per airplane to accomplish, at an average labor rate of $65 per work hour. Based on these figures, the cost impact of the repetitive inspections on U.S. operators is estimated to be $65 per airplane, per inspection cycle.

The modification, including the part number reidentification, specified in Part I of EMBRAER Service Bulletin 145–49–0021, Change 03; and EMBRAER Service Bulletin 145LEG–49–0001, Change 01; will take approximately 4 work hours per airplane to accomplish, at an average labor rate of $65 per work hour. Required parts will be supplied by the part manufacturer at no cost to operators. Based on these figures, the cost impact of the modification is estimated to be $102,440, or $260 per airplane.

The modification, including the part number reidentification, specified in Part II of EMBRAER Service Bulletin 145–49–0021, Change 03, will take approximately 1 work hour per airplane to accomplish, at an average labor rate of $65 per work hour. Based on these figures, the cost impact of the modification is estimated to be $65 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

■ Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. Section 39.13 is amended by removing amendment 39–12845 (67 FR 52398, August 12, 2002), and by adding a new airworthiness directive (AD), amendment 39–13864, to read as follows:

2004–23–09 Empresa Brasileira De Aeronautica S.A. (EMBRAER): Amendment 39–13864. Docket 2002–NM–346–AD. Supersedes AD 2002–16–06, amendment 39–12845.

Applicability: Model EMB–135BJ series airplanes, as listed in EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; and Model EMB–135 and –145 series airplanes, as listed in EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; certificated in any category.

Compliance: Required as indicated, unless accomplished previously.

To prevent separation of the aft baffle assembly from the APU exhaust silencer and consequent separation of the assembly from the airplane, which could cause damage to other airplanes during takeoff and landing operations, or injury to people on the ground, accomplish the following:

Modification

(a) For airplanes that have incorporated EMBRAER Alert Service Bulletin 145–49–A021, Change 01, dated May 13, 2002: Within 1,500 flight hours after the effective date of this AD, install a spacer and bolts (including torquing the bolts) in the APU exhaust silencer assembly per the Accomplishment Instructions of EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002, (for Model EMB–135BJ series airplanes); or Part II of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003, (for Model EMB–135 and –145 series airplanes); as applicable.

Reidentification of Modified Part

(b) For airplanes that have incorporated EMBRAER Alert Service Bulletin 145–49–A021, Change 01, dated May 13, 2002: After accomplishment of the modification required by paragraph (a) of this AD, before further flight, change the part number of the modified APU exhaust silencer assembly from 4503801B to 4503801C per the Accomplishment Instructions of EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; or Part II of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; as applicable.

Inspections

(c) For airplanes that have not incorporated EMBRAER Alert Service Bulletin 145–49–A021, Change 01, dated May 13, 2002; or that have not accomplished the modification required by paragraph (e) of this AD: Within 500 flight hours or 3 months after the effective date of this AD, whichever is first, do a one-time general visual inspection of the APU exhaust silencer to determine if the aft baffle is flush with the end of the cylindrical portion, and an inspection of the movement of the cylindrical portion of the APU exhaust silencer shell assembly, per the Accomplishment Instructions of EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; or Part I of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; as applicable.

(1) If the APU exhaust silencer assembly passes the inspections: Do the actions in paragraph (d) of this AD.

(2) If the APU exhaust silencer assembly does not pass one or both inspections: Before further flight, secure or remove the affected parts from the silencer, and placard the APU as ''Inoperative'' per the Accomplishment Instructions of the applicable service bulletin. No further action is required unless the APU is reactivated. To reactivate the APU: Before further flight, do the actions required by paragraph (e) of this AD.

Note 1: For the purposes of this AD, a general visual inspection is defined as: ''A visual examination of an interior or exterior area, installation, or assembly to detect obvious damage, failure, or irregularity. This level of inspection is made from within touching distance unless otherwise specified. A mirror may be necessary to enhance visual access to all exposed surfaces in the inspection area. This level of inspection is made under normally available lighting conditions such as daylight, hangar lighting, flashlight, or droplight and may require removal or opening of access panels or doors. Stands, ladders, or platforms may be required to gain proximity to the area being checked.''

Repetitive Inspections

(d) For airplanes that have not incorporated EMBRAER Alert Service Bulletin 145–49–A021, Change 01, dated May 13, 2002; or that have not accomplished the modification required by paragraph (e) of this AD: After doing the inspections required by paragraph (c) of this AD, before further flight, do a mechanical integrity inspection of the APU exhaust silencer assembly per the Accomplishment Instructions of EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; or Part I of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; as applicable.

(1) If the APU exhaust silencer assembly passes the inspection required by paragraph (d) of this AD: Do the same steps for the mechanical integrity inspection required by paragraph (d) of this AD in a counter-clockwise direction, per the Accomplishment Instructions of the applicable service bulletin. Repeat the inspections required by paragraphs (d) and (d)(1) of this AD thereafter at intervals not to exceed 500 flight hours or 3 months, whichever is first. The inspections may be repeated up to two times before accomplishment of the requirements of paragraph (e) of this AD.

(2) If the APU exhaust silencer assembly does not pass the inspection required by paragraph (d) of this AD: Before further flight, disassemble the APU exhaust silencer assembly or placard the APU as ''Inoperative'' per the Accomplishment Instructions of the applicable service bulletin. No further action is required unless the APU is reactivated. To reactivate the APU: Before further flight, do the actions required by paragraph (e) of this AD.

Modification/Terminating Action

(e) For airplanes that have not incorporated EMBRAER Alert Service Bulletin 145–49–A021, Change 01, dated May 13, 2002: Within 1,500 flight hours or 12 months after the effective date of this AD, whichever is first, except as provided by paragraphs (c)(2) and (d)(2) of this AD, do all of the applicable actions per the Accomplishment Instructions of EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; or Part I of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; as applicable. This constitutes terminating action for the repetitive inspections required by paragraph (d) of this AD.

Reidentification of Modified Part

(f) For airplanes that have not incorporated EMBRAER Alert Service Bulletin 145–49–A021, Change 01, dated May 13, 2002: After accomplishment of the modification required by paragraph (e) of this AD, before further flight, change the part number of the modified APU exhaust silencer assembly from 4503801B to 4503801C per the Accomplishment Instructions of EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; or Part I of the Accomplishment Instructions of EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; as applicable.

Actions Previously Accomplished

(g) Accomplishment of the specified actions before the effective date of this AD per EMBRAER Service Bulletin 145–49–0021, dated July 11, 2002; Change 01, dated July 31, 2002; or Change 02, dated November 12, 2002; is considered acceptable for compliance with the applicable requirements of paragraphs (a), (b), (c), (d), (e), and (f) of this AD.

Parts Installation

(h) As of the effective date of this AD, no person may install on any airplane an APU exhaust silencer having P/N 4503801B.

Alternative Methods of Compliance

(i) In accordance with 14 CFR 39.19, the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, is authorized to approve alternative methods of compliance for this AD.

Incorporation by Reference

(j) Unless otherwise specified in this AD, the actions must be done in accordance with EMBRAER Service Bulletin 145LEG–49–0001, Change 01, dated August 29, 2002; or EMBRAER Service Bulletin 145–49–0021, Change 03, dated September 12, 2003; as applicable. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Empresa Brasileira de Aeronautica S.A. (EMBRAER), P.O. Box 343—CEP 12.225, Sao Jose dos Campos—SP, Brazil. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

Note 2: The subject of this AD is addressed in Brazilian airworthiness directive 2002–05–01R2, dated January 6, 2003.

Effective Date

(k) This amendment becomes effective on December 20, 2004.

Issued in Renton, Washington, on November 1, 2004.

Kalene C. Yanamura,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 30429 ; Amdt. No. 3109]

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective November 15, 2004. The compliance date for each SIAP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of November 15, 2004.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located;

3. The Flight Inspection Area Office which originated the SIAP; or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Boulevard, Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Forms 8260–3, 8260–4, and 8260–5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

The Rule

This amendment to part 97 is effective upon publication of each separate SIAP as contained in the transmittal. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (NFDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making them effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air traffic control, Airports, Incorporation by reference, and Navigation (air).

Issued in Washington, DC on November 5, 2004.

James J. Ballough,

Director, Flight Standards Service.

Adoption of the Amendment

■ Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

Effective December 23, 2004

Fargo, ND, Hector Intl, RADAR–1, Amdt 11

Effective January 20, 2005

Mobile, AL, Mobile Downtown, ILS OR LOC RWY 32, Amdt 1

BILLING CODE 4910–13–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

15 CFR Part 744

[Docket No.041103304–4304–01]

RIN 0694–AD12

Entity List: Removal of Four Russian Entities

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Final rule.

SUMMARY: This final rule amends the Export Administration Regulations by removing four Russian entities from the Entity List, and by removing certain license requirements for exports and reexports to these entities, in conformance with a determination of the Department of State to remove nonproliferation measures imposed on these entities in 1998 and 1999.

DATES: This rule is effective November 15, 2004.

ADDRESSES: You may submit comments, identified by RIN 0694–AD12, by any of the following methods:

- *E-mail: scook@bis.doc.gov.* Include ''RIN 0694–AD12'' in the subject line of the message.
- *Fax:* (202)482–3355
- *Mail or Hand Delivery/Courier:* Sharron Cook, U.S. Department of Commerce, Bureau of Industry and Security, Regulatory Policy Division, 14th & Pennsylvania Avenue, NW., Room 2705, Washington, DC 20230, ATTN: RIN 0694–AD12.

FOR FURTHER INFORMATION CONTACT: Eileen M. Albanese, Office of Exporter Services, Bureau of Industry and Security, Telephone: (202) 482–0436.

SUPPLEMENTARY INFORMATION:

Background

In 1998 and 1999, the Department of Commerce imposed license requirements on four Russian entities, under section 744.10 of the Export Administration Regulations (EAR), in conformance with determinations by the Department of State that these entities had engaged in nuclear or missile technology proliferation activities that required the imposition of measures pursuant to Executive Order 12938, as amended (''Proliferation of Weapons of Mass Destruction''). These entities were added to the Entity List, set forth in Supplement No. 4 to part 744 of the EAR, as follows:

1. Europalace 2000
2. Grafit (aka State Scientific Research Institute of Graphite or NIIGRAFIT)

3. MOSO Company

4. The Scientific Research and Design Institute of Power Technology (aka NIKIET, Research and Development Institute of Power Engineering (RDIPE), and ENTEK).

The Department of State made its determination with regard to, and imposed nonproliferation measures against, Europalace 2000, Grafit, and MOSO Company on July 30, 1998 (63 FR 42089). BIS imposed conforming license requirements on these three entities under the EAR on July 29, 1998 (63 FR 40363). The Department of State made its determination with regard to, and imposed nonproliferation measures against, the Scientific Research and Design Institute of Power Technology on January 8, 1999 (64 FR 2935), and BIS imposed license requirements on this entity under the EAR on March 26, 1999 (64 FR 14605).

On March 23, 2004, the Department of State determined that it is in the foreign policy and national security interests of the United States to remove nonproliferation measures imposed on these four Russian entities (69 FR 17262). In conformance with this determination, this final rule removes the license requirements under section 744.10 for exports and reexports to these entities, and removes these entities from the Entity List.

The removal of these entities from the Entity List eliminates the license requirements under section 744.10 of the EAR for exports and reexports to these entities. However, license requirements for exports and reexports set forth in part 744 still apply to these entities when the exporter or reexporter knows that the item will be used in a prohibited activity. BIS strongly urges the use of Supplement No. 3 to part 732 of the EAR, ''BIS's 'Know Your Customer' Guidance and Red Flags'' when exporting or reexporting.

Although the Export Administration Act expired on August 20, 2001, Executive Order 13222 of August 17, 2001 (66 FR 44025, August 22, 2001), extended by the Notice of August 6, 2004, 69 FR 48763 (August 10, 2004), continues the EAR in effect under the International Emergency Economic Powers Act.

Rulemaking Requirements

1. This final rule has been determined to be not significant for purposes of E.O. 12866.

2. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with a collection of information, subject to the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) (PRA), unless that collection of information displays a currently valid Office of Management and Budget (OMB) Control Number. This rule involves a collection of information subject to the PRA. This collection has been approved by OMB under control number 0694–0088, ''Multi-Purpose Application,'' which carries a burden hour estimate of 58 minutes for a manual or electronic submission. Send comments regarding these burden estimates or any other aspect of these collections of information, including suggestions for reducing the burden, to David Rostker, Office of Management and Budget (OMB), by e-mail to *David_Rostker@omb.eop.gov,* or by fax to (202)395–7285; and to the Office of Administration, Bureau of Industry and Security, Department of Commerce, 14th and Pennsylvania Avenue, NW., Room 6883, Washington, DC 20230.

3. This rule does not contain policies with Federalism implications as that term is defined under E.O. 13132.

4. The provisions of the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed rulemaking, the opportunity for public participation, and a delay in effective date, are inapplicable because this regulation involves a military and foreign affairs function of the United States (5 U.S.C. 553(a)(1)). Further, no other law requires that a notice of proposed rulemaking and an opportunity for public comment be given for this final rule. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule under the Administrative Procedure Act or by any other law, the analytical requirements of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) are not applicable.

Therefore, this regulation is issued in final form. Although there is no formal comment period, public comments on this regulation are welcome on a continuing basis. Please refer to the **ADDRESSES** section cited above for comment submission.

List of Subjects in 15 CFR Part 744

Exports, Foreign trade, Reporting and recordkeeping requirements.

■ Accordingly, part 744 of the Export Administration Regulations (15 CFR parts 730–799) is amended as follows:

PART 744—[AMENDED]

■ 1. The authority citation for 15 CFR part 744 continues to read as follows:

Authority: 50 U.S.C. app. 2401 *et seq.*; 50 U.S.C. 1701 *et seq.*; 22 U.S.C. 3201 *et seq.*; 42 U.S.C. 2139a; Sec. 901–911, Pub. L. 106–387; Sec. 221, Pub. BILLING CODE 3510–33–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 180

[Docket No. 2004F–0066]

Food Additives Permitted in Food on an Interim Basis or in Contact With Food Pending Additional Study; Mannitol

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to permit the manufacture of mannitol by fermentation of sugars such as fructose, glucose, or maltose by the action of the microorganism *Lactobacillus intermedius* (*fermentum*). This action is in response to a petition filed by zuChem, Inc.

DATES: This rule is effective November 15, 2004. Submit written or electronic objections and requests for a hearing by December 15, 2004.

ADDRESSES: You may submit written objections and requests for a hearing,

identified by Docket No. 2004F–0066, by any of the following methods:

- Federal eRulemaking Portal: *http://www.regulations.gov*. Follow the instructions for submitting comments.
- Agency Web site: *http://www.fda.gov/dockets/ecomments*. Follow the instructions for submitting comments on the agency Web site.
- E-mail: *fdadockets@oc.fda.gov*. Include Docket No. 2004F–0066 in the subject line of your e-mail message.
- FAX: 301–827–6870.
- Mail/Hand delivery/Courier [For paper, disk, or CD-ROM submissions]: Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. All objections received will be posted without change to *http://www.fda.gov/ohrms/dockets/default.htm*, including any personal information provided. For detailed instructions on submitting objections, see the ''Objections'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to read background documents or comments received, go to *http://www.fda.gov/ohrms/dockets/default.htm* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Celeste Johnston, Center for Food Safety and Applied Nutrition (HFS–265), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740–3835, 301–436–1282.

SUPPLEMENTARY INFORMATION:

I. Background

In a notice published in the **Federal Register** of February 19, 2004 (69 FR 7759), FDA announced that a food additive petition (FAP 4A4754) had been filed by zuChem, Inc., c/o Hyman, Phelps and McNamara, P.C., 700 13th Street NW., Washington, DC 20005. The petition proposed to amend the food additive regulations in § 180.25 *Mannitol* (21 CFR 180.25) to permit the manufacture of mannitol by fermentation of sugars such as fructose, glucose, and maltose by the action of the microorganism *L. intermedius* (*fermentum*).

In 1973, the agency proposed to affirm mannitol as generally recognized as safe (GRAS) based on the findings by the Select Committee on GRAS Substances from the Life Sciences Research Office of the Federation of American Societies for Experimental Biology (38 FR 20046, July 26, 1973). In response to the proposal, the agency received comments, including information raising questions about the safety of mannitol. Rather than affirm the GRAS status of mannitol, the agency instead decided to establish an interim food additive regulation for mannitol, pending additional study of the ingredient (39 FR 34178, September 23, 1974) and based on the conclusion that there would be no increased risk to the public health to continue existing uses and levels of use of mannitol while additional studies were carried out. The regulation was subsequently amended (61 FR 7990, March 1, 1996) to permit the manufacture of mannitol by fermentation of sugars or sugar alcohols by the action of the yeast *Zygosaccharomyces rouxii*.

The proposed fermentation organism, *L. fermentum*, is currently used in various food applications. For example, strains of *L. fermentum* are used in sourdough bread and pressed curd cheeses, and FDA has affirmed as GRAS a urease preparation from *L. fermentum* for use in the manufacture of wine. The petitioner has submitted data in support of the microbiological safety of mannitol produced by this bacterium. In addition, the petitioner has provided detailed information on the process used to produce mannitol by this fermentation method, including information on the purification steps that are used. FDA concludes, having considered the evidence concerning the production organism and the purification procedures, that *L. intermedius* (*fermentum*) will not be present in the final product and can be safely used in the fermentation of fructose and other sugars to produce mannitol provided that the purity of the culture is maintained, and that a nonpathogenic, nontoxicogenic strain of *L. intermedius* (*fermentum*) is used (Ref. 1).

II. Conclusion

The current interim regulation for mannitol specifies manufacturing procedures that do not include the proposed fermentation process. FDA has reviewed data and information in the petition on the chemical equivalence of mannitol produced using *L. intermedius* (*fermentum*) and mannitol produced by the currently-regulated methods. Based on its review, the agency concludes that mannitol manufactured by fermentation of sugars by the action of *L. intermedius* (*fermentum*) is equivalent to mannitol produced by the currently-regulated methods as described in § 180.25. In addition, mannitol manufactured by the proposed fermentation process will have the same intended technical effect and uses as mannitol produced by the currently-regulated methods. Consequently, there will be no change in exposure to mannitol (Refs. 2 and 3). Therefore, FDA concludes that § 180.25 should be amended as set forth in this document.

III. Public Disclosure

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed (see **FOR FURTHER INFORMATION CONTACT**). As provided in § 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

IV. Environmental Impact

The agency has previously considered the environmental effects of this rule as announced in the notice of filing for FAP 4A4754. No new information or comments have been received that would affect the agency's previous determination that there is no significant impact on the human environment and that an environmental impact statement is not required.

V. Paperwork Reduction Act of 1995

This final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

VI. Objections

Any person who will be adversely affected by this regulation may file with the Division of Dockets Management (see **ADDRESSES**) written or electronic objections (see **DATES**). Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event

that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents are to be submitted and are to be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Division of Dockets Management (see **ADDRESSES**) between 9 a.m. and 4 p.m., Monday through Friday.

VII. References

The following references have been placed on display in the Division of Dockets Management (see **ADDRESSES**) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday.

1. FDA memorandum from P. C. DeLeo, Division of Petition Review, to C. Johnston, Division of Petition Review, April 21, 2004.

2. FDA memorandum from D. E. Folmer, Division of Petition Review, to C. Johnston, Division of Petition Review, April 20, 2004.

3. FDA memorandum from D. E. Folmer, Division of Petition Review, to C. Johnston, Division of Petition Review, July 29, 2004.

■ 2. Section 180.25 is amended by adding paragraph (a)(3) to read as follows:

§ 180.25 Mannitol.

(a) * * *

(3) A pure culture fermentation of sugars such as fructose, glucose, or maltose using the nonpathogenic, nontoxicogenic bacterium *Lactobacillus intermedius* (*fermentum*).

* * * * *

Dated: October 27, 2004.

Leslye M. Fraser,

Director, Office of Regulations and Policy, Center for Food Safety and Applied Nutrition.

[FR Doc. 04–25243 Filed 11–12–04; 8:45 am]

BILLING CODE 4160–01–S

DEPARTMENT OF JUSTICE

28 CFR Part 0

[AG Order No. 2738–2004]

Delegations of Authority; Federal Bureau of Investigation

AGENCY: Department of Justice.

ACTION: Final rule.

SUMMARY: Recent consultations between criminal law enforcement investigative agencies and the Department of Justice have suggested the need to simplify and clarify the delegations of authority to the Federal Bureau of Investigation to investigate any criminal violations of law in certain foreign counterintelligence areas. This final rule changes the language of the delegations of authority to eliminate confusion about the scope of the delegation.

EFFECTIVE DATE: November 15, 2004.

FOR FURTHER INFORMATION CONTACT: Bruce C. Swartz, Deputy Assistant Attorney General, Criminal Division, United States Department of Justice, Washington, DC 20530 (202) 514–2333 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: The Attorney General has authority to investigate any violation of the criminal laws of the United States. 28 U.S.C. 533. As a general proposition, the Attorney General has delegated general investigative authority to the Federal Bureau of Investigation. 28 CFR 0.85(a). Recent consultations among investigative agencies have indicated that confusion has been created by the use of limiting language in the formal delegations of authority within the Department. The limitation of the Federal Bureau of Investigation's authority to the extent that investigative authority is assigned elsewhere was not intended as other than an internal management tool. The Department has determined that the limitation should be stated more clearly and applicable only when statute or other authority, such as an Executive Order or Attorney General delegation, assigns investigative authority exclusively to another agency or component. Accordingly, this final rule amends the language in 28 CFR part 0.

Administrative Procedure Act

This rule relates to matters of agency management and personnel and, therefore, is exempt from the usual requirements of prior notice and comment and a 30-day delay in effective date. *See* 5 U.S.C. 553(a)(2) and (d). The rule only alters an internal delegation to the Federal Bureau of Investigation.

Regulatory Flexibility Act

The Attorney General, in accordance with the Regulatory Flexibility Act, 5 U.S.C. 605(b), has reviewed this rule and, by approving it, certifies that it will not have a significant economic impact on a substantial number of small entities because it pertains to personnel and administrative matters affecting the Department. Further, a Regulatory Flexibility Analysis is not required for this final rule because the Department was not required to publish a general notice of proposed rulemaking for this matter.

Executive Order 12866

This rule has been drafted and reviewed in accordance with Executive Order 12866, Regulatory Planning and Review, section 1(b), Principles of Regulation. This rule is limited to agency organization, management and personnel matters as described by Executive Order 12866, § 3(d)(3) and, therefore, is not a ''regulation'' or ''rule'' as defined by that Executive Order.

Executive Order 12988

This regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform.

Executive Order 13132

This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 13132, Federalism, the Department has determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions are necessary under the provisions of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.*

Small Business Regulatory Enforcement Fairness Act of 1996

This rule is not a major rule as defined by section 251 of the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), 5 U.S.C. 804. This rule will not result in an

annual effect on the economy of $100 million or more, a major increase in costs or prices, or significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.

This action pertains to agency management, personnel, and organization and does not substantially affect the rights or obligations of non-agency parties. Accordingly, it is not a rule for purposes of the reporting requirement of 5 U.S.C. 801.

Congressional Review Act

This action pertains to agency management, personnel and organization and does not substantially affect the rights or obligations of non-agency parties and, accordingly, is not a ''rule'' as that term is used by the Congressional Review Act (Subtitle E of the Small Business Regulatory Enforcment Fairness Act of 1996 (SBREFA)). Therefore, the reporting requirement of 5 U.S.C. 801 does not apply.

List of Subjects in 28 CFR Part 0

Authority delegations (Government agencies), Government employees, Organization and functions (Government agencies), Whistleblowing.

■ Accordingly, chapter 1 of title 28 of the Code of Federal Regulations is amended as follows:

PART 0—ORGANIZATION OF THE DEPARTMENT OF JUSTICE

■ 1. The authority citation for part 0 continues to read as follows:

Authority: 5 U.S.C. 301; 28 U.S.C. 509, 510, 515–519.

■ 2. In § 0.85, paragraph (a) is amended by removing ''specifically'' and adding in its place ''exclusively,'' and paragraph (d) is revised to read as follows:

§ 0.85 General functions.

* * * * *

(d) Carry out the Presidential directive of September 6, 1939, as reaffirmed by Presidential directives of January 8, 1943, July 24, 1950, and December 15, 1953, designating the Federal Bureau of Investigation to take charge of investigative work in matters relating to espionage, sabotage, subversive activities, and related matters, including investigating any potential violations of the Arms Export Control Act, the Export Administration Act, the Trading with the Enemy Act, or the International Emergency Economic Powers Act, relating to any foreign counterintelligence matter.

* * * * *

Dated: November 5, 2004.

John Ashcroft,

Attorney General.

BILLING CODE 4410–02–M

PENSION BENEFIT GUARANTY CORPORATION

29 CFR Parts 4022 and 4044

Benefits Payable in Terminated Single-Employer Plans; Allocation of Assets in Single-Employer Plans; Interest Assumptions for Valuing and Paying Benefits

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Final rule.

SUMMARY: The Pension Benefit Guaranty Corporation's regulations on Benefits Payable in Terminated Single-Employer Plans and Allocation of Assets in Single-Employer Plans prescribe interest assumptions for valuing and paying benefits under terminating single-employer plans. This final rule amends the regulations to adopt interest assumptions for plans with valuation dates in December 2004. Interest assumptions are also published on the PBGC's Web site (*http://www.pbgc.gov*).

EFFECTIVE DATES: December 1, 2004.

FOR FURTHER INFORMATION CONTACT: Harold J. Ashner, Assistant General Counsel, Office of the General Counsel, Pension Benefit Guaranty Corporation, 1200 K Street, NW., Washington, DC 20005, 202–326–4024. (TTY/TDD users may call the Federal relay service toll-free at 1–800–877–8339 and ask to be connected to 202–326–4024.)

SUPPLEMENTARY INFORMATION: The PBGC's regulations prescribe actuarial assumptions—including interest assumptions—for valuing and paying plan benefits of terminating single-employer plans covered by title IV of the Employee Retirement Income Security Act of 1974. The interest assumptions are intended to reflect current conditions in the financial and annuity markets.

Three sets of interest assumptions are prescribed: (1) a set for the valuation of benefits for allocation purposes under section 4044 (found in Appendix B to Part 4044), (2) a set for the PBGC to use to determine whether a benefit is payable as a lump sum and to determine lump-sum amounts to be paid by the PBGC (found in Appendix B to Part 4022), and (3) a set for private-sector pension practitioners to refer to if they wish to use lump-sum interest rates determined using the PBGC's historical methodology (found in Appendix C to Part 4022).

Accordingly, this amendment (1) adds to Appendix B to Part 4044 the interest assumptions for valuing benefits for allocation purposes in plans with valuation dates during December 2004, (2) adds to Appendix B to Part 4022 the interest assumptions for the PBGC to use for its own lump-sum payments in plans with valuation dates during December 2004, and (3) adds to Appendix C to Part 4022 the interest assumptions for private-sector pension practitioners to refer to if they wish to use lump-sum interest rates determined using the PBGC's historical methodology for valuation dates during December 2004.

For valuation of benefits for allocation purposes, the interest assumptions that the PBGC will use (set forth in Appendix B to part 4044) will be 3.80 percent for the first 20 years following the valuation date and 5.00 percent thereafter. These interest assumptions are unchanged from those in effect for November 2004.

The interest assumptions that the PBGC will use for its own lump-sum payments (set forth in Appendix B to part 4022) will be 2.75 percent for the period during which a benefit is in pay status and 4.00 percent during any years preceding the benefit's placement in pay status. These interest assumptions are unchanged from those in effect for November 2004.

For private-sector payments, the interest assumptions (set forth in Appendix C to part 4022) will be the same as those used by the PBGC for determining and paying lump sums (set forth in Appendix B to part 4022).

The PBGC has determined that notice and public comment on this amendment are impracticable and contrary to the public interest. This finding is based on the need to determine and issue new interest assumptions promptly so that the assumptions can reflect, as accurately as possible, current market conditions.

Because of the need to provide immediate guidance for the valuation and payment of benefits in plans with valuation dates during December 2004, the PBGC finds that good cause exists for making the assumptions set forth in this amendment effective less than 30 days after publication.

The PBGC has determined that this action is not a ''significant regulatory action'' under the criteria set forth in Executive Order 12866.

Because no general notice of proposed rulemaking is required for this amendment, the Regulatory Flexibility Act of 1980 does not apply. See 5 U.S.C. 601(2).

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 1

[WT Docket No. 00–230; FCC 03–113; DA 04–239; DA 04–252]

Promoting Efficient Use of Spectrum Through Elimination of Barriers to the Development of Secondary Markets

AGENCY: Federal Communications Commission.

ACTION: Final rule, announcement of effective date.

SUMMARY: The Wireless Telecommunications Bureau (Bureau) of the Federal Communications Commission (Commission) announces that certain Commission rules adopted in the Secondary Markets proceeding (WT Docket No. 00–230) in 2003, to the extent they contained information collection requirements relating to spectrum leasing notifications and applications that required approval by the Office of Management and Budget (OMB), are now in effect with the issuance of FCC Form 603–T.

DATES: Sections 1.913(a), 1.913(a)(3), 1.2002(d), 1.2003, 1.9003, 1.9020(e), 1.9030(e), and 1.9035(e), published at 68 FR 66252 (Nov. 25, 2003), contained information collection requirements that

became effective on February 2, 2004, following approval by the Office of Management and Budget (OMB).

FOR FURTHER INFORMATION CONTACT: Paul Murray, Wireless Telecommunications Bureau, at (202) 418–7240, or via the Internet at *Paul.Murray@fcc.gov;* for additional information concerning the information collections contained in this document, contact Judith-B.Herman at (202) 418–0214, or via the Internet at *Judith.B-Herman@fcc.gov.*

Announcement of Effective Date of Certain Commission Rules

1. In the February 2, 2004 *Public Notice,* DA 04–252, 19 FCC Rcd 1911, the Wireless Telecommunications Bureau announced the availability of FCC Form 603–T for use by spectrum leasing parties filing spectrum leasing notifications and applications with the Commission, and the rules requiring use of FCC Form 603–T became effective as of that date. FCC Form 603–T contain information collection necessary for the implementation of certain spectrum leasing rules adopted by the Commission in 2003 in the *Secondary Markets First Report and Order,* published at 68 Fed. Reg. 66252 (Nov. 25, 2003). As noted therein, the effective date of certain of the Commission's spectrum leasing rules adopted in the *Secondary Markets First Report and Order*—specifically sections 1.913(a), 1.913(a)(3), 1.2002(d), 1.2003, 1.9003, 1.9020(e), 1.9030(e), and 1.9035(e)—would not become effective until the information collection requirements contained in those rules were approved by the Office of Management and Budget (OMB). The Bureau reiterated this discussion regarding the effective date of certain spectrum leasing rules in its *Memorandum Opinion and Order,* DA 04–239, 19 FCC Rcd 1542, January 30, 2004.

2. On January 29, 2004, OMB approved of the use of Form 603–T on an interim basis. Accordingly, the revisions to sections 1.913(a), 1.913(a)(3), 1.2002(d), 1.2003, and the new rules involving use of certain forms of information collection as set forth of 1.9003, 1.9020(e), 1.9030(e), and 1.9035(e) of the Commission's spectrum leasing rules, 47 CFR 1.913(a), 1.913(a)(3), 1.2002(d), 1.2003, 1.9003, 1.9020(e), 1.9030(e), and 1.9035(e), became effective with the issuance of FCC Form 603–T on February 2, 2004.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[DA 04–3482, MB Docket No. 04–236, RM–11001]

Digital Television Broadcast Service; Fresno, CA.

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Commission, at the request of KSEE License, Inc., substitutes DTV channel 38 for DTV channel 16 at Fresno, California. *See* 69 FR 41444, July 9, 2004. DTV channel 38 can be allotted to Fresno, California, in compliance with the principle community coverage requirements of Section 73.625(a) at reference coordinates 37–04–19 N. and 119–25–48 W. with a power of 326, HAAT of 601 meters and with a DTV service population of 1224 thousand. With this action, this proceeding is terminated.

DATES: Effective December 20, 2004.

FOR FURTHER INFORMATION CONTACT: Pam Blumenthal, Media Bureau, (202) 418–1600.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Report and Order, MB Docket No. 04–236, adopted October 29, 2004, and released November 5, 2004. The full text of this document is available for public inspection and copying during regular business hours in the FCC Reference Information Center, Portals II, 445 12th Street, SW., Room CY–A257, Washington, DC. This document may also be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., 445 12th Street, SW., Room CY–B402, Washington, DC, 20554, telephone 301–816–2820, facsimile 301–816–0169, or via-e-mail *joshir@erols.com.*

This document does not contain [new or modified] information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. In addition, therefore, it does not contain any new or modified ''information collection burden for small business concerns with fewer than 25 employees,'' pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4).

The Commission will send a copy of this [Report & Order *etc.*] in a report to be sent to Congress and the General Accounting Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

List of Subjects in 47 CFR Part 73

Digital television broadcasting, Television.

■ Part 73 of title 47 of the Code of Federal Regulations is amended as follows:

PART 73—[AMENDED]

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 303, 334 and 336.

§ 73.622 [Amended]

■ 2. Section 73.622(b), the Table of Digital Television Allotments under California, is amended by removing DTV channel 16 and adding DTV channel 38 at Fresno.

Rural Utilities Service

Farm Service Agency

7 CFR Parts 1782, 1951, 1955, and 1956

RIN 0572–AB59

Servicing of Water Programs Loans and Grants

AGENCY: Rural Utilities Service, USDA.

ACTION: Proposed rule.

SUMMARY: The Rural Utilities Service (RUS) proposes to consolidate and amend the regulations utilized to service water and waste loan and grant programs. The proposed rule will combine the water and waste loan and grant servicing regulations found in 7 CFR parts 1951, 1955 and 1956 into one regulation. Unnecessary and burdensome requirements for water and waste loan and grant servicing under the program will be eliminated. The streamlining of the water and waste loan and grant servicing regulation will allow RUS to provide better service to entities needing assistance in resolving financial and economic problems in their communities and in general improve the quality of life in rural areas. Additionally, this rule proposes to implement Section 6018 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 1936a) for the Rural Business-Cooperative Service (RBS), Rural Housing Service (RHS) and RUS.

DATES: Comments on the proposed rule must be received on or before January 14, 2005.

ADDRESSES: You may submit comments by any of the following methods:

- Federal eRulemaking Portal: Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- Agency Web Site: *http://www.usda.gov/rus/index2/Comments.htm.* Follow the instructions for submitting comments.
- E-mail: *RUSComments@usda.gov.* Include in the subject line of the message ''7 CFR 1782.''
- Mail: Addressed to Richard Annan, Acting Director, Program Development and Regulatory Analysis, Rural Utilities Service, United States Department of Agriculture, 1400 Independence Avenue, SW., STOP 1522, Washington, DC 20250–1522.
- Hand Delivery/Courier: Addressed to Richard Annan, Acting Director, Program Development and Regulatory Analysis, Rural Utilities Service, United States Department of Agriculture, 1400 Independence Avenue, SW., Room 5168–S, Washington, DC 20250–1522.

Instructions: All submissions received must include the agency name and the subject heading ''7 CFR 1782''. All comments received must identify the name of the individual (and the name of the entity, if applicable) who is submitting the comment. All comments received will be posted without change to *http://www.usda.gov/rus/index2/Comments.htm*, including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Anita O'Brien, Loan Specialist, Water and Environmental Programs, Rural Utilities Service, Room 2230 South Building, Stop 1570, 1400 Independence Ave., SW., Washington, DC 20250–1570. Telephone: (202) 690–3789, FAX: (202) 690–0649, e-mail: *anita.obrien@usda.gov.*

SUPPLEMENTARY INFORMATION:

Classification

Executive Order 12866

This proposed rule has been determined to be not significant for purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget (OMB).

Executive Order 12988

This proposed rule has been reviewed in accordance with Executive Order 12988, Civil Justice Reform. RUS has determined that this proposed rule meets the applicable standards provided in section 3 of the Executive Order. In addition, all State and local laws and regulations that are in conflict with this rule will be pre-empted; no retroactive effect will be given to the rule; and in accordance with sec. 212(e) of the Department of Agriculture Reorganization Act of 1994 (7 U.S.C. sec. 6912(e)), appeal procedures must be exhausted before an action against the Department or its agencies may be initiated.

Regulatory Flexibility Act Certification

It has been determined that the Regulatory Flexibility Act is not applicable to this rule since the Rural Utilities Service is not required by 5 U.S.C. 551 *et seq.* or any other provision of law to publish a notice of proposed rulemaking with respect to the subject matter of this rule.

Information Collection and Recordkeeping Requirements

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), RUS is requesting comments on the collection of information incorporated in this proposed rule. The reporting burden will be transferred from nine existing regulations into regulation 1782 and where possible, the reporting burden will be reduced.

Title: Servicing of Water and Waste Programs.

Type of Request: New collection.

Abstract: RUS' Water and Environmental Programs (WEP) provide financing and technical assistance for development and operation of safe and affordable water supply systems and sewage and other waste disposal facilities. WEP provides loans, guaranteed loans and grants for water, sewer, storm water, and solid waste disposal facilities in rural areas and towns of up to 10,000 people. The recipients of the assistance covered by 7 CFR part 1782 must be public entities. These can include municipalities, counties, special purpose districts; federally designated Indian tribes, land corporations not operated for profit, including cooperatives. The information, which is for the most part financial in nature, is needed by the Agency to determine if borrowers, based on their individual situations, qualify for the various servicing options.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 30 hours per response.

Respondents: Business or other for profit and non-profit institutions, and state and local governments.

Estimated Number of Respondents: 2,000.

Estimated Number of Responses per Respondents: 1.35.

Estimated Total Annual Burden on Respondents: 80,976 hours.

The subject regulation is published for public review and comment. Copies of this information collection can be obtained from Michele Brooks, Program Development and Regulatory Analysis, Rural Utilities Service. Telephone: (202) 690–1078.

Comments on this information collection must be received by January 14, 2005.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Send comments regarding this information collection requirement to Michele Brooks, Program Development and Regulatory Analysis, USDA, Rural Utilities Service, 1400 Independence Ave., SW., Room 5166, Stop 1522, Washington, DC 20250–1522.

Comments are best assured of having full effect if OMB receives them within 30 days of publication in the **Federal Register**. All comments will be summarized, included in the request for OMB approval, and will become a matter of public record.

National Environmental Policy Act Certification

The Administrator of RUS has determined that this proposed rule will not significantly affect the quality of the human environment as defined by the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*). Therefore, this action does not require an environmental impact statement or assessment.

Catalog of Federal Domestic Assistance

The program described by this proposed rule is listed in the Catalog of Federal Domestic Assistance Programs under numbers (1) 10.760—Water and Waste Disposal System for Rural Communities, (2) 10.761—Technical Assistance and Training Grants, (3) 10.762—Solid Waste Management Grants (4) 10.763—Emergency Community Assistance Grants, and (5) 10.770—section 306C Water and Waste Loans and Grants. This catalog is available on a subscription basis from the Superintendent of Documents, the United States Government Printing Office, Washington, DC 20402–9325, telephone number (202) 512–1800.

Executive Order 12372

This program is listed in the Catalog of Federal Domestic Assistance under numbers (1) 10.760—Water and Waste Disposal (WWD) System for Rural Communities, (2) 10.763—Emergency Community Assistance Grants, and (3) 10.770—Water and Waste Loans and Grants (section 306C), and is subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials.

Unfunded Mandates

This rule contains no Federal mandates (under the regulatory provision of title II of the Unfunded Mandates Reform Act of 1995) for State, local, and tribal governments or the private sector. Therefore, this rule is not subject to the requirements of section 202 and 205 of the Unfunded Mandates Reform Act.

Executive Order 13132, Federalism

The policies contained in this proposed rule do not have any substantial direct effect on states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Nor does this proposed rule impose substantial direct compliance costs on state and local governments. Therefore, consultation with states is not required.

Background

RUS' water and waste program is administered by Water and Environmental Programs (WEP). The water and waste loan and grant programs are authorized by various sections of the Consolidated Farm and Rural Development Act (7 U.S.C. 1921 *et seq.*), as amended. The regulations for these programs have not been completely reviewed for many years. The 1994 streamlining and reorganization of the Department of Agriculture provided an opportunity to review and rewrite the water and waste loan and grant servicing regulations. A task force was formed for that purpose. The aim of the task force was to make the regulations easier to understand, eliminate unnecessary requirements, and continue to protect the interest of the U. S. taxpayer. The program provides loan servicing options for communities facing financial problems. Servicing options should result in reasonable user costs for rural residents, rural businesses, and other rural users. Additionally, in order to provide uniformity, servicing provisions for grants are addressed in the Departmental Grant Regulations listed cited in 1782.7.

Major changes are:

1. Combines servicing regulations found in 7 CFR parts 1951, 1955 and 1956 into one regulation.

2. The field staff is provided with more authority to service water and waste loans and grants.

3. The application process for servicing actions has been streamlined to reduce unnecessary paperwork and improve service to the rural communities. There will be fewer regulations and the number of pages in the Code of Federal Regulations will be greatly reduced.

4. The functions of the former Farmers Home Administration (FmHA) and the Rural Development Administration (RDA) relating to the water and waste loan and grant programs authorized by various sections of the Consolidated Farm and Rural Development Act, (7 U.S.C. 1926(a)), have been transferred to RUS based on the Department of Agriculture Reorganization Act of 1994, 7 U.S.C. 6942. Therefore in order to enhance the delivery of borrower services and better assist the public, RUS is simplifying and rewriting regulations originally published by FmHA and RDA. All parts pertaining to the water and waste loan program will be moved into 7 CFR part 1782. This action will have no effect on the Rural Housing Services (RHS) community facilities loan program, as this action makes no policy changes in the regulation with the exception of implementing section 6018 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 1936a). The following programs are affected by these amendments: (1) Water and Waste Disposal Loans and Grants, (2) Watershed loans and advances, (3) Resource Conservation and Development loans, (4) Technical Assistance and Training grants, (5) Emergency Community Assistance grants, (6) Solid Waste Management grants, and (7) Section 306C Water and Waste Facility Loans and Grants to Alleviate Health Risks.

5. Implement Sec. 6018 of the Farm Security and Rural Investment Act of 2002. This change will allow the borrower or grant recipient to use property (real and personal) purchased or improved with the loan or grant funds or proceeds from the sale of property (real and personal) purchased with such funds, for another project or activity. The RUS proposes to include language to implement this provision in 7 CFR 1782.23. These provisions will also be applicable to the RBS and RHS programs by adding § 1951.218 to 7 CFR part 1951, subpart E.

The Regulations

RUS has completed a consolidation of regulations affecting WEP loans and grants. Prior to this rule becoming effective, WEP borrowers were affected, in part, by the following regulations:

7 CFR part 1951, subpart A—Account Servicing Policies.

7 CFR part 1951, subpart D—Final Payment on Loans.

7 CFR part 1951, subpart E—Servicing of Community and Direct Business Programs Loans and Grants.

7 CFR part 1951, subpart F—Analyzing Credit Needs and Graduation of Borrowers.

7 CFR part 1951, subpart O—Servicing Cases Where Unauthorized Loan(s) or Other Financial Assistance Was Received—Community and Insured Business Programs.

7 CFR part 1955, subpart A—Liquidation of Loans Secured by Real Estate and Acquisition of Real and Chattel Property.

7 CFR part 1955, subpart B—Management of Property.

7 CFR part 1955, subpart C—Disposal of Inventory Property.

7 CFR part 1956, subpart C—Debt Settlement—Community and Business Programs.

All of the above mentioned regulations include regulatory provisions of other programs of the former FmHA such as farm loans, business and industrial loans, single family housing, and multi-family housing. RUS is consolidating all regulatory actions in the above mentioned regulations which affect WEP loan and grant servicing into one new regulation—7 CFR part 1782. This consolidated regulation will clarify for our borrowers and grantees, the available servicing tools and the requirements to utilize these tools.

Additionally, RUS proposes to remove all administrative processes from the regulations, leaving only regulatory actions that impact the public. This streamlining will make the regulation more concise and much easier to read and understand. The Agency will issue a Staff Instruction that will include the administrative portion, which outlines the Agency's internal processing procedures. The Staff Instruction will be available to the public upon request at no cost.

Conclusion

RUS believes the consolidation and streamlining of the regulations for this program will maximize the ability of the Borrowers to use and understand the available servicing tools under this program. This consolidation is consistent with the Administration's efforts to streamline Government functions, improve the efficiency and effectiveness of Government activities, and strive to be more borrower friendly. This effort will enable the Agency to reduce regulations, streamline Agency operations and provide servicing assistance with fewer staff resources.

List of Subjects

7 CFR Part 1782

Accounting, Appeal procedures, Auditing, Debts, Delinquency, Grant programs—Agriculture, Insurance, Loan programs—Agriculture.

7 CFR Part 1951

Accounting, Credit, Grant programs—Agriculture, Loan Programs—Agriculture, Low and moderate-income housing loans—Rent subsidies, reporting, and recordkeeping requirements, Rural areas.

7 CFR Part 1955

Government property, Government property management, Surplus government property.

7 CFR Part 1956

Accounting, Loan programs—Agriculture, Rural areas.

Therefore, chapters XVII and XVIII of title 7, Code of Federal Regulations are proposed to be amended as follows:

CHAPTER XVII—RURAL UTILITIES SERVICE, DEPARTMENT OF AGRICULTURE

1. Part 1782 is added to read as follows:

PART 1782—SERVICING OF WATER AND WASTE PROGRAMS

Sec.

Authority: 5 U.S.C. 301; 7 U.S.C. 1981; 16 U.S.C. 1005.

§ 1782.1 Purpose.

This part outlines the Rural Utilities Service's (RUS) policies and procedures for servicing direct and insured Water and Waste Disposal loans and grants; Watershed loans and advances; Resource Conservation and Development loans; Technical Assistance and Training grants; Emergency Community Water Assistance grants; Solid Waste Management grants; and section 306C WWD loans and grants.

§ 1782.2 Objectives.

Loan and grant servicing is provided by RUS in order to assist recipients in complying with the established objectives and requirements for loans and grants, repaying loans on schedule, acting in accordance with any necessary agreements, and protecting RUS' financial interest. Servicing by RUS includes, but is not limited to, the review of budgets, management reports, audits and financial statements; performing security inspections; providing, arranging or recommending technical assistance; evaluating environmental impacts of proposed actions by the Borrower; and performing civil rights compliance and graduation reviews.

§ 1782.3 Definitions.

Acceleration. A written notice informing the borrower that the total unpaid principal and interest is due and payable immediately.

Adjustment. Satisfaction of a debt, including release of liability, when acceptance by the agency is conditioned upon completion of payment of the adjusted amount at a specific time or times; with or without the payment of

any consideration when the adjustment offer is approved. An adjustment is not a final settlement until all payments under the adjustment agreement have been made.

Administrator. Administrator of RUS.

Agency. RUS or any employee acting on its behalf in accordance with appropriate delegations of authority.

Assumption of debt. Agreement by one party to legally bind itself to pay the debt incurred by another.

Borrower. Recipient of RUS or predecessor agency loan assistance.

Cancellation. Final discharge of debt with a release of liability.

Chargeoff. Write off of a debt and termination of servicing activity without release of liability. A Chargeoff is a decision upon the part of the Agency to remove debt from Agency receivables; however, future payments may be received.

Compromise. Satisfaction of a debt including a release of liability by accepting a lump-sum payment of less than the total amount owed.

Defeasance. Defeasance is the use of invested proceeds from a new bond issue to repay outstanding bonds in accordance with the repayment schedule of the outstanding bonds. The new issue supersedes the contractual agreements from the prior issue.

Disposition of facility. Relinquishing control of a facility to another entity.

False information. Information, known to be incorrect, provided with the intent to obtain benefits which would not have been obtainable based on correct information.

Government. The United States of America acting through the RUS, USDA. USDA and RUS may be used interchangeably throughout this part.

Grantee. Recipient of RUS or predecessor agency grant assistance, technical assistance, or services.

Letter of Conditions. A written document that describes the conditions which the borrower and/or grantee must meet for funds to be advanced and the loan and/or grant to be closed.

Liquidation. To satisfy a debt through the sale of a borrower's assets and discharge of liabilities.

Parity Lien. A lien having an equal lien position to another lender's lien on a borrower's asset.

Reasonable rates and terms. Commercial rates and terms borrowers are expected to pay when borrowing for similar purposes and periods of time.

Rural Development. The mission area of the Under Secretary for Rural Development. Rural Development State and local offices administer the water and waste programs on behalf of RUS.

Rural Utilities Service (RUS). An Agency of the USDA established pursuant to section 232 of the Department of Agriculture Reorganization Act of 1994 (Pub. L. 103–354).

Servicing office. The USDA office which maintains the official file of the borrower or grantee and is responsible for the routine servicing of the loan and grant account.

Servicing official. A USDA official who has been delegated loan and grant approval and servicing authorities subject to any dollar limitations within applicable programs.

Settlement. Compromise, adjustment, cancellation, or chargeoff of a debt owed USDA. The term ''settlement'' is used for convenience in referring to compromise, adjustment, cancellation, or chargeoff action, individually or collectively.

Subordination agreement. A formal agreement whereby RUS permits another lender to have a senior or prior lien position on a borrower's assets to facilitate the borrower's obtaining financing from another source of credit. A subordinate lien position is an inferior or junior lien position.

USDA. United States Department of Agriculture.

Unliquidated obligations. Obligated loan or grant funds that have not been advanced.

Voluntary conveyance. A method by which title to security is voluntarily transferred to the Government.

§ 1782.4 Availability of forms and regulations.

Information about the availability of forms, regulations, bulletins, and procedures referenced in this chapter are available in any office of the USDA/Rural Development or RUS, United States Department of Agriculture, Washington, DC 20250–1500 or at the Web site *http://www.usda.gov/rus/water.*

§ 1782.5 Nondiscrimination.

Each instrument of conveyance required for a transfer, assumption, sale of facility, or other servicing action under this subpart will comply with Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, section 504 of the Rehabilitation Act of 1973, and other similarly worded Federal statutes and regulations issued pursuant thereto that prohibits discrimination on the basis of race, color, national origin, handicap, religion, age, or sex in programs or activities receiving Federal financial assistance. Such provisions apply for as long as the property continues to be used for the same or similar purposes for which the Federal assistance was extended, or for so long as the purchaser owns it, whichever is later.

§ 1782.6 [Reserved]

§ 1782.7 Grants.

Servicing actions relating to RUS grants are governed by the provisions of 7 CFR parts 3015, 3016, 3017, 3018, 3019, 3021, and 3052 as applicable, and Executive Order (E.O.) 12803. Grantees remain responsible for property acquired with grant funds in accordance with terms of a grant agreement and applicable regulations.

§ 1782.8 Payments.

Payments will be applied in accordance with the terms of the debt instrument. Information on non-typical payments can be obtained from the Servicing official or office. All new borrowers will use pre-authorized debits as required in their Letter of Conditions.

§ 1782.9 Environmental requirements.

Servicing actions involving subordination and lease or sale of RUS owned property will be reviewed for compliance with 7 CFR part 1794 as required in § 1794.3. The appropriate environmental review will be completed prior to approval of the servicing action.

§ 1782.10 Audit requirements.

Audits for loans will be required in accordance with § 1780.47 of this title. If the borrower becomes delinquent or is experiencing problems, the servicing official will require an audit or other documentation deemed necessary to resolve the delinquency. The provisions of 7 CFR part 3052 address audit requirements for recipients of federal grants.

§ 1782.11 Refinancing requirements.

If at any time it appears to the Government that the borrower is able to refinance the amount of the indebtedness then outstanding, in whole or in part, by obtaining a loan for such purposes from responsible cooperative or private credit sources, at reasonable rates and terms, the borrower will, upon request of the Government, apply for and accept such loan in sufficient amount to repay the Government and will take all such actions as may be required in connection with such loan.

§ 1782.12 Sale or exchange of security property.

A cash sale of all or a portion of a borrower's assets or an exchange of security property may be approved subject to the conditions set forth in this section.

(a) *Approval conditions.* Approval may be given when the servicing official determines that:

(1) The consideration is for the full amount of the debt or the present fair market value as determined by an appraisal completed by a qualified Rural Development employee or an independent appraiser as determined appropriate by the approval official;

(2) The sale or exchange will not prevent carrying out the purpose of the loan;

(3) The remaining property is adequate security for the loan and the transaction will not adversely affect RUS' security position;

(4) If the property to be sold or exchanged will be used for similar purposes that the loan was made, the purchaser will:

(i) Execute Form RD 400–4, ''Assurance Agreement.'' The instrument of conveyance will contain the civil rights covenant referenced in 7 CFR 1901.202(e); and

(ii) Provide RUS with a written agreement assuming all rights and obligations of the original borrower, and

(5) Proceeds remaining after paying any reasonable and necessary selling expenses are to be used for one or more of the following purposes:

(i) To pay RUS debt, pay on debts secured by a prior lien, and pay on debts secured by a parity or subsequent lien if it is to RUS' advantage;

(ii) To purchase or acquire property more suited to the borrower's needs, providing RUS security position is maintained; and

(iii) To develop or enlarge the facility if necessary to improve the borrower's debt-paying ability, place the operation on a sounder financial basis, or further the loan objectives and purposes.

(b) *Sale of assets financed with RUS grants.* The requirements for the sale or disposition of assets financed with RUS grants are determined by the terms of the grant agreement, 7 CFR parts 3015, 3016, and 3019, and E.O. 12803, as applicable.

(c) *Release from liability.* If a borrower can no longer meet the objectives of the loan, the property may be sold. If the full amount of the borrower's debt is paid or assumed, the State Director may release the borrower from liability.

§ 1782.13 Transfer of Security and Assumption of Loans.

It is RUS policy to approve transfers and assumptions to transferees that will continue the original purpose of the loan. Assistant Administrator written concurrence is required when the transfer exceeds the State Director's loan approval authority. The transfer will be approved in accordance with the following requirements:

(a) *General requirements for transferees.* The fulfillment of the following requirements for transfers will be determined by the approval official, in his or her discretion:

(1) The transferees must meet the eligibility requirements of 7 CFR 1780.7 and provide the same information required in 7 CFR Part 1780, subpart B for application processing.

(2) The transfer will not be disadvantageous to the Government as determined by the approval official.

(3) If the RUS debt(s) exceeds the present market value of the security as determined by an appraisal, the transferee will assume an amount at least equal to the present market value.

(4) RUS must concur in plans for disposition of funds in any reserve account, including project construction bank accounts. A reserve account may be considered as a transferable asset.

(5) The transferee will assume all of the borrower's responsibilities regarding loans. The transferee will also agree to accept the original loan conditions plus any conditions set forth by RUS with regard to the transfer.

(6) A current appraisal will be completed to establish the present market value of the security when the full debt is not being assumed.

(7) There must be no lien, judgement, or similar claims of other parties against the RUS security being transferred unless the transferee is willing to accept such claims. RUS must also determine that the claims will not prevent the transferee from repaying the RUS debt, meeting all operating and maintenance costs, and maintaining required reserves. The written consent of any other lienholder will be obtained where required.

(8) A letter of conditions establishing requirements to be met in connection with the transfer will be issued, and the transferee will be required to execute Form RD 1942–46, ''Letter of Intent to Meet Conditions,'' prior to closing of the transfer.

(9) The transferee will obtain insurance according to RUS requirements.

(10) The effective date of the transfer is the date the transfer is closed, which is the same date Form RD 1951–15, ''Community Programs Assumption Agreement,'' or other appropriate assumption agreement, which is executed and delivered by all necessary parties.

(11) Title to all assets will be conveyed from the transferor to the transferee unless all parties concerned, including RUS, agree upon other arrangements. All instruments of conveyance will contain the necessary nondiscrimination covenant as referred to in *§ 1782.5.*

(12) If the transfer and assumption is to one or more members of the borrower's organization, there must not be a loss to the Government.

(13) The State Director is authorized to approve transfers to eligible transferees at the same interest rate as on the borrower's note(s) or bond(s). The maturity of the debt instrument for the assumed debt may not exceed the lesser of the repayment period authorized in 7 CFR 1780.13(e) for a ''new'' loan or the expected life of the facility.

(14) RUS National Office concurrence is required for transfers not in compliance with paragraphs (a)(1) through (14) of this section.

(b) *Loan requirements for eligible transferees.* If a loan is evidenced and secured by a note and lien on real or chattel property, Form RD 1951–15, or other appropriate assumption agreement will be executed by the transferee. If a bond secures a loan, transfer documents will be developed by bond counsel and approved by Office of the General Counsel, USDA (OGC).

(1) Loans being transferred and assumed may be combined when the security is the same, new terms are being provided, a new debt instrument will be issued, and the loans have the same interest rate and are for the same purpose. If applicable, 7 CFR 1780.94(l) will govern the preparation of any new debt instruments required.

(2) A loan may be made in connection with a transfer if the transferee meets all eligibility and other requirements for the kind of loan being made. Such a loan will be considered as a separate loan, and must be evidenced by a separate debt instrument. However, it is permissible to have one authorizing loan resolution or ordinance if permitted by State statutes.

(3) Any development funds remaining in a bank account that are not refunded to RUS will be transferred to a bank account for the transferee. This will occur simultaneously with the closing of the transfer and the funds will be used in completing planned development.

(c) *Release from liability.* Transferors may be released from liability when their debt is paid in full or when the debt is settled in accordance with § 1782.20 of this part.

(d) *Transfer of facility financed with RUS grants.* The requirements for the sale or disposition of assets financed with RUS grants are determined by the terms of the grant agreement, 7 CFR

parts 3015, 3016, and 3019, and E.O. 12803, as applicable.

§ 1782.14 Protection of Service Areas—7 U.S.C. 1926(b).

(a) 7 U.S.C. 1926(b) was enacted to protect the service area of RUS borrowers with outstanding loans, or those loans sold in the sale of assets authorized by the ''Joint Resolution Making Continuing Appropriations for the Fiscal Year 1987, Pub. L. 99–591, 100 Stat. 3341 (1986),'' from loss of users due to actions or activities of other entities in the service area of the RUS financed system. Without this protection, other entities could extend service to users within the service area and thereby undermine the purpose of the congressionally mandated water and waste loan and grant programs; and jeopardize the borrower's ability to repay its RUS debt.

(b) Responsibility for initiating action in response to those actions prohibited by 7 U.S.C. 1926(b) rests with the borrower.

§ 1782.15 Mergers and consolidations.

Mergers and consolidations will be processed the same as a transfer and assumption, although approvals by RUS will give consideration to the differences under the applicable law regarding the type of transaction under consideration. Mergers occur when two or more entities combine in such a manner that only one remains in existence. Consolidations occur when two or more entities combine to form a new consolidated entity, and the original entities cease to exist. In both mergers and consolidations, the surviving or emerging entity acquires the assets and assumes the liabilities of the entity or entities that ceased to exist.

§ 1782.16 Defeasance of RUS indebtedness.

Defeasance, or amending outstanding loan instruments and agreements to permit defeasance of RUS debt instruments, is not authorized.

§ 1782.17 Subordination of security or parity lien.

In order for RUS to agree to either a subordination or to a parity lien position, the borrower must submit a written request to the servicing office.

(a) The written request for parity or subordination must contain the following items:

(1) An explanation of the purpose of the request for parity or subordination; amount of loan for which parity or subordination is requested; description of security property; type of security instrument; name, and address of financial institution requesting the transaction; and other information determined necessary by the servicing official to evaluate the request.

(2) Current financial statements or an audit, if available or determined necessary by the servicing official.

(3) An annual operating budget which projects income and expenses for a typical year's operation. If construction is involved, the budget must be projected through the first full year of operation following completion of the planned improvements.

(4) A copy of the proposed security instrument.

(5) A certification from the borrower that the RUS debt cannot be refinanced at reasonable rates and terms.

(6) An appraisal, when the primary security is real estate or determined necessary by the servicing official in order to determine the adequacy of loan security or repayment ability.

(7) A certification that any development work will comply with subpart C of part 1780 of this chapter.

(8) Requests for a subordination of security are subject to the appropriate environmental review as required by § 1794.3 of this chapter.

(b) Requests for parity or subordination must comply with requirements of paragraph (a) of this section, requirements as specified in the bond or loan documents, the requirements as specified in § 1780.94(i) of this chapter, and as provided in applicable State law.

(c) Proposals for tax exempt issues will be considered for parity only.

(d) Once the borrower has met all of the requirements in paragraphs (a), (b) and (c) of this section and the proposal is determined to be in the Government's interest, RUS will then grant approval of the borrower's request for parity or subordination.

§ 1782.18 [Reserved]

§ 1782.19 Third party agreements.

The State Director may authorize third party operation, maintenance, and management of an RUS financed facility. The borrower's attorney must review the contract, management agreement, written lease or other third party agreement and issue an opinion to the agency as to their legal sufficiency. The borrower shall retain the legal authority necessary for owning, constructing, operating and maintaining the facility.

§ 1782.20 Debt settlement.

Pursuant to 7 U.S.C. 1981 this section prescribes policies for debt settlement of Water and Waste Disposal Loans; Watershed loans and advances; Resource Conservation and Development loans; and 306(c) Water and Waste Facility loans.

(a) *General requirements for debt settlement.* (1) The debt or any extension thereof on which settlement is requested must be due and payable. The debt will be due and payable either under the terms of the note or other instrument, or by acceleration, unless the debt is to be cancelled without application under paragraph (e)(2) of this section or charged off under paragraph (f) of this section.

(2) Normally, all security will be disposed of prior to the date of application for debt settlement unless it is necessary to abandon security through the debt settlement process. In such cases, debt settlement may proceed if the servicing official determines that further collection efforts would be ineffective, uneconomical, and not in the best interests of the Government.

(3) Debtors will not be permitted to sell security and use the proceeds as part or all of a compromise/adjustment debt settlement offer.

(4) Request for debt settlement will consist of Form RD 1956–1 ''Application For Settlement of Indebtedness,'' current financial information, description and estimated market value of collateral, and status of operation (*i.e.* number of users, compliance with environmental issues, etc.).

(5) OGC advice on compliance with State or Federal statutes that may affect the debt settlement action must be requested.

(b) *Debts ineligible for settlement.* Debts will not be settled if:

(1) Referral to OIG and/or to OGC is contemplated or pending because of suspected criminal violation, or

(2) Civil action to protect the interest of the Government is contemplated or pending, or

(3) An investigation for suspected fiscal irregularity is contemplated or pending, or

(4) The debtor requests settlement of a claim that has been referred to or a judgment obtained by the United States Attorney. The settlement offer and any related payment must be submitted directly to the United States Attorney for consideration.

(c) *Types of debt settlement.* Typically, debt settlement will be accomplished through compromise/adjustment, chargeoff, or cancellation. Any debt remaining after the security has been liquidated, by sale or transfer, will be cancelled if there are no other assets from which to collect the debt. The servicing official will proceed with

advice from OGC and the National Office, as required.

(d) *Compromise and adjustment.* Debts may be compromised or adjusted and security retained by the debtor, provided:

(1) The debtor is unable to pay the indebtedness in full, and

(2) The debtor has offered an amount equal to the present fair market value of all security or facility financed, and

(3) The debtor has offered any additional amount that the debtor is able to pay.

(e) *Cancellation.* Nonjudgment debts, regardless of the amount, may be cancelled with or without application by the debtor.

(1) *With application by the debtor.* Debts may be cancelled upon application of the debtor, subject to the following conditions:

(i) The servicing official furnishes a favorable recommendation concerning the cancellation;

(ii) There is no known security for the debt and the debtor has no other assets from which the debt could be collected;

(iii) The debtor is unable to pay any part of the debt and has no reasonable prospect of being able to do so; and

(iv) The debt or any extension thereof is due and payable under the terms of the note or other instrument, or due to acceleration by written notice prior to the date of application.

(2) *Without application by debtor.* Debts may be cancelled upon a favorable recommendation of the servicing official in the following instances:

(i) *Debtors discharged in bankruptcy.* If there is no security for the debt, debts discharged in bankruptcy shall be cancelled by the use of Form RD 1956–1. A copy of the Bankruptcy Court's Discharge Order must be attached.

(ii) *Impractical to obtain debtor's signature.* Debts may be cancelled if it is impractical to obtain a signed application and the requirements of paragraphs (e)(1) of this section are met. Form RD 1956–1 will document the specific reason(s) why it was impossible or impracticable to obtain the signature of the debtor. If the debtor refused to sign the application, the reason(s) should be documented.

(f) *Chargeoff.* (1) *Judgment debts.* Judgment debts, regardless of the amount, may be charged off without the debtor's signature upon a favorable recommendation of the servicing official provided:

(i) The United States Attorney's file is closed, and

(ii) The requirements of paragraph (e)(2)(ii) of this section, if applicable, have been met, or 2 years have elapsed since any collections were made on the judgment. The debtor must also have no equity in the property subject to the lien or upon which a lien can be obtained.

(2) *Nonjudgment debts.* Debts that cannot be settled under other sections of this part may be charged off without the debtor's signature upon a favorable recommendation of the servicing official in the following instances:

(i) When OGC advises in writing that the claim is legally without merit, or that evidence necessary to prove the claim in court cannot be provided; or

(ii) When there is no known security for the debt, the debtor has no other assets from which the debt could be collected, and the debtor:

(A) Is unable to pay any part of the debt and has no reasonable prospect of being able to do so; or

(B) Is able to pay part or all of the debt but refuses to do so, and OGC provides an opinion to the effect that the Government cannot enforce collection of a significant amount from assets or income.

§ 1782.21 [Reserved]

§ 1782.22 Exception authority.

The Administrator may, in individual cases, make an exception to any requirement or provision of this part which is not inconsistent with the authorizing statute or other applicable law and is determined to be in the Government's interest. Requests for exceptions must be made in writing by the State Director and supported with documentation to explain the adverse effect on the Government's interest, propose alternative course(s) of action, and show how the adverse affect will be eliminated or minimized if the exception is granted. The exception decision will be documented in writing, signed by the Administrator, and retained in the files.

§ 1782.23 Use of Rural Development Loans and Grants for other purposes.

(a) If, after making a loan or a grant, the Administrator determines that the circumstances under which the loan or grant was made have sufficiently changed to make the project or activity for which the loan or grant was made available no longer appropriate, the Administrator may allow the borrower or grantee to use property (real and personal) purchased or improved with the loan or grant funds, or proceeds from the sale of property (real and personal) purchased with such funds, for another project or activity that:

(1) Will be carried out in the same area as the original project or activity;

(2) Meets the criteria for a loan or grant described in section 381E(d) of the Consolidated Farm and Rural Development Act, as amended; and

(3) Satisfies such additional requirements as are established by the Administrator.

(b) If the new use of the property is under the authority of another USDA Agency Administrator, the other Administrator will be consulted on whether the new use will meet the criteria of the other program. Since the new project or activity must be carried out in the same area as the original project or activity, a new rural area determination will not be necessary.

(c) Borrowers and grantees that wish to use the proceeds for other purposes may make their request through the appropriate Rural Development State Office. Permission to use this option will be exercised on a case-by-case-basis on applications submitted through the State Office to the Administrator for consideration. If the proposal is approved, the Administrator will issue a memorandum to the State Director outlining the conditions necessary to complete the transaction.

§ 1782.24–1782.99 [Reserved]

§ 1782.100 OMB Control Number.

The information collection requirements in this part are approved by the Office of Management and Budget (OMB) and assigned OMB Control Number 0572–XXXX.

CHAPTER XVIII—RURAL HOUSING SERVICE, RURAL BUSINESS—COOPERATIVE SERVICE, RURAL UTILITIES SERVICE, AND FARM SERVICE AGENCY, DEPARTMENT OF AGRICULTURE.

PART 1951—SERVICING AND COLLECTIONS

2. The authority citation for part 1951 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989; 42 U.S.C. 1480.

Subpart A—Account Servicing Policies

3. Amend § 1951.1 by adding the following sentence to the end of the section:

§ 1951.1 Purpose.

* * * This subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, or Resource Conservation and Development loans, which are serviced under part 1782 of this title.

Subpart D—Final Payment on Loans

4. Revise § 1951.151 to read as follows:

§ 1951.151 Purpose.

This subpart prescribes authorizations, policies and procedures of the Farm Service Agency (FSA), Rural Housing Service (RHS), and Rural Business—Cooperative Service (RBS), herein referred to as ''Agency,'' for processing final payment of all loans. This subpart does not apply to direct Single Family Housing customers of the RHS. This subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, Resource Conservation and Development loans, which are serviced under part 1782 of this title.

Subpart E—Servicing of Community and Direct Business Programs Loans and Grants

5. Revise § 1951.201 to read as follows:

§ 1951.201 Purposes.

This subpart prescribes the Rural Development mission area policies, authorizations, and procedures for servicing Community Facility loans and grants; Rural Business Enterprise/ Television Demonstration grants; Association Recreation loans; Direct Business loans; Economic Opportunity Cooperative loans; Rural Renewal loans; Energy Impacted Area Development Assistance Program grants; National Nonprofit Corporation grants; System for Delivery of Certain Rural Development Programs panel grants; and Rural Cooperative Development Grants in subpart F of part 4284 of this title. Rural Development State Offices act on behalf of the Rural Business-Cooperative Service, and the Farm Service Agency as to loan and grant programs formerly administered by the Farmers Home Administration and the Rural Development Administration. Loans sold without insurance to the private sector will be serviced in the private sector and will not be serviced under this subpart. The provisions of this subpart are not applicable to such loans. Future changes to this subpart will not be made applicable to such loans. This subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, and Resource Conservation and Development Loans, which are serviced under part 1782 of this title.

6. Add § 1951.218 to read as follows:

§ 1951.218 Use of Rural Development Loans and Grants for other purposes.

(a) If, after making a loan or a grant, the Administrator determines that the circumstances under which the loan or grant was made have sufficiently changed to make the project or activity for which the loan or grant was made available no longer appropriate, the Administrator may allow the loan borrower or grant recipient to use property (real and personal) purchased or improved with the loan or grant funds, or proceeds from the sale of property (real and personal) purchased with such funds, for another project or activity that:

(1) Will be carried out in the same area as the original project or activity;

(2) Meets the criteria for a loan or grant described in section 381E(d) of the Consolidated Farm and Rural Development Act, as amended; and

(3) Satisfies such additional requirements as are established by the Administrator.

(b) For the purpose of this section, Administrator means the Administrator of the Rural Housing Service or Rural Business-Cooperative Service that has the delegated authority to administer the loan or grant program that covers the property or the proceeds from the sale property proposed to be used in another way.

(c) If the new use of the property is under the authority of another Administrator, the other Administrator will be consulted on whether the new use will meet the criteria of the other program. Since the new project or activity must be carried out in the same area as the original project or activity, a new rural area determination will not be necessary.

(d) Borrowers and grantees that wish to take advantage of this option may make their request through the appropriate Rural Development State Office. Permission to use this option will be exercised on a case-by-case-basis on applications submitted through the State Office to the Administrator for consideration. If the proposal is approved, the Administrator will issue a memorandum to the State Director outlining the conditions necessary to complete the transaction.

Subpart F—Analyzing Credit Needs and Graduation of Borrowers

6. Revise § 1951.251 to read as follows:

§ 1951.251 Purpose.

This subpart prescribes the policies to be followed when analyzing a direct borrower's need for continued Agency supervision, further credit, and graduation. All loan accounts will be reviewed for graduation in accordance with this subpart, with the exception of Guaranteed, Rural Development Loan Funds, and Rural Rental Housing loans made to build or acquire new units pursuant to contracts entered into on or after December 15, 1989, and Intermediary Relending Program loans. The term ''Agency'' used in this subpart refers to the Farm Service Agency (FSA) (including its county and State committees and their personnel), Rural Housing Service (RHS), or Rural Business-Cooperative Service (RBS), depending upon the loan program discussed herein. This subpart does not apply to RHS direct single family housing (SFH) customers. In addition, this subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, Resource Conservation and Development loans, which are serviced under part 1782 of this title.

Subpart O—Servicing Cases Where Unauthorized Loan(s) or Other Financial Assistance Was Received—Community and Insured Business Programs

7. Revise § 1951.701 to read as follows:

§ 1951.701 Purpose.

This subpart prescribes the policies and procedures for servicing Community and Business Program loans and/or grants made by Rural Development when it is determined that the borrower or grantee was not eligible for all or part of the financial assistance received in the form of a loan, grant, or subsidy granted, or any other direct financial assistance. It does not apply to guaranteed loans. Loans sold without insurance by the Rural Development to the private sector will be serviced in the private sector and will not be serviced under this subpart. The provisions of this subpart are not applicable to such loans. Future changes to this subpart will not be made applicable to such loans. This subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, and Resource Conservation and Development Loans, which are serviced under part 1782 of this title.

PART 1955—PROPERTY MANAGEMENT

8. The authority citation for part 1955 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1989; and 42 U.S.C. 1480.

Subpart A—Liquidation of Loans Secured by Real Estate and Acquisition of Real and Chattel Property

9. Revise § 1955.1 to read as follows:

§ 1955.1 Purpose.

This subpart delegates authority and prescribes procedures for the liquidation of loans to individuals and to organizations as identified in § 1955.3. It pertains to the Farm Credit programs of the Farm Service Agency (FSA), Multi-Family Housing (MFH) and Community Facilities (CF) programs of the Rural Housing Service (RHS), and direct programs of the Rural Business-Cooperative Service (RBS). Guaranteed RBS loans are liquidated upon direction from the Deputy Administrator, Business Programs, RBS. This subpart does not apply to RHS single family housing loans or to CF loans sold without insurance in the private sector. These CF loans will be serviced in the private sector and future revisions to this subpart no longer apply to such loans. In addition, this subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, Resource Conservation and Development loans, which are serviced under part 1782 of this title.

Subpart B—Management of Property

10. Revise the introductory text of § 1955.51 to read as follows:

§ 1955.51 Purpose.

This subpart delegates authority and prescribes policies and procedures for the Rural Housing Service (RHS), Rural Business-Cooperative Service (RBS), and Farm Service Agency (FSA), herein referred to as ''Agency,'' and references contained in this subpart to the Farmers Home Administration (FmHA) are synonymous with ''Agency.'' This subpart does not apply to RHS single family housing loans or community program loans sold without insurance to the private sector. These community program loans will be serviced by the private sector and future revisions and this subpart no longer apply to such loans. In addition, this subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, Resource Conservation and Development loans, which are serviced under part 1782 of this title. This subpart does cover:

* * * * *

Subpart C—Disposal of Inventory Property

11. Revise § 1955.101 to read as follows:

§ 1955.101 Purpose.

This subpart delegates program authority and prescribes policies and procedures for the sale of inventory property including real estate, related real estate rights and chattels. It also covers the granting of easements and rights-of-way on inventory property. Credit sales of inventory property to ineligible (nonprogram (NP)) purchasers will be handled in accordance with subpart J of part 1951 of this chapter, except Community and Business Programs (C&BP) and Multi-Family Housing (MFH) which will be handled in accordance with this subpart. In addition, credit sales of Single-Family Housing (SFH) properties converted to MFH will be handled in accordance with this subpart. This subpart does not apply to SFH inventory property. In addition, this subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, Resource Conservation and Development loans, which are serviced under part 1782 of this title.

PART 1956—DEBT SETTLEMENT

12. The authority citation for part 1956 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1981; 31 U.S.C 3711; 42 U.S.C. 1480.

Subpart C—Debt Settlement—Community and Business Programs

13. Amend § 1956.101 by adding the following sentence to the end of the section:

§ 1956.101 Purpose.

* * * In addition, this subpart does not apply to Water and Waste Programs of the Rural Utilities Service, Watershed loans, Resource Conservation and Development loans, which are serviced under part 1782 of this title.

Dated: October 7, 2004.

Gilbert Gonzalez,

Acting Under Secretary, Rural Development.

BILLING CODE 3410–15–P

DEPARTMENT OF AGRICULTURE

Rural Business-Cooperative Service

7 CFR Part 4280

RIN 0570–AA50

Renewable Energy Systems and Energy Efficiency Improvements Grant, Guaranteed Loan, and Direct Loan Program

AGENCY: Rural Business-Cooperative Service, USDA.

ACTION: Proposed rule: extension of comment period.

SUMMARY: The Rural Business-Cooperative Service (RBS) is extending the deadline of November 4, 2004, for submitting comments regarding the proposed Renewable Energy Systems and Energy Efficiency Improvements Grant, Guaranteed Loan, and Direct Loan Program. The program will assist farmers, ranchers, and small rural businesses to purchase renewable energy systems and make energy efficiency improvements. The proposed rule was published in the **Federal Register** on October 5, 2004 (69 FR 59650). This extension will allow additional time for the public to submit comments.

DATES: Comments must be submitted by December 15, 2004.

ADDRESSES: You may submit comments to this rule by any of the following methods:

Agency Web Site: *http://rdinit.usda.gov/regs/*. Follow instructions for submitting comments on the Web site.

E-Mail: *comments@usda.gov*. Include the RIN No. 0570–AA50 in the subject line of the message.

Federal eRulemaking Portal: *http://www.regulations.gov*. Follow the instructions for submitting comments.

Mail: Submit written comments via the U.S. Postal Service to the Branch Chief, Regulations and Paperwork Management Branch, U.S. Department of Agriculture, STOP 0742, 1400 Independence Avenue, SW., Washington, DC 20250–0742.

Hand Delivery/Courier: Submit written comments via Federal Express Mail or another courier service requiring a street address to the Branch Chief, Regulations and Paperwork Management Branch, U.S. Department of Agriculture, 300 7th Street, SW., 7th Floor, Washington, DC 20024.

All written comments will be available for public inspection during regular working hours at 300 7th Street, SW., 7th Floor, address listed above.

FOR FURTHER INFORMATION CONTACT: Georg A. Shultz, Special Advisor for Renewable Energy Policy and Programs, Office of the Deputy Administrator Business Programs, U.S. Department of Agriculture, Mail Stop 3220, 1400 Independence Ave., SW., Washington, DC 20250–3220, telephone: (202) 720–2976.

SUPPLEMENTARY INFORMATION: RBS published the notice of proposed rule making with a 30-day comment period. The reason for this limited time for comments was based primarily on the need to have a published final rule in time for the implementation of the program in fiscal year (FY) 2005. The Agency felt that since the program outlined in the proposed rule is similar

in scope as the Notices of Funds Availability (NOFA) for the grant program published in FY 2003 and FY 2004 and the Agency's current Business and Industry Guaranteed Loan Program forms the basis of the proposed guaranteed loan program, that a 30-day period would be sufficient. The additional 30-day comment period will delay publication of the final rule a commensurate time. The delay in publication will create additional time constraints on applicants. It will also constrain the time for processing the applications, including meeting environmental assessment requirements. RBS is extending the comment period in response to numerous requests from the public for additional time to comment.

Dated: November 5, 2004.

Gilbert Gonzalez,

Acting Under Secretary, Rural Development.

RIN 0694–AC94

Revised ''Knowledge'' Definition, Revision of ''Red Flags'' Guidance and Safe Harbor

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Proposed rule; reopening of comment period.

SUMMARY: This notice reopens the comment period on a proposed rule that would revise the knowledge definition and the ''red flags'' guidance as well as create a safe harbor from knowledge based violations in the Export Administration Regulations.

DATES: Comments must be received by December 15, 2004.

ADDRESSES: Send comments on this proposed rule to: The Federal eRulemaking Portal: *http://www.regulations.gov,* via e-mail to *rpd2@bis.doc.gov,* fax them to 202–482–3355, or on paper to Regulatory Policy Division, Office of Exporter Services, Room 2705, U.S. Department of Commerce, Washington, DC 20230. Refer to Regulation Identification Number 0694–AC94 in all comments.

FOR FURTHER INFORMATION CONTACT: For further information regarding this proposed rule, contact: William Arvin, Office of Exporter Services, at *warvin@bis.doc.gov,* fax 202–482–3355 or telephone 202–482–2440.

SUPPLEMENTARY INFORMATION: On October 13, 2004, the Bureau of Industry and Security published a proposed rule that would revise the Export Administration Regulations in three ways: Revise the knowledge definition, revise the ''red flags'' guidance; and create a safe harbor from certain knowledge based violations. The deadline for public comments was November 12, 2004 (69 FR 60829). The Bureau is now reopening the comment period until December 15, 2004, to allow the public more time to comment on this proposed rule.

Dated: November 9, 2004.

Eileen Albanese,

Director, Office of Exporter Services.

RIN 1545–BD49

Guidance Under Section 951 for Determining Pro Rata Share; Hearing Cancellation

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Cancellation of notice of public hearing on proposed rulemaking.

SUMMARY: This document cancels a public hearing on proposed regulations under section 951(a) of the Internal Revenue Code (Code) that provide guidance for determining a United States shareholder's pro rata share of a controlled foreign corporation's (CFC's) subpart F income, previously excluded subpart F income withdrawn from investment in less developed countries, previously excluded subpart F income withdrawn from foreign base company shipping operations, and amounts determined under section 956.

DATES: The public hearing originally scheduled for November 18, 2004, at 10 a.m., is cancelled.

FOR FURTHER INFORMATION CONTACT: Sonya M. Cruse of the Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel (Procedures and Administration), at (202) 622–4693 (not a toll-free number).

SUPPLEMENTARY INFORMATION: A notice of proposed rulemaking and notice of public hearing that appeared in **Federal Register** on Friday, August 6, 2004, (69 FR 47822), announced that a public hearing was scheduled for November 18, 2004, at 10 a.m., in the IRS Auditorium, Internal Revenue Service Building, 1111 Constitution Avenue, NW., Washington, DC. The subject of the public hearing is under section 951(a) of the Internal Revenue Code.

The public comment period for these regulations expired on November 4, 2004. The notice of proposed rulemaking and notice of public hearing, instructed those interested in testifying at the public hearing to submit a request to speak and an outline of the topics to be addressed. As of Tuesday, November 9, 2004, no one has requested to speak. Therefore, the public hearing scheduled for November 18, 2004, is cancelled.

Cynthia E. Grigsby,

Acting Chief, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel, (Procedures and Administration).

RIN 1024–AC93

Pictured Rocks National Lakeshore, Personal Watercraft Use

AGENCY: National Park Service, Interior.

ACTION: Proposed Rule.

SUMMARY: The National Park Service (NPS) is proposing to designate areas where personal watercraft (PWC) may be used in Pictured Rocks National Lakeshore, Michigan. This proposed rule implements the provisions of the NPS general regulations authorizing park areas to allow the use of PWC by promulgating a special regulation. The NPS *Management Policies 2001* require individual parks to determine whether PWC use is appropriate for a specific park area based on an evaluation of that area's enabling legislation, resources and values, other visitor uses, and overall management objectives.

DATES: Comments must be received by January 14, 2005.

ADDRESSES: Comments on the proposed rule should be mailed to N8391 Sand Point Road, P.O. Box 40 Munising, Michigan 49862–0040. Comments may also be sent by e-mail to *PIRO@den.nps.gov*. If you comment by e-mail, please include ''PWC rule'' in the subject line and your name and return address in the body of your Internet message.

For additional information see ''Public Participation'' under **SUPPLEMENTARY INFORMATION** below.

FOR FURTHER INFORMATION CONTACT: Kym Hall, Special Assistant, National Park Service, 1849 C Street, NW., Room 3145, Washington, DC 20240. Phone: (202) 208–4206. E-mail: *Kym_Hall@nps.gov.*

SUPPLEMENTARY INFORMATION:

Background

Additional Alternatives

The information contained in this proposed rule supports implementation of the modified preferred alternative for Pictured Rocks National Lakeshore in the Environmental Assessment (EA) published July, 2002, and the errata sheet published October, 2003. The errata sheet corrects factual information in the EA as well as provides the analysis of the modified preferred alternative. The public should be aware that two other alternatives including a no-PWC alternative were presented in the EA and one alternative was modified in the subsequent errata sheet. Those alternatives should also be reviewed and considered when making comments on this proposed rule.

Personal Watercraft Regulation

On March 21, 2000, the National Park Service published a regulation (36 CFR 3.24) on the management of personal watercraft (PWC) use within all units of the national park system (65 FR 15077). This regulation prohibits PWC use in all national park units unless the NPS determines that this type of water-based recreational activity is appropriate for the specific park unit based on the legislation establishing that park, the park's resources and values, other visitor uses of the area, and overall management objectives. The regulation prohibits PWC use in all park units effective April 20, 2000, except a limited exception was provided for 21 parks, lakeshores, seashores, and recreation areas. The regulation established a 2-year grace period following the final rule publication to give these 21 park units time to consider whether PWC use should be allowed. Accordingly, on April 22, 2002, Pictured Rocks National Lakeshore closed for PWC use.

Description of Pictured Rocks National Lakeshore

Pictured Rocks National Lakeshore is situated in the north-central section of Michigan's Upper Peninsula, along the southern shore of Lake Superior. The eastern half of the Upper Peninsula is bounded by Lakes Superior, Michigan, and Huron. There are a variety of other national parks in the upper Great Lakes, including Apostle Islands National Lakeshore and Isle Royal National Park on Lake Superior, and Sleeping Bear Dunes and Indiana Dunes National Lakeshores on Lake Michigan. Canadian provincial parks are also located on Lake Superior.

The national lakeshore stretches from Munising to Grand Marais, approximately 40 miles to the northeast. The shoreline consists of narrow sandy beaches, sandstone cliffs, and a perched sand dune system. The sandy shoreline is susceptible to erosion from natural weather conditions.

Pictured Rocks National Lakeshore was authorized in 1966. The lakeshore is noted for its multicolored sandstone cliffs, beaches, sand dunes, waterfalls, inland lakes, wildlife, and forested shoreline. Attractions include a lighthouse and former Coast Guard life-saving stations, along with old farmsteads and orchards. The lakeshore is a year-round recreational destination where hiking, camping, hunting, nature study, and winter activities abound.

Purpose of Pictured Rocks National Lakeshore

As formulated during the Pictured Rocks general management planning process, the purpose of the national lakeshore includes the following:

Preserve a portion of the Great Lakes shoreline for its geographic, scientific, scenic, and historic features, and its associated ecological processes.

Provide opportunities for public benefit in recreation, education, enjoyment, and inspiration.

Protect the character and use of the shoreline zone while allowing economic utilization of the inland buffer zone's renewable resources.

Significance of Pictured Rocks National Lakeshore

As stated in the national lakeshore's Draft General Management Plan / Wilderness Study/Environmental Impact Statement, Pictured Rocks National Lakeshore is significant because:

Pictured Rocks National Lakeshore preserves and affords public access to a spectacular and diverse segment of the Lake Superior shoreline.

Unmatched in their scenic value, the 200-foot high Pictured Rocks cliffs rise perpendicularly from Lake Superior, creating a rock mosaic of form, color, and texture, which is enhanced by cascading waterfalls.

Grand Sable Dunes, perched atop 300-foot-high sand banks above Lake Superior, is one of two perched dune systems on the Great Lakes; within these dunes live unique plant communities resulting from geomorphic processes.

Twelve miles of unspoiled and undeveloped Lake Superior beach contrast with the Pictured Rocks cliffs and Grand Sable Dunes.

Bedrock geology and glacial landforms provide significant topographic relief marked by streams, inland lakes, and a diversity of associated vegetation.

The shoreline offers extraordinary and inspirational scenic vistas of Lake

Superior, which has the largest surface area of any fresh water lake on earth.

Pictured Rocks National Lakeshore offers a variety of affordable year-round recreational opportunities for appropriate public use.

Within a distinct area, the lakeshore contains a spectrum of cultural resources focused on the human use of Lake Superior and its shoreline.

Lying in a transition zone between boreal and eastern hardwood forest, the lakeshore's scientifically recognized assemblage of flora and fauna is representative of associations unique to the Lake Superior Basin.

Pictured Rocks is the only national park system area with a legislated buffer zone.

Authority and Jurisdiction

Under the National Park Service's Organic Act of 1916 (Organic Act) (16 U.S.C. 1 *et seq.*) Congress granted the NPS broad authority to regulate the use of the Federal areas known as national parks. In addition, the Organic Act (16 U.S.C. 3) allows the NPS, through the Secretary of the Interior, to ''make and publish such rules and regulations as he may deem necessary or proper for the use and management of the parks * * *''.

16 U.S.C. 1a–1 states, ''The authorization of activities shall be conducted in light of the high public value and integrity of the National Park System and shall not be exercised in derogation of the values and purposes for which these various areas have been established * * *''.

As with the United States Coast Guard, NPS's regulatory authority over waters subject to the jurisdiction of the United States, including navigable waters and areas within their ordinary reach, is based upon the Property and Commerce Clauses of the U.S. Constitution. In regard to the NPS, Congress in 1976 directed the NPS to ''promulgate and enforce regulations concerning boating and other activities on or relating to waters within areas of the National Park System, including waters subject to the jurisdiction of the United States * * *'' (16 U.S.C. 1a–2(h)). In 1996 the NPS published a final rule (61 FR 35136, July 5, 1996) amending 36 CFR 1.2(a)(3) to clarify its authority to regulate activities within the National Park System boundaries occurring on waters subject to the jurisdiction of the United States.

PWC Use at Pictured Rocks National Lakeshore

PWC use in Pictured Rocks National Lakeshore began around 1990. Before the ban, use was only allowed on Lake Superior, and it was relatively low. Restrictions on inland lakes precluded PWC use on those lakes. Pictured Rocks National Lakeshore has jurisdiction on the surface water of Lake Superior extending 0.25 mile from the shoreline. This proposed rule would only apply to the waters under the lakeshore's jurisdiction. In addition, Michigan's Personal Watercraft Safety Act of 1998 (Public Act 116) stipulates regulations for PWC use. One of the regulations is that personal watercraft cannot operate within 200 feet of the shoreline unless traveling perpendicular to shoreline at no-wake speed.

Before the ban, PWC operation on Lake Superior was concentrated between Sand Point and Chapel Beach, along the Lake Superior shoreline. The eastern side of the park had little PWC use. Rivers and streams within Pictured Rocks National Lakeshore are not accessible to personal watercraft due to extremely small size, shallow depths, and rocky bottoms. On inland lakes within the Lakeshore boundaries, the size of powerboat engines is restricted to two- and four-stroke internal combustion engines of 50 hp or less, essentially eliminating PWC use.

Before the ban was imposed, most PWC users at the park were from within 100 miles of the lakeshore. Based on staff observations, some users come from other parts of Michigan, Wisconsin, and Minnesota, and perhaps Ohio and Illinois. There are many other areas for water-based recreation in this portion of the Upper Peninsula, including State parks, national forests, and other lakes with public access. Such areas include other portions of Lake Superior (excluding the shore of Grand Island), many lakes within the Escanaba River and Lake Superior State Forests, several lakes within the Hiawatha National Forest, Manistique Lake, South Manistique Lake, and Lake Michigan.

To document actual PWC use and to provide peak usage information, staff conducted a survey at the Sand Point launch July 4–8, 2001. During the five-day survey, small craft warnings prohibited personal watercraft on two days. PWC use for the remaining three days ranged from 8 to 13 personal watercraft each day. Thus, the peak number of personal watercraft that were operating before the ban in the lakeshore was 13 per day—6.6 from the Sand Point launch and 6.6 from the Munising boat ramp.

Before the ban, because personal watercraft were also launched from the Munising boat ramp on the west end of the lakeshore, the city was contacted to determine launch numbers. However, specific data were not available. Based on discussions with lakeshore staff, the number of personal watercraft launched from Munising was assumed to be the same as the number launched from Sand Point. Based on the analysis of the survey and assumptions, 6.6 personal watercraft would be launched from the Munising boat ramp each day during July and August weekends. All of these personal watercraft would likely travel within the lakeshore's jurisdiction.

Grand Marais, on the east end of the lakeshore, also has boat launch facilities. According to city staff, very few personal watercraft are launched—perhaps 12 all summer, for an average of 1 personal watercraft every seven days. This analysis assumes that on average no personal watercraft would be launched from Grand Marais during July and August.

The low PWC numbers are primarily a result of the cold water temperature, cool ambient air temperature, changeable weather conditions, and heavy winds and wave action. The average PWC trip within Pictured Rocks National Lakeshore lasted between three and five hours, from mid morning to mid or late afternoon. State regulations restrict operations to the hours of 8 a.m. to one hour before sunset. Most PWC users cruised and sometimes raced along the shoreline, explored the rock cliffs up close, jumped the wakes of tour boats (which make 4–5 foot swells), and traveled to beach destinations and spent the day or afternoon on the beach. Fewer PWC users assembled in pontoons and did short trips or went to beach areas. A very small number may have done day trips between Munising and Grand Marais (40+ miles). Only a few users asked about PWC camping opportunities.

Before the ban, PWC users were distributed throughout the lakeshore. According to NPS staff, most personal watercraft were operated on the west end of the lakeshore. This is consistent with the launch locations and predicted launch numbers. Few PWC operators traveled the entire length of the lakeshore due to the long distance, rough waters, and potential for changing weather.

Generally, there is very little information specific to visitor concerns about PWC use. Visitor surveys were conducted for the winter of 1999–2000 and for the summer of 2000 (with questions specific to PWC use in the national lakeshore). A majority of the respondents to the survey supported or strongly supported restricting PWC use to designated areas. No PWC accidents have been observed or reported to NPS staff. Five incident reports have been documented, one for operating too close

to other motorcraft, two for operating too close to swimmers, and two for operating illegally on inland lakes. There are no observations or reports related to natural resource concerns.

Resource Protection and Public Use Issues

Pictured Rocks National Lakeshore Environmental Assessment

The environmental assessment was available for public review and comment for the period August 1 through November 15, 2004. An errata sheet was prepared to address the changes to alternative B, the preferred alternative. To request a copy of the document and the errata sheet contact Superintendent, Pictured Rocks National Lakeshore, N8391 Sand Point Road, P.O. box 40, Munising, MI 49862–0040. A copy of the Environmental Assessment and the errata sheet may also be found at *http://www.nps.gov/piro.*

The purpose of the environmental assessment was to evaluate a range of alternatives and strategies for the management of PWC use at Pictured Rocks to ensure the protection of park resources and values while offering recreational opportunities as provided for in the National Lakeshore's enabling legislation, purpose, mission, and goals. The assessment assumed alternatives would be implemented beginning in 2002 and considered a 10-year period, from 2002 to 2012. In addition, the environmental assessment defines such terms as ''negligible'' and ''adverse.'' In this document, these terms are used to describe the environmental impact. Refer to the EA for complete definitions.

The environmental assessment evaluates three alternatives addressing the use of personal watercraft at Pictured Rocks National Lakeshore. The errata sheet modifies one of the alternatives, Alternative B. Each alternative is described below:

Alternative A—Under alternative A, PWC use would continue as was provided and managed within Pictured Rocks National Lakeshore before the ban. PWC use would be unrestricted on Lake Superior from the lakeshore's 0.25-mile jurisdictional boundary to the lakeshore's shoreline. Launch and retrieval of personal watercraft would be permitted only at the Sand Point boat ramp on Lake Superior. PWC users would be able to land anywhere along the shoreline. PWC users would continue to abide by Michigan's Personal Watercraft Safety Act of 1998 (Public Act 116) and related regulations.

Alternative B—Alternative B was modified by the errata dated October 2003. Under the modified alternative B, PWC use would be allowed to operate on the waters of Lake Superior within the boundaries of Pictured Rocks National Lakeshore from the western boundary of the lakeshore up to the east end of Miners Beach.

PWC use would be allowed under the following conditions: Personal watercraft may only be launched from a designated launch site at Sand Point, PWC users may beach their craft only on Miners Beach, and PWC users may not launch or operate in any other area of the lakeshore. The superintendent of the park may temporarily limit, restrict, or terminate access to areas designated for PWC use after taking into consideration public health and safety, natural and cultural resource protection, and other management activities and objectives. PWC use would be restricted at specific locations during the permitted use of ethnographic resources. Boat patrols would be conducted in the vicinity of the ethnographic resource use in order to reduce the potential for PWC-related intrusion into the ceremonial activity. PWC users would continue to abide by Michigan's Personal Watercraft Safety Act of 1998 (Public Act 116) and related regulations, as identified in alternative A. This alternative would allow PWC use along the Lake Superior shoreline within the western end of the park, covering approximately 8 miles of shoreline. The numbers of personal watercraft would not be restricted.

No-Action Alternative—Under the no-action alternative, the National Park Service would take no action to reinstate the use of personal watercraft at Pictured Rocks National Lakeshore and no special rule would be promulgated to continue personal watercraft use. Under this alternative, NPS would continue to prohibit personal watercraft use at Pictured Rocks begun on April 22, 2002.

Alternative B is the park's preferred alternative because it would best fulfill the park responsibilities as trustee of the sensitive habitat; ensure safe, healthful, productive, and aesthetically and culturally pleasing surroundings; and attain a wider range of beneficial uses of the environment without degradation, risk of health or safety, or other undesirable and unintended consequences.

As previously noted, NPS will consider the comments received on this proposal, as well as the comments previously received on the Environmental Assessment [as modified by the errata sheet]. In the final rule, the NPS will implement one of these alternatives as proposed, or choose a different alternative or combination of alternatives. Therefore, the public should review and consider the other alternatives contained in the Environmental Assessment [as modified by the errata sheet] when making comments on this proposed rule.

The following summarizes the predominant resource protection and public use issues associated with reinstating PWC use at Pictured Rocks National Lakeshore. Each of these issues is analyzed in the *Pictured Rocks National Lakeshore, Personal Watercraft Use Environmental Assessment* as modified by the errata sheet.

Water Quality

Most research on the effects of personal watercraft on water quality focuses on the impacts of two-stroke engines, and it is assumed that any impacts caused by these engines also apply to the personal watercraft powered by them. There is general agreement that two-stroke engines discharge a gas-oil mixture into the water. Fuel used in PWC engines contains many hydrocarbons, including benzene, toluene, ethylbenzene, and xylene (collectively referred to as BTEX) and polyaromatic hydrocarbons (PAH). PAH also are released from boat engines, including those in personal watercraft. These compounds are not found appreciably in the unburned fuel mixture, but rather are products of combustion. Discharges of these compounds—BTEX and PAH—have potential adverse effects on water quality. A common gasoline additive, methyl tertiary butyl ether (MTBE) is not used in Michigan.

A typical conventional (*i.e.*, carbureted) two-stroke PWC engine discharges as much as 30% of the unburned fuel mixture directly into the water. At common fuel consumption rates, an average two-hour ride on a personal watercraft may discharge 3 gallons of fuel into the water. According to the California Air Resources Board, an average personal watercraft can discharge between 1.2 and 3.3 gallons of fuel during one hour at full throttle. However, hydrocarbon (HC) discharges to water are expected to decrease substantially over the next 10 years due to mandated improvements in engine technology.

PWC use would continue within the lakeshore, with a shift in location due to restrictions east of Miners Beach. Overall numbers of personal watercraft would remain similar to the number before the ban, with maximum use projected to increase from 13 per day in 2002 to 16 per day in 2012. For example, the estimated use in 2002 if PWC were allowed would have been 52

PWC-hours per day in the designated use area. Daily peak operation times would increase in 2012 to 64 PWC-hours in the designated use area. Water quality impacts east of Miners Beach would be reduced compared to before the ban, since PWC use would not be allowed in this area.

PWC users would operate within the designated use area because of the closure of other areas to the east and proximity to the launch facility at Sand Point. The Sand Point area would have the highest use and highest pollutant loads. This location also tends to have shallower waters that extend for some distance offshore. Over the next 10 years PWC use in this area is projected to increase from 13 to 16 machines per day.

The calculated threshold volumes for pollutants emitted by personal watercraft and boats would range from 0 to 240 acre-feet for the ecological criteria. The 1-methyl naphthalene volume for Sand Point (240 acre-feet) would be less than 1% of the volume available. These pollutant concentrations are well below the water quality benchmarks and would likely not be detectable. Cumulative ecological impacts under this proposal would be negligible.

Threshold volumes for the human health criteria range from 0 to 10,800 acre-feet. Benzene emissions in the Sand Point area would have the highest concentrations and would require 45% of the total water volume available within the 0.25-mile jurisdictional boundary for dilution. Benzene levels would be below the human health criterion. Similar to before the ban, dilution with adjacent waters and volatilization would occur and therefore cumulative human health based impacts would be negligible to minor. If the State water quality standard for benzene was used in place of the EPA criterion, estimated human health impacts from benzene would be even lower.

Total PAH concentrations in the designated use area with boating activity would equal or exceed 0.1 µg/L in 2002 and 2012. Although the calculated levels are well below aquatic life benchmarks, the concentrations could have a minor to moderate adverse impact to aquatic life due to phototoxic effects.

Future (2012) pollutant loads would decrease, despite increased boating traffic, due to reductions in engine emissions. Impact levels for cumulative actions would be negligible to moderate, depending on the location and pollutant type. All effects would be short term and would occur during the times of heaviest use.

In conclusion, based on analyses for individual pollutants, this proposal would have negligible to minor adverse effects on water quality due to continued PWC use. No impacts would occur east of Miners Beach where PWC use would be restricted under this proposed rule. While all pollutant loads would be well below benchmarks and criteria, PAH concentrations in the Sand Point segment and the western Cliffs segment could have negligible to moderate adverse phototoxic effects on aquatic life.

Cumulative impacts from PWC and motorized boat use would range from negligible to moderate. No impacts would occur in the Beaver Basin segment. Total PAH concentrations could be a concern for aquatic life, due to potential phototoxicity. Benzene concentrations could be detectable, but are expected to remain below the human health criterion. By 2012 impacts would be reduced substantially through improved emission controls.

Air Quality

Personal watercraft emit various compounds that pollute the air. In the two-stroke engines commonly used in personal watercraft, the lubricating oil is used once and is expelled as part of the exhaust; and the combustion process results in emissions of air pollutants such as volatile organic compounds (VOC), nitrogen oxides (NO_X), particulate matter (PM), and carbon monoxide (CO). Personal watercraft also emit fuel components such as benzene that are known to cause adverse health effects. Even though PWC engine exhaust is usually routed below the waterline, a portion of the exhaust gases go into the air. These air pollutants may adversely impact park visitor and employee health, as well as sensitive park resources.

For example, in the presence of sunlight VOC and NO_X emissions combine to form ozone. Ozone causes respiratory problems in humans, including cough, airway irritation, and chest pain during inhalations. Ozone is also toxic to sensitive species of vegetation. It causes visible foliar injury, decreases plant growth, and increases plant susceptibility to insects and disease. Carbon monoxide can affect humans as well. It interferes with the oxygen carrying capacity of blood, resulting in lack of oxygen to tissues. NO_X and PM emissions associated with PWC use can also degrade visibility. NO_X can also contribute to acid deposition effects on plants, water, and soil. However, because emission estimates show that NO_X from personal watercraft are minimal (less than 5 tons per year), acid deposition effects attributable to personal watercraft use are expected to be minimal.

Under this proposed rule the number of personal watercraft used daily in the lakeshore would follow similar trends as before the ban, ranging from 13 in 2002 to 16 in 2012. The impacts of continued PWC use within the lakeshore, but with restrictions east of Miners Beach, would be the negligible, since the emissions would all be less than 50 tons/year. All pollutant loads would be less than 20 tons/year, with negligible to moderate impact levels.

As stated above, the number of personal watercraft operating within Pictured Rocks National Lakeshore would be similar to the number before the ban, except that PWC use would be prohibited east of Miners Beach. Therefore, PWC-related activities would result in negligible adverse impacts for all pollutants and would range from negligible to moderate adverse for air quality impact levels.

Soundscapes

Daily PWC use levels would be similar to the number before the ban, with a slight change in the area of use. Under this proposal there would be an estimated 13 personal watercraft per day in the designated use area. No PWC use would be allowed east of Miners Beach.

In most cases, personal watercraft would be dispersed along 8 miles of the lakeshore so that operating craft would be infrequent at any given location. At the areas that have the highest visitor use, such as Sand Point, PWC noise would be diluted by the sounds from wind, waves, other visitors, and motorboats. In general, the use of personal watercraft would result in negligible adverse impacts where other users are concentrated, such as at overlooks and beaches. Within the designated PWC use area, PWC noise would be heard frequently but would not be overly disruptive to visitors because of the high degree of activity that occurs within the area. Thus, PWC noise would have a moderate adverse impact on the soundscapes in the area of designated use.

Backcountry users, particularly in the Beaver Basin segment and along the North Country National Scenic Trail, tend to be more sensitive to sound levels and PWC activity. The intolerance to PWC noise by backcountry users was documented in the summer 2000 visitor survey. Under this proposed rule personal watercraft would be prohibited east of Miners Beach. Backcountry users in this area might still hear infrequent PWC noise since personal watercraft could still

operate outside the 0.25-mile boundary. Thus, eliminating PWC use from the eastern portions of the lakeshore would have minor beneficial impacts to the soundscape because related noise would be less frequent and at a greater distance from shore.

Overall, this proposed rule would have a minor beneficial effect east of Miners Beach and a moderate adverse effect near Sand Point and Miners Beach on days when PWC use was relatively heavy. Negligible impacts would occur when use was occasional and distanced from other park users, for example, PWC users operating far from shore. Moderate adverse impacts would occur mainly where PWC use would conflict with other quieter uses, such as fishing, beach uses, or backcountry camping. In general, the impact to those seeking a quiet visitor experience would most likely be short-term and minor because PWC use would not be constant throughout the day and because the enjoyment of the typical visitor activities in the area would not be compromised. Overall, this proposal would result in a net minor beneficial to moderate adverse impact on the soundscape of Pictured Rocks National Lakeshore. All impacts would be temporary, since noise would usually be for limited times.

Therefore, noise from personal watercraft would continue to have short- and long-term, moderate adverse impacts in the area of designated use. Impact levels would be related to the number of personal watercraft operating, as well as the sensitivity of other visitors. Eliminating PWC use east of Miners Beach would have minor beneficial impacts.

Wildlife and Wildlife Habitat

Some research suggests that personal watercraft affect wildlife by interrupting normal activities. This is thought to be caused by PWC speed, noise, and access. Flight response is the most likely impact of PWC use; the most likely occurrence of PWC-induced flight would be on Lake Superior. Impacts to sensitive species at Pictured Rocks, such as loons, peregrine falcons, and piping plovers, are documented under ''Threatened, Endangered, or Special Concern Species.''

The number of PWC users in the lakeshore would be similar to the number before the ban, except use would be prohibited east of Miners Beach. Wildlife impacts under this proposal would be similar to those that existed before the ban on PWC use. Due to the low habitat productivity and lack of colonial wildlife along the lakeshore, as well as the low number of personal watercraft in use, impacts to wildlife and wildlife habitat due to PWC activity would be negligible at most locations. Closing eastern portions of the lakeshore to PWC use would have negligible beneficial impacts. Over the next 10 years impacts would continue to be negligible since PWC numbers would not increase substantially. All wildlife impacts would be temporary.

Therefore, due to the 200′ distance that PWC users are required to operate at flat wake speed in proximity to the shoreline, impacts on wildlife and wildlife habitat would be negligible at most locations. Prohibiting PWC use east of Miners Beach would have negligible beneficial impacts.

Threatened, Endangered, or Special Concern Species

The same issues described for PWC use and general wildlife also pertain to special concern species. Potential impacts from personal watercraft include inducing flight and alarm responses, disrupting normal behaviors and causing stress, degrading habitat quality, and potentially affecting reproductive success. Special status species at the recreation area include Federal or State listed threatened, endangered, or candidate species.

The Endangered Species Act (16 U.S.C 1531 *et seq.*) mandates that all Federal agencies consider the potential effects of their actions on species that are listed as threatened or endangered. If the National Park Service determines that an action may adversely affect a Federally listed species, consultation with the U.S. Fish and Wildlife Service is required to ensure that the action will not jeopardize the species' continued existence or result in the destruction or adverse modification of critical habitat. The animal species at Pictured Rocks National Lakeshore that have the potential to be affected by this proposed rule include the federally listed piping plover and the State listed peregrine falcon and common loon. Plant species include the federally listed pitcher's thistle and the State listed Lake Huron tansy.

This proposal would allow continued PWC use from the western park boundary to the east end of Miners Beach. PWC use would be prohibited east of Miners Beach. Potential effects would be similar to those that existed before the ban and would be limited to interactions with wildlife farther than 200 feet from shore or to personal watercraft landing on shore.

Piping Plover—PWC use would not be allowed within the Grand Sable segment, where potential habitat exists, and there would be no effect on the piping plover. If plovers ever became established in the western end of the lakeshore, then mitigating actions could be required to minimize any adverse effect from PWC use.

Common Loon and Peregrine Falcon—Interactions between personal watercraft and loons or falcons would have the same impacts as before the ban and would not likely adversely affect peregrine falcons or loons. Interactions between personal watercraft and loons or falcons would have the same impacts as before the ban and would not likely adversely affect peregrine falcons or loons.

Pitcher's Thistle and Lake Huron Tansy—PWC use would not be allowed within the Grand Sable segment, where these plants are known to exist. Therefore, this proposal would affect the pitcher's thistle or the Lake Huron tansy. Restoration activities proposed for 2002 would have a beneficial effect on the thistle and the tansy.

Overall, PWC use would have no effect on the piping plover, the pitcher's thistle, or the Lake Huron tansy, and would not be likely to adversely affect the common loon or the peregrine falcon since interactions would be extremely limited.

Cumulative effects for PWC users and other visitors would be similar to before the ban on PWC use and would not likely adversely affect concerned species or their habitat. PWC use would have no effect in the eastern portions of the lakeshore.

Piping Plover—There has been no evidence of plover use in the national lakeshore since 1992. PWC use or motorized boating would not be allowed in areas where critical plover habitat has been designated in the eastern end of the lakeshore. No direct effect on the piping plover is anticipated. If plovers started using habitat within Pictured Rocks National Lakeshore, then PWC and visitor activity would have the potential for adverse effects, and mitigating measures would be taken.

Therefore, PWC use would have no cumulative effect on the piping plover, the pitcher's thistle, or the Lake Huron tansy and would not be likely to adversely affect the common loon or the peregrine falcon since interactions would be extremely limited.

Shoreline Vegetation

PWC are able to access areas that other types of watercraft may not, which may cause direct disturbance to vegetation. Indirect impact on shoreline vegetation may occur through trampling if operators disembark and engage in activities on shore. In addition, wakes created by personal watercraft may

affect shorelines through erosion by wave action. The proposed rule aims to limit these disturbances to the shoreline areas.

PWC use under the proposed rule would continue to be allowed in the designated use area but use would be prohibited east of Miners Beach. PWC impacts to shoreline vegetation would be similar to those before the ban, since the number of PWC users would be comparable, although use areas would be modified. Impacts to vegetation east of Miners Beach would be negligible and beneficial since users would no longer have access to shoreline areas. Continued PWC use in other areas would have negligible adverse impacts to sensitive shoreline vegetation over the short and long term, with no perceptible changes in plant community size, integrity, or continuity.

Therefore, PWC use would have negligible adverse impacts in the designated uea area over the short and long term because there have been no perceptible changes to plant community size, integrity or continuity, and none are expected in the future (2012). PWC restrictions east of Miners Beach would result in negligible beneficial impacts to shoreline vegetation.

Visitor Experience

The proposed rule would provide park visitors with a high-quality experience and manage potential conflicts between PWC use and other park visitors. PWC use under this proposal would continue to be allowed in the designated use area and PWC use would be prohibited east of Miners Beach. Of the 13 to 16 personal watercraft operating in the lakeshore during peak use, these restrictions would affect an estimated five to six PWC operators by changing their location of use. Additionally, PWC operation would be restricted at certain locations during the permitted use of ethnographic resources.

Impact on PWC Users—By prohibiting PWC use east of Miners Beach, there would be no use at Twelvemile Beach. Additionally, more PWC riders would stay within the west end of the park, between Munising and Miners Beach. Most PWC users (estimated at 60%) would have little or no noticeable change in their location of operation. They could, however, notice more personal watercraft operating within the 8 miles of the shoreline open to PWC use. Voluntarily extending operations farther from shore would likely offset this increase in density. Under this proposal PWC users would be limited in their location of operation and could be affected by a slight increase in density of use. As a result, visitors who use personal watercraft at Pictured Rocks National Lakeshore would experience moderate adverse impacts.

Impact on Frontcountry Visitors—Swimmers, hikers, and other visitors to the Sand Point, Miners Beach, and Miners Castle areas would have slightly more contact with PWC operators than before the ban because PWC use would only be allowed along this stretch of the lakeshore and would be prohibited east of Miners Beach. The increased amount of contact would not be noticeable in comparison to existing conditions since most activities occur in this stretch of the lakeshore. PWC activity near Sand Point, Miners Beach, and Miners Castle would have negligible adverse impacts on the experiences of swimmers, hikers, and other visitors because under State regulations personal watercraft must be operated at no-wake speed within 200 feet of the shore and may only travel perpendicular to the shore.

Visitors east of Miners Beach would no longer have contact with PWC users within the lakeshore's 0.25-mile jurisdiction. Visitors to Chapel Beach and Twelvemile Beach, in particular, tend to look for quieter experiences. Therefore, this proposal would have a negligible beneficial impact to visitors east of Miners Beach.

Impact on Backcountry Visitors—Backcountry visitors east of Miners Beach would have decreased contact with PWC users, resulting in a moderate beneficial impact to their experiences. PWC restrictions would particularly enhance the experiences of wilderness visitors in the Beaver Basin segment. Visitors along the North Country National Scenic Trail within the Sand Point segment and the western one mile of the Cliffs segment would continue to be occasionally affected by PWC use, with a moderate adverse impact.

Motorized boats and other visitors would continue to interact, with impacts the same as before the ban on PWC use. Cumulative impacts related to the use of personal watercraft, motorized boats, and other visitor activities would be negligible over the short and long term because there would be little noticeable change in the visitor experience for most visitors. Backcountry visitors east of Miners Beach would have moderate beneficial impacts because of decreased impacts from PWC use. Most visitors would continue to be satisfied with their experiences at Pictured Rocks National Lakeshore.

Therefore, PWC users would be limited in their location of operation within the national lakeshore and could notice a slight increase in the density of use in the vicinity of Sand Point. As a result, they would experience moderate adverse impacts. Restricting PWC use east of Miners Beach would have negligible beneficial impacts on the experiences of most other visitors in the short and long term, and it would have long-term, moderate, beneficial impacts on those visitors desiring backcountry experiences with natural ''quiet.'' The level of PWC use would remain relatively low at lakeshore locations. When related to other visitor activities, PWC use would not appreciably limit the critical characteristics of visitor experiences.

Visitor Conflict and Safety

The proposed rule would minimize or reduce the potential for PWC user accidents and improve safety between PWC users and other water recreationists. This proposed rule assumes that PWC operations would be similar to before the ban, except that PWC use would be discontinued east of Miners Beach. As a result, the watercraft that normally operate in the eastern portions of the national lakeshore would be relocated to the western portion of the lakeshore.

Personal Watercraft/Swimmer Conflicts—Impacts would be similar to before the PWC ban since the overall number of personal watercraft operating within the lakeshore would not change. PWC user/swimmer interactions would increase slightly in the Sand Point segment and the western one mile of the Cliffs segment because of a shift in PWC use from other locations. However, under State regulations PWC operators must travel at no-wake speed within 200 feet of the shore and only perpendicular to the shore. The change in location for PWC operation would not be noticeable to other visitors and would continue to result in minor adverse impacts. In the remaining lakeshore locations there would be little or no conflict between PWC users and swimmers. No conflicts would occur east of Miners Beach, resulting in a negligible beneficial impact to these visitors.

Overall, PWC use would continue to have negligible to minor adverse impacts on most swimmers at Pictured Rocks National Lakeshore. Beneficial impacts would occur east of Miners Beach. Impacts would be perceptible to a relatively small number of visitors at localized areas, primarily at Sand Point and Miners Beach.

Personal Watercraft/Other Boat Conflicts—Impacts would be similar to before the ban. Overall, PWC use would continue to have minor adverse impacts on other motorized boat users at Pictured Rocks National Lakeshore.

Impacts would be perceptible to a relatively small number of visitors at localized areas, primarily at the Sand Point launch.

Cumulative impacts would be similar to before the ban on PWC use. The natural separation of use between the various lakeshore visitors reduces the potential for conflicts. For this reason, the cumulative impact of the various user groups on visitor conflicts and safety would be negligible to minor over the short and long term. Beneficial impacts would occur east of Miners Beach. Impacts would be perceptible to a relatively small number of visitors at localized areas, primarily at the Sand Point beach.

Therefore, continued PWC use would have short- and long-term, minor, adverse impacts on visitor conflicts and safety, particularly in the Sand Point area, due to the number of visitors and boats present on high use days. Conflicts at other locations would remain negligible because use is lower and conflicts would be less likely to occur. Conflicts would be eliminated east of Miners Beach, resulting in negligible, beneficial impacts.

The Proposed Rule

Under the proposed rule in § 7.32 PWC use would be allowed to operate on the waters of Lake Superior within the boundaries of Pictured Rocks National Lakeshore from the western boundary of the lakeshore up to the east end of Miners Beach. This proposed rule would allow PWC use along the Lake Superior shoreline within the western end of the park, covering approximately 8 miles of shoreline. PWC use would be allowed under the following conditions:

Personal watercraft may only be launched from a designated launch site at Sand Point.

PWC users may beach their craft on Miners Beach, however no launching or retrieving of the craft may occur at Miners Beach.

PWC users may not launch or operate in any other area of the lakeshore.

The superintendent may temporarily limit, restrict, or terminate access to areas designated for PWC use after taking into consideration public health and safety, natural and cultural resource protection, and other management activities and objectives.

PWC use would be restricted at specific locations during the permitted use of ethnographic resources. Boat patrols would be conducted in the vicinity of the ethnographic resource use in order to reduce the potential for PWC-related intrusion into the ceremonial activity.

PWC users must comply with the requirements of the Michigan Personal Watercraft Safety Act of 1998 (Public Act 116), including the requirement to operate at flat wake speed within 200′ of the shoreline, and related regulations.

Compliance with Other Laws

Regulatory Planning and Review (Executive Order 12866)

This document is a significant rule and has been reviewed by the Office of Management and Budget under Executive Order 12866.

(1) This rule will not have an effect of $100 million or more on the economy. It will not adversely affect in a material way the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities. The National Park Service has completed the report ''Economic Analysis of Personal Watercraft Regulations in Pictured Rocks National Lakeshore'' (RTI, International, November 2004).

(2) This rule will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency. Actions taken under this rule will not interfere with other agencies or local government plans, policies or controls. This rule is an agency specific rule.

(3) This rule does not alter the budgetary effects of entitlements, grants, user fees, or loan programs or the rights or obligations of their recipients. This rule will have no effects on entitlements, grants, user fees, or loan programs or the rights or obligations of their recipients. No grants or other forms of monetary supplements are involved.

(4) This rule does raise novel legal or policy issues. This rule is one of the special regulations being issued for managing PWC use in National Park Units. The National Park Service published general regulations (36 CFR 3.24) in March 2000, requiring individual park areas to adopt special regulations to authorize PWC use. The implementation of the requirement of the general regulation continues to generate interest and discussion from the public concerning the overall effect of authorizing PWC use and National Park Service policy and park management.

Regulatory Flexibility Act

The Department of the Interior certifies that this rulemaking will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). This certification is based on a report entitled report ''Economic Analysis of Personal Watercraft Regulations in Pictured Rocks National Lakeshore'' (RTI, International, November 2004).

Small Business Regulatory Enforcement Fairness Act (SBREFA)

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This proposed rule:

a. Does not have an annual effect on the economy of $100 million or more.

b. Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions.

c. Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on State, local, or tribal governments or the private sector of more than $100 million per year. The rule does not have a significant or unique effect on State, local or tribal governments or the private sector. This rule is an agency specific rule and does not impose any other requirements on other agencies, governments, or the private sector.

Takings (Executive Order 12630)

In accordance with Executive Order 12630, the rule does not have significant takings implications. A taking implication assessment is not required. No taking of personal property will occur as a result of this rule.

Federalism (Executive Order 13132)

In accordance with Executive Order 13132, the rule does not have sufficient Federalism implications to warrant the preparation of a Federalism Assessment. This proposed rule only affects use of NPS administered lands and waters. It has no outside effects on other areas by allowing PWC use in specific areas of the park.

Civil Justice Reform (Executive Order 12988)

In accordance with Executive Order 12988, the Office of the Solicitor has determined that this rule does not unduly burden the judicial system and meets the requirements of sections 3(a) and 3(b)(2) of the Order.

Paperwork Reduction Act

This regulation does not require an information collection from 10 or more

parties and a submission under the Paperwork Reduction Act is not required. An OMB Form 83–I is not required.

National Environmental Policy Act

As a companion document to this NPRM, NPS has issued the *Personal Watercraft Use Environmental Assessment for Pictured Rocks National Lakeshore* and subsequent errata sheet. The environmental assessment was available for public review and comment for the period August 1 through November 15, 2004. To request a copy of the document and errata sheet contact Superintendent, Pictured Rocks National Lakeshore, N8391 Sand Point Road, P.O. Box 40, Munising, MI 49862–0040. A copy of the Environmental Assessment and errata sheet may also be found at www.nps.gov/piro.

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994, ''Government to Government Relations with Native American Tribal Governments'' (59 FR 22951) and 512 DM 2, we have evaluated potential effects on Federally recognized Indian tribes and have determined that there are no potential effects.

Clarity of Rule

Executive Order 12866 requires each agency to write regulations that are easy to understand. We invite your comments on how to make this rule easier to understand, including answers to questions such as the following: (1) Are the requirements in the rule clearly stated? (2) Does the rule contain technical language or jargon that interferes with its clarity? (3) Does the format of the rule (grouping and order of sections, use of headings, paragraphing, *etc.*) aid or reduce its clarity? (4) Would the rule be easier to read if it were divided into more (but shorter) sections? (A ''section'' appears in bold type and is preceded by the symbol ''§ '' and a numbered heading; for example [§ 7.32 Pictured Rocks National Lakeshore] (5) Is the description of the rule in the ''Supplementary Information'' section of the preamble helpful in understanding the proposed rule? What else could we do to make the rule easier to understand?

Send a copy of any comments that concern how we could make this rule easier to understand to: Office of Regulatory Affairs, Department of the Interior, Room 7229, 1849 C Street, NW., Washington, DC 20240. You may also e-mail the comments to this address: *Exsec@ios.doi.gov.*

Drafting Information: The primary authors of this regulation are: Larry Hach, Chief Ranger, Pictured Rocks National Lakeshore; Sarah Bransom, Environmental Quality Division; and Kym Hall, Special Assistant.

Public Participation

Comments on the proposed rule should be mailed to N8391 Sand Point Road, P.O. Box 40, Munising, MI 49862–0040. Comments may also be sent by e-mail to *PIRO@den.nps.gov.* If you comment by e-mail, please include ''PWC rule'' in the subject line and your name and return address in the body of your Internet message.

Our practice is to make comments, including names and addresses of respondents, available for public review during regular business hours. Individual respondents may request that we withhold their home address from the rulemaking record, which we will honor to the extent allowable by law. If you wish us to withhold your name and/or address, you must state this prominently at the beginning of your comment. However, we will not consider anonymous comments. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials or organizations or businesses, available for public inspection in their entirety.

List of Subjects in 36 CFR Part 7

District of Columbia, National Parks, Reporting and recordkeeping requirements.

In consideration of the foregoing, the National Park Service proposes to amend 36 CFR part 7 as follows:

PART 7—SPECIAL REGULATIONS, AREAS OF THE NATIONAL PARK SYSTEM

1. The authority for Part 7 continues to read as follows:

Authority: 16 U.S.C. 1, 3, 9a, 460(q), 462(k); Sec. 7.96 also issued under DC Code 8–137(1981) and DC Code 40–721 (1981).

2. Amend § 7.32 by adding paragraph (d) to read as follows:

§ 7.32 Pictured Rocks National Lakeshore.

* * * * *

(d) *Personal Watercraft (PWC).* (1) PWC are allowed on the waters within Pictured Rocks National Lakeshore, from the western boundary of the lakeshore to the east end of Miners Beach.

(2) PWC may only be launched from a designated launch site at Sand Point.

(3) At Sand Point Beach and Miners Beach, PWC users may only beach their craft.

(4) The Superintendent may temporarily limit, restrict, or terminate access to the areas designated for PWC use after taking into consideration public health and safety, natural and cultural resource protection, and other management activities and objectives.

Dated: November 4, 2004.

Paul Hoffman,

Deputy Assistant Secretary, Fish and Wildlife and Parks.

[FR Doc. 04–25318 Filed 11–12–04; 8:45 am]

BILLING CODE 4310–70–P

POSTAL RATE COMMISSION

39 CFR Part 3001

[Docket No. RM2005–1; Order No. 1423]

Periodic Reporting Rule

AGENCY: Postal Rate Commission.

ACTION: Advance notice of proposed rulemaking.

SUMMARY: This document addresses a dispute that has arisen over the Postal Service's compliance with certain periodic reporting rules. These rules are intended to facilitate participation in Commission proceedings by providing the public with data and information on cost methodologies and other matters. This notice describes the dispute and invites comments on this development, including suggestions on possible rule changes.

DATES: *Initial Comments:* December 6, 2004; *Reply Comments:* January 6, 2005.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, (202) 789–6818.

SUPPLEMENTARY INFORMATION:

Regulatory History

68 FR 2272, January 16, 2003.
68 FR 65348, November 19, 2003.

Summary

The Postal Rate Commission amended its Rules Applicable to the Filing of Reports by the U.S. Postal Service in its Order No. 1386, issued November 3, 2003. That order updated the rules to reflect new data systems and methodologies, and increased the amount of information the Postal Service was to submit to assist the Commission and foster effective public participation in Administrative Procedure Act (APA) hearings pursuant to 39 U.S.C. 3624.

The Postal Service opposed expansion of its obligations under 39 CFR

3001.102, Filing of Reports, in the rulemaking docket leading to the adoption of Order No. 1386. Although it initially complied with some of its new obligations, the Postal Service has now informed the Commission that after consideration at the ''highest level'' of postal management, it has determined that it will not comply with Commission rules that require the reporting of new methodologies and data used in the preparation of its annual Cost and Revenue Analysis (CRA) report.

In support of its action, the Postal Service reiterated several legal contentions fully considered and rejected by the Commission in its rulemaking. However, the primary motivating factor leading to the Postal Service announcement that it would not comply with the rules seems to be the Commission practice of making materials filed in compliance with its rules available to the public.

The Commission requests that interested persons provide comments on this controversy, including suggestions for adjustments to Commission rules designed to reconcile the conflicting interests outlined in this Notice. Comments should be provided by December 6, 2004. Reply comments may be submitted by January 6, 2005.

Background

Over the years, postal ratemaking has become increasingly complex. The ability to computerize information and apply econometrics to large data bases has led to more sophisticated analyses of postal costs, volumes, and revenues. The Commission, and to an even greater extent mailers and other interested participants in Postal Rate Commission proceedings, have had growing difficulty in reviewing multiple new complex analyses in the context of proceedings that must, by statute, be completed in 10 months. 39 U.S.C. 3624(c)(1).

The Postal Service supports its requests for rate increases with testimony from 40+ witnesses, a number of whom sponsor technical analyses that have been in preparation for many months. Participants must review this material, develop their criticisms, and present any suggested alternative analyses approximately half way through a case to allow other participants and the Commission to evaluate their views. The Commission is charged with reviewing every analysis presented, getting clarifications as needed, and preparing a technically sound, comprehensive decision.

Commission conclusions must be confined to materials in the evidentiary record. Participants have complained that the process becomes ineffective and one-sided if only the Postal Service has time sufficient to analyze data and prepare persuasive evidence.

Following the most recent rate case, the Postal Service and Postal Rate Commission jointly sponsored a Ratemaking Summit to obtain public input on ways to make the ratemaking process more streamlined and less burdensome for all involved. The Summit took place in May and June, 2002, and involved written comments followed by two, separate full day discussion sessions.

Attention was given both to how the Postal Service planned and implemented rate changes, and how to improve the current rate case process. The majority of comments addressing the rate case process focused on the difficulty of responding adequately to multiple new complex technical presentations within the 10-month timeframe. Participants emphasized they do not have the resources to address several major technical studies simultaneously.

The most widely supported solution was to find a way to provide participants with more timely access to annual cost and volume data, as well as any changes in the methodologies the Postal Service uses to aggregate and distribute that data in preparing its annual reports. It has been the Postal Service's consistent practice to withhold from the public both the basic cost and volume data underlying its aggregate results, and any changes to its analytic methodologies, until it submits an omnibus rate request.

Recent Amendments to the Periodic Reporting Rules

A short time after the Ratemaking Summit, the Commission issued a notice of proposed rulemaking, in which it sought comments on whether to update and expand its Rules Applicable to the Filing of Reports by the U.S. Postal Service. These rules had not been revised for over a decade and no longer fully reflected existing operating and data collection practices. The Commission is directed by 39 U.S.C. 3603 to implement such rules as it finds necessary and proper to enable it to carry out its statutory functions. That section specifically provides such rules ''shall not be subject to any change or supervision by the Postal Service.''

All those who submitted either comments or reply comments, with the exception of the Postal Service, urged the Commission to amend its periodic reporting rules to facilitate analysis between rate cases. The Postal Service has opposed parts of these proposals, raising legal arguments (set forth below) and expressing concern that compliance would be burdensome, and that it might face time-consuming questions about new analytic methods underlying its published summary reports.

The Commission followed APA processes, resolving every issue raised. It narrowed its initial proposal somewhat in light of the Postal Service's burden arguments, but it retained several proposed amendments to the periodic reporting rules providing access to new data collection systems and estimating methods. The Commission found that updating the periodic reporting rules would result in favor of key improvements:

(1) Help the Commission and the public to evaluate the soundness of the cost, volume and revenue estimates on which existing rates were based;

(2) Inform the Commission and the public about new data sets and estimation techniques incorporated by the Postal Service each year into the Cost and Revenue Analysis (CRA) report it currently provides;

(3) Allow the public to participate more meaningfully in Commission cases; and

(4) Enable the Commission to expedite the processing of rate, classification, and complaint cases.

In November 2003 the Commission amended its periodic reporting rules. The Postal Service has complied with some parts of the new rule, but it now has refused to provide data and methodologies used to develop the majority of the cost attributions reported in its Cost and Revenue analysis. The Attachment to this Order lists the information the Postal Service has not provided.

The Postal Service Position

The Postal Service explained its views in detailed filings in Docket RM2003–3. All of these filings may be accessed on the Commission Web site, *http://www.prc.gov.* The most recent Postal Service statement, in which it announced it would not provide required information, may also be found there on the ''Daily Listing'' for September 17, 2004.

The Postal Service advances two main arguments in support of its position that the Commission is not authorized to require periodic reports of this nature. First, it contends that Commission authority is limited to acting in response to Postal Service requests for rate or classification decisions, and other strictly limited specific functions set forth in the Act. The Postal Service argues that the Commission does not

have broad investigative or oversight authority, and the Service has implied that the amended rules are an attempt by the Commission to expand its authority and oversee operations in a manner not contemplated by the statute.

Second, the Postal Service contends that Congress does not want it to have to make information of this nature public ''indiscriminately.'' The Act includes a special test applicable to Freedom of Information Act (FOIA) requests. The Postal Service does not have to provide ''information of a commercial nature'' which ''under good business practice would not be publicly disclosed'' in response to a FOIA request. 39 U.S.C. 410(c)(2). The Postal Service correctly observes that private businesses in the United States seldom disclose detailed information about their operating costs.

The Postal Service argues that because it is standard Commission practice to post public documents on its Web site, including data received as periodic reports, the Service should not provide such detailed information to the Commission. The Postal Service seems to concede that the Commission might have use for these materials, and for explanations of changes since the most recent rate case, but it contends that allowing internet access to this information would be contrary to Congress' vision of the Postal Service following good business practices.

The Current Commission Position

The Commission has not found either Postal Service argument persuasive, as explained fully in Order No. 1386. The Commission has concluded that its responsibility under section 3603 to establish rules to carry out its functions under the Act does provide the authority to assure that sufficient information is available in a timely fashion to facilitate meaningful public participation and to enable the Commission to provide informed recommendations in response to Postal Service rate and classification requests.

The Commission also has concluded that information required by its rules is not equivalent to a citizen's FOIA request. While citizens can file a FOIA request seeking information on any topic without any showing of need, the Commission's rules focus on information needed to carry out its statutory functions. The Act requires public participation in all Commission proceedings, and thus contemplates public access to relevant data. In past rate cases, the Postal Service has made all of the contested information available without suggesting that there was any need to restrict public access to it.

The Commission always has recognized that when the Postal Service or any other participant provides items for use in a Commission proceeding that it shows to be trade secrets or other sensitive business information, and that disclosure of this information could result in commercial harm, such items should be made subject to appropriate protective conditions. Similarly, the Commission has been willing to accommodate in its periodic reporting rules, Postal Service requests that specific information be protected as commercially sensitive, after balancing the asserted risk of harm against the needs of the public to remain informed. See Docket No. RM89–3, Order No. 839, at 7–8 (deferring filing dates for billing determinants of competitive products).

Comments

The Postal Service has indicated its interest in further exploring the possibility of ways to refine procedures for controlling dissemination of information provided as periodic reports. This might be accomplished through additions to rule 102. Those responding to this notice are invited to advise on the most important policies and principles that should guide the Commission in evaluating potential action in regard to this situation. Commenters also may suggest procedures for obtaining a desired outcome or specific proposals for changes to Commission rules.

Ordering Paragraphs

It is ordered:

1. Interested persons are invited to submit comments on the Commission's Advance Notice of Proposed Rulemaking on or before December 6, 2004. Any reply comments should be submitted by January 6, 2005.

2. The Secretary shall cause this Advance Notice of Proposed Rulemaking to be published in the **Federal Register**.

Attachment

Materials Required by Rule 102 That the Postal Service Has Not Provided

1. The In-Office Cost System (IOCS) data for FY 2003 used to distribute attributable mail processing and in-office carrier costs to classes of mail in the Cost and Revenue Analysis (CRA) report.

2. The City Carrier Cost System (CCCS) data for FY 2003 used to distribute attributable city carrier costs to classes of mail in the CRA.

3. The Rural Carrier Cost System (RCCS) data for 2003 used to distribute attributable rural carrier costs to classes of mail in the CRA.

4. The National Mail Count data for 2003. These data are used to determine attributable rural carrier costs.

5. MODS input data used to estimate mail processing cost variabilities by activity.

6. SAS computer programs showing how FY 2003 attributable mail processing costs were estimated and distributed to mail classes in the CRA.

7. Revenue, Pieces, and Weight reports by rate category for the first three quarters of FY 2004.

By the Commission.

Issued: November 8, 2004.

Steven W. Williams,

Secretary.

BILLING CODE 7710–FW–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 720

[OPPT–2003–0058; FRL–7342–2]

RIN 2070–AJ04

TSCA Inventory Nomenclature for Enzymes and Proteins

AGENCY: Environmental Protection Agency (EPA).

ACTION: Advance Notice of Proposed Rulemaking (ANPRM).

SUMMARY: This ANPRM alerts interested parties that EPA is considering new procedures and regulations for naming enzymes and proteins when listing such substances on the Toxic Substances Control Act (TSCA) Chemical Substances Inventory (Inventory). More specifically, this ANPRM outlines four identification elements that EPA currently believes are appropriate for use in developing unique TSCA Inventory nomenclature for proteinaceous enzymes. This ANPRM also solicits public comment on several specific questions relating to this initiative.

DATES: Comments must be received on or before December 15, 2004.

ADDRESSES: Submit your comments, identified by docket ID number OPPT–2003–0058, by one of the following methods:

- *Federal eRulemaking Portal*: *http://www.regulations.gov/*. Follow the on-line instructions for submitting comments.
- *Agency Website*: *http://www.epa.gov/edocket/*. EDOCKET, EPA's electronic public docket and

comment system, is EPA's preferred method for receiving comments. Follow the on-line instructions for submitting comments.

- *E-mail: oppt.ncic@epa.gov*.
- *Mail:* Document Control Office (7407M), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001.
- *Hand delivery/courier*: OPPT Document Control Office (DCO), EPA East Bldg., Rm. 6428, 1201 Constitution Ave., NW., Washington, DC, Attention: Docket ID number OPPT–2003–0058. The DCO is open from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The telephone number for the DCO is (202) 564–8930. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to docket ID number OPPT–2003–0058. EPA's policy is that all comments received will be included in the public docket without change and may be made available on-line at *http://www.epa.gov/edocket/*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through EDOCKET, regulations.gov, or e-mail. The EPA EDOCKET and the Federal regulations.gov websites are ''anonymous access'' systems, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through EDOCKET or regulations.gov, your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit EDOCKET on-line or see the **Federal Register** of May 31, 2002 (67 FR 38102) (FRL–7181–7).

Docket: All documents in the docket are listed in the EDOCKET index at *http://www.epa.gov/edocket/*. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in EDOCKET or in hard copy at the OPPT Docket, EPA Docket Center (EPA/DC), EPA West, Rm. B102, 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The EPA Docket Center Reading Room telephone number is (202) 566–1744, and the telephone number for the OPPT Docket, which is located in the EPA Docket Center, is (202) 566–0280.

FOR FURTHER INFORMATION CONTACT: *For general information contact*: Colby Lintner, Regulatory Coordinator, Environmental Assistance Division (7408M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (202) 554–1404; e-mail address: *TSCA-Hotline@epa.gov*.

For technical information contact: James Alwood, Chemical Control Division, (7405M), Office Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (202) 564–8974; e-mail address: *alwood.jim@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be potentially affected by this action if you manufacture, import, process, or use chemical substances which are subject to TSCA jurisdiction. Potentially affected entities may include, but are not limited to:

- Chemical manufacturers (NAICS 325), e.g., persons manufacturing, importing, processing, or using chemicals for commercial purposes.
- Petroleum and coal product industries (NAICS 324), e.g., persons manufacturing, importing, processing, or using chemicals for commercial purposes.

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. To determine whether you or your business may be affected by this action, you should carefully examine the applicability provisions in title 40 of the Code of Federal Regulations (CFR) at 40 CFR 720.22. If you have any questions regarding the applicability of this action to a particular entity, consult the technical person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How Can I Access Electronic Copies of this Document and Other Related Information?

In addition to EDOCKET (*http://www.epa.gov/edocket/*), you may access this **Federal Register** document electronically through the EPA Internet under the ''**Federal Register**'' listings at *http://www.epa.gov/fedrgstr/*. A frequently updated electronic version of 40 CFR part 720 is available on E-CFR Beta Site Two at *http://www.gpoaccess.gov/ecfr/*.

C. What Should I Consider as I Prepare My Comments for EPA?

1. *Submitting CBI*. Do not submit this information to EPA through EDOCKET, regulations.gov, or e-mail. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD ROM that you mail to EPA, mark the outside of the disk or CD ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments*. When submitting comments, remember to:

i. Identify the rulemaking by docket ID number and other identifying information (subject heading, **Federal Register** date and page number).

ii. Follow directions—The Agency may ask you to respond to specific questions or organize comments by referencing a CFR part or section number.

iii. Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.

iv. Describe any assumptions and provide any technical information and/or data that you used.

v. If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.

vi. Provide specific examples to illustrate your concerns, and suggest alternatives.

vii. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.

viii. Make sure to submit your comments by the comment period deadline identified.

II. Background

A. What Action is the Agency Taking?

This ANPRM is alerting stakeholders that EPA is considering changing procedures and requirements for naming enzymes and proteins for the purpose of listing those substances on the TSCA Inventory. Specifically, EPA has identified four elements that it currently believes are appropriate for use in creating unique and unambiguous identities for proteinaceous enzymes on the TSCA Inventory. Through this ANPRM, EPA is also soliciting public comment on the scientific appropriateness and technical feasibility of using the identification elements summarized herein.

B. What is the Agency's Authority for Taking this Action?

Section 8(b) of TSCA requires EPA to ''compile, keep current, and publish a list of each chemical substance which is manufactured or processed in the United States'' (the TSCA Inventory). In order to fulfill this requirement, EPA must continuously update and keep current various types of information, including, but not limited to, the information used to identify any new chemical substance that is reported to be manufactured or processed in the United States. EPA also makes corrections, when necessary, of previously reported information on the TSCA Inventory.

C. TSCA Inventory Background

As stated above, TSCA section 8(b) requires EPA to compile, keep current, and publish a list of chemical substances which are manufactured (including imported) or processed in the United States. This listing, known as the ''TSCA Inventory,'' informs the public of which chemical substances are being manufactured, imported, or processed in the United States for commercial purposes. For the TSCA Inventory to accurately inform the public, it must be continuously and accurately updated as new information becomes available. The updating process includes adding to the Inventory the identities of new chemical substances that are being introduced into U.S. commerce and corrections when necessary of the identities of previously reported substances. The Agency has developed policies regarding the identification of chemical substances for the purpose of assigning a unique description of each substance on the TSCA Inventory. Published nomenclature guidance is currently available for polymeric substances, substances containing varying carbon chain lengths, complex reaction products, mixtures, and chemical substances of unknown or variable compositions. Approximately 81,500 chemical substances, as defined in section 3 of TSCA, are on the TSCA Inventory at this time.

In its implementation of TSCA, EPA defines chemical substances as either ''existing'' chemicals or ''new'' chemicals. The only way to determine if a substance is new or existing is by consulting the TSCA Inventory. Any substance that is listed on the TSCA Inventory is an existing chemical, otherwise it is a new chemical. If a substance is a new chemical, generally it can be manufactured or imported for non-exempt commercial purposes only when a Premanufacture Notice (PMN) is submitted at least 90 days before the manufacture or import of such substance begins (see section 5(a) of TSCA and 40 CFR part 720). During this 90-day review period EPA will evaluate the proposed manufacture, processing, use, distribution in commerce, and disposal of the substance, and if necessary, prohibit or limit any activity that may result in an unreasonable risk of injury to human health or the environment. A new chemical substance also can be manufactured or imported if it is subject to an exemption from full premanufacture reporting, for example a Low Volume Exemption or a Test Marketing Exemption (see 40 CFR part 723 and 40 CFR 720.38). In addition a new chemical substance is excluded from premanufacture reporting under certain conditions such as manufacture or import of small quantities for research and development or if the substance does not meet the TSCA definition of chemical substance as defined in 40 CFR part 720.3(e) (see 40 CFR 720.30).

D. Inventory Listings of Enzymes

When EPA promulgated the TSCA Inventory Reporting Regulations of 1977 (42 FR 64572, December 23, 1977), the Agency did not provide specific guidance regarding how complex biological compounds should be identified. However, EPA did publish the TSCA Candidates List to provide examples of the types of substances that would be reportable for the Inventory. That list included enzymes. As a result, approximately 150 enzymes were reported and listed on the TSCA Inventory without specific agency guidance regarding how they should be unambiguously identified. The original Inventory listings for non-enzymatic proteins and other complex biological compounds are based on information originally reported to EPA that varies widely in the type and specificity of information included.

The enzymes currently on the TSCA Inventory are identified by a Chemical Abstract Services (CAS) Registry Number and Chemical Abstracts 9th Collective Index Name. The names assigned to these enzymes by EPA vary in the type and specificity of information included due to wide variation in the type and amount of information originally reported to EPA. For some enzymes, the name is broad, defining only the most generic catalytic activity of the enzyme (e.g., proteinase).

As a result of the existing broad and generic TSCA Inventory enzyme listings, it has been difficult for EPA to determine whether enzyme substances are new and distinct, or covered under existing listings. In most cases, newly developed enzymes appear to be subsumed under one of the current broad and generic TSCA Inventory enzyme listings, which means that, although they are newly developed, they appear to be existing chemicals. This, in turn, means that EPA is reviewing very few new enzymes under section 5 of TSCA, despite the ongoing innovation in this field as to the specificity and functions of commercially available enzymes. Under the existing nomenclature system, therefore, EPA may not be addressing all of the newly developed enzymes and considering the potential risks that may be associated with these substances under section 5 of TSCA. A more specific nomenclature system would allow EPA to assess newly developed enzymes and take actions needed to prevent potential unreasonable risks to health and the environment that may be associated with these substances under section 5 of TSCA before they occur.

In addition, the broad TSCA Inventory enzyme listings, the lack of clear reporting guidelines, and the absence of policy concerning what structural variation or changes trigger reporting, also make it difficult for manufacturers to determine whether enzyme substances are new or covered under existing listings. Recognizing that enzyme listings on the Inventory were broad, EPA developed an interim policy that manufacturers of enzymes should contact EPA regarding submission of a *bona fide* intent to manufacture before producing any enzyme. EPA also routinely advised submitters of a Notice of Bona Fide Intent to Manufacture that the Agency may modify the method of listing enzymes on the Inventory and that this could require reporting at a higher level of detail than is required at present. This case-by-case determination creates uncertainty and an unnecessary burden for both the Agency and PMN submitters. More specific guidelines for identifying enzymes on the TSCA Inventory would make the process of deciding whether an enzyme is new or existing more predictable and transparent.

In order to more effectively meet its statutory obligation under TSCA to prevent unreasonable risk to human health and the environment and to maintain a complete and accurate list of all chemical substances manufactured, imported, or processed, EPA believes it is necessary to refine its policies with regard to enzyme identification reporting requirements. The timely development of identification reporting guidelines for enzymes is essential, given the increasing use of enzymes in commerce, the wide variety of enzymes that are being produced, and the development of new and different manufacturing techniques.

III. Identification Elements

A. Description of Identification Elements

EPA has identified four elements that it currently believes are appropriate to use in combination to create unambiguous listings for proteinaceous enzymes on the TSCA Inventory:

1. Function.
2. Source.
3. Processing.
4. Amino acid sequence.

EPA believes that no individual element provides sufficient identification information by itself. Rather, EPA anticipates that all four elements will provide useful and necessary information for the unambiguous identification of proteinaceous enzymes and that some combination of these and/or additional identification elements may be appropriate for other enzymes and proteins.

The function of an enzyme refers to its catalytic activity. The internationally accepted nomenclature conventions of the Nomenclature Committee of the International Union of Biochemistry and Molecular Biology (NC-IUBMB) describe and differentiate enzymes based on catalytic activity. Function, or catalytic activity, could be incorporated as an element of chemical identity of an enzyme on the TSCA Inventory using this standard enzyme nomenclature.

Source refers to the organism from which the gene encoding the enzyme was derived and the organism or manufacturing platform (e.g., tissue culture) in which the enzyme is produced. The two sources may be the same or differ when the enzyme gene from one organism is introduced through genetic engineering into a different organism or through the use of a synthetic sequence.

Processing refers to procedures used to isolate the enzyme from the production organism or manufacturing platform, procedures used to purify it, or any chemical reactions to which the enzyme is subjected to produce the final product.

The amino acid sequence of an enzyme or protein is known as its primary structure. The amino acid sequence is a systematic representation of the linear chain of amino acids connected via amide bonds that produce a polypeptide.

An example of enzyme nomenclature using these identification elements would be neopullulanase (*Enzyme Commission* 3.2.1.135), produced by *Bacillus stearothermophilus*, treated with acetic acid, with amino acid sequence:

BILLING CODE 6560–50–C

This is one version of enzyme nomenclature using these four identification elements. Actual nomenclature would vary widely depending on use of all four elements, nomenclature used for each element, and the level of detail ultimately used for each element.

B. Issues for Public Comment

EPA is soliciting comments on all aspects of the discussion presented in this document regarding nomenclature issues for enzymes and proteins, for purposes of listing these chemical substances on the TSCA Inventory. EPA is particularly interested in receiving comments on the following topics.

EPA has identified four elements (listed in Unit III.A.), that it currently believes are appropriate to derive unique nomenclature for the purpose of unambiguously listing proteinaceous enzymes on the TSCA Inventory. EPA is seeking comments on the scientific appropriateness of using these identification elements, the level of detail necessary to create specific, unambiguous TSCA Inventory listings, the technical feasibility of providing such information, and any additional or alternative elements that could be used to identify proteinaceous enzymes on the TSCA Inventory.

Are the identification elements proposed for proteinaceous enzymes scientifically appropriate and sufficiently comprehensive for non-proteinaceous enzymes and non-enzymatic proteins? Are there additional or alternative identification elements that should be used in creating TSCA Inventory listings for non-proteinaceous enzymes and non-enzymatic proteins?If so, what are these alternatives, and why is it believed that these alternatives are preferable.

IV. Do Any Statutory or Executive Order Reviews Apply to this Action?

Under Executive Order 12866, entitled *Regulatory Planning and Review* (58 FR 51735, October 4, 1993), it has been determined that this ANPRM is a ''significant regulatory action'' under section 3(f) of the Executive order. The Agency therefore submitted this document to OMB for the 10-day review period afforded under this Executive order. Any changes made in response to OMB comments during that review have been documented in the docket as required by the Executive order.

Since this ANPRM does not impose or propose any requirements, and instead seeks comments and suggestions for the Agency to consider in developing a subsequent notice of proposed rulemaking, the various other review requirements that apply when an agency imposes requirements do not apply to this action.

As part of your comments on this ANPRM you may include any comments or information that you have regarding these requirements. In particular, any comments or information that would help the Agency to assess the potential impact of a rule on small entities pursuant to the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*); to consider voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–113, section 12(d) (15 U.S.C. 272 note); or to consider environmental health or safety effects on children pursuant to Executive Order 13045, entitled *Protection of Children from Environmental Health Risks and Safety Risks* (62 FR 19885, April 23, 1997). The Agency will consider such comments during the development of any subsequent notice of proposed rulemaking as it takes appropriate steps to address any applicable requirements.

BILLING CODE 6560–50–S

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 2 and 80

[WT Docket No. 04–344; RM–10821; FCC 04–207]

Maritime Communications

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Commission initiates a rulemaking proceeding to identify the electromagnetic spectrum that should be used for maritime Automatic Identification Systems (AIS) in the United States and its territorial waters. AIS is an important tool for enhancing maritime safety and homeland security, and the Commission is concerned that recent developments may have created uncertainty in the maritime community regarding the very high frequency (VHF) channels to be used for AIS, and that this in turn could impede efforts to expedite the broad deployment of AIS. The Commission has received conflicting petitions and other pleadings on this subject from the National Telecommunications and Information Administration (NTIA), which is representing the interests of the Federal Government, including the United States Coast Guard (USCG or Coast Guard) and the Department of Transportation (including the Saint Lawrence Seaway Development Corporation) in this matter, and from MariTEL, Inc. (MariTEL), the licensee of all nine of the maritime VHF Public Coast (VPC) station service areas. Based on these petitions and pleadings, as well as responsive comments from other stakeholders in the maritime community, the Commission proposes to designate VHF maritime Channels 87B and 88B for exclusive AIS use domestically, in keeping with the international allocation of those channels for AIS, because the Commission tentatively concludes that the use of those channels will best secure to the United States the maritime safety and homeland security benefits of AIS. In addition, the Commission tentatively concludes that it should deny MariTEL's pending petitions that conflict with this proposal.

DATES: Submit comments on or before December 30, 2004, and reply comments are due on or before January 31, 2005.

FOR FURTHER INFORMATION CONTACT: Jeffrey Tobias, *Jeff.Tobias@FCC.gov*, Public Safety and Critical Infrastructure Division, Wireless Telecommunications Bureau, (202) 418–0680, or TTY (202) 418–7233.

SUPPLEMENTARY INFORMATION: This is a summary of the Federal Communications Commission's Notice of Proposed Rulemaking (''NPRM'') in WT Docket No. 04–344, FCC 04–207, adopted on August 26, 2004, and released on October 15, 2004. The full text of this document is available for inspection and copying during normal business hours in the FCC Reference Center, 445 12th Street, SW., Washington, DC 20554. The complete text may be purchased from the Commission's copy contractor, Best Copy and Printing, Inc., 445 12th Street, SW., Room CY–B402, Washington, DC 20554. The full text may also be downloaded at: *http://www.fcc.gov.* Alternative formats are available to persons with disabilities by contacting Brian Millin at (202) 418–7426 or TTY (202) 418–7365 or at *bmillin@fcc.gov.*

1. Section 80.371(c)(3) of the Commission's Rules, 47 CFR 80.371(c)(3), directs the licensee of VHF Public Coast Service Areas (VPCSAs) 1–9, *i.e.*, MariTEL, and the Coast Guard to negotiate in good faith to select two narrowband offset channel pairs to be dedicated to AIS use, and specifies that if an agreement cannot be reached, the Coast Guard may petition the Commission to select the channel pairs. Although MariTEL and the Coast Guard did in fact reach an agreement to designate frequencies 157.375 MHz and 161.975 MHz for AIS and executed a Memorandum of Agreement (MOA) to that effect, MariTEL later exercised its right to terminate the MOA. Following termination of the MOA, NTIA petitioned the Commission on behalf of the Coast Guard to select Channels 87B and 88B for AIS and to work with NTIA to reallocate the channels for exclusive AIS use nationwide on a shared Federal Government/non-Federal Government basis. After reviewing various proposals submitted by MariTEL and NTIA, including their technical submissions, and the comments filed in response to a number of public notices relating to this matter, the Commission tentatively agrees with NTIA and the Coast Guard, as well as the vast majority of commenters, that the public interest would be served by designating Channels 87B and 88B for exclusive AIS use in the nine maritime VPCSAs. The Commission therefore grants the petition for rulemaking filed by NTIA on October 24, 2003, RM–10821 to the extent that it seeks initiation of a rulemaking proceeding to consider this issue, denies the Emergency Petition for Declaratory Ruling filed by MariTEL on October 15, 2003, and adopts the instant *Notice of Proposed Rule Making* in which it proposes to designate Channels 87B and 88B for exclusive AIS use in the nine maritime VPCSAs.

2. Designating Channels 87B and 88B for AIS in the United States and its territorial waters would permit seamless worldwide AIS operations. If the United States were to designate channels other than 87B and 88B for AIS, vessels entering United States waters would have to switch to those alternative channels, instead of being able to use the same channels that were employed in international waters. Commenters indicate that requiring such switching would increase the risk of vessel collisions. If ships must switch channels as they approach and transit an AIS ''fence'' between international and United States waters, there is a risk that they will disappear temporarily from the screens of vessel traffic management systems as well as from the screens of AIS receivers located on the bridges of vessels.

3. Further, domestic use of Channels 87B and 88B for AIS would facilitate the speedy and efficient deployment of AIS, allowing the United States to take full advantage of existing AIS standards and infrastructure. Mandating the use of other channels could prolong implementation schedules for future PAWSS installations and delay full implementation of AIS as a component of homeland security because of the need for additional technical analysis, possible design changes, and conceivably more extensive shore infrastructure to accommodate AIS channel shifting. In addition, AIS operations on Channels 87B and 88B already have been deployed in, for example, the Saint Lawrence Seaway. A switch to other channels on the United States side would not only necessitate a costly reconfiguration of the AIS network on the Seaway but, more importantly, would compromise the ability of the United States to coordinate with Canada in monitoring vessel traffic on the Seaway and in other areas, since Canada uses Channels 87B and 88B for AIS. In addition to implementation delays and coordination difficulties, the use of channels other than 87B and 88B would affect the United States adversely because it would cause the U.S. Government to expend considerably more time, money and resources to

implement a domestic AIS infrastructure.

4. Designating specific channels for AIS should provide greater regulatory certainty, which in turn should encourage investment in AIS technology. Calling for another round of negotiations between the Coast Guard and MariTEL to identify channels for AIS would likely result in greater delay before this critical issue could be definitively resolved, and the resultant uncertainty could retard the pace of AIS deployment in the United States. Further, a resolution premised on a new MOA between the parties would still leave open the possibility that either party would terminate that future MOA, returning us to the present predicament. Specifically designating AIS channels in the Commission's Rules, in contrast, would eliminate that possibility. Therefore, the Commission sees important public interest benefits in designating specific channels for AIS, and the record developed thus far overwhelmingly militates in favor of designating Channels 87B and 88B for this purpose rather than any other channels.

5. After reviewing the parties' technical submissions, the Commission also tentatively concludes that there is no basis in public policy or equity either to forego designating Channels 87B and 88B for AIS in order to protect MariTEL's interests or to provide some mechanism to compensate MariTEL if it does so. The Commission believed that the action it proposes here is essential to public safety, a reasonable regulatory response to changed circumstances, does not limit the licensed VPC spectrum available for MariTEL's proposed data offerings to any greater degree than would the designation of four narrowband offset channels, does not unfairly undermine MariTEL's reasonable investment-backed expectations, and does not undermine the integrity of the Commission's auction process. The Commission invites comment on these tentative conclusions as well as on its overall proposal. In addition, the Commission encourages the Coast Guard and Maritel to cooperate in an effort to avoid interference to and from AIS and VPC operations, and to take reasonable measures to remedy any instances of interference that occur. Although the Commission does not propose here to mandate any particular type of cooperative interference mitigation measures, it seeks comment on whether there are specific actions it could take to facilitate such collaboration.

6. The Commission also tentatively concludes that it should not adopt MariTEL's proposal to serve as the AIS frequency coordinator. MariTEL's proposed fees for providing AIS frequency coordination would create an unwarranted disincentive for voluntary carriage of AIS equipment. The effectiveness of AIS as a tool in service of maritime safety and homeland security is directly proportional to the percentage of vessels that operate with AIS. Creating a disincentive for voluntary AIS carriage should be considered only if there are equally weighty reasons in favor of it. Here, there is no apparent countervailing public interest benefit in MariTEL's proposal to act as AIS frequency coordinator that could justify a measure that would discourage fitting vessels with AIS equipment. In addition, the proposed fees would unfairly burden the owners and operators of vessels subject to mandatory AIS carriage requirements, who must already shoulder the costs of purchasing and installing AIS equipment to fulfill the requirement.

7. The Commission also declines to propose adoption of MariTEL's proposal for shared use of Channels 87B and 88B, as set forth in MariTEL's submission of February 9, 2004. The public interest benefits of adopting this proposal are unclear, and do not outweigh the clear disadvantages of the proposal. First, the MariTEL sharing proposal would permit MariTEL to use on a shared basis not only Channel 87B but also the Federal Government channel 88B. The Commission is not empowered to give MariTEL any rights to use a Federal Government channel, and NTIA has not indicated any readiness to do so. Second, the MariTEL sharing proposal is premised in part on the Commission adopting regulations precluding the reception and use of AIS transmissions except by MariTEL, the Coast Guard and ship stations. However, precluding other entities from acquiring and using AIS information, or allowing such access and use only upon payment to MariTEL, could inhibit domestic implementation of AIS, could preclude beneficial public/private cooperative arrangements between the Coast Guard and private maritime associations, and could otherwise impede efficient AIS implementation. Finally, the MariTEL sharing proposal calls for the Commission to modify the technical requirements for AIS devices in order to prevent interference from AIS operations on Channels 87B and 88B to adjacent channel VPC channels. The AIS technical requirements are based on the international standards, and the Commission tentatively concludes that it should not revise those requirements unilaterally, and effectively abandon the standards-setting efforts to date, solely at the behest of and for the benefit of a single company. This is especially so because some of the mandatory AIS carriage deadlines have come into effect, and it is at best uncertain that the Commission could develop new technical requirements soon enough to give vessel operators a reasonable opportunity to come into compliance.

I. Procedural Matters

A. Ex Parte Rules—Permit-But-Disclose Proceeding

8. This is a permit-but-disclose notice and comment rulemaking proceeding. Ex parte presentations are permitted, except during the Sunshine Agenda period, provided they are disclosed as provided in the Commission's rules.

B. Comment Dates

9. Pursuant to sections 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments on or before December 30, 2004 and reply comments on or before January 31, 2005. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS) or by filing paper copies.

10. Comments filed through the ECFS can be sent as an electronic file via the Internet to *http://www.fcc.gov/e-file/ecfs.html.* Generally, only one copy of an electronic submission must be filed. If multiple docket or rulemaking numbers appear in the caption of this proceeding, however, commenters must transmit one electronic copy of the comments to each docket or rulemaking number referenced in the caption. In completing the transmittal screen, commenters should include their full name, Postal Service mailing address, and the applicable docket or rulemaking number. Parties may also submit an electronic comment by Internet e-mail. To get filing instructions for e-mail comments, commenters should send an e-mail to *ecfs@fcc.gov,* and should include the following words in the body of the message, ''get form <your e-mail address>.'' A sample form and directions will be sent in reply. Parties who choose to file by paper must file an original and four copies of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, commenters must submit two additional copies for each additional docket or rulemaking number. All filings must be addressed to the Commission's Secretary, Marlene H. Dortch, Office of the Secretary, Federal Communications Commission, 445 12th

St., SW., Washington, DC 20554. Filings can be sent first class by the U.S. Postal Service, by an overnight courier or hand and message-delivered. Hand and message-delivered paper filings must be delivered to 236 Massachusetts Avenue, NE., Suite 110, Washington, DC 20002. Filings delivered by overnight courier (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.

11. Parties who choose to file by paper should also submit their comments on diskette. These diskettes should be submitted to: Jeffrey Tobias, Wireless Telecommunications Bureau, 445 12th St., SW., Room 3–A432, Washington, DC 20554. Such a submission should be on a 3.5 inch diskette formatted in an IBM compatible format using Microsoft Word or compatible software. The diskette should be accompanied by a cover letter and should be submitted in ''read only'' mode. The diskette should be clearly labeled with the commenter's name, proceeding (including the docket number in this case, WT Docket No. 04–344), type of pleading (comment or reply comment), date of submission, and the name of the electronic file on the diskette. The label should also include the following phrase ''Disk Copy—Not an Original.'' Each diskette should contain only one party's pleadings, preferably in a single electronic file. In addition, commenters should send diskette copies to the Commission's copy contractor, Best Copy and Printing, Inc., 445 12th St., SW., Room CY–B402, Washington, DC 20554.

C. Paperwork Reduction Act

12. This document does not contain proposed information collection(s) subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. In addition, therefore, it does not contain any new or modified ''information collection burden for small business concerns with fewer than 25 employees,'' pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4).

II. Initial Regulatory Flexibility Analysis

13. As required by the Regulatory Flexibility Act (RFA), the Commission has prepared this present Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on small entities by the policies and rules proposed in the *Notice of Proposed Rule Making* in WT Docket No. 04–344 (*NPRM*). Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments on the *NPRM* as provided in paragraph 70, *supra*, of the item. The Commission will send a copy of the *NPRM*, including the IRFA, to the Chief Counsel for Advocacy of the U.S. Small Business Administration. In addition, the *NPRM* and IRFA (or summaries thereof) will be published in the **Federal Register**.

A. Need for, and Objectives of, the Proposed Rules

14. In the *NPRM*, we seek comment on rule amendments that are intended to identify the spectrum that should be used for maritime Automatic Identification Systems (AIS) in the United States and its territorial waters. AIS is an important tool for enhancing maritime safety and homeland security, and we are concerned that recent developments may have created uncertainty in the maritime community regarding the very high frequency (VHF) channels to be used for AIS, and that this in turn could impede efforts to expedite the broad deployment of AIS domestically. In the *NPRM*, we propose to designate VHF maritime Channels 87B and 88B for AIS use domestically, in keeping with the international allocation of those channels for AIS, because we believe the use of those channels will best secure to the United States the maritime safety and homeland security benefits of AIS.

B. Legal Basis for Proposed Rules

15. The proposed action is authorized under sections 1, 4(i), 302, 303(f) and (r), and 332 of the Communications Act of 1934, as amended, 47 U.S.C. 1, 154(i), 302, 303(f) and (r), and 332.

C. Description and Estimate of the Number of Small Entities To Which the Proposed Rules Will Apply

16. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA defines the term ''small entity'' as having the same meaning as the terms ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).

17. Small businesses in the aviation and marine radio services use a very high frequency (VHF) marine or aircraft radio and, as appropriate, an emergency position-indicating radio beacon (and/or radar) or an emergency locator transmitter. The Commission has not developed a small business size standard specifically applicable to these small businesses. For purposes of this analysis, the Commission uses the SBA small business size standard for the category ''Cellular and Other Telecommunications,'' which is 1,500 or fewer employees. Between December 3, 1998 and December 14, 1998, the Commission held an auction of 42 VHF Public Coast (VPC) licenses in the 157.1875–157.4500 MHz (ship transmit) and 161.775–162.0125 MHz (coast transmit) bands. For purposes of the auction, the Commission defined a ''small'' business as an entity that, together with controlling interests and affiliates, has average gross revenues for the preceding three years not to exceed fifteen million dollars. In addition, a ''very small'' business is one that, together with controlling interests and affiliates, has average gross revenues for the preceding three years not to exceed three million dollars. There are approximately 10,672 licensees in the Marine Coast Service, and the Commission estimates that almost all of them qualify as ''small'' businesses under the above special small business size standards.

D. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

18. There are no projected reporting, recordkeeping or other compliance requirements.

E. Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

19. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives: (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

In the *NPRM*, we request comment on the proposal to designate Channels 87B and 88B for exclusive AIS use. We

describe here, and seek comment on, possible alternatives to imposing these new rules that might minimize the economic impact on small entities. First, we ask commenters to consider the interference impact on MariTEL, Inc., licensee of the nine maritime VPC service areas, or on any incumbent site-based VPC licensees or any Economic Area (EA) VPC licensees of the proposed designation of Channels 87B and 88B for AIS exclusively. We tentatively conclude that the proposed designation of Channels 87B and 88B for AIS should not have an adverse effect on MariTEL's use of its VPC channels to a materially greater extent, if at all, than would designation of two narrowband offset channel pairs of the Commission's choosing from the 156–162 MHz VHF maritime band. We request comment on this tentative conclusion. In addition, commenters are asked if incumbent site based VPC operations can co-exist on a non-interference basis with AIS and, if not, should the Commission require that that these operations be migrated to other spectrum and/or should the licensees be compensated in some way.

20. Commenters are requested to identify potential means of minimizing or eliminating any adverse economic impact on any small entities, particularly VPC licensees that qualify as small entities, if Channels 87B and 88B are designated for AIS use. Such means may include, but are not limited to, exemptions, grandfathering protection, or geographic limitations on the use of Channels 87B and 88B for AIS. Additionally or alternatively, we seek comment on whether we could provide replacement spectrum for licensees who may find themselves unable to continue using their licensed VPC channels because of our proposal. For example, we might be able to modify their licenses to provide other channels in lieu of Channels 87B and 88B. We also could designate channels other than Channels 87B and 88B for AIS use in the United States as a means of minimizing any adverse economic impact on these licensee. We note, however, that mandating use of channels other than Channels 87B and 88B for AIS use in the United States may have an adverse economic impact on vessel operators and radio equipment manufacturers that qualify as small entities by, for example, increasing the cost of AIS equipment, causing premature obsolescence of AIS equipment already installed on vessels, or leaving manufacturers with stranded inventory. Accordingly, commenting parties, and particularly commenting parties who favor adopting an alternative to the Commission's proposal, are asked to address the potential economic impact of that alternative on small entities.

21. In Appendix D of the *NPRM*, we list all of the incumbent site-based licensees that currently operate within VHF Public Coast Service Areas (VPCSAs) 1–9 on the channels which we are proposing to designate for exclusive AIS use. We assume for purposes of this IRFA that some or all of these licensees qualify as small entities. We specifically invite these licensees to address the expected economic impact on them of our proposal, and to suggest alternatives or additions to our proposal that would minimize that impact, including but not limited to the methods discussed in the preceding paragraph.

22. We also note that there are incumbent licensees operating on the specified channels in inland areas. We do not anticipate any significant adverse effect on any such licensee due to the geographic limitations of our proposal, *i.e.*, our limiting the AIS set-aside to areas near major navigable waterways. Commenters who believe differently are asked to describe the expected adverse economic impact on incumbent inland licensees operating on these or adjacent channels, and to provide suggested methods of minimizing any such impact. In addition, we note that, although we are proposing only to designate Channels 87B and 88B for AIS in the nine maritime VPCSAs, we have not foreclosed the possibility of designating those channels for AIS on a nationwide basis. Accordingly, inland licensees and other interested parties should address the possible economic impact on small entities if we were to designate Channels 87B and 88B for AIS in inland areas as well as the nine maritime VPCSAs.

F. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

None.

III. Ordering Clauses

23. The Commission's Consumer Information Bureau, Reference Information Center, SHALL SEND a copy of this NPRM, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects in 47 CFR Parts 2 and 80

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

Proposed Rules

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR parts 2 and 80 as follows:

PART 2—FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS

1. The authority citation for part 2 continues to read as follows:

Authority: 47 U.S.C. 154, 302a, 303, and 336, unless otherwise noted.

2. Section 2.106, the Table of Frequency Allocations, is amended as follows:

a. Revise pages 30 and 31.

b. In the list of United States (US) Notes, add note USxxx and remove note US223.

§ 2.106 Table of Frequency Allocations.

The revisions and additions read as follows:

United States (US) Notes

* * * * *

USxxx The bands 161.9625–161.9875 MHz (AIS 1 with its center frequency at 161.975 MHz) and 162.0125–162.0375 MHz (AIS 2 with its center frequency at 162.025 MHz) are allocated to the maritime mobile service on a primary basis for Federal and non-Federal Government use in VHF Public Coast Station Areas (VPCSAs) 1–9. In these areas, the maritime mobile service shall be used exclusively for Automatic Identification Systems (AIS). In VPCSAs 10–42, the band 161.9625–161.9875 MHz is allocated to the maritime mobile service on a primary basis for exclusive non-Federal Government use and the 162.0125–162.0375 MHz is allocated to the fixed and mobile services on a primary basis for exclusive Federal Government use. See 47 CFR 80.371(c)(1)(ii) for the definitions of VPCSAs.

* * * * *

PART 80—STATIONS IN THE MARITIME SERVICES

3. The authority citation for part 80 continues to read as follows:

Authority: Secs. 4, 303, 307(e), 309, and 332, 48 Stat. 1066, 1082, as amended; 47 U.S.C. 154, 303, 307(e), 309, and 332, unless otherwise noted. Interpret or apply 48 Stat. 1064–1068, 1081–1105, as amended; 47 U.S.C. 151–155, 301–609; 3 UST 3450, 3 UST 4726, 12 UST 2377.

4. Section 80.5 is amended by adding an entry for ''Automatic Identification Systems (AIS)'' in alphabetical order to read as follows:

§ 80.5 Definitions.

* * * * *

Automatic Identification Systems (AIS). A maritime navigation safety communications system standardized by the International Telecommunication Union (ITU) that provides vessel information, including the vessel's identity, type, position, course, speed, navigational status and other safety-related information automatically to appropriately equipped shore stations, other ships, and aircraft; receives automatically such information from similarly fitted ships; monitors and tracks ships; and exchanges data with shore-based facilities.

* * * * *

5. Section 80.13 is amended by revising paragraph (c) to read as follows:

§ 80.13 Station license required.

* * * * *

(c) A ship station is licensed by rule and does not need an individual license issued by the FCC if the ship station is not subject to the radio equipment carriage requirements of any statute, treaty or agreement to which the United States is signatory, the ship station does not travel to foreign ports, and the ship station does not make international communications. A ship station licensed by rule is authorized to transmit radio signals using a marine radio operating in the 156–162 MHz band, any type of AIS, any type of EPIRB, and any type of radar installation. All other transmissions must be authorized under a ship station license. Even though an individual license is not required, a ship station licensed by rule must be operated in accordance with all applicable operating requirements, procedures, and technical specifications found in this part.

6. Section 80.371 is amended by revising paragraphs (c)(1)(i), (c)(2) and (c)(3) to read as follows:

§ 80.371 Public correspondence frequencies.

* * * * *

(c) *Working frequencies in the marine VHF 156–162 MHz band.* (1)(i) The frequency pairs listed in the following table are available for assignment to public coast stations for public correspondence communications with ship stations and units on land.

WORKING CARRIER FREQUENCY PAIRS IN THE 156–162 MHZ BAND [1]

Channel designator	Carrier frequency (MHz)	
	Ship transmit	Coast transmit
24	157.200	161.800
84	157.225	161.825
25	157.250	161.850
85 [2]	157.275	161.875
26	157.300	161.900
86	157.325	161.925
27	157.350	161.950
87 [3]	157.375	157.375
28	157.400	162.000
88 [4]	157.425	157.425

[1] For special assignment of frequencies in this band in certain areas of Washington State, the Great Lakes and the east coast of the United States pursuant to arrangements between the United States and Canada, *see* subpart B of this part.

[2] The frequency pair 157.275/161.875 MHz is available on a primary basis to ship and public coast stations. In Alaska it is also available on a secondary basis to private mobile repeater stations.

[3] Within VHF Public Coast Station Areas (VPCSAs) 1 through 9 listed in the table in paragraph (c)(1)(ii) of this section, the frequency 161.975 MHz may be used only for Automatic Identification System communications.

[4] Within that portion of VHF Public Coast Station Areas (VPCSAs) 1 through 9 listed in the table in paragraph (c)(1)(ii) of this section within 120 km (75 miles) of the United States/Canada border, in the area of the Great Lakes, the Saint Lawrence Seaway, and the Puget Sound and the Strait of Juan de Fuca and its approaches, the frequency 157.425 MHz is available for use by ship stations for public correspondence communications and the frequency 162.025 MHz is available only for Automatic Identification System communications. One hundred twenty kilometers (75 miles) from the United States/Canada border 157.425 MHz is available for intership and commercial communications. Outside the Puget Sound area and its approaches and the Great Lakes, 157.425 MHz is available for communications between commercial fishing vessels and associated aircraft while engaged in commercial fishing activities.

* * * * *

(2) Any recovered channel pairs will revert automatically to the holder of the VPCSA license within which such channels are included, except the channel pairs listed in the table in paragraph (c)(1)(i) of this section. Those channel pairs, and any channel pairs recovered where there is no VPCSA licensee, will be retained by the Commission for future licensing.

(3) VPCSA licensees may not operate on Channel 228B (162.0125 MHz), which is available for use in the Coast Guard's Ports and Waterways Safety System (PAWSS). In addition, VPCSA licensees in VPCSAs 1–9 may not operate on Channel AIS 1 (161.975 MHz) or Channel AIS 2 (162.025 MHz), which are designated in those areas exclusively for Automatic Identification Systems (AIS), except to transmit and receive AIS communications to the same extent, and subject to the same limitations, as other shore stations participating in AIS.

* * * * *

7. Section 80.373 is amended by revising paragraph (j) to read as follows:

§ 80.373 Private communications frequencies.

* * * * *

(j) *Frequencies for portable ship stations.* VHF frequencies authorized for stations authorized carrier frequencies in the 156.275 MHz to 157.450 MHz and 161.575 MHz to 162.025 MHz bands may also be authorized as marine utility stations. Marine-utility stations on shore must not cause interference to any Automatic Identification System, VHF or coast station, VHF or UHF land mobile base station, or U.S. Government station.

8. Section 80.393 is added to read as follows:

§ 80.393 Frequencies for AIS stations.

Automatic Identification Systems (AIS) is a maritime broadcast service provided by both the United States

Coast Guard and Commission licensees. The simplex channels at 161.975 MHz (AIS 1) and 162.025 MHz (AIS 2), each with a 25 kHz bandwidth, may be authorized in VHF Public Coast Station Areas 1–9 for AIS. These areas are codified at 47 CFR 80.371(c)(1)(ii). In accordance with the Maritime Transportation Security Act, the United States Coast Guard regulates AIS carriage requirements for non-Federal Government ships. These requirements are codified at 33 CFR 164.46, 401.20.

Notices

Federal Register
Vol. 69, No. 219
Monday, November 15, 2004

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Bridger-Teton National Forest-Wyoming—Kemmerer and Greys River Ranger Districts; Lincoln County, WY Salt Pass Grazing Allotments Environmental Impact Statement.

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Department of Agriculture, Forest Service, will prepare An Environmental Impact Statement (EIS) to analyze the effects of domestic livestock grazing in the Salt Pass area. The Salt Pass Grazing Allotments (composed of Giraffe, Lower Salt, Porcupine, Smiths Fork, Buckskin Knoll, Lake Alice, North Salt River, South Salt River domestic sheep allotments and Trespass domestic cattle allotment) are located in Township 28, 29, 30 North, and Range 116, 117, 118, 119 West; Sixth Principal Meridian. The allotments are located entirely within Lincoln County. The allotments are located on two ranger districts, Kemmerer and Greys River. The Kemmerer Ranger District administers all the allotments except North Salt River and South Salt River, which are administered by the Greys River Ranger District.

DATES: Comments concerning the scope of the analysis must be received by December 17, 2005. The draft environmental impact statement is expected in April 2005 and the final environmental impact statement is expected by July 2005.

ADDRESSES: Send written comments to: Russ Bacon, District Ranger, Kemmerer Ranger District, P.O. Box 31, Kemmerer, Wyoming 83101. For further information, mail correspondence to *mailroom_r4_bridger_teton@fs.fed.us* and on the subject line put only ''Salt Pass Allotments''.

FOR FURTHER INFORMATION CONTACT: Russ Bacon, Kemmerer District Ranger, Kemmerer Ranger District, P.O. Box 31, Kemmerer, Wyoming 83101 or phone (307) 877-4415.

SUPPLEMENTARY INFORMATION:

Purpose and Need for Action

This proposal, in part, is to comply with Public Law 104–19, section 504(a): establish and adhere to a schedule for the completion of National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*) analysis and decision on all grazing allotments within the National Forest System unit for which NEPA is needed (Pub. L. 104–19, General Provision 1995). Upon completion of the NEPA analysis and decisions for the allotments, the terms and conditions of the existing grazing permits will be modified, as necessary, to conform to such NEPA analysis. In addition, the purpose of the proposed action is to improve range condition and trend and achieve desired conditions within the project area through livestock grazing.

Proposed Action

The proposed action is to authorize continued livestock grazing, provide analysis and data to update allotment management plans (AMPs), and allow livestock grazing that meets or moves existing resources conditions toward desired conditions on National Forest grazing allotments while complying with applicable statutes. Adaptive management, which allows flexibility during the implementation of the grazing strategy, would allow managers to make adjustments and corrections to management based on monitoring.

Possible Alternatives

Grazing as Currently Permitted: Although allotment management plans (AMP's) would be prepared for each of the nine allotments, the grazing management practices specified for the allotments with existing AMP's would not be changed. In addition, no new utilization standards would be initiated to move existing resource conditions in the project area toward the desired future conditions (DFC's) specified in the Forest Plan.

No Grazing by Domestic Livestock (No grazing alternative): This would eliminate livestock grazing in the project area. This alternative was developed to demonstrate the effects that eliminating livestock grazing would have on the environment and to more clearly illustrate the potential effects of implementing other alternatives. Under this alternative, domestic livestock grazing on all nine allotments within the project area would be phased out over several years as existing Term Grazing Permits expire.

Responsible Official

Russell Bacon, District Forest Ranger, Kemmerer Ranger District, P.O. Box 31, Kemmerer, Wyoming 83101 and Charlene Bucha-Gentry, District Forest Ranger, Greys River Ranger District, P.O. Box 339, Afton, Wyoming 83110.

Nature of Decision To Be Made

The decision, which is based on this analysis, will be to decide if livestock will be allowed to graze on the allotment complex, either through the implementation of the proposed action, or an alternative to the proposed action. The decision would include any mitigation measures needed in addition to those prescribed in the Forest Plan.

Scoping Process

Forest Service is seeking information, comments, and assistance from individuals, organizations, tribal governments, and federal, state, and local agencies interested in or affected by this project. This analysis is for nine grazing allotments. The decision will have limited environmental effects outside the allotment boundaries, and the economic impacts are localized. Public participation will be solicited by notifying in person and/or by mail known interested affected publics. News releases will be used to give the public general notice. Public participation activities would include requests for written comments. The first formal opportunity to comment is to respond to this notice of intent, which initiates the scoping process (40 CFR 1501.7). Scoping includes: (1) Identifying potential issues, (2) narrowing the potential issues and identifying significant issues of those that have been covered by prior environmental review, (3) exploring alternatives in addition to No Action, and (4) identifying potential environmental effects of the proposed action and alternatives.

Preliminary Issues

The Forest Service has identified the following potential issues. Your input is especially valuable here. It will help us determine which of these merit detailed analysis. It will also help identify additional issues related to the proposed action that may not be listed here.

- Effects of grazing on soil erosion and productivity.
- Effects of grazing on watershed condition and function.
- Effects of grazing on the life cycle of the Bonneville and Snake River cutthroat trout.

Comment Requested

This notice of intent initiates the scoping process which guides the development of the environmental impact statement.

Early Notice of Importance of Public Participation in Subsequent Environmental Review: A draft environmental impact statement will be prepared for comment. The comment period on the draft environmental impact statement will be 45 days from the date the Environmental Protection Agency publishes the notice of availability in the **Federal Register**.

The Forest Service believes, at this early stage, it is important to give reviewers notice of: several court rulings related to public participation in the environmental review process. First, reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contention. *Vermont Yankee Nuclear Power Corp* v. *NRDC*, 435 U.S. 519, 533 (1978). Also, environmental objections that could be raised at the draft environmental impact statement stage but that are not raised until after completion of the final environmental impact statement may be waived or dismissed by the courts. *City of Angoon* v. *Hodel*, 803 F.2d 1016, 1022 (9th Cir. 1986) and *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45 day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningully consider them and respond to them in the final environmental impact statement.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft environmental impact statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft environmental impact statement or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

Comments received, including the names and addresses of those who comment, will be considered part of the public record on this proposal and will be available for public inspection.

(Authority: 40 CFR 1501.7 and 1508.22; Forest Service Handbook 1909.15, Section 21.)

Dated: November 4, 2004.

Fred Fouse,

Acting District Ranger.

BILLING CODE 3410–11–M

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

Notice of Proposed Change to the Natural Resources Conservation Service's National Handbook of Conservation Practices

AGENCY: Natural Resources Conservation Service (NRCS), U.S. Department of Agriculture, Maine State Office.

ACTION: Notice of availability of proposed changes in the NRCS National Handbook of Conservation Practices, Section IV of the Maine State NRCS Field Office Technical Guide (FOTG) located at *http://www.me.nrcs.usda.gov* under ''Draft Standards for Comments'' for review and comment.

SUMMARY: It is the intention of NRCS to issue revised conservation practice standards in its National Handbook of Conservation Practices. These revised standards are the following:

314 Brush Management; 329 Residue Management, Ridge-Till; 340 Cover Crop; 342 Critical Area Planting; 344 Residue Management, Seasonal; 386 Field Border; 511 Forage Harvest Management; 512 Pasture and Hay Planting; 528 Animal Trails and Walkways; 590 Nutrient Management; 557 Row Arrangement.

DATES: Comments will be received for a 30-day period commencing with this date of publication.

FOR FURTHER INFORMATION CONTACT: Inquire in writing to Christopher R. Jones, State Resource Conservationist, Natural Resources Conservation Service (NRCS), 967 Illinois Avenue, Suite #3, Bangor, Maine 04401.

A copy of these standards are available from the above individual.

SUPPLEMENTARY INFORMATION: Section 343 of the Federal Agricultural Improvement and Reform Act of 1966 states that revisions made after enactment of the law to NRCS State Technical Guides used to carry out highly erodible land and wetland provisions of the law shall be made available for public review and comment. For the next 30 days the NRCS will receive comments relative to the proposed changes. Following that period a determination will be made by the NRCS regarding disposition of those comments and a final determination of change will be made.

Dated: November 4, 2004.

Christopher R. Jones,

State Resource Conservationist.

BILLING CODE 3410–16–P

COMMISSION ON CIVIL RIGHTS

Agenda and Notice of Public Meeting of the Vermont Advisory Committee

Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights that a conference call of the Vermont Advisory Committee will convene at 10:30 a.m. and adjourn at 11 a.m., Tuesday, November, 16, 2004. The purpose of the conference call is to discuss juvenile justice issues in Vermont.

This conference call is available to the public through the following call-in number: 1–800–659–8294, access code: 30141003. Any interested member of the public may call this number and listen to the meeting. Callers can expect to incur charges for calls not initiated using the supplied call-in number or over wireless lines, and the Commission will not refund any incurred charges. Callers will incur no charge for calls using the call-in number over land-line connections. Persons with hearing impairments may also follow the proceedings by first calling the Federal Relay Service at 1–800–977–8339 and providing the Service with the conference call number and access code.

To ensure that the Commission secures an appropriate number of lines for the public, persons are asked to register by contacting Barbara de La

Viez of the Eastern Regional Office at 202–376–7533 by 4 p.m. on Monday, November 15, 2004.

The meeting will be conducted pursuant to the provisions of the rules and regulations of the Commission.

Dated in Washington, DC, November 8, 2004.

Ivy L. Davis,

Chief, Regional Programs Coordination Unit.

BILLING CODE 6335–01–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 47–2004]

Foreign-Trade 243—Victorville, CA; Application for Expansion

An application has been submitted to the Foreign-Trade Zones (FTZ) Board (the Board) by the Southern California Logistics Airport Authority, grantee of Foreign-Trade Zone 243, requesting authority to expand its zone to include additional sites in the Victorville area, within and adjacent to the Victorville Customs user fee airport and the Los Angeles-Long Beach Customs port of entry. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR Part 400). It was formally filed on October 29, 2004.

FTZ 243 was approved on July 26, 2000 (Board Order 1097, 65 FR 47953, 8/4/00). The general-purpose zone project currently consists of the following site: *Site 1* (1,954 acres) consists of: Parcel 1 (1,943 acres)—Southern California Logistics Airport complex located at 18374 Phantom, Victorville; Parcel 2 (7 acres, 287,060 sq. ft.)—located at 19317 Arenth Avenue, Industry (expires 1/31/05); Parcel 3 (1 acre, 35,283 sq. ft.)—located at 13731 Proctor Avenue, Industry (expires 1/31/05); and, Parcel 4 (3 acres, 156,816 sq. ft.)—located at 3525 Walnut Avenue, Chino (expires 1/31/05).

The applicant is now requesting authority for a major expansion of the zone as described below. The proposal requests authority to expand the zone to include nine additional sites in the cities of Industry, Whittier, Chino and Rialto, California.

Proposed Site 2 (7 acres)—Golden State Foods warehouse located at 19317 Arenth Avenue, Industry (this site will include Site 1-Parcel 2 on a permanent basis);

Proposed Site 3 (4 acres)—Proctor Warehouse located at 13731 Proctor Avenue, Industry (this site will include Site 1-Parcel 3 on a permanent basis);

Proposed Site 4 (179 acres, 13 parcels)—located within the 186-acre Fairway Business Center in the City of Industry;

Proposed Site 5 (318 acres)—Grand Crossing Industrial Park located at the intersection of the Pomona (60) and Orange (57) Freeways in the City of Industry;

Proposed Site 6 (70 acres)—Gateway Pointe Industrial Park located at the intersection of the Pomona (60) and San Gabriel River (605) Freeways in the City of Whittier;

Proposed Site 7 (4 acres)—FBC Industries warehouse facility located at 3525 Walnut Avenue, Chino (this site will include Site 1-Parcel 4 on a permanent basis);

Proposed Site 8 (14 acres, 2 parcels)—Schaefer Warehouse (Parcel 1, 7 acres) located at 5125 Schaefer Avenue and Pacific Warehouse (Parcel 2, 7 acres) located at 5085 Schaefer Avenue, Chino;

Proposed Site 9 (8 acres)—Eucalyptus Warehouse located at 4340 Eucalyptus Avenue, Chino; and,

Proposed Site 10 (91 acres)—located within the 138-acre ProLogis Park I–210 at the Alder Interchange and Interstate 210 extension in the City of Rialto.

The applicant is also requesting that 11 acres at *Site 1* (Southern California Logistics Airport) be restored to zone status and that Parcels 2, 3 and 4 be granted zone status on a permanent basis as noted above. (A minor boundary modification was approved in December 2003 (A(27f)–60–2003), removing 11 acres from Site 1 (Southern California Logistics Airport) to establish the temporary parcels.) No specific manufacturing requests are being made at this time. Such requests would be made to the Board on a case-by-case basis.

In accordance with the Board's regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

Public comment on the application is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board's Executive Secretary at one of the addresses below:

1. *Submissions via Express/Package Delivery Services:* Foreign-Trade Zones Board, U.S. Department of Commerce, Franklin Court Building—Suite 4100W, 1099 14th Street NW., Washington, DC 20005; or

2. *Submissions via the U.S. Postal Service:* Foreign-Trade Zones Board, U.S. Department of Commerce, FCB—Suite 4100W, 1401 Constitution Avenue, NW., Washington, DC 20230.

The closing period for their receipt is January 14, 2005. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period (to January 31, 2005).

A copy of the application and accompanying exhibits will be available for public inspection at the Office of the Foreign-Trade Zones Board's Executive Secretary at the first address listed above, and at the U.S. Department of Commerce, Export Assistance Center, 2940 Inland Empire Boulevard, Suite 121, Ontario, CA 91764.

Dated: November 4, 2004.

Dennis Puccinelli,

Executive Secretary.

BILLING CODE 3510–D5–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 110904C]

Re-Initiation of Request for Nominations to the Marine Fisheries Advisory Committee (MAFAC)

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of request for nominations.

SUMMARY: The Marine Fisheries Advisory Committee (the ''Committee) is the only Federal Advisory committee with the responsibility to advise the Secretary of Commerce (Secretary) on all matters concerning living marine resources that are the responsibility of the Department of Commerce. The Committee makes recommendations to the Secretary to assist in the development and implementation of Departmental regulations, policies and programs critical to the mission and goals of the National Marine Fisheries Service. The Committee is composed of leaders in the commercial, recreational, environmental, academic, state, tribal, and consumer interests from the nation's coastal regions.

On June 14, NMFS published a Notice requesting nominees for four vacancies on the Committee. The nomination ran through July 15, 2004, and resulted in the appointment of only two of the vacancies. Therefore, in keeping with the Administration's policy to ensure the Committee reflect a balanced

composition of national interests, expertise and geographic representation, the Administration has decided to reinitiate a request for additional nominations in the hopes of receiving a more diverse selection of qualified candidates to fill the remaining two vacancies in time for the Committee's next meeting in January 2005. The Department of Commerce is seeking up to two highly qualified individuals knowledgeable about fisheries and living marine resources to serve on the Committee.

DATES: Nominations must be postmarked on or before November 30, 2004.

ADDRESSES: Nominations should be sent to Laurel Bryant, Executive Director, MAFAC, Office of Constituent Services, NMFS, 1315 East-West Highway #9508, Silver Spring, Maryland 20910.

FOR FURTHER INFORMATION CONTACT: Laurel Bryant, Executive Director; (301) 713–2379 x171. E-mail: *Laurel.Bryant@noaa.gov*.

SUPPLEMENTARY INFORMATION: The establishment of MAFAC was approved by the Secretary on December 28, 1970, and initially chartered under the Federal Advisory Committee Act, 5, U.S.C. App.2, on February 17, 1971. The Committee meets twice a year with supplementary subcommittee meetings as determined necessary by the Secretary. Individuals serve for a term of three years for no more than two consecutive terms if re-appointed. No less that 15 and no more than 21 individuals may serve on the Committee. Membership is comprised of highly qualified individuals representing commercial and recreational fisheries interests, environmental organizations, academic institutions, governmental, tribal and consumer groups from a balance of geographical regions, including the Hawaiian and the Pacific Islands, and the U.S. Virgin Islands. Nominations are encouraged from all interested parties involved with or representing interests affected by Agency actions in managing living marine resources. Nominees should possess demonstrable expertise in a field related to the management of living marine resources and be able to fulfill the time commitments required for two meetings annually.

A MAFAC member cannot be a Federal agency employee or a member of a Regional Fishery Management Council. Selected candidates must have security checks and complete financial disclosure forms. Membership is voluntary, and except for reimbursable travel and related expenses, service is without pay.

Each submission should include the submitting person's or organization's name and affiliation, a cover letter describing the nominee's qualifications and interest in serving on the Committee, a curriculum vitae or resume of nominee, and no more than three supporting letters describing the nominee's qualifications and interest in serving on the Committee. Self-nominations are acceptable. The following contact information should accompany each nominee's submission: name, address, phone number, fax number, and e-mail address if available.

Nominations should be sent to (see **ADDRESSES**) and nominations must be received by (see **DATES**). The full text of the Committee Charter and its current membership can be viewed at the Agency's web page at *www.nmfs.noaa.gov/mafac.htm*.

Dated: November 9, 2004.

Alan D. Risenhoover,

Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 04–25314 Filed 11–12–04; 8:45 am]

BILLING CODE 3510–22–S

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 102904C]

Endangered and Threatened Species; Take of Anadromous Fish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Receipt of applications to renew and modify permit 1166 and request for comment.

SUMMARY: Notice is hereby given that NMFS has received an application to renew a permit for scientific research from A.A. Rich and Associates (AAR) in San Anselmo, California (1166). The permit would affect federally endangered Sacramento River winter-run Chinook salmon and Southern California steelhead, and threatened Central Valley steelhead, Central California Coast steelhead, and Central California Coast coho salmon. This document serves to notify the public of the availability of the permit applications for review and comment.

DATES: Written comments on the permit applications must be received no later than 5 p.m. Pacific Standard Time on December 15, 2004.

ADDRESSES: E-mailed comments on the permit applications must be sent to FRNpermits.SR@noaa.gov. The applications and related documents are available for review by appointment, for permit 1166: Protected Resources Division, NMFS, 777 Sonoma Avenue, Room 315, Santa Rosa, CA 95404 (ph: 707–575–6097, fax: 707–5783–435).

FOR FURTHER INFORMATION CONTACT: Jeffrey Jahn at phone number 707–575–6097, or e-mail: *Jeffrey.Jahn@noaa.gov*

SUPPLEMENTARY INFORMATION:

Authority

Issuance of permits and permit modifications, as required by the Endangered Species Act of 1973 (16 U.S.C. 1531 1543) (ESA), is based on a finding that such permits/modifications: (1) are applied for in good faith; (2) would not operate to the disadvantage of the listed species which are the subject of the permits; and (3) are consistent with the purposes and policies set forth in section 2 of the ESA. Authority to take listed species is subject to conditions set forth in the permits. Permits and modifications are issued in accordance with and are subject to the ESA and NMFS regulations governing listed fish and wildlife permits (50 CFR parts 222–226).

Those individuals requesting a hearing on an application listed in this notice should set out the specific reasons why a hearing on that application would be appropriate (see ADDRESSES). The holding of such a hearing is at the discretion of the Assistant Administrator for Fisheries, NOAA. All statements and opinions contained in the permit action summaries are those of the applicant and do not necessarily reflect the views of NMFS.

Species Covered in This Notice

This notice is relevant to federally endangered Sacramento River winter-run Chinook salmon (*Oncorhynchus tshawytscha*) and Southern California steelhead (*O. mykiss*), threatened Central Valley steelhead (*O. mykiss*), Central California Coast steelhead (*O. mykiss*), and Central California Coast coho salmon (*O. kisutch*). Application Received

AAR requests to renew and modify a 5–year permit (1166) for take of juvenile Sacramento River winter-run Chinook salmon and Central Valley steelhead to conduct pre-project fish surveys on the San Joaquin River and Old River in California. AAR requests authorization for an estimated annual take of 30 juvenile Sacramento River winter-run Chinook salmon and 80 juvenile Central Valley steelhead, with no more than 5 percent unintentional mortality to result

from capture by beach seine, scale samples, and release of fish.

AAR also requests take of juvenile Central California Coast steelhead and juvenile Central California Coast coho salmon to conduct pre- and post-project fish surveys, relocation activities, and fish monitoring activities in various streams in Marin, Sonoma and Mendocino counties. AAR requests authorization for an estimated annual take of 450 juvenile Central California Coast steelhead, and 50 juvenile Central California Coast coho salmon, with no more than 5 percent unintentional mortality to result from capture (dip net, seine, electrofishing) and release of fish.

In addition, AAR requests take of juvenile Southern California steelhead to conduct fish monitoring activities in Hilton Creek, tributary to the Santa Ynez River in Santa Barbara County. AAR requests authorization for an estimated annual take of 2 juvenile Southern California Coast steelhead with no more than 5 percent unintentional mortality to result from capture (dip net, seine, electrofishing) and release of fish.

Dated: November 9, 2004.

Phil Williams,

Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

[I.D. 052104F]

Endangered and Threatened Species: Take of Threatened West Coast Salmonids

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of Availability of Draft Environmental Assessment (EA) and Request for Comments.

SUMMARY: Notice is hereby given of the availability of a draft EA for NMFS' June 2004 proposed amendments to the Endangered Species Act (ESA) protective regulations for West Coast threatened salmon and steelhead (*Oncorhynchus* spp.) The ESA protective regulations provide for ''limits'' on ESA prohibitions for specified categories of activities determined to contribute to conserving listed salmonids. The draft EA analyzes the impacts of: (1) revising and simplifying existing protective regulations so that all threatened West Coast salmon and steelhead are subject to the same limits, and (2) revising the current protective regulations so that the section 9 take prohibitions do not apply to adipose-fin-clipped hatchery fish and resident O. mykiss (rainbow trout). NMFS is furnishing this notification to allow other agencies and the public an opportunity to review and comment on the draft EA. All comments received will become part of the public record and will be available for review.

DATES: All comments on the draft EA must be received no later than 5 p.m. Pacific Standard Time on December 15, 2004.

ADDRESSES: Copies of the draft EA are available on the Internet at *http://www.nwr.noaa.gov/1salmon/salmesa/draft4dEA.html*, or upon request (see **FOR FURTHER INFORMATION CONTACT**).

You may submit comments on the draft EA by any of the following methods:

E-mail: The mailbox address for submitting e-mail comments on the draft EA is salmon.draft4dEA@nwr.noaa.gov. Please include in the subject line of the e-mail comment the document identifier ''Draft 4(d) EA''

Mail: Submit written comments and information to Chief, NMFS, Protected Resources Division, 525 NE Oregon Street, Suite 500, Portland, Oregon, 97232–2737. Please identify the comment as regarding the ''Draft 4(d) EA.'' You may hand-deliver written comments to our office at the street address below. Business hours are 8 a.m. to 5 p.m., Monday through Friday, except Federal holidays.

Hand Delivery/Courier: NMFS, Protected Resources Division, 525 NE Oregon Street, Suite 210, Portland, Oregon, 97232–2737. Business hours are noted above.

Fax: 503–230–5435. Please identify the fax comment as regarding the ''Draft 4(d) EA.''

FOR FURTHER INFORMATION CONTACT: NMFS, Northwest Region, Protected Resources Division by phone at (503) 872–2791. Copies of the **Federal Register** notices cited herein and additional salmon-related materials are available on the Internet at *http://www.nwr.noaa.gov*.

SUPPLEMENTARY INFORMATION:

Species Covered in This Notice

The following species and Evolutionarily Significant Units (ESUs) are covered in this notice:

Chinook salmon (*O. tshawytscha*): the Sacramento River winter-run, Central Valley spring-run, California Coastal, Upper Willamette River, Lower Columbia River, Puget Sound, Snake River fall-run, and Snake River spring/summer-run chinook ESUs;

Coho salmon (*O. kisutch*): Southern Oregon/Northern California Coast, Oregon coast, and Lower Columbia River coho ESUs;

Sockeye salmon (*O. nerka*): the Ozette Lake sockeye ESU;

Chum salmon (*O. keta*): the Columbia River and Hood Canal summer-run chum ESUs;

Steelhead and rainbow trout (*O. mykiss*): South-Central California Coast, Central California Coast, California Central Valley, Northern California, Upper Willamette River, Lower Columbia River, Middle Columbia River, Snake River Basin, and Upper Columbia River *O. mykiss* ESUs.

Background

On June 14, 2004, NMFS published proposed ESA listing determinations for 27 ESUs of salmon and *O. mykiss* (69 FR 33101). NMFS proposed threatened status for 23 ESUs in California, Oregon, Washington, and Idaho, and as part of that rulemaking also proposed amendments to the existing 4(d) protective regulations for threatened salmon and steelhead ESUs. The National Environmental Policy Act (NEPA) requires that Federal agencies conduct an environmental analysis of their actions to determine if the actions may affect the human environment. Accordingly, NMFS has prepared a draft EA that analyzes the impacts of the proposed amendments to the 4(d) protective regulations for West Coast salmonids, and is making it available for public review and comment.

This draft EA analyzes two alternatives: (1) No Action (no revision to the current 4(d) protective regulations); and (2) the Proposed Action Alternative (revision and simplification of existing 4(d) protective regulations). The Proposed Action Alternative includes the following amendments:

Apply the 4(d) protections and 14 limits promulgated in 2000 (as modified in the proposed amendments) to three ESUs being newly proposed for threatened status; Apply the same 4(d) protections and 14 limits promulgated in 2000 (as modified in proposed amendments) to all threatened ESUs; Amend an expired 4(d) limit which provided a temporary exemption for ongoing research with pending permit applications during the 2000 4(d) rulemaking, to temporarily exempt ongoing research during the current rulemaking process; Move the

description of the limit for Tribal Resource Management Plans (§ 223.209) so that the text would appear next to the 4(d) rule in the Code of Federal Regulations, improving the clarity of the 4(d) regulations; and Amend the current 4(d) rule so that the section 9(a) take prohibitions apply to anadromous fish with an intact adipose fin only (that is, the take prohibitions and 4(d) protective regulations would not apply to unclipped hatchery fish or resident O. mykiss included in the subject ESUs).

Because the proposed action creates an optional ESA process, the effects that it may generate are limited to those associated with amending the 4(d) protective regulations. The proposed action does not address the potential effects of individual activities or programs that may seek coverage under one of the 4(d) ''limits.'' It is impossible to anticipate the specific impacts of such programs that may be submitted to and approved by NMFS. NMFS will conduct further NEPA analyses as necessary when a specific program is submitted to NMFS for coverage under one of the 4(d) limits for West Coast salmonids.

This notice is provided pursuant to the NEPA regulations (40 CFR 1506.6). The final NEPA determinations will not be completed until after the end of the 30–day comment period and after NMFS has fully considered all comments received during the public comment period.

Authority: 16 U.S.C. 1531 *et seq.*

Dated: November 9, 2004.

Laurie K. Allen,

Director, Office of Protected Resources, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

[I.D. 102704]

Taking and Importing of Marine Mammals

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of affirmative finding renewal.

SUMMARY: The Assistant Administrator for Fisheries, NMFS, (Assistant Administrator) renewed the affirmative finding for the Republic of Ecuador under the Marine Mammal Protection Act (MMPA). This affirmative finding renewal will allow yellowfin tuna and yellowfin tuna products harvested in the eastern tropical Pacific Ocean (ETP), in compliance with the International Dolphin Conservation Program (IDCP) by Ecuadorian-flag purse seine vessels or vessels operating under Ecuadorian jurisdiction, to continue to be imported into the United States. The affirmative finding renewal was based on review of documentary evidence submitted by the Republic of Ecuador and obtained from the Inter-American Tropical Tuna Commission (IATTC) and the Department of State. This finding remains in effect through March 31, 2005.

DATES: Effective April 1, 2004, through March 31, 2005.

FOR FURTHER INFORMATION CONTACT: Regional Administrator, Southwest Region, NMFS, 501 West Ocean Boulevard, Suite 4200, Long Beach, California, 90802–4213; Phone 562–980–4000; Fax 562–980-4018.

SUPPLEMENTARY INFORMATION: The MMPA, 16 U.S.C. 1361 et seq., allows entry into the United States of yellowfin tuna harvested by purse seine vessels in the ETP under certain conditions. Under implementing regulations at 50 CFR 216.24, a nation with purse seine vessels greater than 400 short tons (362.8 metric tons) carrying capacity fishing for tuna in the ETP must have an affirmative finding in order to export such tuna and tuna products to the United States. If requested by the harvesting nation, the Assistant Administrator will determine whether to make an affirmative finding based upon documentary evidence provided by the government of the harvesting nation, the IATTC, or the Department of State. The finding will be reviewed annually to ensure that the nation continues to meet the requirements for an affirmative finding. The requirements must be met in order for the finding to remain valid for the following 12-month period: April 1 through March 31, or for such other period as the Assistant Administrator may determine.

The affirmative finding process requires that the harvesting nation meet several conditions related to compliance with the IDCP. Every 5 years, the government of the harvesting nation must request an affirmative finding and submit the required documentary evidence directly to the Assistant Administrator. A nation may opt to provide information regarding compliance with the IDCP directly to NMFS on an annual basis or to authorize the IATTC to release the information to NMFS in years when NMFS will review and consider whether to issue an affirmative finding determination without an application from the harvesting nation.

An affirmative finding will be terminated, in consultation with the Secretary of State, if the Assistant Administrator determines that the requirements of 50 CFR 216.24(f) are no longer being met or that a nation is consistently failing to take enforcement actions on violations which diminish the effectiveness of the IDCP. Every 5 years, the government of the harvesting nation must request an affirmative finding and submit the required documentary evidence directly to the Assistant Administrator.

As a part of the annual review process set forth in 50 CFR 216.24(f), the Assistant Administrator considered documentary evidence submitted by the Republic of Ecuador and obtained from the IATTC and the Department of State and determined that Ecuador has met the MMPA's requirements to receive an affirmative finding.

After consultation with the Department of State, NMFS renewed the Republic of Ecuador's affirmative finding allowing the continued importation into the United States of yellowfin tuna and products derived from yellowfin tuna harvested in the ETP by Ecuadorian-flag purse seine vessels or vessels operating under Ecuadorian jurisdiction.

The Republic of Ecuador must submit a new application no later than January 2005 for an affirmative finding to be effective for the period April 1, 2005, through March 31, 2006, and the subsequent 4 years.

Dated: November 9, 2004.

Rebecca Lent,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 101304E]

Issuance of Permit 1493

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration, Commerce.

ACTION: Notice of decision and availability of decision documents on the issuance of ESA research/

enhancement permit 1493 for takes of endangered species.

SUMMARY: This notice advises the public that a scientific research permit to the Bonneville Power Administration (BPA) and the Confederated Tribes and Bands of the Yakama Nation, as their agent, pursuant to the Endangered Species Act of 1973 (ESA), has been issued and that the decision documents are available upon request.

DATES: Permit 1493 was issued on September 15, 2004, subject to certain conditions set forth therein. The permit expires on September 15, 2009.

ADDRESSES: Requests for copies of the decision documents or any of the other associated documents should be directed to the Salmon Recovery Division, NOAA Fisheries, 525 NE Oregon Street, Suite 510, Portland, Oregon 97232. The documents are also available on the Internet at *www.nwr.noaa.gov*.

FOR FURTHER INFORMATION CONTACT: Kristine Petersen, Portland, OR, at phone number: (503) 230–5409, e-mail: *Kristine.Petersen@noaa.gov*

SUPPLEMENTARY INFORMATION: The following species and evolutionarily significant units (ESUs) are covered in the permit:

Steelhead (*Oncorhynchus mykiss*): endangered Upper Columbia River.

Chinook salmon (*O. tshawytscha*): endangered Upper Columbia River spring run.

Issuance of this permit, as required by the ESA, was based on a finding that such permits: (1) were applied for in good faith; (2) will not operate to the disadvantage of the listed species which are the subject of the permits; and (3) is consistent with the purposes and policies set forth in section 2 of the ESA. This permit was issued in accordance with, and is subject to, 50 CFR part 222, the NMFS regulations governing listed species permits.

Dated: November 9, 2004.

Phil Williams,

Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–S

COMMODITY FUTURES TRADING COMMISSION

In the Matter of the Intercontinental Exchange, Inc. Petition for Expansion of the Definition of an Eligible Commercial Entity Under Section 1a(11)(C) of the Commodity Exchange Act

AGENCY: Commodity Futures Trading Commission.

ACTION: Order.

SUMMARY: In response to a petition from the Intercontinental Exchange, Inc. (''Intercontinental''), the Commodity Futures Trading Commission (''Commission'' or ''CFTC''), pursuant to section 1a(11)(C) of the Commodity Exchange Act (''Act''), is issuing an order that deems, subject to certain conditions, brokers and traders associated with the International Petroleum Exchange (''IPE''), a recognized investment exchange (''RIE'') located in the United Kingdom (''U.K.''), who are either authorized by the Financial Services Authority (''FSA'') or registered with the IPE,[1] when acting in a proprietary trading capacity, to be an ''eligible commercial entity'' as defined in section 1a(11) of the Act.[2] Accordingly, subject to certain conditions as set forth in the Commission's order, IPE members authorized as commodity brokers by FSA or registered as local traders with IPE, when acting for their own accounts, are permitted to enter into transactions in exempt commodities on exempt commercial markets pursuant to section 2(h)(3) of the Act. In order to participate, the FSA-authorized broker or IPE-registered trader must either be an eligible contract participant, as that term is defined in section 1a(12) of the Act, or have its trades on the exempt commercial market guaranteed by a clearing member that is both a member of an FSA-recognized derivatives clearing organization and is an eligible contract participant.

EFFECTIVE DATE: This order is effective November 15, 2004.

FOR FURTHER INFORMATION CONTACT: Clarence Sanders, Special Counsel, Division of Market Oversight, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street, NW., Washington, DC 20581. Telephone: (202) 418–5068. Electronic mail: *csanders@cftc.gov.*

SUPPLEMENTARY INFORMATION:

I. Statutory Background

The Commodity Futures Modernization Act of 2000 (''CFMA''), Public Law No. 106–554, was signed into law on December 21, 2000. Under amendments implemented by the CFMA, section 2(h)(3) of the Act authorizes trading in an ''exempt commodity'' [3] on an exempt commercial market (''ECM'') meeting the requirements of section 2(h) (3)–(5). Under those provisions, transactions between an eligible commercial entity (''ECE'') in an exempt commodity on an ECM are exempt from all but certain limited requirements of the Act.[4]

Section 1a(11) of the Act lists those eligible contract participants (''ECP'') [5]

[1] Registration with IPE is not registration with FSA or any other government entity. Criteria and procedures for obtaining membership or trading privileges on IPE are discussed below.

[2] The Commission previously determined to expand ECE eligibility to include, subject to certain conditions, Commission-registered floor brokers and floor traders. *See* 68 FR 2319 (January 16, 2003). That action applied to Commission-registered floor brokers and floor traders conducting business on electronic or open outcry markets. Similarly, this action applies to IPE brokers and local traders conducting business on IPE in either electronic or open outcry trading environments. As used in this **Federal Register** notice and in the prior **Federal Register** notice, the term proprietary trading means trading for one's own account.

[3] Section 1a(14) of the Act defines the term ''exempt commodity'' to mean a commodity that is not an excluded commodity or an agricultural commodity. Section 1a(13) defines the term ''excluded commodity'' to mean, among other things, an interest rate, exchange rate, currency, credit risk or measure, debt instrument, measure of inflation, or other macroeconomic index or measure. Although the term ''agricultural commodity'' is not defined in the Act, section 1a(4) enumerates a non-exclusive list of several agricultural-based commodities and products. The broadest type of commodities that fall into the exempt category are energy and metals products.

[4] Under section 2(h)(3), ECMs are markets that meet the requirements of section 2(h)(3)–(5) by notifying the Commission of their intention to operate a trading facility in reliance on the exemption and by limiting themselves to transactions: (1) In exempt commodities, (2) entered into on a principal-to-principal basis by ECEs, and (3) executed or traded on an electronic trading facility. An ECM is not a registered entity, but is required to notify the Commission of its intention to operate an electronic trading facility in reliance on the exemption set forth in section 2(h)(3). The notification of operation as an ECM must include several certifications and, pursuant to Commission regulation 36.3(c)(3), a representation that it will require each participant to comply with all applicable law and that it has a reasonable basis for believing that authorized participants are ECEs. Section 2(h)(4) reserves, with respect to transactions eligible for the 2(h)(3) exemption, certain provisions of the Act, including certain anti-fraud and anti-manipulation provisions.

[5] Section 1a(12) lists those entities and individuals included within the ECP category. Included generally as ECPs are financial institutions; insurance companies; and investment companies subject to regulation; commodity pools and employee benefit plans subject to regulation and asset requirements; other entities subject to asset requirements or whose obligations are guaranteed by an ECP that meets a net worth requirement; governmental entities; brokers,

P='65585'≤that are qualified to be ECEs.[6] As defined under section 1a(11), floor brokers and floor traders, even if determined to fall within the definition of an ECP, do not, as a category, fall within the statutory definition of an ECE. Thus, commodity brokers and traders, whether conducting business in either electronic or open outcry trading environments, are prohibited from entering into transactions on ECMs.

Section 1a(11)(C) of the Act, however, vests the Commission with discretion to expand the list of entities qualifying as an ECE. Specifically, under that provision, the definition of an ECE shall include ''such other persons as the Commission shall determine appropriate and shall designate by rule, regulation, or order.'' Therefore, a Commission-determination recognizing that IPE brokers and traders, either authorized by FSA or registered with IPE, are considered to be ECEs would permit these entities to enter into exempt commodity transactions on ECMs pursuant to section 2(h)(3) of the Act.

II. The Petition

A. Scope of Request

By letter dated February 9, 2004, Intercontinental requested that the Commission issue an order pursuant to section 1a(11) of the Act that would expand the ECE category to include certain IPE brokers and local traders, who are either authorized by FSA or registered with IPE, thus permitting them to trade on ECMs.[7] Intercontinental operates a commodities trading platform for energy and metals (the ''Intercontinental electronic platform'') and is itself an ECM. Intercontinental also owns IPE, a U.K. futures exchange that trades energy futures products. The Intercontinental electronic platform is used by IPE for its electronic trading system. Intercontinental stated that including IPE brokers and local traders as ECEs would be consistent with the CFMA and would recognize their value as both liquidity providers and market makers.

As more fully described below, Intercontinental's request applies to certain IPE brokers and local traders conducting business on IPE in either electronic or open outcry trading environments.[8] Specifically, Intercontinental proposed that eligible IPE brokers must be located in the U.K., be authorized and regulated by the FSA, and be a member of the IPE. For IPE local traders, Intercontinental proposed that eligible local traders be located in the U.K., be outside the scope of the Financial Services and Markets Act of 2000 (''FSMA''), and be a member of, or registered to, the IPE. Additionally, for both brokers and local traders, Intercontinental proposed that they have, as a part of their business activities, the business of acting as a broker or local trader but need not have any connection or experience in the underlying physical commodity. Finally, Intercontinental proposed that an eligible IPE broker or local trader must be an ECP or, if not an ECP, then the IPE broker or local trader must have its trades on the ECM guaranteed by an entity that is both an ECP and a clearing member of a U.K. recognized clearing organization.

In its petition, Intercontinental noted that the Commission has previously expanded the eligibility criteria for ECE status to include Commission-registered floor brokers and floor traders when acting in a proprietary trading capacity. In this respect, Intercontinental commented that the relief it seeks for IPE brokers and local traders is an appropriate extension of the Commission's previous expansion of the ECE definition. Moreover, Intercontinental contends that the IPE brokers and local traders, much as the CFTC registered floor brokers and floor traders qualifying under the Commission's prior action, are commodity professionals supervised by a central regulator, the FSA, or the IPE. Intercontinental also notes that the IPE brokers and local traders regularly trade on the IPE as part of their business and would utilize ECMs in connection with their trading activities. Intercontinental also observes that the Commission's prior action effectively acknowledges that floor brokers and floor traders are sophisticated market participants who are subject to a comprehensive regulatory scheme, such as that provided under FSA and IPE regulations. Intercontinental concludes that IPE brokers and local traders satisfy similar criteria, including that of having their trades guaranteed by the arrangements put in place by an RIE, and should therefore be eligible for the same type of relief.[9]

B. IPE Brokers

The petition requests that the ECE definition be expanded to include IPE brokers that are located in the UK when acting in a proprietary capacity. The IPE brokers include IPE Floor Members and IPE General Participants. IPE Floor Members may trade in either the open outcry or electronic markets; General Participants are restricted to the electronic market only.

As the petition describes, IPE brokers are firms authorized to transact business on behalf of customers or for the firm's proprietary account.[10] When acting on behalf of customers, the firm's business activities fall within the scope of the FSMA. Thus, a firm conducting such

dealers, and futures commission merchants (''FCM'') subject to regulation and organized as other than natural persons or proprietorships; brokers, dealers, and FCMs subject to regulation and organized as natural persons or proprietorships subject to total asset requirements or whose obligations are guaranteed by an ECP that meets a net worth requirement; floor brokers or floor traders subject to regulation in connection with transactions that take place on or through the facilities of a registered entity or an exempt board of trade; individuals subject to total asset requirements; an investment adviser or commodity trading adviser acting as an investment manager or fiduciary for another ECP, and any other person that the Commission deems eligible in light of the financial or other qualifications of the person.

[6] Section 1a(11) defines the term ECE by listing those entities and individuals considered to be ECEs. Generally, an ECE is an ECP that (1) in connection with its business, demonstrates the ability to make or take delivery of the underlying commodity; incurs risk, in addition to price risk related to the commodity; or is a dealer that regularly provides risk management or hedging services to, or engages in market-making activities with, the foregoing entities with respect to the commodity or derivatives transactions in the commodity; or (2) is other than a natural person or government entity and regularly enters into transactions with respect to the commodity, subject to certain qualification or total asset requirements; or (3) such other persons as the Commission shall determine appropriate.

[7] Intercontinental submitted its notice of operation as an ECM to the Commission on December 27, 2001. Intercontinental is one of 11 ECMs that have submitted notices to the Commission to date.

[8] The two classes denominated as brokers or local traders encompass four separate types of holders of trading privileges on IPE. Within the broker class there are Floor Members and General Participants. Floor Members hold privileges to trade on the IPE floor, whereas General Participants may trade only through the IPE electronic trading system. After establishment by IPE of the General Participant class, Floor Members were eligible to be grandfathered as General Participants. Also new Floor Members can elect to qualify as General Participants. The class denominated as local traders by IPE can similarly be broken down into two separate trader types. These are called Local Members and Individual Participants. Local Members may trade on the IPE floor, but Individual Participants may trade solely through the IPE electronic trading system. During July 2003 IPE introduced a new ''electronic'' membership structure. FSA recognizes all four classes as ''members,'' irrespective of whether the individual class is vested with equity or voting rights. See FSA Handbook Glossary at M8, 01/10/04, which defines a member as ''a person who is entitled, under an arrangement or agreement between him and that body, to use that body's facilities.''

[9] FSA recognition requirements place obligations on an RIE to put in place satisfactory arrangements for securing clearing and settlement services, which generally will be carried out by a Recognized Clearing House.

[10] Although IPE brokers have FSA authorization to conduct transactions on behalf of customers, any relief granted in response to the Intercontinental petition would be solely for their proprietary trading activities.

activities in the UK is subject to regulation by the FSA. Among other qualifying criteria, such firms must obtain FSA authorization prior to engaging in the commodity brokerage business.[11]

As there are two separate trading venues at IPE, conduct of business by IPE brokers may take two different forms. Each IPE floor-based broker (*i.e.*, Floor Members) is represented on the trading floor by one or more individual traders.[12]

General Participants are IPE brokers authorized to conduct business solely on the electronic trading platform. IPE-established eligibility requirements for this class of membership differ from those applicable to floor members. However, both classes of IPE brokers are authorized by FSA and therefore under FSA oversight. When operating on the IPE electronic trading platform, representatives of IPE General Participants are registered with the IPE as a Responsible Individual (''RI'') or, alternatively, are registered with the FSA as an Approved Person linked to a particular General Participant.[13]

C. IPE Local Traders

The petition also requests that the ECE definition be expanded to include IPE local traders located in the UK. Under IPE rules, local traders are authorized to trade for their own account but are prohibited from engaging in customer brokerage. As noted above, IPE local traders as a class are composed of two separate types of holders of trading privileges. These are Local Members and Individual Participants.[14] Qualifying criteria for these two trader classes differ in some respects. Local Members hold privileges to trade on the IPE floor.[15] Individual Participants are authorized to trade solely on the electronic trading platform.[16]

Notably, both Local Members and Individual Participants are outside the scope of the FSMA and therefore need not be authorized by the FSA—either when trading on IPE on behalf of their own account or on behalf of other IPE members.[17] However, both Local Members and Individual Participants must be members of, or registered with, the IPE, and must meet independent qualifying criteria established by IPE under an FSA-recognized regime.[18] The IPE actively monitors Local Member and Individual Participant trading activity, and has authority to impose sanctions for improper trading conduct.[19]

D. Qualifying Experience for Individual Participants

IPE affirms that it will determine whether an applicant has substantial qualifying experience by applying the standards set out under the definition of an Intermediate Customer contained in FSA regulations. In particular, IPE represents that the standards defining an expert private client as an Intermediate Customer found in Rule 4.1.9R of the FSA Conduct of Business (''COB'') sourcebook will be applied as the primary guide in determining the adequacy of an applicant's experience for this purpose.

COB Rule 4.1.9R imposes a two-tiered regulatory structure on financial services firms servicing accounts of expert private clients. This structure is divided between (1) procedural steps in establishing a client relationship with an expert private client and (2) objective steps in determining the adequacy of the expert private client's trading and business experience. More specifically, under FSA regulations, a financial intermediary is required to classify a client in one of three classifications: these are private (''retail'') customer, intermediate customer, or market counterparty.[20] Provisions under COB Rule 4.1.9R, permit a financial services firm to classify a client who would otherwise be a private, or retail, customer as an Intermediate Customer only upon a determination that the client is an ''expert'' private client.

COB 4.1.9R requires a firm to assess the adequacy of a client's experience and knowledge as an expert private client.[21] In this respect, COB Rule

[11] Under the U.K. regulatory regime, FSA also is responsible for approving persons who perform certain ''controlled functions'' for an authorized person. The FSA has specified 27 separate controlled functions, which fall into two main groups. The first of these two groups is the ''significant influence functions'' group, which includes activities carried out by persons in positions having a significant influence over conduct of the firm, such as governing functions (a Board Director or Chief Executive) or required functions (Compliance Officer or Money-Laundering Reporting Officer). The other group is the ''customer functions'' group, which includes persons performing advisory functions or customer trading and investment management functions.

[12] In order to qualify for membership as a Floor member on IPE, an applicant also must meet a schedule of IPE eligibility requirements. Under this schedule, an applicant must (1) be a firm or company, (2) meet IPE requirements on record-keeping, training and fitness of staff and directors, and implement internal procedures to ensure compliance with regulations, (3) meet minimum IPE-established net worth requirements, (4) maintain a properly established office in an IPE-approved location for the conduct of business, (5) have a continuing interest in trading and maintain trading staff on the IPE floor, (6) be a clearing member of LCH.Clearnet or be a party to a clearing agreement with another firm that is a member of LCH.Clearnet, and (7) hold at least one seat on IPE, where the applicant wishes to self-execute transactions on the IPE floor.

[13] Under the applicable schedule of requirements, the applicant must (1) demonstrate fitness to be a member, (2) demonstrate sufficiency of controls and procedures to ensure that employees, agents, and representatives are fit and proper, suitably qualified and experienced, adequately trained, and properly supervised, (3) maintain a properly established office in an IPE-approved location for the conduct of business, (4) meet minimum IPE-established financial standing requirements, (5) be a party to an IPE-prescribed Platform User Agreement, (6) maintain access to the Trading Server via a front end application meeting IPE criteria, (7) be a clearing member of LCH.Clearnet or be a party to a clearing agreement with another firm that is a member of LCH.Clearnet, (8) hold all necessary licenses, authorizations, and consents or qualifies for an exclusion permitting the conduct of business on the Platform in accordance with applicable law and regulation, and (9) identify the location of all RIs, along with related details and information on order routing, upon request from IPE.

[14] A third local trader class, Trade Participant membership, also exists but relief is not being sought for this class. Trade Participants are companies limited to trading for their own account.

[15] To qualify as an IPE Local Member an applicant must (1) demonstrate fitness as a member and an intention to comply with IPE regulations, (2) register with IPE and successfully pass the Registered Floor Trader examination, (3) demonstrate that the applicant will become a party to a clearing agreement with a clearing member of LCH.Clearnet, (4) demonstrate that the applicant is entitled, upon admission to membership, to acquire or lease a minimum of one seat on IPE, (5) demonstrate that the applicant is either a sole trader or a company where 90 percent of issued share capital is owned by the sole trader or 90 percent of voting rights of a non-share capital company is held by the sole trader, and (6) provide any other information or documents requested by IPE.

[16] To demonstrate eligibility an applicant as an Individual Participant must (1) demonstrate fitness as a member and an intention to comply with IPE regulations, (2) register with IPE as an RI and successfully pass the Registered Trader examination, (3) be a party to an IPE-prescribed Platform User Agreement, (4) maintain access to the Trading Server via a front end application meeting IPE criteria, (5) demonstrate that the applicant will become a party to a clearing agreement with a clearing member of LCH.Clearnet, and (6) demonstrate substantial experience trading on a UK futures exchanges, or otherwise meet the Intermediate Customer Standards found in FSA Conduct of Business Rule 4.1.9R.

[17] IPE Local Members and Individual Participants were determined to be outside the scope of FSMA by Order 2001. Local Members and Individual Participants may be individuals or corporations, although in the case of a corporation, 90 percent of the share capital or voting rights must be held by a single member.

[18] FSA confirms that IPE regulations appear to meet the requirements in the FSA sourcebook on Recognized Investment Exchanges and Recognized Clearing Houses.

[19] All IPE members and holders of trading privileges must execute an IPE-prescribed agreement consenting to be bound by IPE rules. *See* IPE Rule B.1.4.

[20] See COB Rule 4.1.4, FSA Handbook, Release 034, September 2004.

[21] Under the first tier, which concerns the establishment of a client relationship, COB Rule 4.1.9R requires that a firm take reasonable care to determine that the client has sufficient experience and understanding, disclose in writing the regulatory protections waived by such classification, provide the client sufficient time to consider the determination, and obtain the client's written consent or otherwise demonstrate that informed consent has been given by the client.

4.1.9R requires that a firm inquire about the client's knowledge, understanding, and awareness of risks in the applicable investments and markets. The rule also requires a firm to consider the length of time the client has been active in the applicable markets, the frequency of dealings, and the extent to which the client has relied on advice. Finally, the rule instructs a firm to inquire about or consider the size and nature of any transactions undertaken for the client, and the client's financial standing, including where appropriate an assessment of the client's net worth and portfolio holdings.

Essentially, IPE has determined to adopt the COB Rule 4.1.9R standards as qualifying criteria for applicants as IPE Individual Participants. Thus, these standards, otherwise imposed upon financial services firms regulated by FSA, will also be part of IPE procedures and serve as a screening device for determining the sufficiency of an applicant's experience and knowledge for admission on the IPE as an Individual Participant. In this respect, IPE confirms that its application of the criteria found in Rule 4.1.9R, to assess experience and knowledge of Individual Participant applicants, will be part of an independent determination made by IPE management. Moreover, IPE represents that any prior status an applicant may have attained as a customer of a financial services firm would not be determinative of eligibility, but that IPE would undertake an independent assessment of the applicant's experience and knowledge under the standards of COB Rule 4.1.9R.

E. Comments

The Intercontinental petition was published in the **Federal Register** for a 15-day public comment period on March 22, 2004.[22] In addition, the **Federal Register** release includes a series of questions posed by the Commission regarding the petition. Those questions focus on whether the petition should be granted; what conditions if any should apply; whether any grant of the petition should be specifically tailored to the Intercontinental ECM or be more broadly applied to other ECMs as well; whether relief should extend to IPE traders with rights to trade only on the IPE electronic platform, or to IPE locals not registered with the FSA and, if so, what standards should apply to evaluate the qualifications of such persons.

In total, the Commission received three comment letters responding to the **Federal Register** notice, two of which were submitted by the New York Mercantile Exchange (''NYMEX'') in letters dated April 7, and May 27, 2004. The other comment was submitted by Intercontinental in a letter dated April 28, 2004. The Intercontinental comment letter primarily responded to issues critically raised in the NYMEX letter of April 7, 2004.

1. NYMEX Comment Letters

The NYMEX comment letters include a generalized critical assessment of the petition. In so doing, the letters characterize the relief being sought as ''broad and unrestricted,'' and argue against the grant of the petition. In arriving at this conclusion, NYMEX emphasizes several different aspects of the IPE institutional and regulatory environment.

In particular, NYMEX sets out its view of the regulatory landscape governing ECMs as one in which statutory exemption is conditioned on the commercial nature of the market. Following this line of reasoning, NYMEX asserts that the IPE electronic traders are best characterized as representing a retail rather than a commercial interest and, on that basis, concludes they should be denied eligibility to obtain trading privileges on ECMs.

In amplifying its objection to a grant of access for IPE electronic traders, NYMEX asserts that granting the petition for IPE electronic traders would open ECM access to a ''potentially large group of unschooled and unsophisticated electronic traders who are not required to be registered here or in the U.K.'' NYMEX further concludes that granting such regulatory relief could impose risks to the integrity of trading on an ECM. Thus, NYMEX concludes that a grant of relief sought by Intercontinental would be contrary to statutory intent and the public interest.

Along a similar line of reasoning, NYMEX questions whether the IPE local traders (both Local Members and Individual Participants) could meet commercial standards justifying access to an ECM. NYYMEX supports this conclusion by arguing that the lack of FSA registration for IPE local traders, combined with a lack of express qualifying and trading participation requirements, raises a question as to whether such traders could serve as effective ''liquidity providers'' on an ECM.

NYMEX also questions whether the petition is imbued with a full understanding of the meaning of ''trading for one's own account'' within the context of obtaining trading access to an ECM.

The NYMEX comments also respond to the Commission's inquiry whether any regulatory response to the petition should be tailored specifically to permit IPE members to trade solely on Intercontinental or should be more broadly designed to permit IPE members to trade on other ECMs as well. Although more generally opposing the grant of the petition, NYMEX, in response to this question, comments that it is unable to identify any factual circumstances that would be unique to Intercontinental's ECM. On this basis, NYMEX concludes there is no need to tailor any hypothetical relief to the specific factual circumstances of the Intercontinental ECM and, in this respect, questions the wisdom of ''creating private definitions for public statutory categories.'' In summary, although NYMEX argues against granting the petition, NYMEX suggests that in any grant of relief the Commission ''may wish to consider allowing such IPE members to trade on other ECMs.''

2. Intercontinental Letter

As noted, Intercontinental submitted a comment letter dated April 28, 2004. That letter generally responds to the issues raised in the NYMEX letter of April 7, 2004. At the outset, Intercontinental notes that the IPE, as an RIE regulated by FSA, is subject to a panoply of FSA requirements, which, according to Intercontinental, are designed to protect the functioning of the market and the interests of users.[23]

Intercontinental also comments that these FSA requirements on member access to an RIE should also be read in conjunction with the rules and requirements independently applied by

[22] 69 FR 13286 (March 22, 2004).

[23] Recognized Investment Exchanges and Recognized Clearing Houses, FSA Handbook, Release 033, July 2004. More specifically, Intercontinental represents that Part 2.7 of the RIE Sourcebook imposes obligations requiring an RIE to restrict membership to applicants (1) over whom it can with reasonable certainty enforce its rules contractually, (2) who have sufficient technical competence to use its facilities, (3) who it is appropriate to admit to membership having regard to the size and sophistication of users of its facilities and the nature of the business effected by means of or cleared through its facilities, and (4) if appropriate who have adequate financial resources in relation to their exposure to the UK recognized body or its central counterparty. See also FSA Handbook Glossary at M8, 01/10/04, which defines a member as ''a person who is entitled, under an arrangement or agreement between him and that body, to use that body's facilities.'' Thus, all holders of IPE trading privileges are deemed ''members,'' and are regulated as such under FSA regulations, irrespective of whether individuals within a particular class of traders hold any equity or voting rights in IPE.

IPE.[24] As a supplement to these rules and requirements, Intercontinental comments that IPE also applies a membership due diligence screening process in which the IPE inquiry seeks information on an applicant's personal history including, but not limited to, the applicant's experience and knowledge of derivatives trading, whether an individual applicant has been registered by another regulatory body, has ever been disciplined by another regulatory body, or been insolvent. Additionally, Intercontinental comments that, as part of the due diligence screening, IPE conducts an identification inquiry under anti-money laundering standards and reviews or confirms all information obtained with appropriate agencies.

With respect to IPE contracts traded on the electric platform, Intercontinental comments that IPE makes available two different training programs for new members before they can access the system. As a consequence of these requirements, Intercontinental maintains that the characterization by NYMEX that IPE electronic traders are ''unschooled and unsophisticated,'' or of a retail nature, is not accurate. On this basis, Intercontinental concludes that the IPE members should be viewed as eligible to access the over-the-counter contracts traded on Intercontinental's ECM.

Intercontinental's comment letter also notes that it is not seeking relief solely for its own ECM, but rather does not oppose broad ECM access for the IPE membership. Intercontinental also acknowledges that relief is being sought solely for ''principal-to-principal'' trading.

While not responding to any aspect of NYMEX's comment letter, Intercontinental did add several clarifications with respect to its relief request. For instance, Intercontinental remarks that its systems are adequate to enforce the requirement that IPE members eligible for relief must be located in the U.K., as it inquires into a participant's physical location by collecting information on a participant's principal business address. Intercontinental also comments that it conducts an anti-money laundering inquiry for privately-owned companies in which the participant must present the company's registered address, as well as collecting the address and telephone number for each user as part of its process for new market users.

[24] These are the same rules and requirements outlined above in Section II.

III. Discussion

Under the CEA, ECMs are commercial markets executing principal-to-principal transactions. In view of the unregulated nature of these markets, Congress intended that access should be confined to professional traders—either ECEs as defined in section 1a(11) or other traders that have an interest in the underlying commodity as part of their business operations, perform a market-making role, or otherwise provide a similar trading function that improves market liquidity.

As noted above the Commission has previously acted to expand the ECE definition to include floor brokers and floor traders registered with the Commission and acting in a proprietary capacity, since these persons operate as knowledgeable, experienced professional traders who historically have provided a trading function that improves market liquidity.[25] The Commission stated in the **Federal Register** notice accompanying that action that in order to qualify as an ECE under the Order, the ''CFTC-registered floor broker or floor trader must be a member of a DCM or otherwise have trading privileges on a DCM * * * [and act] as a floor broker or floor trader, either on a DCM's open outcry market or [perform] an equivalent function on the DCM's electronic market.'' In the **Federal Register** notice, the Commission also acknowledged, as professional traders providing market-making type activities, that the floor broker or floor trader ''need not have any connection to or experience in the underlying physical commodity.'' Finally, the Commission stated that the ''floor broker or floor trader must either be an ECP or have its trades on the ECM guaranteed by a clearing member that is both a member of a CFTC-registered derivatives clearing organization and an ECP.''

Underlying the Commission's prior action was the notion that registration was a proxy for the aforementioned knowledge, experience, and professionalism, and for the provision of a market-making or similar trading function that improves market liquidity.

As outlined above in Section II.A, Intercontinental maintains that its petition seeks relief of a similar nature, and further represents that granting its request would constitute an appropriate extension of the Commission's prior action. Although NYMEX supported the Commission's prior action, NYMEX now opposes the Intercontinental petition for IPE traders. In contrast to Intercontinental's declaration, the comment letters submitted by NYMEX argue that the Intercontinental petition fails to satisfy standards established under the Commission's prior action to include CFTC-registered floor brokers and floor traders in the definition of an ECE.

The Commission believes that granting relief for IPE brokers would comply with the Commission's prior action to expand the ECE category to include CFTC-registered floor brokers and floor traders. IPE brokers, by virtue of having received FSA authorization as a prerequisite to engaging in the conduct of commodity brokerage on IPE, conform to that part of the standards enunciated in the Commission's prior action. The Commission also has entered into an information-sharing arrangement with the FSA.

With respect to IPE floor and electronic local traders, NYMEX correctly concludes that these traders are neither authorized nor approved by FSA, the U.K. regulator with jurisdiction over commodity futures exchanges and other instrumentalities operating in the U.K. financial services industry. Nonetheless, the Commission believes that it is appropriate to include these traders under the ECE category since, as identified above, IPE floor and electronic local traders do have to meet a schedule of criteria in order to establish eligibility as an IPE Local Member or Individual Participant. In order to demonstrate fitness, both IPE Local Members and Individual Participants must, among other things, successfully pass the Registered Trader examination that is administered by IPE.[26]

As either an applicant or an IPE-approved trader, Local Members and Individual Participants must meet a schedule of fees that is essentially the same for both classes of membership. Each applicant is required to pay an application fee of 500 pounds. If accepted to membership, each applicant would then be required to pay an annual subscription fee of 350 pounds per seat or membership. Additionally, each applicant would be subject to an annual minimum activity charge of 1000 pounds, if the applicant failed to trade at least 4000 lots per year.

Other applicable criteria differ for each of these two trader classes, most

[25] 68 FR 2319 (January 16, 2003). The Commission also incorporated floor brokers and floor traders in the definition of an ECE as it relates to trading on a Derivatives Transaction Execution Facility. *See* Commission Regulation 37.1(b), and the discussion thereunder at 66 FR 42256.

[26] *See* IPE Rule G.10(c). The Registered Floor Trader exam tests knowledge of trading behavior and of the rules and regulations of IPE.

notably with respect to evidencing an adequate level of experience and knowledge. Local Members are required to either purchase or lease a seat on IPE and to serve both a trainee and probationary period. While in trainee status, an applicant may only enter a trading pit as an observer.[27] In order to achieve probationary status, an applicant must pass the Registered Trader exam. During the probationary period, an applicant may execute transactions on the exchange, but only under the supervision of another IPE member.[28]

After completion of the probationary period, the applicant's performance is subjected to peer review by other IPE members and the IPE Trading Committee.[29] Final acceptance or denial of membership is conditioned on confirmation of the IPE Trading Committee. Thus, the trainee and probationary periods required of Local Members appear to serve as a training period or apprenticeship preparatory to a new member receiving full floor trading privileges.

For Individual Participants, who only have trading privileges for the IPE electronic system, IPE has implemented other requirements that differ from those applicable to Local Members. Under IPE requirements, as in the case of Local Members, Individual Participants must also show fitness to be a member. However, as outlined above in Section II.C, in addition to successfully passing the Registered Trader Exam, applicants for Individual Participant membership must demonstrate substantial experience trading on a U.K. futures exchange, or otherwise satisfy the standards defining an Intermediate Customer under FSA Conduct of Business Rule 4.1.9R.

According to Intercontinental, electronic trader eligibility is limited to existing IPE-registered traders, to traders at other U.K. exchanges, to other individuals with substantial trading experience on U.K. futures exchanges, or to traders who have successfully passed the Registered Trader exam. Thus, according to Intercontinental, FSA-developed standards under COB Rule 4.1.9R, which define an intermediate customer, are used by IPE as a screening device to differentiate professional from retail experience among applicants.

As the above suggests, criteria set out under COB Rule 4.1.9R are intended for use in determining whether a client would have experience meeting or qualifying at the intermediate customer level. Thus COB Rule 4.1.9R instructs that, in determining a client's experience and knowledge, a firm should inquire about:

1. The client's knowledge, understanding, and awareness of risks in the applicable investments and markets,

2. The length of time the client has been active in these markets, the frequency of dealings, and the extent to which client relied on advice,

3. The size and nature of the transactions undertaken for the client, and

4. The client's financial standing, which may include an assessment of net worth and portfolio.

As a practice that is functionally parallel to that required of financial firms under COB Rule 4.1.9R, Intercontinental has represented that IPE will confine eligibility for admission as an electronic trader to applicants with:

1. Sufficient knowledge and understanding of market and risks,

2. Who were active on such markets for a reasonable length of time,

3. Who have traded in appropriate size and quantity, and

4. Who have appropriate financial standing.

In this respect, IPE confirms that it will apply the criteria found in Rule 4.1.9R applicable to assessing experience and knowledge of an expert private customer as part of an independent determination made by IPE management. Moreover, IPE represents that the prior status an applicant may have attained as a customer of a financial services firm would not be determinative of eligibility, but that IPE would undertake an independent assessment of the applicant's experience and knowledge under the standards of COB Rule 4.1.9R.[30]

As a general matter, IPE also maintains that as an RIE it is organized as a wholesale market and is not open to retail membership. In this regard, IPE points out that FSA rules and standards found in the Recognized Investment Exchange and Clearing House sourcebook (''REC'') impose requirements on types of applicants eligible for membership. Among other things, REC Rule 2.7.3 states that FSA may conduct assessments of whether access to a UK recognized body's facilities is based on criteria designed to protect the orderly functioning of the market and the interests of investors. Further, Rule 2.7.3 states that FSA, in conducting any such assessments, may consider: (a) Whether the RIE limits access as a member to persons over whom it can with reasonable certainty enforce its rules, (b) who have sufficient technical competence to use the market's facilities, (c) whom it is appropriate to admit to membership having regard for the size and sophistication of users of its facilities and the nature of business thereon, and (d) where appropriate, the adequacy of financial resources in relation to a member's exposure to the UK recognized body or central counterparty.[31]

As noted, IPE local traders need not be authorized or approved by FSA as a pre-condition in obtaining trading privileges on IPE. The U.K. approach therefore differs somewhat from that applied under U.S. regulation, where Commission requirements mandate registration with a government body for both floor brokers and floor traders. However, even though qualifying determinations for local traders are reserved to IPE, those procedures are subject to FSA supervision. Thus, notwithstanding the formalistic differences in the treatment of local traders in the U.S. and U.K. regulatory systems, the Commission believes that the U.K. regulatory structure facilitates and enforces a level of regulation for the IPE local traders that meets applicable standards of professionalism established under the Commission's prior action expanding the ECE category to include

[27] *See* IPE Rule 1.3.2.

[28] *See* IPE Rule 1.6.7(f).

[29] Under IPE Rule 1.6.7, the probationary period runs for a period of 90 days unless terminated earlier at the discretion of the IPE Trading Committee.

[30] IPE is posting the Individual Participant application form on its Web site. The application form includes an eligibility requirement in reference to the Intermediate Customer standards under FSA COB 4.1.9R. There are no specific FSA regulations governing an RIE's record-keeping obligations regarding membership applications or documents relating thereto. However, IPE maintains that Money Laundering Regulations 1993 require IPE retention of new client records, including IPE members, for a five-year period following the termination of the business relationship. In the case of an IPE member or holder of trading privileges, the five-year period would run from the date of rejection or resignation from membership.

[31] Administratively, REC Rule 2.7.3 also seeks to ensure that an RIE's membership criteria are objective in their scope and are applied in an objective, non-discriminatory manner. Specifically, for access to electronic markets, REC Rule 2.7.4 provides that the FSA may review an RIE's rules and practices concerning procedures, controls, and security for inputting instructions into the system; the facilities provided and restrictions imposed on clients inputting instructions into the system; practices used to detect, identify, and prevent instructions to the system that breach any relevant restrictions; the quality and completeness of the audit trail; and procedures governing the determination to suspend system trading or member access.

CFTC-registered floor brokers and floor traders.[32]

IV. Conclusion

After consideration of the Intercontinental petition, and the additional material submitted by Intercontinental to accompany the petition, and the comment letters submitted in response to the **Federal Register** notice, the Commission has determined, consistent with the Intercontinental petition, that it is appropriate to issue an order, pursuant to Section 1a(11)(c) of the Act, that includes certain IPE floor and electronic brokers and traders, subject to certain conditions, within the definition of an ECE for eligibility to trade on an ECM.[33] As in the prior action to expand the ECE definition to include CFTC-registered floor brokers and floor traders, either in open outcry or electronic markets, the Commission believes that expanding the definition to include IPE floor and electronic brokers and traders is consistent with the purposes of the CFMA.[34] Moreover, and again as in the prior action, the Commission believes that inclusion of IPE floor and electronic brokers and traders in the definition of an ECE could potentially increase competition and efficiency, and reduce liquidity risk, on ECMs.

As noted above, underlying the Commission's prior action was the notion that registration serves as a proxy for the aforementioned knowledge, experience and professionalism, and for the provision of a market-making or similar trading function that improves market liquidity. Commission action taken here makes a similar finding for IPE floor and electronic brokers and traders with respect to their knowledge, experience and professionalism, and their ability to provide market-making or similar trading functions that improve market liquidity.

The Commission also notes that IPE registration of electronic local traders is based on eligibility pursuant to the Intermediate Customer standards under FSA COB 4.1.9R. The Commission considers the inclusion of this process in IPE registration as a reasonable proxy for an electronic local trader's knowledge, experience, professionalism, and ability to provide a market-making or similar trading function that improves market liquidity. Moreover, the Commission believes that the IPE has the experience and ability to apply the standards in an efficient and prudent manner. The Commission points out that these determinations are based on materials provided by, and/or representations made by, IPE and FSA and, as such, are particular to IPE. If another market or governmental regulator petitioned the Commission for a similar expansion of the ECE definition, an analogous showing to the Commission would be necessary.

The Commission also notes that it has previously expanded the ECE definition for purposes of trading on a DTEF.[35] That action incorporated within the ECE definition registered floor brokers and floor traders, whose trading obligations are guaranteed by a registered FCM, when trading for their own accounts on a DTEF.

In order to qualify as an ECE under the Commission's order, an IPE floor or electronic broker or trader must be a member of IPE or otherwise have trading privileges on IPE and be located in the U.K. Pursuant to those requirements, the qualifying IPE floor or electronic broker or trader also must be authorized by FSA or registered with IPE. The IPE floor or electronic broker or trader must have as a part of its business the business of acting as a commodity broker or local trader, either on IPE's open outcry or electronic market, but need not have any connection to or experience in the underlying physical commodity. The Commission believes that the trading expertise of IPE floor or electronic brokers or traders would be applicable to trading in any commodity product traded on an ECM. Among other things, the ability of an IPE floor or electronic broker or trader to interpret market momentum, and facilitate the adjustment of market prices to new information, is more a function of trading expertise than of experience in the underlying physical commodity.

A qualifying IPE floor or electronic broker or trader must be either an ECP or have its trades on the ECM guaranteed by a clearing member that is both a member of an FSA-recognized derivatives clearing organization and an ECP. The Commission believes that requiring either the IPE floor or electronic broker or trader, or the guarantor thereof, to be an ECP provides sufficient financial backing for the IPE floor or electronic broker or trader and mitigates any credit and collection risk that might otherwise arise. The Commission notes that the guarantor of an IPE floor or electronic broker or trader would be placing its own money at risk, and expects that such guarantor would carefully consider the risk involved in the provision of the guarantee for that particular broker or trader.

V. Cost Benefit Analysis

Section 15 of the Act, as amended by section 119 of the CFMA, requires the Commission to consider the costs and benefits of its action before issuing a new order under the Act. By its terms, section 15 does not require the Commission to quantify the costs and benefits of its action or to determine whether the benefits of the action outweigh the costs. Rather, section 15 simply requires the Commission to ''consider the costs and benefits'' of its order.

Section 15(a) further specifies that the costs and benefits of the proposed order shall be evaluated in light of five broad areas of market and public concern: (1) Protection of market participants and the public; (2) efficiency competitiveness and financial integrity of futures markets; (3) price discovery; (4) sound risk management practices; and (5) other public interest considerations. The Commission may, in its discretion, give greater weight to any one of the five enumerated areas of concern and may, in its discretion, determine that, notwithstanding its costs, a particular order is necessary or appropriate to protect the public interest or to effectuate any of the provisions or to accomplish any of the purposes of the Act.

The subject order is intended to reduce regulatory barriers to permit certain IPE floor or electronic brokers or traders, when acting in a proprietary capacity, to enter into transactions in exempt commodities on ECMs pursuant to section 2(h)(3) of the Act if such entities are either ECPs or have obtained a financial guarantee for such transactions from a clearing member that is both a member of a FSA-registered derivatives clearing organization and an ECP. The Commission has considered the costs and benefits of the order in light of the

[32] The Commission has found the U.K. regulatory program generally comparable to the U.S. framework pursuant to a grant of relief under CFTC regulation 30.10. The review for this determination focused generally upon firms acting in the capacity of futures commission merchants for U.S. customers trading on U.K. exchanges, rather than on proprietary trading by brokers and traders. *See* 68 FR 58583 (October 10, 2003).

[33] As noted, Intercontinental seeks to include in the definition of an ECE four separate types of holders of trading privileges on IPE: the broker class is composed of Floor Members and General Participants and the local trader class is composed of Local Members and Individual Participants.

[34] The Commission's prior action to include CFTC-registered floor brokers and floor traders in the ECE definition specifically acknowledged that the prior action would reach a ''floor broker or floor trader, either on a DCM's open outcry market or [when] performing an equivalent function on the DCM's electronic market.'' *See* 68 FR 2323 (January 16, 2003).

[35] Commission regulation 37.1(b).

specific provisions of section 15(a) of the Act.

A. Protection of Market Participants and the Public

The order would deem certain professional IPE floor or electronic brokers or traders meeting the required conditions who are ECPs, or who have guarantees from clearing members that are members of FSA-registered derivatives clearing organizations and are ECPs, to be ECEs under section 1a(11)(c) and thus permit them to enter into proprietary transactions in exempt commodities on ECMs. Under the Act, ECEs are sophisticated investors who have the financial wherewithal or trading expertise to participate in these markets. Accordingly, there should be no effect on the Commission's ability to protect market participants and the public.

B. Efficiency and Competition

The order is expected to benefit efficiency and competition by, among other things, providing essential trading expertise to the market that enhances price discovery through both the speed and efficiency of market adjustment to new fundamentals and by generally increasing the pool of potential counterparties for participants trading on exempt commercial markets.

C. Financial Integrity of Futures Markets and Price Discovery

The order should have no effect, from the standpoint of imposing costs or creating benefits, on the financial integrity of the futures and options markets. The order should enhance the price discovery function of such markets.

D. Sound Risk Management Practices

The order should have no effect, from the standpoint of imposing costs, on the risk management practices of the futures and options industry. Where an individual or entity is qualified as an ECP, the individual or entity has been deemed under the Act to be sufficiently responsible to execute trades in certain excluded or exempt commodity transactions, and no further mitigation of credit risk is necessary. Moreover, where an individual or entity does not qualify as an ECP, the order requires that a clearing member of an FSA-recognized derivatives clearing organization that is itself an ECP guarantee the trades in order to mitigate the credit and collection risk.

E. Other Public Interest Considerations

The order is consistent with one of the purposes of the Act as articulated in section 3 in that it would promote responsible innovation and fair competition among boards of trade, other markets, and market participants.

VI. Order

Upon due consideration, and pursuant to its authority under section 1a(11)(C) of the Act, the Commission hereby determines that certain professional International Petroleum Exchange (''IPE'') floor or electronic brokers or local traders, who are authorized by the Financial Services Authority (''FSA'') or registered with the IPE, when acting in a proprietary capacity, are appropriate persons as defined in section 1a(11)(C) and, thus, are deemed to be eligible commercial entities and may enter into contracts, agreements or transactions in an exempt commodity on an exempt commercial market under the following conditions:

1. The contracts, agreements, or transactions must be executed on an exempt commercial market that meets the requirements of section 2(h)(3)–(5) of the Act.

2. The IPE floor or electronic broker, denominated as either a Floor Member or General Participant pursuant to IPE membership rules, must be a member of IPE or otherwise have trading privileges on IPE, be located in the U.K., and be subject to the rules of IPE.

3. The IPE local trader, denominated as a Local Member or Individual Participant pursuant to IPE membership rules, must be a member of IPE or otherwise have trading privileges on IPE, be located in the U.K., and be subject to the rules of IPE.

4. The IPE Floor Member or General Participant must be authorized and regulated by the FSA.

5. The IPE Local Member or Individual Participant must be registered with the IPE.

6. The IPE Floor Member, General Participant, Local Member, or Individual Participant must have as a part of its business the business of acting as a professional commodity broker or trader on either the IPE open outcry or electronic markets.

7. The IPE Individual Participant must meet and satisfy the current qualifying standards of an Intermediate Customer pursuant to FSA Conduct of Business (''COB'') Rule 4.1.9R. IPE must notify the Commission of any changes to the standards included in FSA COB Rule 4.1.9R.

8. The IPE Floor Member, General Participant, Local Member, or Individual Participant must be either an eligible contract participant, as that term is defined in section 1a(12) of the Act, or have its trades on the exempt commercial market guaranteed by a clearing member that is a member of an FSA-recognized derivatives clearing organization and is an eligible contract participant.

Issued by the Commission this 8th day of November, 2004, in Washington, DC.

Jean A. Webb,

Secretary of the Commission.

BILLING CODE 6351–01–P

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0078]

Federal Acquisition Regulation; Submission for OMB Review; Make-or-Buy Program

AGENCIES: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for comments regarding an extension to an existing OMB clearance (9000–0078).

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Federal Acquisition Regulation (FAR) Secretariat has submitted to the Office of Management and Budget (OMB) a request to review and approve an extension of a currently approved information collection requirement concerning make-or-buy programs. A request for public comments was published at 69 FR 44645, July 27, 2004. No comments were received.

Public comments are particularly invited on: Whether this collection of information is necessary for the proper performance of functions of the FAR, and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

DATES: Submit comments on or before December 15, 2004.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect

of this collection of information, including suggestions for reducing this burden, to the General Services Administration, FAR Secretariat (VR),1800 F Street, NW, Room 4035, Washington, DC 20405. Please cite OMB Control No. 9000–0078, Make-or-Buy Program, in all correspondence.

FOR FURTHER INFORMATION CONTACT Jerry Zaffos, Contract Policy Division, GSA (202) 208–6091

SUPPLEMENTARY INFORMATION:

A. Purpose

Price, performance, and/or implementation of socio-economic policies may be affected by make-or-buy decisions under certain Government prime contracts. Accordingly, FAR 15.407–2, Make-or-Buy Programs (i) Sets forth circumstances under which a Government contractor must submit for approval by the contracting officer a make-or-buy program, i.e., a written plan identifying major items to be produced or work efforts to be performed in the prime contractor's facilities and those to be subcontracted;

(ii) Provides guidance to contracting officers concerning the review and approval of the make-or-buy programs; and

(iii) Prescribes the contract clause at FAR 52.215–9, Changes or Additions to Make-or-Buy Programs, which specifies the circumstances under which the contractor is required to submit for the contracting officer's advance approval a notification and justification of any proposed change in the approved make-or-buy program.

The information is used to assure the lowest overall cost to the Government for required supplies and services.

[OMB Control No. 9000–0155]

Submission for OMB Review; Prohibition on Acquisition of Products Produced by Forced or Indentured Child Labor

AGENCIES: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for comments regarding an extension to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Federal Acquisition Regulation (FAR) Secretariat will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a currently approved information collection requirement regarding prohibition on acquisition of products produced by forced or indentured child labor. A request for public comments was published at 69 FR 54767 on September 10, 2004. No comments were received.

DATES: Submit comments on or before: December 15, 2004.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to the Regulatory Secretariat (VR), General Services Administration, Room 4035, 1800 F Street, NW., Washington, DC 20405. Please cite OMB Control No. 9000–0155, Prohibition on Acquisition of Products Produced by Forced or Indentured Child Labor, in all correspondence.

FOR FURTHER INFORMATION CONTACT Craig R. Goral, Contract Policy Division, GSA (202) 501–3856.

SUPPLEMENTARY INFORMATION:

A. Purpose

This information collection complies with Executive Order 13126, Prohibition on Acquisition of Products Produced by Forced or Indentured Child Labor, signed by the President on June 12, 1999. Executive Order 13126 requires that this prohibition be enforced within the federal acquisition system by means of: (1) A provision that requires the contractor to certify to the contracting officer that the contractor or, in the case of an incorporated contractor, a responsible official of the contractor has made a good faith effort to determine whether forced or indentured child labor was used to mine, produce, or manufacture any product furnished under the contract and that, on the basis of those efforts, the contractor is unaware of any such use of child labor; and (2) A provision that obligates the contractor to cooperate fully in providing reasonable access to the contractor's records, documents, persons, or premises if reasonably requested by authorized officials of the contracting agency, the Department of the Treasury, or the Department of Justice, for the purpose of determining whether forced or indentured child labor was used to mine, produce, or manufacture any product furnished under the contract.

The information collection requirements of the Executive Order are evidenced via the certification requirements delineated at FAR 22.1505, 52.212–3, 52.222–18, and 52.222–19.

To eliminate some of the administrative burden on offerors who must submit the same information to various contracting offices, the Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (Councils) decided to amend the Federal Acquisition Regulation (FAR) to require offerors to submit representations and certifications electronically via the Business Partner Network (BPN), unless certain exceptions apply. Online Representations and Certifications Application (ORCA) is the specific application on the BPN to replace the paper based Representations and Certifications (Reps and Certs) process. The change to the FAR is being accomplished by FAR Case 2002–024. The clearance associated with this case referenced this OMB Control No. 9000–0155 and reduced the hours of burden by 35%—attributable to mandated use of ORCA. This reduction is already reflected in the figures below.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0014]

Federal Acquisition Regulation; Submission for OMB Review; Statement and Acknowledgment (Standard Form 1413)

AGENCIES: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for public comments regarding an extension of an existing OMB clearance (9000–0014).

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Federal Acquisition Regulation (FAR) Secretariat has submitted to the Office of Management and Budget (OMB) a request to review and approve an extension of a currently approved information collection requirement concerning statement and acknowledgment (Standard Form 1413). A request for public comments was published in the **Federal Register** at 69 FR 54135 on September 1, 2004. No comments were received.

Public comments are particularly invited on: Whether this collection of information is necessary for the proper performance of functions of the FAR, and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

DATES: Comments may be submitted on or before December 15, 2004.

ADDRESSES: Submit comments, including suggestions for reducing this burden to the General Services Administration, FAR Secretariat (VR), 1800 F Street, NW, Room 4035, Washington, DC 20405. Please cite OMB Control No. 9000–0014, Statement and Acknowledgment, Standard Form 1413, in all correspondence.

FOR FURTHER INFORMATION CONTACT Craig Goral, Contract Policy Division, GSA (202) 501–3856.

SUPPLEMENTARY INFORMATION:

A. Purpose

Standard Form 1413, Statement and Acknowledgment, is used by all Executive Agencies, including the Department of Defense, to obtain a statement from contractors that the proper clauses have been included in subcontracts. The form includes a signed contractor acknowledgment of the inclusion of those clause in the subcontract.

B. Annual Reporting Burden

Respondents: 31,500.

Responses Per Respondent: 2.

Total Responses: 63,000.

Hours Per Response: .05.

Total Burden Hours: 3,150.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, FAR Secretariat (VR), 1800 F Street, NW, Room 4035, Washington, DC 20405, telephone (202) 501–4755. Please cite OMB Control No. 9000–0014, Statement and Acknowledgment, Standard Form 1413, in all correspondence.

Federal Acquisition Regulation; Submission for OMB Review; Certification of Independent Price Determination and Parent Company and Identifying Data

AGENCIES: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for comments regarding an extension to an existing OMB clearance (9000–0018).

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Federal Acquisition Regulation (FAR) Secretariat has submitted to the Office of Management and Budget (OMB) a request to review and approve an extension of a currently approved information collection requirement concerning certification of independent price determination and parent company and identifying data. A request for public comments was published in the Federal Register at 69 FR 53685 on September 2, 2004. No comments were received.

Public comments are particularly invited on: Whether this collection of information is necessary for the proper performance of functions of the FAR, and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

DATES: Submit comments on or before December 15, 2004.

ADDRESSES: Submit comments regarding this burden or any other aspect of this collection of information, including suggestions for reducing this burden to the General Services Administration, FAR Secretariat (VR), 1800 F Street, NW, Room 4035, Washington, DC 20405.

FOR FURTHER INFORMATION CONTACT: Craig Goral, Contract Policy Division, GSA (202) 501–3856.

SUPPLEMENTARY INFORMATION:

A. Purpose

Agencies are required to report under 41 U.S.C. 252(d) and 10 U.S.C. 2305(d) suspected violations of the antitrust laws (e.g., collusive bidding, identical bids, uniform estimating systems, etc.) to the Attorney General. As a first step in assuring that Government contracts are not awarded to firms violating such laws, offerors on Government contracts must complete the certificate of independent price determination. An offer will not be considered for award where the certificate has been deleted or modified. Deletions or modifications of the certificate and suspected false

certificates are reported to the Attorney General.

B. Annual Reporting Burden

Respondents: 64,250.
Responses Per Respondent: 20.
Total Responses: 1,285,000.

BILLING CODE 6820–EP–S

DEPARTMENT OF EDUCATION

Submission for OMB Review; Comment Request

AGENCY: Department of Education.

SUMMARY: The Director, Regulatory Information Management Services, Office of the Chief Information Officer invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before December 15, 2004.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Carolyn Lovett, Desk Officer, Department of Education, Office of Management and Budget, 725 17th Street, NW., Room 10235, New Executive Office Building, Washington, DC 20503, or faxed to (202) 395–6974.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Director, Regulatory Information Management Services, Office of the Chief Information Officer, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, *e.g.,* new, revision, extension, existing or reinstatement; (2) title; (3) summary of the collection; (4) description of the need for, and proposed use of, the information; (5) respondents and frequency of collection; and (6) reporting and/or recordkeeping burden. OMB invites public comment.

Dated: November 5, 2004.

Jeanne Van Vlandren,

Director, Regulatory Information Management Services, Office of the Chief Information Officer.

Federal Student Aid

Type of Review: Extension.
Title: Guaranty Agency Financial Report.
Frequency: Monthly, annually.
Affected Public: State, local, or tribal gov't, SEAs or LEAs; businesses or other for-profit.
Reporting and Recordkeeping Hour Burden:
Responses: 612.
Burden Hours: 33,660.
Abstract: The Guaranty Agency Financial Report is used to request payments from and make payments to the Department of Education under the Federal Family Education Loan (FFEL) program authorized by Title IV, Part B of the Higher Education Act (HEA) of 1965, as amended. The report is also used to monitor the agency's financial activities, including activities concerning its Federal fund, operating fund and the agency's restricted account.

Requests for copies of the submission for OMB review; comment request may be accessed from *http://edicsweb.ed.gov,* by selecting the ''Browse Pending Collections'' link and by clicking on link number 2641. When you access the information collection, click on ''Download Attachments'' to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., Potomac Center, 9th Floor, Washington, DC 20202–4700. Requests may also be electronically mailed to the Internet address *OCIO_RIMG@ed.gov* or faxed to 202–245–6621. Please specify the complete title of the information collection when making your request.

Comments regarding burden and/or the collection activity requirements should be directed to Sheila Carey at her e-mail address *Sheila.Carey@ed.gov.* Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339.

BILLING CODE 4000–01–M

ENVIRONMENTAL PROTECTION AGENCY

[AMS–FRL–7837–7]

California State Motor Vehicle Pollution Control Standards; Request for Waiver of Federal Preemption; Opportunity for Public Hearing

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of opportunity for public hearing and comment.

SUMMARY: The California Air Resources Board (CARB) has notified EPA that it has adopted amendments to the California heavy-duty diesel regulations for 2007 and subsequent model year vehicles and engines (''2007 California Heavy Duty Diesel Engine Standards'') and related test procedures including the not-to-exceed (NTE) and supplemental steady-state tests (''supplemental test procedures'') to determine compliance with applicable standards. By letter dated July 16, 2004, CARB submitted a request that EPA grant a waiver of preemption under section 209(b) of the Clean Air Act (CAA), 42 U.S.C. 7543(b) for these amendments. This notice announces that EPA has tentatively scheduled a public hearing concerning California's request and that EPA is accepting written comment on the request.

DATES: EPA has tentatively scheduled a public hearing concerning CARB's request on December 15, 2004 beginning at 10 a.m. EPA will hold a hearing only if a party notifies EPA by December 6, 2004, expressing its interest in presenting oral testimony. By December 10, 2004, any person who plans to attend the hearing should call David Dickinson at (202) 343–9256 to learn if a hearing will be held. If EPA does not receive a request for a public hearing, then EPA will not hold a hearing, and instead consider CARB's request based on written submissions to the docket. Any party may submit written comments by January 24, 2005.

ADDRESSES: EPA will make available for public inspection at the Air and Radiation Docket and Information Center written comments received from interested parties, in addition to any

testimony given at the public hearing. The official public docket is the collection of materials that is available for public viewing at the Air and Radiation Docket in the EPA Docket Center, (EPA/DC) EPA West, Room B102, 1301 Constitution Ave., NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Air and Radiation Docket is (202) 566–1743. The reference number for this docket is OAR–2004–0132. Parties wishing to present oral testimony at the public hearing should provide written notice to David Dickinson at the address noted below. If EPA receives a request for a public hearing, EPA will hold the public hearing at 1310 L St, NW., Washington, DC 20005.

FOR FURTHER INFORMATION CONTACT: David Dickinson, Certification and Compliance Division (6405J), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave, NW., Washington, DC 20460. Telephone: (202) 343–9256, Fax: (202) 343–2804, e-mail address: *Dickinson.David@EPA.GOV.* EPA will make available an electronic copy of this Notice on the Office of Transportation and Air Quality's (OTAQ's) homepage (*http://www.epa.gov/otaq/*). Users can find this document by accessing the OTAQ homepage and looking at the path entitled ''Regulations.'' This service is free of charge, except any cost you already incur for Internet connectivity. Users can also get the official **Federal Register** version of the Notice on the day of publication on the primary Web site: (*http://www.epa.gov/docs/fedrgstr/EPA-AIR/*).

Please note that due to differences between the software used to develop the documents and the software into which the documents may be downloaded, changes in format, page length, etc., may occur. Parties wishing to present oral testimony at the public hearing should provide written notice to David Dickinson at: U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW., (6405J), Washington, DC 20460. Telephone: (202) 343–9256.

Docket: An electronic version of the public docket is available through EPA's electronic public docket and comment system. You may use EPA dockets at *http://www.epa.gov/edocket/* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Although a part of the official docket, the public docket, the public docket does not include Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Once in the edocket system, select ''search,'' then key in the appropriate docket ID number.

SUPPLEMENTARY INFORMATION:

(A) Background and Discussion

Section 209(a) of the Clean Air Act, as amended (''Act''), 42 U.S.C. 7543(a), provides:

> No State or any political subdivision thereof shall adopt or attempt to enforce any standard relating to the control of emissions from new motor vehicles or new motor vehicle engines subject to this part. No state shall require certification, inspection or any other approval relating to the control of emissions from any new motor vehicle or new motor vehicle engine as condition precedent to the initial retail sale, titling (if any), or registration of such motor vehicle, motor vehicle engine, or equipment.

Section 209(b)(1) of the Act requires the Administrator, after notice and opportunity for public hearing, to waive application of the prohibitions of section 209(a) for any state that has adopted standards (other than crankcase emission standards) for the control of emissions from new motor vehicles or new motor vehicle engines prior to March 30, 1966, if the state determines that the state standards will be, in the aggregate, at least as protective of public health and welfare as applicable federal standards. California is the only state that is qualified to seek and receive a waiver under section 209(b). The Administrator must grant a waiver unless he finds that (A) the determination of the state is arbitrary and capricious, (B) the state does not need the state standards to meet compelling and extraordinary conditions, or (C) the state standards and accompanying enforcement procedures are not consistent with section 202(a) of the Act.

CARB's July 16, 2004, letter to the Administrator notified EPA that it had adopted amendments to its heavy-duty diesel vehicle and engine program. These amendments are to title 13, California Code of Regulations (CCR), section 1958.8. The specific regulatory text and the incorporated document covered by CARB's rulemaking are: section 1956.8, Title 13, CCR as shown in attachment 2 to CARB's July 16, 2004 letter; and the amendments to the related test procedures incorporated in section 1956.8(b), ''California Exhaust Emission Standards and Test Procedures for 1985 and Subsequent Model Heavy-Duty Diesel Engines and Vehicles,'' also shown in attachment 2.

Please provide comment as to whether (a) California's determination that its amendments as referenced in its July 16, 2004, request letter, are at least as protective of public health and welfare as applicable federal standards is arbitrary and capricious, (b) California needs separate standards to meet compelling and extraordinary conditions, and (c) California's standards and accompanying enforcement procedures are consistent with section 202(a) of the Clean Air Act.

Procedures for Public Participation

In recognition that public hearings are designed to give interested parties an opportunity to participate in this proceeding, there are no adverse parties as such. Statements by participants will not be subject to cross-examination by other participants without special approval by the presiding officer. The presiding officer is authorized to strike from the record statements that he or she deems irrelevant or repetitious and to impose reasonable time limits on the duration of the statement of any participant.

If hearing(s) are held, the Agency will make a verbatim record of the proceedings. Interested parties may arrange with the reporter at the hearing(s) to obtain a copy of the transcript at their own expense. Regardless of whether public hearing(s) are held, EPA will keep the record open until January 24, 2005. Upon expiration of the comment period, the Administrator will render a decision on CARB's request based on the record of the public hearing(s), if any, relevant written submissions, and other information that he deems pertinent. All information will be available for inspection at EPA Air Docket. (OAR–2004–0132).

Persons with comments containing proprietary information must distinguish such information from other comments to the greatest possible extent and label it as ''Confidential Business Information'' (CBI). If a person making comments wants EPA to base its decision in part on a submission labeled CBI, then a nonconfidential version of the document that summarizes the key data or information should be submitted for the public docket. To ensure that proprietary information is not inadvertently placed in the docket, submissions containing such information should be sent directly to the contact person listed above and not to the public docket. Information covered by a claim of confidentiality will be disclosed by EPA only to the

extent allowed and by the procedures set forth in 40 CFR part 2. If no claim of confidentiality accompanies the submission when EPA receives it, EPA will make it available to the public without further notice to the person making comments.

Dated: November 8, 2004.

Jeffrey R. Holmstead,

Assistant Administrator, Office of Air and Radiation.

[OPPT–2003–0004; FRL–7687–3]

Access to Confidential Business Information by Science Applications International Corporation

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has authorized its contractor Science Applications International Corporation (SAIC), of Reston, Virginia, access to information which has been submitted to EPA under sections 4, 5, 6, 8, 12, and 13 of the Toxic Substances Control Act (TSCA). Some of the information may be claimed or determined to be Confidential Business Information (CBI).

DATES: Access to the confidential data will occur no sooner than November 22, 2004.

FOR FURTHER INFORMATION CONTACT: Colby Lintner, Regulatory Coordinator, Environmental Assistance Division (7408M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: (202) 554–1404; e-mail address: *TSCA–Hotline@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Notice Apply to Me?

This action is directed to the public in general. This action may, however, be of interest to those persons who are or may be required to conduct testing of chemical substances under TSCA. Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How Can I Get Copies of this Document and Other Related Documents?

1. *Docket.* EPA has established an official public docket for this action under docket identification (ID) number OPPT–2003–0004. The official public docket consists of the documents specifically referenced in this action, any public comments received, and other information related to this action. Although a part of the official docket, the public docket does not include CBI or other information whose disclosure is restricted by statute. The official public docket is the collection of materials that is available for public viewing at the EPA Docket Center, Rm. B102–Reading Room, EPA West, 1301 Constitution Ave., NW., Washington, DC. The EPA Docket Center is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The EPA Docket Center Reading Room telephone number is (202) 566–1744 and the telephone number for the OPPT Docket, which is located in EPA Docket Center, is (202) 566–0280.

2. *Electronic access.* You may access this **Federal Register** document electronically through the EPA Internet under the ''**Federal Register**'' listings at *http://www.epa.gov/fedrgstr/*.

An electronic version of the public docket is available through EPA's electronic public docket and comment system, EPA Dockets. You may use EPA Dockets at *http://www.epa.gov/edocket/* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the docket facility identified in Unit I.B.1. Once in the system, select ''search,'' then key in the appropriate docket ID number.

II. What Action is the Agency Taking?

Under Contract Number EP–W–04–046, SAIC of 11251 Roger Bacon Drive, Reston, VA, will assist EPA by providing expert witness support for a civil administrative hearing, administer the Core TSCA Enforcement Center (CTEC) automated tracking system for TSCA CBI, and perform enforcement inspections. SAIC will also assist in the review and/or collection of information from businesses and could potentially access documents subjects to TSCA CBI claim.

In accordance with 40 CFR 2.306(j), EPA has determined that under Contract Number EP–W–04–046, SAIC will require access to CBI submitted to EPA under sections 4, 5, 6, 8, 12, and 13 of TSCA, to perform successfully the duties specified under the contract.

SAIC personnel will be given information submitted to EPA under sections 4, 5, 6, 8, 12, and 13 of TSCA. Some of the information may be claimed or determined to be CBI.

EPA is issuing this notice to inform all submitters of information under sections 4, 5, 6, 8, 12, and 13 of TSCA, that the Agency may provide SAIC access to these CBI materials on a need-to-know basis only. All access to TSCA CBI under this contract will take place at EPA Headquarters only.

Clearance for access to TSCA CBI under Contract Number EP–W–04–046 may continue until September 30, 2009. Access will commence no sooner than November 22, 2004.

SAIC personnel have signed nondisclosure agreements and will be briefed on appropriate security procedures before they are permitted access to TSCA CBI.

DATES: The model was issued on November 8, 2004.

ADDRESSES: The model will be available on EPA's Web site at *http://www.epa.gov/compliance/resources/policies/cleanup/superfund/ssde-mod-appinfo.pdf.*

FOR FURTHER INFORMATION CONTACT: Susan Boushell, EPA's Office of Site Remediation Enforcement, (202) 564–2173 or *boushell.susan@epa.gov.*

SUPPLEMENTARY INFORMATION: On February 3, 2004 (69 FR 5147), EPA published a notice of availability for public comment on the ''Draft Model CERCLA Application/Information Request for Service Station Dealers.'' On July 20, 2004 (69 FR 43412), EPA published a notice of availability for public comment on a revised draft model, entitled ''Draft Model Application/Information Request for CERCLA Service Station Dealer Exemption.'' After careful consideration of the comments received, EPA revised and finalized the model application/information request. The final model is available on EPA's Web site at *http://www.epa.gov/ compliance/resources/policies/cleanup/superfund/ssde-mod-appinfo.pdf.*

Dated: November 8, 2004.

Susan E. Bromm,

Director, Office of Site Remediation Enforcement.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Submitted to OMB for Review and Approval

November 4, 2004.

SUMMARY: The Federal Communications Commissions, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number. Comments are requested concerning (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be submitted on or before December 15, 2004. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all comments to Les Smith, Federal Communications Commission, Room 1–A804, 445 12th Street, SW., Washington, DC 20554 or via the Internet to Leslie.Smith@fcc.gov or Kristy L. LaLonde, Office of Management and Budget (OMB), Room 10236 NEOB, Washington, DC 20503, (202) 395–3087 or via the Internet at *Kristy_L._LaLonde@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information or copy of the information collection(s) contact Les Smith at (202) 418–0217 or via the Internet at *Leslie.Smith@fcc.gov.*

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0788.

Title: DTV Showings/Interference Agreements.

Form Number: FCC Form 301 and FCC Form 340.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for-profit entities; and Not-for-profit institutions.

Number of Respondents: 300.

Estimated Time per Response: 5 hours.

Frequency of Response: On occasion reporting requirement; and Third party disclosure.

Total Annual Burden: 1,500 hours.

Total Annual Cost: $2,400,000.

Privacy Act Impact Assessment: No impact(s).

Needs and Uses: Section III–D of the FCC Form 301 and Section VII of the FCC Form 340 begin with a ''Certification Checklist.'' This checklist contains a series of questions by which applicants may certify compliance with key processing requirements. The first certification requires conformance with the DTV Table of Allotments. The Commission allows flexibility for DTV facilities to be constructed at locations within five kilometers of the reference allotment sites without consideration of additional interference to analog or DTV service, provided the DTV service does not exceed the allotment reference height above average terrain or effective radiated power. In order for the Commission to process applications that cannot certify affirmatively, 47 CFR Section 73.623(c) requires applicants to submit a technical showing to establish that their proposed facilities will not result in additional interference to TV broadcast and DTV operations. Additionally, the Commission permits broadcasters to agree to proposed DTV facilities that do not conform to the initial allotment parameters, even though they might be affected by potential new interference. The Commission will consider granting applications on the basis of interference agreements if it finds that such grants will serve the public interest. These agreements must be signed by all parties to the agreement. In addition, the Commission needs the following information to enable such public interest determinations: A list of parties predicted to receive additional interference from the proposed facility, a showing as to why a grant based on the agreements would serve the public interest, and technical studies depicting the additional interference.

In 2001, the Commission removed from this collection all references to industry frequency coordination committees. These committees did not evolve. Respondents have been using consulting engineers and attorneys to prepare the technical showings and interference agreements.

OMB Control Number: 3060–0685.

Title: Annual Updating of Maximum Permitted Rates for Regulated Cable Services, FCC Form 1240.

Form Number: FCC 1240.

Type of Review: Revision of currently approved collection.

Respondents: Business or other for-profit entities; and State, local, or tribal government.

Number of Respondents: 3,000.

Estimated Time per Response: 10 hour (avg.).

Frequency of Response: Annual reporting requirement.

Total Annual Burden: 30,000 hours.

Total Annual Cost: $562,500.

Privacy Impact Assessment: No impact(s).

Needs and Uses: The FCC Form 1240 is filed with the local franchising authorities (''LFAs'') by cable operators seeking to adjust maximum permitted rates to reflect changes in external costs. The Commission authored the Form 1240 to enable local franchising authorities to adjudicate permitted rates for regulated cable rates, services, and equipment; for the addition and/or deletion of channels; and for allowance for pass through of external costs due to inflation.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

[FR Doc. 04–25286 Filed 11–12–04; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[IB Docket No. 04–398; FCC 04–247]

The Effect of Foreign Mobile Termination Rates on U.S. Customers

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document is a summary of the *Notice of Inquiry* that was adopted by the Commission on October 14, 2004. The *Notice of Inquiry* seeks to develop a record on foreign mobile termination rates and inquires whether U.S. customers have adequate information and alternatives with regard to foreign mobile termination rates and surcharges, and whether such charges raise consumer concerns.

DATES: Comments are due January 14, 2005, and reply comments are due by February 14, 2005.

FOR FURTHER INFORMATION CONTACT: Peggy Reitzel or Francis Gutierrez, Policy Division, International Bureau, (202) 418–1460.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Notice of Inquiry* in IB Docket No. 04–398, FCC 04–247, which was adopted on October 14, 2004. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Reference Center (Room CY–A257), 445 12th Street, SW., Washington, DC 20554. The document may also be downloaded from the Commission's Web site at *http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-247A1.pdf.* The complete text may also be purchased from the Commission's copy contractor, Best Copy and Printing, Inc., in person at 445 12th Street, SW., Room CY–B402, Washington, DC 20554, via telephone at (202) 488–5300, via facsimile at (202) 488–5563, or via e-mail at *FCC@BCPIWEB.COM.*

Summary of the Notice of Inquiry

On October 14, 2004, the Commission adopted a *Notice of Inquiry* on the Effect of Foreign Mobile Termination Rates on U.S. Customers. By this *Notice of Inquiry,* the Commission seeks to develop a record on foreign mobile termination rates that will enable the Commission to assess properly the effects of foreign mobile termination rates on U.S. customers and competition in the U.S.-international services market.

In the *Notice of Inquiry,* the Commission seeks comment on foreign mobile termination rate payment flows and the relevant regulatory regimes. The Commission seeks input, analyses, and comments on the concerns raised by parties in the *ISP Reform Order,* FCC 04–53, 69 FR 23151, April 28, 2004, and on actions taken by foreign national regulatory authorities to address mobile termination rates within their respective jurisdictions. In addition, the Commission asks for factual information and data on foreign mobile termination rates. Finally, the Commission seeks comment on the appropriate framework by which the Commission can analyze whether foreign mobile termination rates are unreasonably high.

The Commission encourages all interested parties to respond to the questions and requests set forth in the *Notice of Inquiry.*

Ordering Clauses

Pursuant to the authority contained in 47 U.S.C. Sections 151, 4(i), 201, 202, 203, 204, 205, 211, 218, 303(r), 403 this *Notice of Inquiry* is *adopted.*

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

BILLING CODE 6712–01–P

FEDERAL HOUSING FINANCE BOARD

Sunshine Act Meeting Notice; Announcing a Closed Meeting of the Board of Directors

TIME AND DATE: The meeting of the Board of Directors is scheduled to begin at 10 a.m. on Wednesday, November 17, 2004.

PLACE: Board Room, Second Floor, Federal Housing Finance Board, 1777 F Street, NW., Washington, DC 20006.

STATUS: The entire meeting will be closed to the public.

MATTER TO BE CONSIDERED AT THE MEETING:

Periodic Update of Examination Program Development and Supervisory Findings.

FOR FURTHER INFORMATION CONTACT: Shelia S. Willis, Paralegal Specialist, Office of General Counsel, by telephone at (202) 408–2876 or by electronic mail at *williss@fhfb.gov*.

Dated: November 10, 2004.

By the Federal Housing Finance Board.

Mark J. Tenhundfeld,

General Counsel.

[FR Doc. 04–25404 Filed 11–10–04; 12:41 pm]

BILLING CODE 6725–01–P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisition of Shares of Bank or Bank Holding Companies

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the office of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than November 29, 2004.

A. Federal Reserve Bank of Minneapolis (Jacqueline G. Nicholas, Community Affairs Officer) 90 Hennepin Avenue, Minneapolis, Minnesota 55480–0291:

1. Todd L. Johnson, Nancy S. Johnson, Hillary K. Johnson, and Matthew S. Johnson, all of Duluth, Minnesota; to acquire voting shares of NATCOM Bancshares, Inc., Superior, Wisconsin, and thereby indirectly acquire voting shares of National Bank of Commerce, Superior, Wisconsin.

2. Federal Reserve Bank of Kansas City (Donna J. Ward, Assistant Vice President) 925 Grand Avenue, Kansas City, Missouri 64198–0001:

1. Walter David Scott, Amy Scott, Sandra Parker, all of Omaha, Nebraska, and Karen Dixon, Leawood, Kansas; to acquire voting shares of DB Holding Company, Inc., Omaha, Nebraska, and thereby indirectly acquire voting shares of Omaha State Bank, Omaha, Nebraska.

Board of Governors of the Federal Reserve System, November 8, 2004.

Robert deV. Frierson,

Deputy Secretary of the Board.

[FR Doc. 04–25269 Filed 11–12–04; 8:45 am]

BILLING CODE 6210–01–S

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States. Additional information on all bank holding companies may be obtained from the National Information Center website at *www.ffiec.gov/nic/*.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than December 6, 2004.

A. Federal Reserve Bank of Atlanta (Sue Costello, Vice President) 1000 Peachtree Street, N.E., Atlanta, Georgia 30303:

1. CBS Financial Corporation, Smyrna, Georgia; to become a bank holding company by acquiring 100 percent of the voting shares of Community Bank of the South, Smyrna, Georgia.

B. Federal Reserve Bank of St. Louis (Randall C. Sumner, Vice President) 411 Locust Street, St. Louis, Missouri 63166–2034:

1. Centennial Bancshares, Inc., Little Rock, Arkansas; to become a bank holding company by acquiring 100 percent of the voting shares of Pine State Bancshares, Inc., Kingsland, Arkansas, and thereby indirectly acquire Pine State Bank, Kingsland, Arkansas.

Board of Governors of the Federal Reserve System, November 8, 2004.

Robert deV. Frierson,

Deputy Secretary of the Board.

[FR Doc. 04–25268 Filed 11–12–04; 8:45 am]

BILLING CODE 6210–01–S

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Coordinator for Health Information Technology; Development and Adoption of a National Health Information Network

AGENCY: Department of Health and Human Services.

ACTION: Request for information.

SUMMARY: Public comment is sought regarding considerations in implementing the President's call for widespread adoption of interoperable electronic health records (EHRs) within 10 years. On April 27, 2004, President Bush established the position of the National Health Information Technology Coordinator. On May 6, 2004, Secretary Tommy G. Thompson appointed David J. Brailer, MD, PhD to serve as National Coordinator for Health Information Technology. The Executive Order signed by the President required the National Coordinator to report within 90 days of operation on the development and implementation of a strategic plan. This Framework for Strategic Action entitled: ''The Decade of Health Information Technology: Delivering Consumer-centric and Information-rich Health Care'' (the Framework), was presented at the Health Information Technology Secretarial Summit II on July 21, 2004. The Framework is posted for reference at: *[http://www.hhs.gov/onchit/framework/]*. The Framework outlines an approach toward the nationwide implementation of interoperable health information technology in both the public and the private sectors.

In order to realize a new vision for health care through the use of information technology, the report called for a sustained set of strategic actions, embraced by the public and the private health sectors, which will be taken over many years. The Framework outlined four major goals: inform clinical practice with use of EHRs, interconnect clinicians so that they can exchange health information using advanced and secure electronic communication, personalize care with consumer-based health records and better information for consumers, and improve public health through advanced biosurveillance methods and streamlined collection of data for quality measurement and research.

This Request for Information (RFI) addresses the goal of interconnecting clinicians by seeking public comment and input regarding how widespread interoperability of health information technologies and health information exchange can be achieved. This RFI is intended to inform policy discussions about possible methods by which widespread interoperability and health information exchange could be deployed and operated on a sustainable basis.

DATES: Responses should be submitted to the Department of Health and Human Services (HHS), Office of the National Coordinator for Health Information Technology (ONCHIT), on or before 5 p.m. e.s.t. on January 18, 2005.

ADDRESSES: Electronic responses are preferred and should be addressed to: *NHINRFI@hhs.gov* in the Office of the National Coordinator for Health Information Technology, Department of Health and Human Services. Include NHIN RFI Responses in the subject line. Non-electronic responses will also be accepted. Please send to: Office of the National Coordinator Health Information Technology, Department of Health and Human Services, Attention: NHIN RFI Responses, Hubert H. Humphrey Building, Room 517D, 200 Independence Avenue, SW., Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT: On December 6, 2004, there will be a technical assistance conference call to answer questions from potential responders. More details will be provided on how to participate in this call on the ONCHIT Web site *[http://www.hhs.gov/onchit/]*. Additionally, a public, online Frequently Asked Question (FAQ) page will be provided to answer questions throughout the response period on ONCHIT's Web site.

Please direct e-mail inquiries and responses to *NHINRFI@hhs.gov*. For additional information, contact Lee Jones or Lori Evans, in the Office of the National Coordinator for Health Information Technology at toll free (877) 474–3918.

Background: As the nation embarks on the widespread deployment of EHRs, a variety of concomitant challenges and barriers must be addressed. One of these is interoperability, or the ability to exchange patient health information among disparate clinicians and other authorized entities in real time and under stringent security, privacy and other protections. Interoperability is an essential factor in using health information technology to improve the

quality and efficiency of care in the United States. Interoperability is necessary for compiling the complete experience of a patient's care, for maintaining a patient's personal health records and for ensuring that complete health information is accessible to clinicians as the patient moves through various healthcare settings. Interoperability is needed for clinicians to make fact-based decisions so medical errors and redundant tests can be reduced. Interoperability is also critical to cost-effective and timely data collection for biosurveillance, quality measurement and clinical research. In short, interoperability is essential for realizing the key goals that are desired from health information technology.

With the exception of a few isolated regional projects, the United States does not currently have meaningful health information interoperability capabilities. Moreover, the broad set of actions and tasks that are needed to achieve interoperability are not well-defined. It is known that interoperability requires a set of common standards that specify how information can be communicated and in what format. On this, there has been considerable effort and progress achieved by private sector organizations such as Health Level 7 (HL7), and by the American National Standards Institute (ANSI), both of which are voluntary consensus standards setting organizations. Also, HHS and other Federal agencies have advanced the adoption of standards through the Consolidated Health Informatics (CHI) initiative, as well as the Public Health Information Network (PHIN) and National Electronic Disease Surveillance System (NEDSS) under the leadership of the Centers for Disease Control and Prevention (CDC). With HHS participation, HL7 has also created a functional model and standards for electronic health records.

However more remains to be done to achieve interoperability and to determine the process by which these tasks should be pursued in the public and private sectors. Clearly needed are interconnection tools such as mobile authentication, identification management, common web services architecture and security technologies. Also needed are precisely defined implementation regimens that are specified at the level of software code. There is also a need for common networking and communication tools to unify access and security. Aside from this, mechanisms for ensuring the sustainable operation of these components on a widespread and publicly available basis must be defined. There are potentially other components that may not be known at this time. The collective array of components that underlie nationwide interoperability is referred to as a National Health Information Network (NHIN) in the Framework.

The NHIN could be developed and operated in many ways. It could include state-of-the-art web technologies or more traditional clearinghouse architectures. It could be highly decentralized or somewhat centrally brokered. It could be a nationwide service, a collection of regional services or a set of tools that share common components. It could be overseen by public organizations, by private organizations, or by public-private consortia. Regardless of how it is developed, overseen or operated, there is a compelling public interest for a NHIN to exist.

Therefore, the National Coordinator for Health Information Technology is seeking comments on and ideas for how a NHIN can be deployed for widespread use. To begin this process, the National Coordinator is inviting responses about the questions in this RFI. We intend to explore the role of the federal government in facilitating deployment of a NHIN, how it could be coordinated with the Federal Health Architecture (FHA), and how it could be supported and coordinated by Regional Health Information Organizations (RHIOs). (For additional information on the FHA and the RHIOs, please refer to the report: ''The Decade of Health Information Technology: Delivering Consumer-centric and Information-rich Health Care,'' at: *[http://www.hhs.gov/onchit/framework/]*).

There are many perspectives that can be brought to bear on this important topic. Health information technology organizations, healthcare providers, industry associations and other stakeholders all have important insights that will inform future deliberation. In the interest of having the most compelling, complete and thorough responses possible, we encourage interested parties to collaborate and submit unified responses to this RFI wherever possible. Comments from the public at large are also invited.

Request for Information

General 1. The primary impetus for considering a NHIN is to achieve interoperability of health information technologies used in the mainstream delivery of health care in America. Please provide your working definition of a NHIN as completely as possible, particularly as it pertains to the information contained in or used by electronic health records. Please include key barriers to this interoperability that exist or are envisioned, and key enablers that exist or are envisioned. This description will allow reviewers of your submission to better interpret your responses to subsequent questions in this RFI regarding interoperability.

2. What type of model could be needed to have a NHIN that: Allows widely available access to information as it is produced and used across the health care continuum; enables interoperability and clinical health information exchange broadly across most/all HIT solutions; protects patients' individually identifiable health information; and allows vendors and other technology partners to be able to use the NHIN in the pursuit of their business objectives? Please include considerations such as roles of various private- and public-sector entities in your response.

3. What aspects of a NHIN could be national in scope (*i.e.*, centralized commonality or controlled at the national level), versus those that are local or regional in scope (*i.e.*, decentralized commonality or controlled at the regional level)? Please describe the roles of entities at those levels. (Note: ''national'' and ''regional'' are *not* meant to imply Federal or local governments in this context.)

Organizational and Business Framework

4. What type of framework could be needed to develop, set policies and standards for, operate, and adopt a NHIN? Please describe the kinds of entities and stakeholders that could compose the framework and address the following components:

a. How could a NHIN be developed? What could be key considerations in constructing a NHIN? What could be a feasible model for accomplishing its construction?

b. How could policies and standards be set for the development, use and operation of a NHIN?

c. How could the adoption and use of the NHIN be accelerated for the mainstream delivery of care?

d. How could the NHIN be operated? What are key considerations in operating a NHIN?

5. What kind of financial model could be required to build a NHIN? Please describe potential sources of initial funding, relative levels of contribution among sources and the implications of various funding models.

6. What kind of financial model could be required to operate and sustain a functioning NHIN? Please describe the

implications of various financing models.

7. What privacy and security considerations, including compliance with relevant rules of the Health Insurance Portability and Accountability Act of 1996 (HIPAA), are implicated by the NHIN, and how could they be addressed?

8. How could the framework for a NHIN address public policy objectives for broad participation, responsiveness, open and non-proprietary interoperable infrastructure?

Management and Operational Considerations

9. How could private sector competition be appropriately addressed and/or encouraged in the construction and implementation of a NHIN?

10. How could the NHIN be established to maintain a health information infrastructure that:

a. Evolves appropriately from private investment;

b. Is non-proprietary and available in the public domain;

c. Achieves country-wide interoperability; and

d. Fosters market innovation.

11. How could a NHIN be established so that it will be utilized in the delivery of care by healthcare providers, regardless of their size and location, and also achieve enough national coverage to ensure that lower income rural and urban areas could be sufficiently served?

12. How could community and regional health information exchange projects be affected by the development and implementation of a NHIN? What issues might arise and how could they be addressed?

13. What effect could the implementation and broad adoption of a NHIN have on the health information technology market at large? Could the ensuing market opportunities be significant enough to merit the investment in a NHIN by the industry? To what entities could the benefits of these market opportunities accrue, and what implication (if any) does that have for the level of investment and/or role required from those beneficiaries in the establishment and perpetuation of a NHIN?

Standards and Policies To Achieve Interoperability

(Question 4b above asks how standards and policy setting for a NHIN could be considered and achieved. The questions below focus more specifically on standards and policy requirements.)

14. What kinds of entity or entities could be needed to develop and diffuse interoperability standards and policies? What could be the characteristics of these entities? Do they exist today?

15. How should the development and diffusion of technically sound, fully informed interoperability standards and policies be established and managed for a NHIN, initially and on an ongoing basis, that effectively address privacy and security issues and fully comply with HIPAA? How can these standards be protected from proprietary bias so that no vendors or organizations have undue influence or advantage? Examples of such standards and policies include: secure connectivity, mobile authentication, patient identification management and information exchange.

16. How could the efforts to develop and diffuse interoperability standards and policy relate to existing Standards Development Organizations (SDOs) to ensure maximum coordination and participation?

17. What type of management and business rules could be required to promote and produce widespread adoption of interoperability standards and the diffusion of such standards into practice?

18. What roles and relationships should the federal government take in relation to how interoperability standards and policies are developed, and what roles and relationships should it refrain from taking?

Financial and/or Regulatory Incentives and Legal Considerations

19. Are financial incentives required to drive the development of a marketplace for interoperable health information, so that relevant private industry companies will participate in the development of a broadly available, open and interoperable NHIN? If so, what types of incentives could gain the maximum benefit for the least investment? What restrictions or limitation should these incentives carry to ensure that the public interest is advanced?

20.What kind of incentives should be available to regional stakeholders (*e.g.*, health care providers, physicians, employers that purchase health insurance, payers) to use a health information exchange architecture based on a NHIN?

21. Are there statutory or regulatory requirements or prohibitions that might be perceived as barriers to the formation and operation of a NHIN, or to support it with critical functions?

22. How could proposed organizational mechanisms or approaches address statutory and regulatory requirements (*e.g.*, data privacy and security, antitrust constraints and tax issues)?

Other

23. Describe the major design principles/elements of a potential technical architecture for a NHIN. This description should be suitable for public discussion.

24. How could success be measured in achieving an interoperable health information infrastructure for the public sector, private sector and health care community or region?

Dated: November 9, 2004.

David J. Brailer,

National Coordinator, Office of the National Coordinator for Health Information Technology.

BILLING CODE 4150–24–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration on Aging

Agency Information Collection Activities; Proposed Collection; Comment Request; Senior Medicare Patrol Program Outcome Measurement

AGENCY: Administration on Aging, HHS.

ACTION: Notice.

SUMMARY: The Administration on Aging (AoA) is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on the information collection requirements relating to Senior Medicare Patrol (SMP) program outcome measurement.

DATES: Submit written or electronic comments on the collection of information by January 14, 2005.

ADDRESSES: Submit electronic comments on the collection of information to: *Barbara.dieker@aoa.gov.* Submit written comments on the collection of information to Barbara Dieker, Administration on Aging, Washington, DC 20201 or by fax at (202) 357–3558.

FOR FURTHER INFORMATION CONTACT: Barbara Dieker at (202) 357–0139 or *Barbara.dieker@aoa.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency request or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, AoA is publishing notice of the proposed collection of information set forth in this document. With respect to the following collection of information, AoA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of AoA's functions, including whether the information will have practical utility; (2) the accuracy of AoA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques when appropriate, and other forms of information technology. AoA estimates the burden of this collection of information as follows:

Frequency: Annually.

Respondents: Medicare beneficiaries after SMP education/training on fraud prevention; administered by staff or senior volunteers in 57 SMP projects nationwide.

Estimated number of responses: 21,000.

Total Estimated Burden Hours: 2,300.

Josefina G. Carbonell,

Assistant Secretary for Aging.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare and Medicaid Services

[Document Identifier: CMS–R–185, CMS 10131, CMS–10054 and CMS–R–50]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare and Medicaid Services.

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Centers for Medicare and Medicaid Services (CMS) (formerly known as the Health Care Financing Administration (HCFA)), Department of Health and Human Services, is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Granting and Withdrawal of Deeming Authority to Private Nonprofit Accreditation Organizations and of State Exemption Under State Laboratory Programs and Supporting Regulations in 42 CFR 493.551–493.557; *Use:* The information required is necessary to determine whether a private accreditation organization's or State licensure program's standards and accreditation/licensure process is equal to or more stringent than those of CLIA. *Form Number:* CMS–R–185 (OMB#: 0938–0686); *Frequency:* Initial application and as needed; *Affected Public:* Not-for-profit institutions, Business or other for-profit and State, Local, or Tribal Government; *Number of Respondents:* 8; *Total Annual Responses:* 76; *Total Annual Hours:* 768.

2. *Type of Information Collection Request:* New Collection; *Title of Information Collection:* Evaluation of Medicare Disease Management Demonstrations; *Form No.:* CMS–10131 (OMB# 0938–NEW); *Use:* CMS contracted with Mathematic Policy Research, Inc. (MPR) for the evaluation of disease management programs. The purpose of the patient survey is to assess the impact of disease management and prescription drug benefits on patient health, functioning status, care satisfaction, health behaviors and knowledge of condition. Data from the physician survey will be used to assess physician satisfaction with disease management services, physician perceptions of the impact of disease management on patient outcomes, education and service use, and the impact of disease management programs on physician practices and office workload.; *Frequency:* On Occasion; *Affected Public:* Individuals or households, Business or other for-profit; *Number of Respondents:* 5000; *Total Annual Responses:* 2500; *Total Annual Hours:* 1625.

3. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Recognition of Payment for New Technology Services for Ambulatory Payment Classifications (APCs) under the Outpatient Prospective Payment System and Supporting Regulations in 42 CFR, 413.65 and 419.42; *Form No.:* CMS–10054 (OMB# 0938–0860); *Use:* Information is necessary to determine services eligible for payment in new technology ambulatory payment classifications (APCs) in the outpatient prospective payment system; *Frequency:* On Occasion; *Affected Public:* Business or other for-profit; *Number of Respondents:* 15; *Total Annual Responses:* 15; *Total Annual Hours:* 180.

4. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Medical Records Review under PPS and Supporting Regulations in 42 CFR, Sections 412.40–412.52; *Form No.:* CMS–R–50 (OMB# 0938–0359); *Use:* The Quality Improvement Organizations (QIOs) are authorized to conduct medical review activities under the Prospective Payment System (PPS) . In order to conduct these review activites, the agency depends upon hospitals to make available specific records regarding care provided to Medicare beneficiaries. The Clinical Data Abstraction Centers (CDACs) obtain copies of medical records from which they abstract data to analyze patterns of care and outcomes for heart failure/myocardial infarction, pneumonia, diabetes and surgical infection.; *Frequency:* Other: when records are reviewed; *Affected Public:*

Business or other for-profit, Not-for-profit institutions, Federal Government, and State, Local or Tribal Govt.; *Number of Respondents:* 6,100; *Total Annual Responses:* 397,500; *Total Annual Hours:* 11,925.

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, access CMS' Web site address at *http://www.cms.hhs.gov/regulations/pra/*, or e-mail your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov*, or call the Reports Clearance Office on (410) 786–1326.

Written comments and recommendations for the proposed information collections must be mailed within 60 days of this notice directly to the CMS Paperwork Clearance Officer designated at the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development and Issuances, Attention: Melissa Musotto, Room C5–14–03, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

Dated: November 5, 2004.

John P. Burke, III,

Paperwork Reduction Act Team Leader, Office of Strategic Operations and Strategic Affairs, Division of Regulations Development and Issuances.

BILLING CODE 4120–03–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

SES Executive Review Board/ Performance Review Board

AGENCY: Indian Health Service.

ACTION: Notice.

SUMMARY: Notice is hereby given of the appointment of members of the Indian Health Service (IHS) Senior Executive Service (SES) Executive Review Board/ SES Performance Review Board.

FOR FURTHER INFORMATION CONTACT: Phyllis Eddy, Acting Director, Office of Management Services, 801 Thompson Avenue, Suite 120, Rockville, Maryland 20852, (301) 443–6290.

SUPPLEMENTARY INFORMATION: Section 4314(c) (1) through (5) of Title 5, U.S.C., requires each agency to establish, in accordance with regulations prescribed by the Office of Personnel Management, one or more SES performance review boards. The board reviews and evaluates the initial appraisal of a senior executive's performance by the supervisor and considers recommendations to the appointing authority regarding the performance of the senior executive.

The following have been designated as regular members of the Senior Executive Service (SES) Executive Review Board/SES Performance Review Board for IHS: Phyllis Eddy, Chair; Elaine Perry, Deputy Director, Office of the Administrator, Substance Abuse and Mental Health Services Administration; Robert G. McSwain, Acting Deputy Director, Management Operations; Gary Hartz, Acting Deputy Director, IHS; Chris Mandregan, Jr., Director, Alaska Area IHS; Doni Wilder, Director, Portland Area IHS; John Hubbard, Director, Navajo Area IHS.

Dated: November 5, 2004.

Charles W. Grim,

Assistant Surgeon General, Director.

BILLING CODE 4160–16–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of Inspector General

Program Exclusions: October 2004

AGENCY: Office of Inspector General, HHS.

ACTION: Notice of program exclusions.

During the month of October 2004, the HHS Office of Inspector General imposed exclusions in the cases set forth below. When an exclusions is imposed, no program payment is made to anyone for any items or services (other than an emergency item or service not provided in a hospital emergency room) furnished, ordered or prescribed by an excluded party under the Medicare, Medicaid, and all Federal Health Care programs. In addition, no program payment is made to any business or facility, *e.g.*, a hospital, that submits bills for payment for items or services provided by an excluded party. Program beneficiaries remain free to decide for themselves whether they will continue to use the services of an excluded party even though no program payments will be made for items and services provided by that excluded party. The exclusions have national effect and also apply to all Executive Branch procurement and non-procurement programs and activities.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; Comment Request; Outcome Evaluation of the Fogarty International Center (FIC) AIDS International Training and Research Program (AITRP)

SUMMARY: In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the Fogarty International Center (FIC), the National Institutes of Health (NIH), will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

Proposed Collection: Title: Outcome Evaluation of the FIC AIDS International Training and Research Program (AITRP). *Type of Information Collection Request:* New. *Need and Use of Information Collection:* This study will assess the outputs, outcomes and impacts of the AIDS International Training and Research Program (AITRP). The findings will provide valuable information concerning: (1) The research capacity development, collaboration, public health, and public policy outputs, outcomes, and impacts of AITRP at the program level and country level; (2) management and policy implications for the AITRP program based on trainee responses. *Frequency of Response:* Once. *Affected Public:* none. *Type of Respondents:* Trainees involved in the AITRP program. There are no Capital Costs to report. There are no Operating or Maintenance Costs to report.

Type of respondents	Estimated number of respondents	Estimated number of responses per respondent	Average burden hours per response	Estimated total annual burden hours requested
Trainees	300	1	1	300
Total	300	300		

Type of respondents	Estimated number of respondents	Frequency of response	Average hourly wage rate	Respondent cost
Trainees	300	1	$5.00/hr	$1500
Total Cost				$1500

Request for Comments: Written comments and/or suggestions from the public and affected agencies are invited on one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of

the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact Dr. Linda Kupfer, Fogarty International Center, National Institutes of Health, 16 Center Drive, Building 16, Bethesda, MD 20892–6705 or call non-toll-free number 301–496–3288 or E-mail your request, including your address to: *Kupferl@mail.nih.gov*.

Comments Due Date: Comments regarding this information collection are best assured of having their full effect if received within 60-days of the date of this publication.

Dated: November 5, 2004.

Richard Miller,

Executive Officer, FIC, National Institutes of Health.

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, Public Health Service, DHHS.

ACTION: Notice.

SUMMARY: The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S. in accordance with 35 U.S.C. 207 to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

ADDRESSES: Licensing information and copies of the U.S. patent applications listed below may be obtained by writing to the indicated licensing contact at the Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852–3804; telephone: 301/496–7057; fax: 301/402–0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

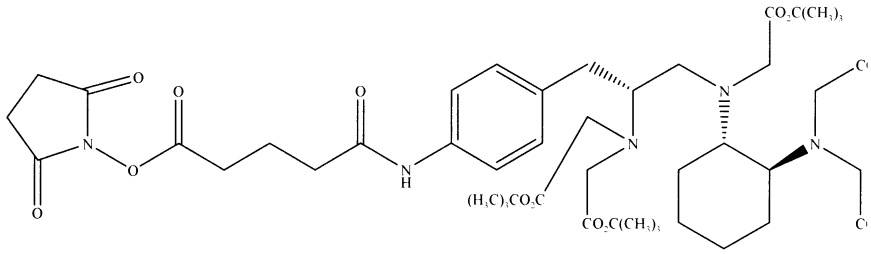
Metal Chelators and Target-Moiety Complexes for Imaging

Martin W. Brechbiel and Thomas Clifford (NCI).

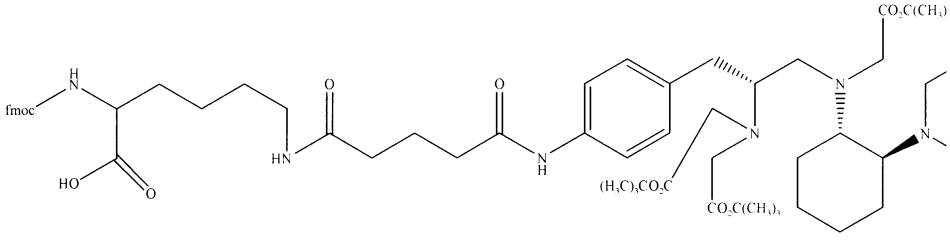
U.S. Provisional Application filed 23 Aug 2004 (DHHS Reference No. E–317–2004).

Licensing Contact: Michael Shmilovich; 301/435–5019; *shmilovm@mail.nih.gov*.

Available for licensing and commercial development are bifunctional metal chelators, metal chelator-targeting moiety complexes, metal chelator-targeting moiety-metal conjugates, kits, and methods of preparing them. These chelators are useful in diagnosing and/or treatment of cancer and thrombosis. The metal chelators may be used in conventional and solid-phase synthetic methods to form targeting moieties (*e.g.*, peptides, and Starburst polyamidoamine dendrimers (PAMAM), capable of conjugating diagnostic and/or therapeutic metals. The formulae for two such chelators is shown below:



I



II

Anti-HIV Peptide Secreting Bacteria: Therapeutics and Methods of Use

Dean Hamer (NCI).

U.S. Provisional Application No. 60/604,051 filed 25 Aug 2004 (DHHS Reference No. E–233–2004/0–US–01).

Licensing Contact: Michael Shmilovich; 301/435–5019; *shmilovm@mail.nih.gov*.

Available for licensing and commercial development are genetically

engineered commensal bacteria compositions that secrete HIV infectivity interfering peptides with the aid of co-expressed translocation mediators such as *HylB, HylD* or *tolC* gene products. The bacteria can be, for example, *Escherichia coli* and are preferably those that colonize the gastrointestinal or genitourinary tracts. The secreted anti-HIV peptide can be a functional inhibitory fragment from the C-terminus of HIV, SHIV or SIV, or an inhibitory peptide derived from the N-terminus receptor-binding domain of SIV gp41, HIV–1 gp41, or HIV–2 gp41. The secreted anti-HIV peptide can also be a peptide from the allosteric domain of gp120, an extracellular loop of CCR5, an anti-CD4 immunoglobulin, a mimetic of CD4, an alpha-defensin or theta-defensin, a CD38 fragment homologous to the V3 loop of gp120, polphemusin II (a CXCR4 antagonist), a RANTES peptide that binds to CCR5 or an HIV surface binding peptide such as cyanovirin.

Method of Assessing Ischemia in a Patient

Steven Warach, Lawrence Latour (NINDS).

U.S. Provisional Application No. 60/381,611 filed 17 Mar 2002 (DHHS Reference No. E–082–2002/0–US–01); PCT Application No. PCT/US03/15368 filed 16 May 2003 (DHHS Reference No. E–082–2002/0–PCT–02).

Licensing Contact: Michael Shmilovich; 301/435–5019; *shmilovm@mail.nih.gov.*

Hyperintense acute reperfusion marker (HARM) is well correlated with reperfusion and is a precursor to or concomitant with reperfusion injury. The inventors have developed a novel technique of assessing injuries associated with ischemia, stroke, or reperfusion injury in a patient by administering a contract agent to the patient, acquiring a fluid-attenuated inversion-recovery (FLAIR) image, and observing the presence or absence of HARM on the acquired image. The technique can also be used to determine the effectiveness of a therapeutic protocol for the treatment or prevention of reperfusion injury in a patient that has previously suffered an ischemic event.

This research has been described, in part, in Latour *et al.*, ''Early Blood-Brain Barrier Disruption in Human Focal Brain Ischemia,'' Ann. Neurol. 2004 56:568–477.

Dated: November 4, 2004.

Steven M. Ferguson,

Director, Division of Technology Development and Transfer, Office of Technology Transfer, National Institutes of Health.

Infectious Clone of Human Parvovirus B19 and Methods of Use

Ning Zhi *et al.* (NHLBI).

U.S. Patent Application No. 10/887,770 filed 09 Jul 2004 (DHHS Reference No.E–178–2004/0–US–01 and corresponding Canadian patent application (DHHS Reference No. E–178–2004/0–CA–02).

Licensing Contact: Susan Ano; 301/435–5515; *anos@mail.nih.gov.*

This technology described in this patent application relates the first reported infectious human parvovirus B19 clone, methods of cloning the parvovirus B19 genome as well as other viral genomes that have secondary DNA structures that are unstable in bacterial cells. The infectious clone and methods of producing the same would be useful in producing infectious virus, which can in turn be used, among other things, to identify and develop therapeutic agents for treatment and/or prevention of human parvovirus B19 infections. The infectious parvovirus B19 clone is also available for licensing. Additional information about this invention can be found in Virology 2004, 318(1), 142–152.

Immunogenic Compositions for Eradication of Latent HIV

Genoveffa Franchini *et al.* (NCI).

U.S. Provisional Application No. 60/536,467 filed 13 Jan 2004 (DHHS Reference No. E–072–2004/0–US–01); U.S. Provisional Application No. 60/536,976 filed 16 Jan 2004 (DHHS Reference No. E–072–2004/1–US–01).

Licensing Contact: Susan Ano; 301/435–5515; *anos@mail.nih.gov.*

HIV infects CD4+ cells and, after incorporation of the viral genome into the host genome, can either produce infectious virus or remain latent. HIV that is latent presents a challenge for complete removal of the virus in infected individuals and is becoming an increasingly important consideration in the identification of potential therapeutics or treatment regimens. This patent application describes immunogenic compositions based on inhibiting the function of $p28^{TEV}$ protein, the first protein expressed during HIV infection, for treatment of latent HIV infection. Specifically, these compositions include the $p28^{TEV}$ polypeptide, a polypeptide with significant sequence homology to $p28^{TEV}$, or immunogenic fragments of these polypeptides. Additional compositions include antibodies and other compounds that act to inhibit $p28^{TEV}$ activity. This technology can also be utilized to detect latent HIV in biological samples. These compositions and methods offer a potential solution for complete virus eradication in therapeutic treatment of HIV infected individuals.

Accelerated Vaccination Strategies To Provide Protection Against Viral Infections

Gary J. Nabel *et al.* (NIAID).

U.S. Provisional Application No. 60/491,933 filed 01 Aug 2003 (DHHS Reference No. E–317–2003/0–US–01); PCT Application filed on 01 Aug 2004 (DHHS Reference No. E–317–2003/0-PCT–02).

Licensing Contact: Susan Ano; 301/435–5515; *anos@mail.nih.gov.*

The technology described in this patent application relates to recombinant viruses for use as vaccines. These viruses contain a single or plurality of sequences encoding antigens from pathogenic viruses

heterologous to the recombinant virus. The antigenic sequences from pathogens such as influenza, RSV, measles, HPV, Epstein-Barr, Lassa, Polio, West Nile, Dengue, HIV–1 and 2, HTLV, herpes simplex virus, hepatitis viruses A, B, C, D, and E, Marburg, Ebola, and SARS are inserted into non-essential regions of either replication-competent or replication-defective adenovirus, adeno-associated virus (AAV), SV40 virus, herpes simplex virus, or vaccinia virus vectors that retain elements necessary for infectivity but are devoid of any pathogenic sequence elements. In these recombinant viruses, the antigenic sequences are operably linked to viral control elements. Thus, these recombinant viruses are capable of infecting a host and mounting an immune response specific to a given virus(es) without eliciting pathogenicity. In addition to the above, the technology also describes methods of accelerated pre-exposure or post-exposure vaccination comprising single-dose administration. The attractive features of this invention include the broad applicability of the recombinant viruses against a number of common pathogens and the potential of using them against other emergent infectious viruses; the ability of the vaccines to stimulate both cellular and humoral immune responses in humans and other hosts; and the ease of administration in single dose form via a number of routes. This technology is now available for licensing. Some fields of use may not be available.

Dated: November 9, 2004.

Steven M. Ferguson,

Director, Division of Technology Development and Transfer, Office of Technology Transfer, National Institutes of Health.

National Cancer Institute; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of the meeting of the National Cancer Advisory Board.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

A portion of the meeting will be closed to the public in accordance with the provision set forth in section 552b(6), as amended. The discussion could disclose personal information concerning NCI Staff and/or its contractors, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Cancer Advisory Board.

Open: November 30, 2004, 8:30 a.m. to 5:30 p.m.

Agenda: Program reports and presentations; Business of the Board.

Place: Name Cancer Institute, 9000 Rockville Pike, Building 31, C Wing, 6th Floor, Conference Room 10, Bethesda, MD 20892.

Contact Person: Dr. Paulette S. Gray, Executive Secretary, National Cancer Institute, National Institutes of Health, 6116 Executive Boulevard, 8th Floor, Room 8001, Bethesda, MD 20892–8327, (301) 496–5147.

Name of Committee: National Cancer Advisory Board.

Open: December 1, 2004, 8:30 a.m. to 10:30 a.m.

Agenda: Program reports and presentations; Business of the Board.

Contact Person: Dr. Paulette S. Gray, Executive Secretary, National Cancer Institute, National Institutes of Health, 6116 Executive Boulevard, 8th Floor, Room 8001, Bethesda, MD 20892–8327, (301) 496–5147.

Name of Committee: National Cancer Advisory Board.

Closed: December 1, 2004, 10:30 a.m. to adjournment.

Agenda: Review intramural program site visit outcomes; Discussion of confidential personnel issues.

Contact Person: Dr. Paulette S. Gray, Executive Secretary, National Cancer Institute, National Institutes of Health, 6116 Executive Boulevard, 8th Floor, Room 8001, Bethesda, MD 20892–8327, (301) 496–5147.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: *deainfo.nci.nih.gov/advisory/ncab.htm,* where an agenda and any additional information for the meeting will be posted when available.

National Institutes of Health

National Institute of Child Health and Human Development; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Child Health and Human Development Special Emphasis Panel, Genes, Aneuploidy and Mamalian Development.

Date: November 17, 2004.

Time: 9:30 a.m. to 3 p.m.

Agenda: To review and evaluate grant applications.

Place: Ramada Inn Rockville, 1775 Rockville Pike, Rockville, MD 20852.

Contact Person: Gopal M. Bhatnagar, PhD, Scientific Review Administrator, National Institutes of Child Health and Human Development, National Institutes of Health, 6100 Bldg Rm 5B01, Rockville, MD 20852, (301) 435–6889, *bhatnagg@mail.nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

(Catalogue of Federal Domestic Assistance Program Nos. 93.864, Population Research; 93.865, Research for Mothers and Children; 93.929, Center for Medical Rehabilitation Research; 93.209, Contraception and Infertility Loan Repayment Program, National Institutes of Health, HHS)

Dated: November 5, 2004.

LaVerne Y. Stringfield,

Director, Office of Federal Advisory Committee Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Child Health and Human Development; Notice of Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of a meeting of the National Advisory Board on Medical Rehabilitation Research.

The meeting will be open to the public, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

Name of Committee: National Advisory Board on Medical Rehabilitation Research.

Date: December 2–3, 2004.

Time: December 2, 2004, 8:30 a.m. to 5:30 p.m.

Agenda: NICHD Director's Report presentation, Regional Research Networks, and an update on the Rehabilitation Medicine Scientist Training Program.

Place: Holiday Inn—Silver Spring, 8777 Georgia Avenue, Silver Spring, MD 20910.

Time: December 3, 2004, 8:30 am. to 12 p.m.

Agenda: Other business dealing with the NABMRR Board.

Place: Holiday Inn—Silver Spring, 8777 Georgia Avenue, Silver Spring, MD 20910.

Contact Person: Ralph M. Nitkin, PhD, Director, BSCD, National Center for Medical Rehabilitation Research, National Institute of Child Health and Human Development, NIH, 6100 Building, Room 2A03, Bethesda, MD 20892. (301) 402–4206.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: *http://www.nichd.nih.gov/about/ncmrr.htm*, where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Public Health Service

National Toxicology Program (NTP) Board of Scientific Counselors Technical Reports Review Subcommittee Meeting; Review of Draft NTP Technical Reports

Pursuant to Pub. L. 92–463, notice is hereby given of the next meeting of the NTP Board of Scientific Counselors Technical Reports Review Subcommittee (''TRR Subcommittee'') on December 9–10, 2004, in the Rodbell Auditorium, Rall Building at the

National Institute of Environmental Health Sciences, 111 T.W. Alexander Drive, Research Triangle Park, NC 27709. The meeting will begin each day at 8:30 a.m. The meeting is open to the public with attendance limited only by the space available (see ''Attendance, Registration, and Remote Access'' below).

Agenda

The primary agenda topic is the peer review by the TRR Subcommittee of the findings and conclusions of seven draft NTP Technical Reports (TR) of rodent toxicology and carcinogenesis studies conducted by the NTP (*see* Preliminary Agenda below). There will also be a presentation on how the NTP handles contaminants in study materials and their impact on the interpretation of 2-year bioassays. In addition, at the request of the NTP Board of Scientific Counselors, the TRR Subcommittee will readdress the title of the Draft NTP Technical Report on Anthraquinone (see minutes from the NTP Board of Scientific Counselors meeting held June 29, 2004, available at *http://ntp-server.niehs.nih.gov/ntpweb/index.cfm?objectid=720164E3-BDB7-CEBA-F338FA2626639D56*). As an introduction to the reports on the studies of polychlorinated biphenyl (PCB), a short presentation will be given on the use of Toxic Equivalency Factors (TEFs). The TEF methodology was developed as a mathematical tool that ranks the dioxin-like activity of a compound relative to 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), the most potent dioxin. This methodology has been applied to the NTP studies reported in TR 531: Mixture of 3,3′,4,4′,5-Pentachlorobiphenyl (PCB 126) and 2,3′,4,4′,5-Pentachlorobiphenyl (PCB 118), TR 529: 2,2′,4,4′,5,5′-Hexachlorobiphenyl (PCB 153), and TR 530: Mixture of PCB 126 and PCB 153.

A copy of the agenda, TRR Subcommittee roster, and the draft NTP Technical Reports, as available, will be posted on the NTP Web site (*http://ntp-server.niehs.nih.gov/* under *Latest News*) and will be available upon request to the NTP Executive Secretary, Dr. Barbara S. Shane (PO Box 12233, 111 T.W. Alexander Dr., MD A3–01, Research Triangle Park, NC 27709, T: 919–541–4253; F: 919–541–0295; e-mail: *shane@niehs.nih.gov*). Following the meeting, summary minutes will be available on the TRR Subcommittee Web site (see *http://ntp-server.niehs.nih.gov/ntpweb/index.cfm?objectid=227FC084=EB0C–7E93–9DCD6F03104F0D22*) and in hard copy upon request to the NTP Executive Secretary.

Draft Reports Available for Public Review and Comment

Approximately four weeks prior to the meeting, the draft reports will be available for public review, through the NTP Web page (*http://ntp-server.niehs.nih.gov/* under *Latest News*). Printed copies of the Draft NTP Technical Reports can be obtained, as available, from Central Data Management (NIEHS, PO Box 12233, MD EC–03, Research Triangle Park, NC 27709, T: 919–541–3419, F: 919–541–3687, e-mail: *CDM@niehs.nih.gov*).

Attendance, Registration and Remote Access

The meeting is open to the public with attendance limited only by the space available. Individuals who plan to attend are strongly encouraged to register with the NTP Executive Secretary by December 2, 2004 to ensure easy access to the NIEHS campus (contact information above) or online on the NTP Web site (*http://ntp.niehs.nih.gov* under *Latest News*). Please note that a photo ID is required to access the NIEHS campus. Persons needing special assistance, such as sign language interpretation or other reasonable accommodation in order to attend are asked to notify the NTP Executive Secretary at least seven business days in advance of the meeting. The NTP is also making plans to videocast the TRR Subcommittee meeting through the Internet at *http://www.niehs.nih.gov/external/video.htm.* The NTP cannot guarantee the technical quality of the video casting and people wishing to use this option are encouraged to test their ability to access the video cast at the above Internet address under *Check your live video setup.*

Public Comment

Comments on any of the Draft NTP Technical Reports are welcome. Time will be provided at the meeting for oral public comment on the reports. Persons requesting time for an oral presentation on a particular report are asked to notify the NTP Executive Secretary (contact information given above) by December 2, 2004, and to provide their contact information (name, affiliation, mailing address, phone, fax, e-mail), and supporting organization (if any). Persons registering to make comments are asked to provide a written copy of their statement to the NTP Executive Secretary on or before December 2, 2004, to enable review by the TRR Subcommittee and NTP staff prior to the meeting. These statements can supplement or expand an oral presentation. Each speaker will be allotted at least 7 minutes and, if time permits, up 10 minutes for presentation of oral comments. Each organization is allowed one time slot per report being reviewed. Registration for making public comments will also be available on-site. If registering on-site to speak and reading comments from printed text, the speaker is asked to provide 25 copies of the statement for distribution to the Subcommittee and NTP staff, and to supplement the record.

Written comments without an oral presentation at the meeting are also welcome. Comments should include contact information for the submitter (name, affiliation, mailing address, phone, fax, and e-mail) and supporting organization (if any). Written comments should be received by the NTP Executive Secretary on or before December 2, 2004, to enable distribution to the Subcommittee and NTP staff for their review and consideration prior to the meeting. Written comments received in response to this notice will be posted on the NTP Web site (*http://ntp.niehs.nih.gov* under *Latest News*).

Request for Additional Information

The NTP would welcome receiving toxicology and carcinogenesis information from completed, ongoing or planned studies as well as current production data, human exposure information, and use patterns for any of the chemicals listed in this announcement. Please send this information to Central Data Management at the address given above and it will be forwarded to the appropriate NTP staff.

NTP Technical and Toxicity Report Series

The NTP conducts toxicology and carcinogenesis studies of agents of public health concern. Any scientist, organization, or member of the public may nominate a chemical for NTP testing. Details about the nomination process are available on the NTP Web site (*http://ntp.niehs.nih.gov* under *Nominations to the Testing Program*). The results of short-term rodent toxicology studies are published in the NTP Toxicity Report series. Longer-term studies, generally, rodent carcinogenicity studies, are published in the NTP Technical Report series. The NTP has a new technical report series for studies conducted in genetically modified models. PDF files of completed reports are available free-of-charge at the NTP Web site (*http://ntp-server.niehs.nih.gov/index.cfm?objectid=084801F0-F43F–7B74–0BE549908B5E5C1C*).

NTP Board of Scientific Counselors

The NTP Board of Scientific Counselors (''the Board'') is a technical advisory body composed of scientists from the public and private sectors who provide primary scientific oversight and peer review to the NTP. Specifically, the Board advises the NTP on matters of scientific program content, both present and future, and conducts periodic review of the program for the purpose of determining and advising on the scientific merit of its activities and overall scientific quality. The TRR Subcommittee of the Board provides scientific peer review of the findings and conclusions of NTP Technical Reports. The Report on Carcinogens Subcommittee of the Board provides scientific peer review of nominations to the Report on Carcinogens, a Congressionally mandated listing of agents *known* or *reasonably anticipated to be human carcinogens.*

The Board's members are selected from recognized authorities knowledgeable in fields, such as toxicology, pharmacology, pathology, biochemistry, epidemiology, risk assessment, carcinogenesis, mutagenesis, molecular biology, behavioral toxicology, neurotoxicology, immunotoxicology, reproductive toxicology or teratology, and biostatistics. The NTP strives for equitable geographic distribution and for minority and female representation on the Board.

Dated: November 5, 2004.

Samuel H. Wilson,

Deputy Director, National Institute of Environmental Health Sciences.

Preliminary Agenda

National Toxicology Program (NTP) Technical Reports (TR) Scheduled for Review by the NTP Board of Scientific Counselors Technical Reports Review Subcommittee

December 9–10, 2004

Rodbell Auditorium, National Institute of Environmental Health Sciences, 111 TW Alexander Drive, Research Triangle Park, NC.

1. Overview of Dioxin Toxic Equivalency Factors (TEFs).
2. TR 531: Mixture of 3,3′,4,4′,5-Pentachlorobiphenyl (PCB 126) and 2,3′,4,4′,5-Pentachlorobiphenyl (PCB 118) (CAS Nos. 57465–28–8 and 31508–00–6, respectively).
   - No longer used commercially; persistent polyhalogenated aromatic hydrocarbons present in the environment.
3. TR 529: 2,2′,4,4′,5,5′-Hexachlorobiphenyl (PCB 153) (CAS No. 35065–27–1).
   - No longer used commercially; persistent polyhalogenated aromatic hydrocarbon present in the environment.
4. TR 530: Mixture of PCB 126 and PCB 153 (CAS No: 57465–28–8 and 835065–27–1, respectively).
   - No longer used commercially; persistent polyhalogenated aromatic hydrocarbons present in the environment.
5. Discussion on Contaminants in NTP Study Materials: Impact on Interpretation of 2-year Bioassays.
   - Discussion of the Title of Draft NTP Technical Report on Anthraquinone (TR–494).
6. TR 517: Sodium Chlorate (CAS No. 7775–09–9).
   - Oxidizing agent, precursor in the synthesis of chlorine dioxide; found as byproduct in water disinfected with chlorine dioxide.
7. TR 532: Bromodichloromethane (CAS No. 75–27–4).
   - Water disinfectant by-product.
8. TR 522: 3′-Azido-3′-thymidine (AZT) (CAS No. 30516–87–1).
   - Chemotherapeutic agent for treatment of people with acquired immune deficiency syndrome (AIDS).
9. TR 533: Benzophenone (CAS No. 119–61–9).
   - Photoinitiator fragrance enhancer, ultraviolet curing agent, intermediate in the manufacture of agricultural chemicals.

[FR Doc. 04–25280 Filed 11–12–04; 8:45 am]

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

RIN 1660–ZA05

Privacy Act Systems of Records; Amendment to Existing Routine Uses

AGENCY: Federal Emergency Management Agency (FEMA), Emergency Preparedness and Response Directorate, Department of Homeland Security (DHS).

ACTION: Notice of amendment to routine uses.

SUMMARY: In compliance with the requirements of the Privacy Act of 1974, as amended, FEMA gives notice that it intends to rename its system of records notice for FEMA/REG–2, Disaster Recovery Assistance Files, to acknowledge in the nomenclature that it is now part of DHS, that it proposes to revise the existing routine uses for this system to allow information sharing with voluntary agencies actively working in the open disaster and that it proposes to add new routine uses to provide notice about routine management and oversight information sharing. In addition, to reduce the burden on the public applying for disaster assistance, FEMA has proposed to allow the registration process to be done by individuals electronically over the Internet and is therefore revising its system notice to account for electronic records.

EFFECTIVE DATE: The amended system of records will be effective December 15, 2004, unless comments are received that result in a contrary determination. The amended system of records will be applicable to major disaster or emergencies declared on or after August 13, 2004, unless comments are received that result in a contrary determination.

ADDRESSES: You may submit comments, identified by EPA DOCKET NUMBER DHS–2004–0014 and/or 1660–ZA05 by *one* of the following methods:

- EPA Federal Partner EDOCKET Web Site: *http://www.epa.gov/feddocket.* Follow instructions for submitting comments on the Web site. DHS has joined the Environmental Protection Electronic Docket System (Partner EDOCKET). DHS and its agencies (excluding the United States Coast Guard (USCG) and Transportation Security Administration (TSA)) will use the EPA Federal Partner EDOCKET system. The USCG and TSA [legacy Department of Transportation (DOT) agencies] will continue to use the DOT Docket Management System until full migration to the electronic rulemaking federal docket management system occurs in 2005.
- Federal e-Rulemaking Portal: *http://www.regulations.gov.* Follow the instructions for submitting comments.
- Fax: (202) 646–4536.
- Mail: Rules Docket Clerk, Federal Emergency Management Agency, Office of General Counsel, room 840, 500 C Street SW., Washington, DC 20472.

FOR FURTHER INFORMATION CONTACT: Rena Y. Kim, Privacy Act Officer, Room 840, 500 C Street, SW., Washington, DC 20472; (telephone) (202) 646–3949, or (e-mail) *Rena.Kim@dhs.gov.*

SUPPLEMENTARY INFORMATION: Prior to March 1, 2003, FEMA was an independent agency within the Federal Government. While operating as an independent agency, FEMA published notices concerning its systems of

records. The system at issue in this notice was last published on October 9, 2001. In compliance with the requirements of the Privacy Act of 1974, as amended, 5 U.S.C. 552a, FEMA gives notice that it intends to revise the routines uses and to add several new ones to its system of records entitled, FEMA/REG–2, Disaster Recovery Assistance Files. FEMA has amended the language in routine use (a) to allow information sharing with voluntary agencies actively working in the open disaster. FEMA also intends to add two new routine uses that allow for information sharing with other Federal and State agencies to enhance FEMA's ability to provide oversight and coordination of State activities and to ensure that the State performs and adheres to FEMA regulations and policy guidance. In addition, because FEMA became a part of DHS on March 1, 2003, FEMA is incorporating appropriate DHS routine uses as part of this system of records.

FEMA altered its system of records and provided a report as required by 5 U.S.C. 552a(r). This change is to amend the language of routine use (a). This amendment will not change the type or amount of information collected from individuals who apply for disaster assistance. Finally, this notice will make the public aware of routine management and oversight information sharing between FEMA and other Federal agencies, State and local governments, and contractors providing services in support of the Individual Assistance program. Routine uses (d), (e), (f), and (g) allow us to disclose information from this system of records to Federal, State, and local governments in the course of providing disaster assistance and in creating and implementing emergency evacuation plans. In addition, to reduce the burden on the public applying for disaster assistance, FEMA is now making the registration process available by an additional means—electronically via the Internet. In addition to filling out paper applications or calling in and applying over the telephone, individuals who wish to apply for disaster assistance can now also do so over the Internet.

Accordingly, FEMA amends the Disaster Recovery Assistance Files of the FEMA Privacy Act system of records to read as follows:

SYSTEM NAME:

Disaster Recovery Assistance Files.

SYSTEM LOCATION:

National Processing Service Centers (NPSC) located at FEMA MD–NPSC, 6505 Belcrest Road, Hyattsville, MD 20782; FEMA VA–NPSC, 19844 Blue Ridge Mountain Road, Bluemont, VA 20135; FEMA TX–NPSC, 3900 Karina Lane, Denton, TX 76208; and FEMA PR–NPSC, Carr 8860, KM 1.1 Bldg T–1429, Trujillo Alto, PR 00976.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who apply for disaster recovery assistance through three different mediums including: (a) Electronically via the Internet, (b) by calling FEMA's toll-free number, or (c) through the submission of a paper copy of FEMA Form 90–69 following Presidentially-declared major disasters or emergencies. Our proposed additional new method will allow applicants to apply for disaster recovery assistance over the Internet, and will reduce the paperwork burden on the public.

CATEGORIES OF RECORDS IN THE SYSTEM:

(a) Records of registration for assistance (Form 90–69, Disaster Assistance Registration/Application) include individual applicants' names, addresses, telephone numbers, social security numbers, insurance coverage information, household size and composition, degree of damage incurred, income information, programs to which FEMA refers applicants for assistance, flood zones, location and height of high water level, and preliminary determinations of eligibility for disaster assistance.

(b) Inspection reports (Form 90–56, Inspection Report) contain individuals' identifying information and results of surveys of damaged real and personal property and goods, which may include individuals' homes and personal items.

(c) Temporary housing assistance eligibility determinations (Forms 90–11 through 90–13, 90–16, 90–22, 90–24 through 90–28, 90–31, 90–33, 90–41, 90–48, 90–57, 90–68 through 90–70, 90–71, 90–75 through 90–78, 90–82, 90–86, 90–87, 90–94 through 90–97, 90–99, and 90–101). These refer to approval and disapproval of temporary housing assistance and include: general correspondence, complaints, appeals and resolutions, requests for disbursement of payments, inquiries from tenants and landlords, general administrative and fiscal information, payment schedules and forms, termination notices, information shared with the temporary housing program staff from other agencies to prevent the duplication of benefits, leases, contracts, specifications for repair of disaster damaged residences, reasons for eviction or denial of aid, sales information after tenant purchase of housing units, and the status of disposition of applications for housing.

(d) Eligibility decisions for disaster aid from other Federal and State agencies (for example, the disaster loan program administered by the Small Business Administration, and disaster aid decisions of the State-administered Individual and Family Grants (IFG) and its successor program, Other Needs Assistance (ONA)) as they relate to determinations of individuals' eligibility for disaster assistance programs.

(e) State files, independently kept by the State, which contains records of persons who request disaster aid, specifically for IFG and its successor program, ONA, and administrative files and reports required by FEMA. As to individuals, the State keeps the same type of information as described above under registration, inspection, and temporary housing assistance records. As to administrative files and reporting requirements, the State uses forms 76–27, 76–28, 76–30, 76–32, 76–34, 76–35, and 76–38. This collection of information is essential to the effective monitoring and management of the IFG and the ONA Program by FEMA's Regional Office staff who have the oversight responsibility of ensuring that the State perform and adhere to FEMA regulations and policy guidance.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121–5206 and Reorganization Plan No. 3 of 1978.

PURPOSE(S):

To register applicants needing disaster assistance, to inspect damaged homes, to verify information provided by each applicant, to make eligibility determinations regarding an applicant's request for assistance, and to identify and implement measures to reduce future disaster damage.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

(a) FEMA may disclose applicant information to certain agencies as necessary and as described below to prevent a duplication of efforts or a duplication of benefits in determining eligibility for disaster assistance. FEMA shall only release as much information as is necessary to enable the recipient agency to determine eligibility for that agency's particular assistance program(s). The receiving agency is not permitted to alter or to further disclose our disclosed records to other disaster organizations. FEMA may make such disclosures under the following circumstances:

(1) To another Federal agency or State government agency charged with administering disaster relief programs to make available any additional Federal and State disaster assistance to individuals and households.

(2) When an applicant seeks assistance from a local government agency or a voluntary organization (as defined at 44 CFR 206.2(a)(27), as amended or superseded) charged under legislation or charter with administering disaster relief programs, and FEMA receives a written request from that local government or voluntary agency that includes the applicant's name, FEMA registration/application number and damaged dwelling address. The written request must explain the type of tangible assistance being offered and the type of verification required before the assistance can be provided.

(3) To voluntary organizations (as defined at 44 CFR 206.2(a)(27), as amended or superseded) that have an established disaster assistance program to address the disaster-related unmet needs of disaster victims, are actively involved in the recovery efforts of the disaster, and either have a national membership, in good standing, with the National Voluntary Organizations Active in Disaster (NVOAD), or are participating in the disaster's Long-Term Recovery Committee. When a voluntary agency satisfies all of the criteria listed in this sub-paragraph, FEMA may release lists of individuals' names, contact information, and their FEMA inspected loss amount to the volunteer agency for the sole purpose of providing additional disaster assistance. FEMA shall release this information only while the period for assistance for the current disaster is open.

(b) When an individual's eligibility, in whole or in part, for a DHS/FEMA disaster assistance program depends upon benefits already received or available from another source for the same purpose, FEMA may disclose information to relevant agencies, organizations, and institutions as necessary to determine what benefits are available from another source and to prevent the duplication of disaster assistance benefits (as described in section 312 of the Stafford Act).

(c) In response to a written request, FEMA may disclose information from this system of records to Federal, State, or local government agencies charged with the implementation of hazard mitigation measures and the enforcement of hazard-specific provisions of building codes, standards, and ordinances. FEMA may only disclose information for the following purposes:

(1) For hazard mitigation planning purposes to assist States and local communities in identifying high-risk areas and preparing mitigation plans that target those areas for hazard mitigation projects implemented under Federal, State or local hazard mitigation programs.

(2) For enforcement purposes, to enable State and local communities to ensure that owners repair or rebuild structures in conformance with applicable hazard-specific building codes, standards, and ordinances.

(d) Pursuant to the Debt Collection Improvement Act of 1996, 31 U.S.C. 3325(d) and 7701(c)(1), FEMA is required to collect and release to the United States Department of the Treasury the social security number of the person doing business with FEMA, including an applicant for a grant. Therefore, FEMA will release an applicant's social security number in connection with a request for payment to the U.S. Treasury in order to provide a disaster assistance payment to an applicant under the Individual Assistance program.

(e) FEMA may provide a list of applicants' names, amounts of assistance provided, and related information to a State in connection with billing that State for the applicable non-Federal cost share under the Individuals and Households Program.

(f) When an applicant is occupying a FEMA Temporary Housing unit, FEMA may release only the location of the FEMA Temporary Housing unit to local emergency managers for the sole purpose of preparing emergency evacuation plans. FEMA shall not release any information on an individual, such as their name, type or amount of disaster assistance received.

(g) *Routine Use—Investigations:* Where a record, either on its face or in conjunction with other information, indicates a violation or potential violation of law—criminal, civil or regulatory—the relevant records may be referred to an appropriate Federal, State, territorial, tribal, local, international, or foreign agency law enforcement authority or other appropriate agency charged with investigating or prosecuting such a violation or enforcing or implementing such law.

(h) *Routine Use—Requesting Information:* To a Federal, State, local, tribal, territorial, foreign, or international agency, if necessary to obtain information relevant to a DHS decision concerning the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant or other benefit.

(i) *Routine Use—Requested Information:* To a Federal, State, local, tribal, territorial, foreign, or international agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

(j) Routine Use—Congressional Inquiries: To a congressional office from the record of an individual in response to an inquiry from that congressional office made at the request of the individual to whom the record pertains.

(k) Routine Use—Private Relief Legislation: To OMB at any stage of the legislative coordination and clearance process set out in OMB Circular No. A–19.

(l) Routine Use—National Archives and Records Administration: To the National Archives and Records Administration or other Federal Government agencies pursuant to records management inspections being conducted under the authority of 44 U.S.C. sections 2904 and 2906.

(m) Routine Use—Audits and Oversight: To an agency, organization, or individual for the purposes of performing authorized audit or oversight operations.

(n) Routine Use—Contractors, et al.: To contractors, grantees, experts, consultants, students, and others performing or working on a contract, service, grant, cooperative agreement, or other assignment for the Federal Government, when necessary to accomplish an agency function related to this system of records.

(o) Routine Use—Debt Collection: To the Department of the Treasury, Justice, the United States Attorney's Office, or a consumer reporting agency for further collection action on any delinquent debt when circumstances warrant.

(p) Routine Use—Freedom of Information Act (FOIA) Discussions with Other Agencies Regarding DHS Documents and Vice Versa: To a Federal agency or entity that furnished the record or information for the purpose of permitting that agency or entity to make a decision regarding access to or correction of the record or information, or to a Federal agency or entity for purposes of providing guidance or advice regarding the handling of particular requests.

(q) Routine Use—Litigation: To the Department of Justice (DOJ) or other Federal agency conducting litigation or in proceedings before any court, adjudicative or administrative body, when: (1) DHS, or (2) any employee of DHS in his/her official capacity, or (3) any employee of DHS in his/her individual capacity where DOJ or DHS has agreed to represent the employee, or (4) the United States or any agency thereof, is a party to the litigation or has an interest in such litigation.

(r) Routine Use—Privacy Act Verification and Amendment: To a Federal, State, territorial, tribal, local, international, or foreign agency or entity for the purpose of consulting with that agency or entity (1) to assist in making a determination regarding access to or amendment of information, or (2) for the purpose of verifying the identity of an individual or the accuracy of information submitted by an individual who has requested access to or amendment of information.

(s) Routine Use—Privacy Act/FOIA Access and Amendment: To the submitter or subject of a record or information to assist DHS in making a determination as to access or amendment.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Disclosure under 5 U.S.C. 552a(b)(12): FEMA may make disclosures from this system to consumer reporting agencies, as defined in the Fair Credit Reporting Act, 15 U.S.C. Section 1681a(f), or the Debt Collection Act of 1982, 31 U.S.C. Section 3711(e).

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Interactive database, computer discs, and paper records in file folders.

RETRIEVABILITY:

By an individual's name, address, social security number, and case file number.

SAFEGUARDS:

Only authorized individuals and FEMA employees have access to this information. Hardware and software computer security measures are used to control access to the data. Access to the data is based upon an individual's position in FEMA and/or their designated duties. Individuals are assigned specific ''rights'' or specific access (*e.g.*, read only, modify, delete, etc.). The access granted is based upon an individual's position responsibilities for ''official use'' only. FEMA employees are allowed access to the data as a function of their specific job assignments within their respective organizations. Each FEMA employee's access to the data is restricted to that needed to carry out their duties.

No individual applying for disaster assistance will have access to the entire database via the Internet. Applicants will have limited access to only their own information that they submitted via the Internet, and to the status of their own information regarding the processing of their own application (*e.g.* the status of required documentation, inspection status, or SBA status). Applicants are provided a Logon id, password, and Personal Identification Number (PIN) that connect only to the applicant's data. The password and PIN ensures that the login id belongs to the applicant. Computer security software ensures that the login id is mapped only to the applicant's data. Applicants will have access to only their own application information after FEMA assigns them a properly authenticated user id, password, and PIN. Applicants will be registered and authenticated in accordance with National Institute of Standards and Technology Level 2 Assurance guidelines.

RETENTION AND DISPOSAL:

Records covered by paragraphs (a) through (d) are covered by Records Schedule N1–311–86–1 4C10a and are destroyed after 6 years and 3 months. Records covered by paragraph (e) are covered by Records Schedules N1–311–86–1 4C7 and/or N1–311–86–1 4C10b and are destroyed 3 years after closeout.

SYSTEM MANAGER(S) AND ADDRESS:

Division Director, Recovery Division, FEMA, 500 C Street SW., Washington, DC 20472 and applicable Regional Directors, as listed in Appendix A(1).

NOTIFICATION PROCEDURE:

Requests for Privacy Act protected information generally are governed by DHS regulations found at 6 CFR Part 5 and FEMA's regulations at 44 CFR Part 6. They must be made in writing, and clearly marked as a ''Privacy Act Request'' on the envelope and letter. Inquiries should be addressed to FEMA—Records Management, National Processing Service Center, P.O. Box 10055 Hyattsville, MD 20782–7055. Include the full name of the individual, the appropriate personal identification, and the current address. The name of the requester, the nature of the record sought, and the verification of identity must be clearly indicated, as required by DHS regulation 6 CFR 5.21 and FEMA regulation at 44 CFR 6.30. Requests may also be sent to: Privacy Act Officer, DHS/FEMA Office of General Counsel (GL), room 840, 500 C Street, SW., Washington, DC 20472.

RECORD ACCESS PROCEDURES:

Same as the Notification Procedure above.

CONTESTING RECORD PROCEDURE:

Same as the Notification Procedure above. The letter should state clearly and concisely what information you are contesting, the reasons for contesting it, and the proposed amendment to the information that you seek pursuant to DHS Privacy Act regulations at 6 CFR Part 5 and FEMA regulations at 44 CFR Part 6.

RECORD SOURCE CATEGORIES:

Applicants for disaster recovery assistance, credit rating bureaus, financial institutions, insurance companies, and state, local and voluntary agencies providing disaster relief.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

Dated: November 9, 2004.

David A. Trissell,

General Counsel, Emergency Preparedness and Response, Department of Homeland Security.

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

[Docket No. TSA–2004–19160]

Notice of Final Order for Secure Flight Test Phase; Response to Public Comments on Proposed Order and Secure Flight Test Records

AGENCY: Transportation Security Administration (TSA), Department of Homeland Security (DHS).

ACTION: Notice.

SUMMARY: This notice responds to public comments received in response to three documents that the Transportation Security Administration (TSA) published in the **Federal Register** on September 24, 2004, related to testing of a new domestic passenger prescreening program known as Secure Flight. Secure Flight is an aviation passenger prescreening program that, once operational, would identify passengers known or reasonably suspected to be engaged in terrorist activity in order to allow action to be taken to prevent them from boarding a domestic flight or to ensure that appropriate additional security screening procedures are applied. Under the program, TSA would compare passenger reservation information for domestic flights, primarily in the form of passenger name records (PNRs), to information maintained by the Federal Government about individuals known or reasonably suspected to be engaged in terrorist activity.

In preparation for testing the feasibility of the Secure Flight program, on September 24, 2004, TSA issued a **Federal Register** notice establishing a system of records under the Privacy Act for purposes of the Secure Flight program during the test phase. TSA also published a notice in the **Federal Register** that the agency had submitted to the Office of Management and Budget (OMB) a request for approval to collect PNRs from aircraft operators to test the Secure Flight program. That notice included the text of a proposed order to certain aircraft operators directing them to provide a limited set of historical PNRs to TSA. OMB subsequently has approved the information collection through March 31, 2005, and assigned OMB control number 1652–0025. In addition, TSA published a Privacy Impact Assessment for the testing phase of the Secure Flight program.

This **Federal Register** notice that TSA publishes today addresses public comments received in response to the **Federal Register** notices published on September 24, 2004, and describes changes made to TSA's proposed order, which TSA now is issuing in final form.

FOR FURTHER INFORMATION CONTACT: Lisa Dean, Privacy Officer, Transportation Security Administration, 601 South 12th Street, Arlington, VA 22202–4220; telephone (571) 227–3947; facsimile (571) 227–2594; e-mail *lisa.dean@dhs.gov.*

SUPPLEMENTARY INFORMATION:

Background

On September 24, 2004, TSA published in the **Federal Register** three notices related to TSA's plan to issue a final order to aircraft operators in order to obtain PNRs for testing of a new domestic passenger prescreening program known as Secure Flight (69 FR 57342, 57345, and 57352). This **Federal Register** notice that TSA is publishing today responds to public comments received in response to the notices published on September 24, 2004, and provides public notice of the final order that TSA is issuing for purposes of testing the Secure Flight program.

Secure Flight Program

The Secure Flight program is an effort to move the existing passenger prescreening process into the Federal Government in order to make the process more effective, consistent, and efficient for the traveling public. By administering this screening process within the Federal Government, the Secure Flight program will allow for better protection of government watchlist information that currently is provided to aircraft operators.

Secure Flight will involve the comparison of information in PNRs from domestic flights to names in the Terrorist Screening Database (TSDB) maintained by the Terrorist Screening Center (TSC), including the expanded TSA No-Fly and Selectee Lists, in order to identify individuals known or reasonably suspected to be engaged in terrorist activity. TSA anticipates that it will also apply, within the Secure Flight system, a streamlined version of the existing passenger prescreening process, known as the Computer Assisted Passenger Prescreening System (CAPPS), which evaluates information in PNRs that passengers otherwise provide to aircraft operators in the normal course of business.

Simple comparisons of PNR information against records maintained in the TSDB will not permit TSA to identify information provided by passengers that is incorrect or inaccurate, potentially rendering the comparisons less effective. Therefore, on a very limited basis, in addition to testing TSA's ability to compare passenger information with data maintained by TSC, TSA will separately test the use of commercial data to determine if use of such data is effective in identifying passenger information that is incorrect or inaccurate and reducing the number of false positive matches of passenger information against TSDB records. This test will involve commercial data aggregators whose procedures will be governed by strict privacy and data security protections. TSA will not receive the commercially available data that would be used by commercial data aggregators. TSA will use this test of commercial data to determine whether such use: (1) Could identify when passengers' information is inaccurate or incorrect and/or assist with the resolution of false positive matches; (2) would result in inappropriate differences in treatment of any protected category of persons; and (3) could be governed by data security safeguards and privacy protections that are sufficiently robust to ensure that commercial entities or other unauthorized entities do not gain access to passengers' personal information and to ensure that the government does not gain inappropriate access to commercial information about individuals. TSA will defer any decision of whether commercial data will be used in its prescreening programs, such as Secure Flight, until a thorough assessment of test results is completed. If TSA decides to use commercial data for Secure Flight, it will not do so until the agency publishes a new System of Records Notice announcing how commercial data will be used and individuals' privacy will be protected.

TSA's efforts to develop and test the Secure Flight program are fully consistent with the recommendation in the final report of the National Commission on Terrorist Attacks Upon the United States (9/11 Commission), which states at page 392:

> ''[I]mproved use of ''no-fly'' and ''automatic selectee'' lists should not be delayed while the argument about a successor to CAPPS continues. This screening function should be performed by TSA and it should utilize the larger set of watch lists maintained by the Federal Government. Air carriers should be required to supply the information needed to test and implement this new system.''

The expansion of these watchlists to include information not previously included for security reasons will be possible as integration and consolidation of the information related to individuals known or suspected to be engaged in terrorist activity maintained

by TSC is completed and the U.S. Government assumes the responsibility for administering the watchlist comparisons. Secure Flight will automate the vast majority of watchlist comparisons, will allow TSA to apply more consistent procedures where automated resolution of potential matches is not possible, and will allow for more consistent response procedures at airports for those passengers identified as potential matches.

Secure Flight represents a significant step in securing domestic air travel and safeguarding terrorism-related national security information, namely, the watchlists. It will dramatically improve consistency and effectiveness of comparisons of passenger information with data now maintained by TSC and will reduce the long-term costs to air carriers and passengers associated with maintaining the present system, which is operated individually by each aircraft operator that flies in the United States.

Prior Federal Register Notices

In order to test the feasibility of the Secure Flight program, TSA must obtain a sample of passenger information for domestic flights. In preparation for obtaining this information for testing purposes, on September 24, 2004, TSA published three public notices in the **Federal Register**. First, TSA published a system of records notice in accordance with the Privacy Act of 1974 (5 U.S.C. 552a), including a list of the proposed routine uses of information in the system of records. (69 FR 57345). The system of records notice establishes a new system entitled ''Secure Flight Test Records'' (hereafter referred to as DHS/TSA 017), which will govern the collection, maintenance, use, and disclosure of PNRs and other information obtained by TSA for purposes of testing the Secure Flight program. TSA requested public comment on the routine uses for DHS/TSA 017 during a 30-day comment period ending on October 25, 2004.

Second, TSA published in the **Federal Register** a notice that TSA had submitted to the Office of Management and Budget in accordance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501, *et seq.*) a request for emergency processing of OMB's review and approval for TSA to collect PNRs from aircraft operators to test the Secure Flight program (PRA notice). (69 FR 57342). That notice included the text of a proposed order to certain aircraft operators directing them to provide a limited set of historical PNRs to TSA that cover commercial scheduled domestic flights. Specifically, the proposed order covered PNRs with domestic flight segments flown during the month of June 2004 and excluded those PNRs with flight segments that occurred after June 30, 2004. The purpose of this limitation was to ensure that during the test phase, TSA does not obtain any information about future travel plans of passengers on domestic flights. The order also proposed to exclude PNR flight segments to or from the U.S. Although not required to do so, TSA requested public comment on the proposed order during a 30-day comment period ending on October 25, 2004. OMB subsequently has approved the information collection through March 31, 2005, and assigned OMB control number 1652–0025.

Third, TSA published in the **Federal Register** a Privacy Impact Assessment for the test phase of the Secure Flight program, which TSA prepared in accordance with the E-Government Act of 2002. (69 FR 57352).

TSA received approximately 500 public comments on the Privacy Act system of records notice for DHS/TSA 017. Identical versions of most of those comments also were sent to OMB in response to TSA's PRA notice. TSA has reviewed and considered the issues raised by the public comments submitted to TSA and OMB. This notice addresses those issues and describes changes made to TSA's proposed order to aircraft operators, which, after carefully considering the comments, TSA now is issuing in final form.

Public Comments

Public comments on the Secure Flight system of records notice and PRA notice generally focused on one or more of the following categories of issues: (1) The program's effect on individual privacy and civil liberties; (2) the routine uses established for the Secure Flight Test Records System (DHS/TSA 017); (3) passenger consent to the use of historical PNRs; (4) the absence of a redress process; (5) concerns with the use of commercial data; (6) the efficacy of the Secure Flight program; (7) TSA's compliance with the Privacy Act, the PRA, and other laws; and (8) possible conflicts of laws involving European Union (EU) data privacy requirements.

Effect on Individual Privacy and Civil Liberties

A large majority of the commenters viewed the use of PNRs to prescreen passengers against government watchlists as an invasion of privacy and an infringement on their civil liberties, including individuals' right to travel and exercise other Constitutional rights that might be related to travel, such as the freedom of assembly. The National Business Travel Association (NBTA), stated that TSA should balance the need to establish better security measures with policies and procedures that protect civil liberties and privacy. The NBTA also stated that TSA should not impose unnecessary costs on business travelers.

TSA is aware of, and sensitive to, the need to preserve Americans' freedoms while pursing better security. In implementing a new security measure that affects these interests, it is necessary to move deliberately and cautiously. It is for this very reason that TSA is testing the Secure Flight program before moving forward with an operational system.

The prescreening of passengers against Government watchlists is a security measure that has been in place for several years, performed by aircraft operators, using watchlists provided by the Federal Government. Because the airlines have varying systems by which they implement passenger prescreening, the effectiveness, efficiency, and consistency in response for airline passengers of the current system is limited. The Secure Flight program is an effort to move this prescreening process into the Federal Government in order to make the process more effective, consistent, and efficient for the traveling public. This effort is consistent with a specific aviation security recommendation of the 9/11 Commission.

The Secure Flight program will not impose an unconstitutional burden on an individual's right to travel or exercise other Constitutional rights. The Secure Flight program is a limited, reasonable security screening measure designed to further the Federal Government's compelling interest in protecting aviation security. Except in cases where a passenger may authorize TSA to retain information about him or her for purposes of redress, TSA has no long-term need to retain the information and is seeking approval from the National Archives and Records Administration (NARA) to destroy passenger information shortly after completion of the passenger's itinerary. Similarly, for purposes of the test phase of the program, TSA is seeking NARA approval to destroy PNRs used for the test after the test has been completed and the results have been evaluated. TSA's purpose in obtaining PNRs is to test the program, not to maintain information on individuals' travel.

TSA agrees with NBTA's comments regarding the need to have policies and procedures that protect passengers' civil liberties and privacy interests and to ensure the Secure Flight program is

effective. TSA is in the process of developing redress procedures that will accomplish these goals, as discussed further below.

The Electronic Privacy Information Center (EPIC) objected to TSA's statement in the System of Records notice that the records created and maintained in the course of the Secure Flight test phase should be exempt from a number of the provisions of the Privacy Act, such as the provision allowing individuals to obtain access to certain records containing information about them.

The Privacy Act specifically permits agencies to exempt from certain of its provisions investigatory materials compiled for law enforcement purposes, because allowing individuals access to law enforcement files could impair investigations, particularly those involving complex or continuing patterns of behavior. The intent of the exemption is to prevent access to law enforcement records if that access would alert subjects that their activities are being scrutinized and allow them to take countermeasures to escape detection and prosecution.

In the Secure Flight system of records notice section entitled ''Exemptions Claimed for the System'', TSA stated that for portions of the system it would invoke exemptions to the Privacy Act's requirements such as those that: (1) Permit individuals to obtain access to, and amend, information pertaining to them; and (2) require that information collected by the agency be relevant and necessary to the agency's statutory purpose. (69 FR 57348). TSA is in the process of preparing a notice of proposed rulemaking to implement these exemptions, which will include a detailed explanation of the basis for invoking the exemptions and will offer the public an opportunity to comment further.

At this point, it is unclear whether TSA will need to invoke these exemptions for the Secure Flight program in its operational stage. In order, however, to preserve its ability to protect classified and law enforcement investigatory information from public disclosure, TSA identified these exemptions in the system of records notice as exemptions it may invoke, if necessary. EPIC noted in its comment that certain information in the system of records, such as PNRs, may not be subject to the exemptions and therefore should be releasable to the affected individual under the Privacy Act. TSA agrees with this view. As stated in the system of records notice, TSA will give individuals access to records in the system pertaining to them to the greatest extent feasible, consistent with law enforcement and national security concerns. It should become clearer during the test phase whether the records in the system may be structured in such a way as to exclude any information that must be withheld from the public for the reasons discussed above.

With regard to the requirement that information collected by the agency be ''relevant and necessary,'' one of the objectives of the test phase is to confirm what information in a PNR is relevant and necessary to conduct an effective comparison of PNRs to information in the TSDB. The results of the test phase should enable TSA to determine more precisely what passenger information is relevant and necessary to the operation of the Secure Flight program and to limit its collection accordingly during the operational stage.

A number of commenters expressed concern that the Secure Flight program could easily be expanded in the future beyond the scope outlined for the test phase. A number of other commenters anticipated that TSA would use passenger data to monitor where individuals travel and with whom they travel or whether they engage in other activities that could come within the First Amendment protection of freedom of assembly. These commenters have misconstrued the purpose of Secure Flight and the requirements that TSA has proposed for this test.

TSA will neither use passenger information to monitor individuals' movements within the country nor share such information with other agencies or third parties. In fact, for the operational phase of Secure Flight, TSA intends to seek approval from NARA to destroy passenger information shortly after completion of the passenger's itinerary. This will preclude TSA from keeping any record of passenger movements around the country. TSA will not monitor the individuals with whom a particular passenger travels.

If testing of the program indicates that it is a feasible and effective security measure, TSA will initiate a public rulemaking process in which it will provide an appropriate proposal for the workings of the system, as well as the redress process. This process, in conjunction with future publication of a Privacy Act system of records notice for the operational stage of the program will limit TSA's activities under Secure Flight to those outlined in the notice and serve as the basis for the operation of the program. To the extent that there are any substantial changes to collection of use of information under the program, these will be subject to additional notice and opportunity for public comment. This transparency will serve to prevent so-called ''mission creep.''

One commenter asked whether Secure Flight would use race, color, gender, age, religion, national origin, political views, origin of a passenger's name, disability, or other personal characteristics as the basis for screening decisions. One commenter suggested that TSA would use gun ownership as a basis for screening decisions. Several commenters stated that TSA should use ethnicity or national origin as a screening factor.

With regard to the use of race, gender, national origin, or other factors listed above, Secure Flight will comply with the Constitution and other applicable law. TSA has adopted and complies with the ''Guidance Regarding Use of Race by Federal Law Enforcement Agencies'' issued by the United States Department of Justice in June 2003.

Routine Uses

TSA received several comments on TSA's possible disclosure of personal data obtained for testing the Secure Flight program. Under the Privacy Act, TSA is required to list routine uses of the information it will maintain in the system of records created for testing the Secure Flight program. A routine use is a disclosure of a record outside the Department of Homeland Security for a purpose that is compatible with the purpose for which the information was collected. In its system of records notice for DHS/TSA 017, TSA listed the following routine uses for Secure Flight Test Records:

(1) To the Federal Bureau of Investigation where TSA becomes aware of information that may be related to an individual identified in the Terrorist Screening Database as known or reasonably suspected to be or having been engaged in conduct constituting, in preparation for, in aid of, or related to terrorism;

(2) To contractors, grantees, experts, consultants, or other like persons when necessary to perform a function or service related to the Secure Flight program or the system of records for which they have been engaged. Such recipients are required to comply with the Privacy Act, 5 U.S.C. 552a, as amended;

(3) To the Department of Justice (DOJ) or other Federal agency in the review, settlement, defense, and prosecution of claims, complaints, and lawsuits involving matters over which TSA exercises jurisdiction or when conducting litigation or in proceedings before any court, adjudicative or

administrative body, when: (a) TSA; or (b) any employee of TSA in his/her official capacity; or (c) any employee of TSA in his/her individual capacity, where DOJ or TSA has agreed to represent the employee; or (d) the United States or any agency thereof, is a party to the litigation or has an interest in such litigation, and TSA determines that the records are both relevant and necessary to the litigation and the use of such records is compatible with the purpose for which TSA collected the records;

(4) To the National Archives and Records Administration (NARA) or other Federal agencies pursuant to records management inspections being conducted under the authority of 44 U.S.C. 2904 and 2906;

(5) To a Congressional office from the record of an individual in response to an inquiry from that congressional office made at the request of the individual; and

(6) To an agency, organization, or individual for the purposes of performing authorized audit or oversight operations.

Some commenters objected to the disclosure of information to other agencies whose missions are unrelated to counterterrorism or security and to foreign governments. TSA has established a very limited set of routine uses for the Secure Flight Test Records. Consistent with the commenters' view, TSA will disclose information to the FBI in connection with its counterterrorism function where TSA becomes aware of information that may be related to an individual identified in the TSDB as known or reasonably suspected to be or having been engaged in conduct constituting, in preparation for, in aid of, or related to terrorism. The other routine uses applicable to DHS/TSA 017 are necessary for the operation of the agency or the operation and oversight of the Secure Flight program. TSA will not provide any of the information related to the Secure Flight program to foreign governments.

One commenter expressed concern with TSA's plan to allow government contractors access to personal data and suggested that TSA ensure that strong contractual requirements are in place to deter weak data handling practices. TSA will put such contractual requirements in place.

One commenter stated that TSA should ensure that if Secure Flight is used to screen actual passengers, any underlying information about the passenger used to make screening decisions should not be provided to the airlines or screeners. TSA agrees with this comment. One of the main purposes of Secure Flight is to bring within the Federal Government the watchlist comparison results that currently are in the hands of airlines.

Passenger Consent

Many commenters objected to the government's collection of PNRs for testing purposes because they had not given consent to the collection. As discussed previously, aircraft operators currently use the information in PNRs to conduct passenger prescreening, including watchlists checks and the application of CAPPS. The existence of these prescreening measures has been public knowledge for many years. Therefore, when passengers provide information to aircraft operators in order to purchase air transportation, they have notice that their information will be used for prescreening purposes. In fact, the PNRs TSA will receive for testing Secure Flight already were already used for airline-implemented prescreening in June 2004. Therefore, TSA's collection of the PNRs is consistent with the purposes for which the information in those PNRs originally was collected, and passengers who traveled by air in June 2004 had notice of those purposes.

Redress Process

Commenters noted that TSA has not yet established detailed redress procedures to handle cases where passengers believe they have been unfairly or inaccurately singled out for additional scrutiny as a result of the comparison of their PNRs to information in the TSDB. NBTA stated that TSA should develop a redress process to address inaccuracies in the databases TSA uses to prescreen passengers, including special procedures for corporate travelers to allow them to continue to fly while any security issue is resolved.

TSA is in the process of developing a robust redress program and has begun hiring and is well into the process of developing redress procedures that will be refined during the Secure Flight test in November. For present purposes, however, TSA is only testing the Secure Flight concept. Because the data to be used concerns domestic flights that have already been completed during the month of June 2004 ''meaning that passengers were already screened ''and because the test results will not be used in an operational setting to conduct passenger screening, no passengers will need to avail themselves of the redress process during testing. With respect to special procedures for business travelers, TSA does not, at this point, believe that the Secure Flight program will cause delays that would warrant special treatment for any class of passengers. Information obtained through program testing, however, may be relevant to this issue, and TSA will consider it in developing the operational aspects of the Secure Flight program.

Use of Commercial Data

A number of commenters had questions and concerns regarding TSA's plan to test the use of commercial data to identify passenger information that is incorrect or inaccurate. Commenters expressed concern that TSA's access to commercial information would open the door to abuse of individuals' privacy rights and possible theft of their personal information.

As discussed in detail in the Privacy Impact Assessment for the Secure Flight Test Phase (69 FR 57352), TSA's testing of commercial data will be governed by stringent data security and privacy protections, including: contractual prohibitions on commercial entities' maintenance or use of PNR information for any purposes other than testing under TSA parameters; strict firewalls between the government and commercial data providers; real-time auditing procedures to determine when data has been accessed and by whom; and strict rules prohibiting the access or use of commercially held personal data by TSA. TSA will not have access to or store the commercially available data that would be used by commercial data aggregators.

One commenter questioned TSA's need for passengers' credit card information as part of Secure Flight and whether TSA would be using commercial data to check credit histories and other personal information unrelated to Secure Flight. Commenters also had questions about the types of commercial information that could lead TSA to apply enhanced screening or deny an individual access to an aircraft. One commenter suggested that TSA use only those sources of commercial data that are easily corrected by consumers so that if there are errors in commercially available data that lead to incorrect screening decisions by TSA, those errors can be resolved in a timely manner.

These are all are key issues that TSA will be attempting to resolve during the testing phase. Once TSA has information about the feasibility and efficacy of using commercial data, such as credit card numbers, to gauge the accuracy of passenger information and reduce false positive matches to information in the TSDB, the agency will be in a position to provide specific answers to the types of questions raised

by the commenters. TSA will not have access to individuals' credit histories, medical records, or other personal records.

A number of commenters expressed concern over access by data aggregators to passenger information during the testing. TSA will require the data aggregators with whom it works to abide by the requirements of the Privacy Act as well as to execute legally enforceable nondisclosure agreements prohibiting their use of information for any purpose other than for the testing of the effectiveness of the use of commercial data for Secure Flight. As a security mechanism, TSA has installed an auditing system as part of the platform on which the Secure Flight program will operate. The auditing mechanism will immediately detect any unauthorized access to the passenger data. Within TSA, individuals who are not conducting the test of the Secure Flight program will not have access to any passenger information. The real-time auditing mechanisms in place should prevent unauthorized access by individuals who are not part of the team conducting the test. TSA personnel with access to information for the testing phase will undergo specialized privacy training and will be required to hold appropriate security clearances and, therefore, will understand the sensitivity of the information to which they have access.

Under section 552(d) of the Department of Homeland Security Appropriations Act, 2005 (Pub. L. 108–334), TSA may not test the use of commercial data until the agency has developed measures to determine the impact of the use of commercial data on aviation security and the Government Accountability Office (GAO) has reported on TSA's evaluation measures. TSA currently is working with GAO to provide the information GAO needs to evaluate TSA's measures.

Efficacy of the Program

Commenters questioned the potential effectiveness of the Secure Flight program because, they claim, the information in the TSDB regarding individuals known or suspected of being engaged in terrorist activity is inaccurate. A number of commenters stated that TSA should instead focus its resources and effort on improved physical security measures such as improved checkpoint screening, increased numbers of Federal Air Marshals and Federal Flight Deck Officers, and improved screening of baggage and cargo. NBTA stated that TSA should stress test the Secure Flight system and develop operational safeguards and oversight policies for the program.

TSA agrees with those commenters who have stated that TSA should ensure that the Secure Flight program is effective before going forward with implementation and should have a quick and effective redress process to address situations in which passengers are mistakenly subjected to enhanced scrutiny or believe that they have wrongly been included on a watchlist.

With respect to the suggested choice between developing Secure Flight or directing TSA's resources towards other security measures, TSA approaches security as a layered process. TSA is committed to taking actions that will improve each layer of security and believes that such actions are not mutually exclusive.

The American Civil Liberties Union (ACLU) commented that the continued expansion of government watchlists creates a risk of false positive matches of passengers on watchlists. Therefore, the ACLU stated, effective management of the watchlists will become even more important. Again, TSA agrees that the Secure Flight program must be shown to be effective in achieving its stated goals before it is implemented. In order to determine whether the program can be effective, however, TSA must test the system and is doing so while respecting the privacy and civil liberties of individuals.

A number of commenters stated that Secure Flight would not be effective in identifying terrorists who may travel by air but are not currently known to the Federal Government and therefore are not included in the TSDB. Commenters also stated that even if an individual is included in the TSDB, Secure Flight will not detect that individual if he or she assumes the identity of a person not included in the TSDB, such as through identity theft.

TSA agrees that checking passenger names against information in the TSDB will not identify unknown terrorists or those using a stolen identity. Commercial data may be useful in identifying instances where a passenger may have presented inaccurate or incorrect information.

As discussed previously, however, Secure Flight will involve the use of a streamlined version of the existing CAPPS system that aircraft operators currently are using to prescreen passengers. That system evaluates information in PNRs that passengers otherwise provide to aircraft operators in the normal course of business. This element of Secure Flight will address the threat posed by an individual who may pose a threat but is not included in the TSDB or has assumed the identity of a person not included in the TSDB.

A number of commenters stated that TSA should make public the results of the Secure Flight test phase. TSA will make the results available to the extent consistent with national security and homeland security.

Compliance With the Privacy Act, PRA, and Other Laws

The EPIC stated that OMB should not approve the information collection until TSA provides more detailed information to the public about the Secure Flight program.

The Secure Flight program is at a very early stage of development. The purpose of the test phase is to determine the technical feasibility of a consolidated system by which TSA may compare information in PNRs to information in the TSDB. At this point, therefore, TSA has provided as much detail as it can about the planned workings of the Secure Flight program. Once the test is completed and the results are analyzed, if the test phase indicates that the program is technically feasible, TSA will then be able to engage in a public rulemaking process that will involve a more detailed proposal for the Secure Flight program. This subsequent rulemaking will provide members of the public further opportunity to comment on operational and policy issues raised by the program.

One commenter questioned whether TSA had a basis for receiving emergency processing from OMB of the information collection contained in the proposed order. TSA's request for emergency processing was based on the need to move forward with a new passenger prescreening system as quickly as possible, consistent with the 9/11 Commission's recently issued recommendation that TSA take over from aircraft operators the function of passenger prescreening using government watchlists.

The commenter also articulated a number of aspects of the Secure Flight program that he argued are contrary to the requirements of the Privacy Act or other laws. First, he argued that PNRs constitute information regarding an individual's exercise of the First Amendment right of assembly because travel is a form of assembly.

The Privacy Act imposes certain limits on an agency's authority to collect records describing an individual's exercise of First Amendment Rights. See 5 U.S.C. 552a(e)(7). TSA does not agree that PNRs contain information related to the exercise of First Amendment rights, including the right of assembly.

Second, the commenter argued that TSA's proposed order to aircraft operators to submit PNRs is inconsistent with the requirement that an agency collect information to the maximum extent practical directly from an individual when the information may result in an adverse determination about an individual's rights, benefits, or privileges. *See* 5 U.S.C. 552a(e)(2). The commenter stated that TSA has failed to show that it would be impractical for TSA staff to collect information about passengers from them directly at the airport prior to boarding.

Collecting information from passengers at the airport for purposes of the Secure Flight test would impose a tremendous burden on the flying public in the form of additional time required for security screening. It also would not allow TSA to obtain and test the information in a PNR format, which is the form in which TSA would receive the information during the operational phase of the program.

Third, the commenter, as well as others, stated that the proposed order is inconsistent with the Privacy Act because passengers whose information will be submitted to TSA under the order did not receive notice in accordance with section 552a(e)(3) of the Privacy Act, which requires a Federal agency to ''inform each individual whom it asks to supply information'' of: (1) The authority under which the request is made; (2) whether the disclosure of the information is mandatory or voluntary; (3) the principal purpose for which the information is intended to be used and the routine uses which may be made of the information; and (4) the effects on the individual if any, of not providing all or part of the information.

The notice requirement under 5 U.S.C. 552a(e)(3) does not apply to the collection of the PNRs described in the proposed order. OMB has interpreted the notice requirement in section 552a(e)(3) to be inapplicable to situations in which an agency collects information about an individual from a third party.

Fourth, the commenter argues that the system of records notice for Secure Flight fails to meet the requirement in 5 U.S.C. 552a(e)(4)(B) that it describe the categories of individuals on whom records are maintained in the system. The commenter notes that PNRs may contain the names of travel agents or other individuals who make, pay for, or process a passenger's travel but who are not passengers. The commenter also noted that the proposed order covered PNRs with itineraries that were entirely cancelled, thereby capturing individuals who had not flown.

It is our understanding that the inclusion in PNRs of names other than those of passengers is rare. In any case, for purposes of testing the Secure Flight concept, TSA will not retrieve information from PNRs using the names of travel agents or other non-passengers who may be included in a PNR, because the purpose of Secure Flight is to screen passengers. The purpose of listing ''Categories of individuals covered'' in the system of records notice is to provide notice to those individuals whose records are subject to the Privacy Act because the records are retrieved by their name or personal identifier. The purpose is not to provide notice to every individual whose name may be incidentally mentioned in a record retrieved by the name of another individual. In addition, TSA has revised the final order to exclude from its scope any PNRs with itineraries that have been cancelled in whole, thereby avoiding collection of PNRs for individuals who have not actually completed any part of the itinerary in the PNR. For these reasons, the provision in the system of records notice meets the requirements of the Privacy Act.

Fifth, the commenter argues that TSA has failed to meet certain requirements applicable to the promulgation of regulations under the Airline Deregulation Act, the Aviation and Transportation Security Act, and the Unfunded Mandates Reform Act of 1995, and the Regulatory Flexibility Act. Other commenters noted that TSA has not published a cost-benefit analysis for the Secure Flight program.

As discussed previously, TSA is obtaining historical PNRs for the test phase of Secure Flight through the issuance of an order, not through rulemaking. Therefore, the foregoing statutes, as well as other statutes and Executive Orders that apply to agency rulemaking, do not apply in this instance. If testing of the program indicates that it is a feasible and effective security measure, TSA will initiate a public rulemaking process in which it will again fully comply with all applicable statutory requirements.

Sixth, the commenter argued that TSA has no authority to establish a system of records for Secure Flight or order aircraft operators to provide PNRs to TSA.

TSA has ample authority to conduct the Secure Flight test. Under the Aviation and Transportation Security Act and authority delegated to the Assistant Secretary of Homeland Security (Transportation Security Administration) by the Secretary of Homeland Security, TSA is responsible for, among other things, the screening of passengers and property transported in air transportation and intrastate air transportation. Also under its delegated authority, TSA has broad authority under 49 U.S.C. 40113(a) to issue orders necessary to carry out its statutory duties, which expressly include providing for security screening, under 49 U.S.C. 44901(a). TSA also is authorized to undertake research and development activities necessary to enhance transportation security under 49 U.S.C. 114(f)(8) and create a successor system to the existing CAPPS under 49 U.S.C. 44903(j)(2). Under these authorities, TSA may order aircraft operators to provide PNRs to TSA to test the Secure Flight program. Implementation of the Secure Flight test also is in furtherance of Homeland Security Presidential Directive–6/HSPD–6 of September 23, 2003 (''Integration and Use of Screening Information to Protect Against Terrorism''), which, among other things, directs Federal agencies to conduct screening at all appropriate opportunities using consolidated terrorist information and intelligence about individuals known or appropriately suspected to be or have been engaged in conduct constituting, in preparation for, in aid of, or related to terrorism.

Potential Conflict With EU Laws

United Airlines and other commenters expressed concern that complying with the proposed order would expose U.S. airlines to liability for violating privacy laws of the Member States of the EU. United suggested that the U.S. government work closely with foreign governments to address any conflicts of laws that may arise. While TSA has clear statutory authority to require the submission of reservation information for use in prescreening passengers on domestic flight segments, TSA understands the sensitivity of aircraft operators to the possibility of conflicting legal obligations under U.S. law and the laws of EU Member States. Therefore, in the interest of implementing this test expeditiously, TSA has determined that for purposes of this test phase, aircraft operators may opt to exclude from PNRs submitted to TSA any PNR that includes a flight segment between the United States and the EU.

TSA and Department officials briefed European Commission (EC) representatives on October 25 to provide further details on Secure Flight testing, including the parameters of data to be

submitted for the test. TSA informed the EC that carriers may elect not to submit to TSA for use in testing any PNRs with a flight segment between the EU and the United States. The Department and EC representatives will continue regular discussions to keep the EU fully apprised of TSA's progress regarding Secure Flight, and to receive EU feedback on Secure Flight issues. TSA, in conjunction with DHS, will continue to consult with the EU prior to and during Secure Flight implementation.

Other Issues

United Airlines stated in its comment the concern that the Secure Flight program might result in unnecessary costs to airlines if they are required to establish new systems to transmit passenger information to TSA, rather than relying on existing systems, such as those that U.S. Customs and Border Protection has in place for receiving advance passenger information for international flights. In planning and developing the operational stage of the Secure Flight program, TSA will work to use existing communications links between the airlines and the Federal Government in order to avoid imposing duplicative requirements on the airlines to the greatest extent possible.

Final Order

The final order is largely unchanged from the proposed order, with the exception of the following provisions.

First, in order to simplify and clarify compliance with the order, TSA changed the scope of PNRs that aircraft operators are required to provide and the description of the category of aircraft operators covered by the order. The proposed order would have required the submission of any PNRs with a flight segment completed during June 2004, so long as all the flight segments in the PNR had been completed by the end of June 2004. Thus, the proposed order covered PNRs with flight segments completed many months before June 2004. The final order applies only to those PNRs with all flight segments (flights between two locations) completed in June 2004.

The proposed order applied to PNRs for any passenger on ''a scheduled flight within the United States, in operations subject to a full security program under 49 CFR 1544.101(a).'' This language was intended to cover any scheduled passenger or public charter operation conducted under a full security program. Because the proposed order did not specifically mention public charter operations and used the term ''scheduled flight,'' there was some confusion as to whether TSA intended to cover any public charter operations. The final order clarifies this point by stating the following: ''This order applies to aircraft operators that conduct scheduled passenger or public charter operations subject to a full security program under 49 CFR 1544.101(a).''

The proposed order directed aircraft operators to exclude from the PNRs submitted to TSA any flight segment to or from the United States. TSA now understands, however, that deleting information related to flight segments from PNRs is difficult and could inhibit aircraft operators from complying with the order in a timely manner. After reviewing this issue and considering the issues discussed above related to possible conflicts of law with EU Member States, TSA revised the order to allow aircraft operators to exclude entirely from its submission PNRs that include flight segments between the United States and the EU.

TSA has modified the proposed order in response to questions about how the order applied to aircraft operators that use passenger manifests rather than PNRs. The final order provides that if an aircraft operator does not use PNRs, the order applies to the reservation data in whatever form the aircraft operators receive or maintain for operation of a flight, such as a passenger manifest. The final order also clarifies that with respect to codesharing operations, if an aircraft operator does not maintain PNRs or other passenger reservation information for the flights that it operates, the aircraft operator may comply with the order by stipulating in writing to TSA that the entity maintaining such PNRs or other passenger reservation information has agreed to provide the information to TSA on behalf of the aircraft operator. For example, a regional aircraft operator that relies on other aircraft operators to maintain PNRs for the regional operator's flights must stipulate that the other aircraft operators will submit PNRs to TSA on the regional aircraft operator's behalf.

TSA also received questions about how to address situations where PNR history, which was excluded from the scope of the proposed order, includes completed flight segments, which were included in the scope of the proposed order. The final order clarifies that if the PNR history includes information on flight segments already flown, they must be included in the PNR submitted to TSA. In such cases, the aircraft operator may move information on flights flown out of the PNR history or include the entire PNR history in the information submitted to TSA, and TSA will extract the flown flight segments. The final order also clarifies that PNRs must include all data that would have been available to the aircraft operator prior to the completion of the itinerary (active fields), including any ''remarks'' sections, the reservation creation date, and CAPPS scores and codes.

Finally, the final order provides additional information about how the PNRs are to be submitted, including a requirement that they be password protected.

Based on the foregoing, TSA will issue the following final order to aircraft operators. The text of the final order is set forth below.

Issued in Arlington, Virginia, on November 10, 2004.

Lisa S. Dean,

Privacy Officer.

OMB Control Number 1652–0025
Expiration Date: March 31, 2005

Transportation Security Administration Order

Pursuant to the authority vested in me as Assistant Secretary of Homeland Security (Transportation Security Administration) (TSA) by delegation from the Secretary of Homeland Security, 49 U.S.C. 40113(a), and other authorities described below, I hereby direct each aircraft operator listed in Attachment A to this order to provide passenger name records (PNRs) to TSA in accordance with the terms of this order.

Background and Authority

1. The Secretary of Homeland Security has delegated to the Assistant Secretary of Homeland Security (TSA), subject to the Secretary's guidance and control, the authority vested in the Secretary by section 403(2) of the Homeland Security Act respecting TSA, including that related to civil aviation security under the Aviation and Transportation Security Act.

2. Under 49 U.S.C. 114(e)(1) and 44901(a), TSA is responsible for, among other things, providing for the screening of passengers traveling in air transportation and intrastate air transportation.

3. One component of passenger screening is the Computer-Assisted Passenger Prescreening System (CAPPS), an automated screening system developed by the Federal Aviation Administration (FAA) in cooperation with U.S. aircraft operators. U.S. aircraft operators implemented CAPPS in 1997.

4. CAPPS evaluates information in PNRs that passengers otherwise provide to aircraft operators in the normal course of business to determine whether a passenger will be selected for a higher level of security screening prior to boarding. A PNR is a record that contains detailed information about an individual's travel on a particular flight, including information provided by the individual when making the flight reservation. While the Federal Government established the CAPPS selection criteria, CAPPS is operated entirely by U.S. aircraft operators.

5. Passenger prescreening also involves the comparison of identifying information of airline passengers against lists of individuals known to pose or suspected of posing a threat to civil aviation or national security. Aircraft operators currently carry out this function, using lists provided by TSA. Because the lists are provided in an unclassified form, the amount of information they include is limited. For this reason, TSA will take over from aircraft operators the function of screening passengers against such lists and use a larger set of data maintained by the Federal Government for this purpose. This is consistent with the recommendation by the National Commission on Terrorist Attacks upon the United States (9/11 Commission) related to the use of expanded ''No-Fly'' and ''Automatic Selectee'' lists, and the 9/11 Commission recommendation that aircraft operators be required to supply the information needed to test and implement such a system.

6. In accordance with the authority in 49 U.S.C. 44903(j)(2), TSA is in the process of developing a successor system to CAPPS that will be operated entirely by TSA and will incorporate the screening of passengers against data maintained by the Terrorist Screening Center (TSC) about individuals known or reasonably suspected to be or have been engaged in conduct constituting, in preparation for, in aid of, or related to terrorism.

7. In order to test such a system, TSA must have access to information contained in the PNRs for domestic passenger flights. TSA also must have access to passenger information from aircraft operators that maintain the information in forms other than PNRs, such as passenger manifests.

8. TSA has broad authority under 49 U.S.C. 40113(a) to issue orders necessary to carry out its functions, including its responsibility to provide for the security screening of passengers under 49 U.S.C. 44901(a). TSA also has authority to identify and undertake research and development activities necessary to enhance transportation security under 49 U.S.C. 114(f)(8).

Findings

9. The security prescreening of passengers, as mandated by Congress, is vital to aviation security and national security.

10. After a lengthy review of the initial plans for a successor system to CAPPS, and consistent with the recommendation of the 9/11 Commission, the Department of Homeland Security is moving forward with a next generation system of domestic passenger prescreening that meets the following goals: (1) Identifying, in advance of flight, passengers known or suspected to be engaged in terrorist activity; (2) moving of passengers through airport screening more quickly and reducing the number of individuals unnecessarily selected for secondary screening; and (3) fully protecting passengers' privacy and civil liberties.

11. In the revised program, known as Secure Flight, TSA will compare information in airline PNRs or other passenger manifest formats for domestic flights to information in the Terrorist Screening Database (TSDB) maintained by TSC, including expanded TSA No-Fly and Selectee lists, in order to identify individuals known or reasonably suspected to be or having been engaged in conduct constituting, in preparation for, in aid of, or related to terrorism. The Secure Flight program also will test operation of a streamlined version of the existing CAPPS evaluation criteria. TSA will use the PNRs obtained under this order to test these aspects of the program.

12. TSA also will test whether comparing passenger information to other commercially available data can enhance TSA's ability to identify passenger information that is inaccurate or incorrect.

13. In order to develop and test such a system, TSA must obtain passenger information in PNRs, or other passenger manifest formats where PNRs are not used, from aircraft operators.

14. On September 24, 2004, TSA published in the **Federal Register** a proposed order requiring aircraft operators to provide PNRs for testing the Secure Flight program. After considering the public comments received and making modifications to the proposed order, where appropriate, TSA is issuing this final order to aircraft operators for purposes of obtaining PNRs to test the Secure Flight program.

Action Ordered

15. *Scope:*

a. *Aircraft Operators:*

This order applies to aircraft operators that conduct scheduled passenger or public charter operations subject to a full security program under 49 CFR 1544.101(a).

b. *Information:*

This order applies to PNRs containing itineraries for domestic flights operated under a full security program and for which all flight segments in the itinerary were flown between June 1, 2004 and June 30, 2004, (after 2400 hours 31 May 2004 and before 0001 hours 1 July 2004). This includes PNRs for non-revenue and space available passengers.

For purposes of this order, ''PNR'' means the electronic record maintained by the aircraft operator detailing information about an individual's travel on a particular flight and any other information contained in that record.

For purposes of this order, ''domestic flight'' means a flight between two locations in the United States (to include the U.S. Virgin Islands, Puerto Rico, Guam, Saipan, and American Samoa).

This order does not apply to PNRs reflecting itineraries that were cancelled in whole.

An aircraft operator may elect to exclude from the scope of the order any PNRs which include any flight segments between the EU and the United States.

If an aircraft operator does not use PNRs, the order applies to the reservation data in whatever form aircraft operators receive or maintain for operation of a flight, such as a passenger manifest.

c. *Information in PNRs:*

PNRs must include all data that would have been available to the aircraft operator in a displayed PNR prior to the completion of the itinerary (active fields), including any ''remarks'' sections, the reservation creation date, and CAPPS scores and codes.

PNRs may not include information related to changes in a PNR prior to completion of the flight itinerary (PNR history). If, however, the PNR history includes information on flight segments already flown, they must be included in the PNR. In such cases, the aircraft operator may move information on flights flown out of the PNR history or include the entire PNR history in the information submitted to TSA, and TSA will extract the flown flights segments (itinerary).

PNRs may be submitted in archive format.

16. *Submission of PNRs:*

The aircraft operator must submit to TSA all PNRs described in paragraph 15 so that the data is received by TSA no later than 5 p.m. EST on November 23, 2004.

Mail all information through overnight carrier to: Lisa Dean, Privacy Officer, Transportation Security Administration, 601 S. 12th Street, TSA–9, Room E7–305N, Arlington, VA 22202, Phone: (571) 227–3947.

17. *Codesharing Operations:*

If an aircraft operator does not maintain PNRs or other passenger reservation information for the flights that it operates, the aircraft operator may comply with this order by stipulating in writing to TSA that the entity maintaining such PNRs or other passenger reservation information has agreed to provide the information to TSA on behalf of the aircraft operator. For example, a regional aircraft operator that relies on other aircraft operators to maintain PNRs for the regional operator's flights must stipulate the other aircraft operators will submit PNRs to TSA on the regional aircraft operator's behalf.

Letters of stipulation, described above, must be signed and on company letterhead. They may be delivered in one of the following three ways:

U.S. Mail: TSA/ONRA, Attention: Airline Team, P.O. Box 597, Annapolis Junction, MD 20701.

FAX: (240) 568–3528.

E-mail (scanned copies): SecureFlight@DHS.gov.

18. The aircraft operator must provide to TSA information about the aircraft operator's PNR data schema and layout, such as a PNR format book and a data dictionary that includes all acronyms and codes not standard to the International Air Transport Association.

19. For purposes of the test, the aircraft operator must provide the PNRs to TSA on optical media in an unpacked or uncompressed form, in a structured data format or XML, if available. Information must be password-protected. The aircraft operator must supply TSA with the password via e-mail at *SecureFlight@DHS.gov.*

BILLING CODE 4910–62–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4665–N–20]

Meeting of the Manufactured Housing Consensus Committee

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Notice of upcoming meeting.

SUMMARY: This advises the public of an upcoming meeting of the Manufactured Housing Consensus Committee (the Committee) and publishes the schedule and proposed agenda for the meeting. The meeting is open to the public and the site is accessible to individuals with disabilities.

DATES: The Committee will meet on November 30, 2004 and December 1, 2004, from 8 a.m. to 5 p.m., and on December 2, 2004, from 8 a.m. to 12 p.m.

ADDRESSES: The Committee will meet at the Marriott San Diego Hotel & Marina, 333 West Harbor Drive, San Diego, California 92101, telephone (619) 234–1500.

FOR FURTHER INFORMATION CONTACT: William W. Matchneer III, Administrator, Manufactured Housing Program, Office of Consumer and Regulatory Affairs, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410–8000, telephone (202) 708–6409 (this is not a toll-free number). Persons with hearing- or speech-impairments may access this number through TTY by calling the toll-free Federal Information Relay Service at (800) 877–8339.

SUPPLEMENTARY INFORMATION: Notice of this meeting is provided in accordance with section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App.2) and 41 CFR 102–3.150. The Manufactured Housing Consensus Committee was established under section 604(a)(3) of the National Manufactured Housing Construction and Safety Standards Act of 1974, as amended by the Manufacturer Housing Improvement Act of 2000, 42 U.S.C. 4503(a)(3). The Consensus Committee is charged with providing recommendations to the Secretary to adopt, revise, and interpret manufactured housing construction and safety standards and procedural and enforcement regulations, and with developing proposed model installation standards.

Tentative Agenda

A. Welcome and Introductions

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Information Collection Renewal to be Submitted to the Office of Management and Budget (OMB) for Approval Under the Paperwork Reduction Act; OMB Control Number 1018–0103, Conservation Order for Control of Mid-Continent Light Geese, 50 CFR 21.60

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: The Fish and Wildlife Service (We) will submit the collection of information described below to OMB for approval under the provisions of the Paperwork Reduction Act of 1995.

DATES: You must submit comments on or before January 14, 2005.

ADDRESSES: Send your comments on this information collection requirement to Hope Grey, Service Information Collection Clearance Officer, Fish and Wildlife Service, MS 222–ARLSQ, 4401 North Fairfax Drive, Arlington, VA 22203 (mail); *Hope_Grey@fws.gov* (e-mail); or (703) 358–2269 (fax).

FOR FURTHER INFORMATION CONTACT: To request a copy of the information collection requirements or explanatory material, contact Hope Grey at the addresses above or by telephone at (703) 358–2482.

SUPPLEMENTARY INFORMATION: The Office of Management and Budget regulations at 5 CFR 1320, which implement provisions of the Paperwork Reduction Act of 1995 (Public Law 104–13), require that interested members of the public and affected agencies have an opportunity to comment on information collection and recordkeeping activities (*see* 5 CFR 1320.8(d)). We plan to submit a request to OMB to renew approval of the collection of information for the Conservation Order for Control of Mid-Continent Light Geese. The current OMB Control Number for this information collection is 1018–0103, which expires March 31, 2005. We are requesting a 3-year term of approval for this information collection activity. Federal agencies may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The number of light geese (lesser snow and Ross' geese) in the mid-continent region has nearly quadrupled during the past several decades due to a decline in adult mortality and an increase in winter survival. Lesser snow and Ross' geese are referred to as light geese because of their light coloration as opposed to dark geese such as white-fronted or Canada Geese. Because of their feeding activity, light geese have become seriously injurious to their habitat as well as to habitat important to other migratory birds. This poses a serious threat to the short- and long-term health and status of some migratory bird populations. We believe that the number of light geese in the mid-continent region has exceeded long-term sustainable levels for their arctic and subarctic breeding habitats and that the populations must be reduced. 50 CFR 21 provides authority for the management of overabundant mid-continent light geese.

Light geese in the mid-continent region are separated into two different populations for management purposes. Lesser snow and Ross' geese that primarily migrate through North Dakota, South Dakota, Nebraska, Kansas, Iowa, and Missouri, and winter in Arkansas, Louisiana, Mississippi, and eastern, central, and southern Texas and other Gulf States are referred to as the mid-continent population of light geese. Lesser snow and Ross' geese that primarily migrate through Montana, Wyoming, and Colorado and winter in New Mexico, northwestern Texas, and Chihuahua, Mexico, are referred to as Western Central Flyway population of light geese.

States that participate in the light geese conservation order must inform and brief all participants on the requirements in 50 CFR 21.60 and conservation order conditions that apply to the implementation of light geese control measures. Participating States must collect information on the number of birds taken during control efforts, the methods by which they were taken, and the date on which they were taken. We use this information to administer the conservation order and, particularly, to monitor the effectiveness of control strategies and to protect migratory birds. Each participating State must submit an annual report by August 30 of each year summarizing the activities it conducted. We contacted some participating States to estimate the burden hours for this information collection.

Title of Collection: Conservation Order for Control of Mid-Continent Light Geese, 50 CFR 21.60.

OMB Control Number: 1018–0103.

Form Number: None.

Frequency of Collection: Annually.

Description of Respondents: States participating in the conservation order.

Total Annual Burden Hours: 1,776.

Total Annual Responses: 24.

We invite comments concerning this submission on (1) whether or not the collection of information is necessary for the proper performance of our migratory bird management functions, including whether or not the information will have practical utility; (2) the accuracy of our estimate of the burden of the collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents. The information collections in this program are part of a system of record covered by the Privacy Act (5 U.S.C. 552(a)).

Our practice is to make comments, including names and home addresses of respondents, available for public review during regular business hours. Individual respondents may request that we withhold their home addresses from the record, which we will honor to the extent allowable by law. There may also be limited circumstances in which we would withhold a respondent's identity from the administrative record, as allowable by law. If you wish us to withhold your name and/or address, you must state this clearly at the beginning of your comment. We will not consider anonymous comments. We generally make all submissions from organizations or businesses and from individuals identifying themselves as representatives or officials of organizations or businesses available for public inspection in their entirety.

Dated: November 1, 2004.

Hope Grey,

Information Collection Clearance Officer, Fish and Wildlife Service.

BILLING CODE 4310–55–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: This notice announces that the Information Collection Request for Adult Education Annual Report Form OMB #1076–0120 requires renewal. The current Adult Education Annual Report Form OMB #1076–0120, with no appreciable changes, will be submitted after the comment period to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act of 1995. The Bureau is soliciting public comments on the subject proposal.

DATES: Written comments must be submitted on or before January 14, 2005.

ADDRESSES: Comments are to be mailed to Edward Parisian, Director, Office of Indian Education Programs, Department of the Interior, Bureau of Indian Affairs, 1849 C St., NW., Mail Stop 3609–MIB, Washington, DC 20240, or hand delivered to room 3623 at the above address.

FOR FURTHER INFORMATION CONTACT: Garry Martin, Bureau of Indian Affairs, 202–208–3478.

SUPPLEMENTARY INFORMATION:

I. Abstract

The information collection is necessary to assess the need for adult education programs in accordance with 25 CFR part 46, subpart A, sections 46.20 Program Requirements and 46.30 Records and Reporting Requirements of the Adult Education Program.

II. Method of Collection

The Adult Education Program regulations under 25 CFR part 46, subpart 46, contain the program requirements which govern the program. Information collected from the contractors will be used for administrative planning, setting long- and short-term goals, and analyzing and monitoring the use of funds.

III. Data

Title of the Collection of Information: Bureau of Indian Affairs Adult Education Program Annual Report Form.

OMB Control Number: 1076–0120; Expiration Date: January 31, 2005.

Type of Review: Renewal of a currently-approved information collection.

Summary of the Collection of Information: The collection of information provides pertinent data concerning the adult education programs.

Description of the need for the information and proposed use of the information: Submission of this information is necessary to assess the need for adult education programs. The information is needed for the utilization and management of program resources to provide education opportunities for adult American Indians and Alaska Natives to complete high school requirements, and to gain new skills and knowledge for individual student self enhancement. The information collected with the annual report will be used by the Bureau or tribally controlled programs for fiscal accountability and appropriate direct services documentation. The results of the data are used for administrative planning.

Affected Entities: Tribal adult education contractors.

Estimated number of respondents: 70. Respondents are tribal adult education program administrators.

Proposed frequency of responses: Annually.

Burden: The estimate of total annual reporting and recordkeeping burden that will result from the collection of information: Reporting 4 hours per response x 70 respondents = 280 hours.

Estimated Annual Costs: $5,040.00 (4 hours × 70 × $18.00 = salary dollars). Cost for recordkeeping and auditing is part of their costs for administering this program under Tribal Priority Allocation activity of the tribal budget.

IV. Request for Comments

The Department of the Interior invites comments on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) The accuracy of the agency's estimate of the burden (including the hours and cost) of the proposed collection of information, including the validity of the methodology and assumption used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(d) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other collection techniques or other forms of information technology.

Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

It is our policy to make all comments available to the public for review at the location listed in the **ADDRESSES** section, Room 3623, during the hours of 8 a.m. to 4:30 p.m., e.s.t., Monday through Friday, except for legal holidays. If you wish to have your name and/or address withheld, you must state this prominently at the beginning of your comments. We will honor your request according to the requirements of the law. All comments from organizations or representatives will be available for review. We may withhold comments from review for other reasons.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information, unless it displays a currently valid Office of Management and Budget control number.

Dated: November 5, 2004.

David W. Anderson,

Assistant Secretary—Indian Affairs.

BILLING CODE 4310–6W–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Indian Affairs (BIA) is seeking comments in preparation for renewal of the Indian Child Welfare Annual Report form. The information collected will aid the BIA in fulfilling requirements of law. This renewal meets the requirements of the Paperwork Reduction Act of 1995.

DATES: Submit comments on or before January 14, 2005.

ADDRESSES: Written comments should be sent directly to Larry Blair, Bureau of Indian Affairs, Office of Tribal Services, Division of Human Services, 1951 Constitution Avenue, NW., Mail Stop 320–SIB, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Interested persons may obtain copies of the information collection requests without charge by contacting Mr. Larry Blair, (202) 513–7621, Facsimile number (202) 208–2648.

SUPPLEMENTARY INFORMATION:

I. Abstract

The information collection required by the use of this form is necessary to comply with Public Law 95–608, The Indian Child Welfare Act, and as codified in 25 CFR Part 23, Indian Child Welfare Act (ICWA). This information is collected through the use of a consolidated caseload form by tribal Indian Child Welfare Act program directors who are the providers of the ICWA services. The information is used to determine the extent of service needs in local Indian communities, assessment of the Indian Child Welfare Act program effectiveness, and to provide data for the annual program budget justification.

The responses to this request for information collection are voluntary and the aggregated report is not considered confidential. The public is not required to respond unless a currently valid OMB control number is displayed.

II. Request for Comments

The Bureau of Indian Affairs requests your comments on this collection concerning:

(a) The necessity of this information collection for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) the accuracy of the agency's estimate of the burden (hours and cost) of the collection of information, including the validity of the methodology and assumptions used;

(c) ways we could enhance the quality, utility and clarity of the information to be collected; and

(d) ways we could minimize the burden of the collection of the information on the respondents, such as through the use of automated collection techniques or other forms of information technology.

Please note that an agency may not sponsor or request, and an individual need not respond to, a collection of information unless it has a valid OMB Control Number.

All comments received will be available for public review 2 weeks after publication in the **Federal Register**. If you wish to have your name and address withheld from review, please make that known at the start of your comments.

It is our policy to make all comments available to the public for review at the location listed in the **ADDRESSES** section, room 355–E, during the hours of 7 a.m. to 4 p.m., e.s.t., Monday through Friday except for legal holidays. All comments from organizations or representatives will be available for review. We may withhold comments from review for other reasons.

III. Data

Title: Department of the Interior, Bureau of Indian Affairs, Indian Child Welfare Act Annual Report, 25 CFR Part 23.4.

OMB Control Number: 1076–0131.

Type of review: Renewal.

Brief Description of collection: Indian tribes are required to collect selected data on Indian child welfare cases and submit them to the Bureau for consolidation. This data is useful on a local level, to the tribes and tribal organizations that collect it, for case management purposes and on a nationwide basis for planning and budget purposes.

Respondents: Indian tribes or tribal entities who are operating programs for Indian tribes.

Number of Respondents: 536.

Estimated Time per Response: 30 minutes.

Frequency of Response: Quarterly.

Estimated Annual Burden to Respondents: 1072 hours.

Dated: November 5, 2004.

David W. Anderson,

Assistant Secretary—Indian Affairs.

BILLING CODE 4310–4J–P

DEPARTMENT OF THE INTERIOR

Minerals Management Service

Environmental Documents Prepared for Proposed Oil and Gas Operations on the Gulf of Mexico Outer Continental Shelf (OCS)

AGENCY: Minerals Management Service, Interior.

ACTION: Notice of the Availability of Environmental Documents. Prepared for OCS Mineral Proposals on the Gulf of Mexico OCS.

SUMMARY: Minerals Management Service (MMS), in accordance with Federal Regulations that implement the National Environmental Policy Act (NEPA), announces the availability of NEPA-related Site-Specific Environmental Assessments (SEA) and Findings of No Significant Impact (FONSI), prepared by MMS for the following oil and gas activities proposed on the Gulf of Mexico OCS.

FOR FURTHER INFORMATION CONTACT: Public Information Unit, Information Services Section at the number below. Minerals Management Service, Gulf of Mexico OCS Region, Attention: Public Information Office (MS 5034), 1201 Elmwood Park Boulevard, Room 114, New Orleans, Louisiana 70123–2394, or by calling 1–800–200–GULF.

SUPPLEMENTARY INFORMATION: MMS prepares SEAs and FONSIs for proposals that relate to exploration for and the development/production of oil and gas resources on the Gulf of Mexico OCS. These SEAs examine the potential environmental effects of activities described in the proposals and present MMS conclusions regarding the significance of those effects. Environmental Assessments are used as a basis for determining whether or not approval of the proposals constitutes major Federal actions that significantly affect the quality of the human environment in the sense of NEPA Section 102(2)(C). A FONSI is prepared in those instances where MMS finds that approval will not result in significant effects on the quality of the human environment. The FONSI briefly presents the basis for that finding and includes a summary or copy of the SEA.

This notice constitutes the public notice of availability of environmental documents required under the NEPA Regulations.

This listing includes all proposals for which the Gulf of Mexico OCS Region prepared a FONSI in the period subsequent to publication of the preceding notice.

BILLING CODE 4310–MR–P

DEPARTMENT OF INTERIOR

Office of Surface Mining Reclamation and Enforcement

Notice of Proposed Information Collection

AGENCY: Office of Surface Mining Reclamation and Enforcement.

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Office of Surface Mining Reclamation and Enforcement (OSM) is announcing that the information collection request for its Technical Evaluation customer surveys has been forwarded to the Office of Management and Budget (OMB) for review and comment. The information collection request describes the nature of the information collection and the expected burden and cost. The OMB control number for this collection of information is 1029–0114 and is on the forms along with the expiration date.

DATES: OMB has up to 60 days to approve or disapprove the information collections but may respond after 30 days. Therefore, public comments should be submitted to OMB by December 15, 2004, in order to be assured of consideration.

FOR FURTHER INFORMATION CONTACT: To request a copy of the information collection request, explanatory information and related form, contact John A. Trelease at (202) 208–2783, or electronically to *jtreleas@osmre.gov.*

SUPPLEMENTARY INFORMATION: The Office of Management and Budget (OMB) regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act of 1995 (Pub. L. 104–13), require that interested members of the public and affected agencies have an opportunity to comment on information collection and recordkeeping activities (*see* 5 CFR 1320.8(d)). OSM has submitted a request to OMB to renew its approval of the collection of information contained in a series of technical evaluation customer surveys. OSM is requesting a 3-year term of approval for the information collection activity.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control number for this collection of information is 1029–0114.

As required under 5 CFR 1320.8(d), a **Federal Register** notice soliciting comments on this collection of information was published on June 24, 2204 (69 FR 35391). No comments were received. This notice provides the public with an additional 30 days in which to comment on the following information collection activity:

Title: Technical Evaluations Series.

OMB Control Number: 1029–0114.

Summary: The series of surveys are needed to ensure that technical assistance activities, technology transfer activities and technical forums are useful for those who participate or receive the assistance. Specifically, representatives from State and tribal regulatory and reclamation authorities, representatives of industry, environmental or citizen groups, or the public, are the recipients of the assistance or participants in these forums. These surveys will be the primary means through which OSM evaluates its performance in meeting the performance goals outlined in its annual plans developed pursuant to the Government Performance and Results Act.

Bureau Form Number: None.

Frequency of Collection: Once.

Description of Respondents: 26 State and tribal governments, industry organizations and individuals who request information or assistance.

Total Annual Responses: 300.

Total Annual Burden Hours: 25.

Send comments on the need for the collection of information for the performance of the functions of the agency; the accuracy of the agency's burden estimates; ways to enhance the quality, utility and clarity of the information collection; and ways to minimize the information collection burden on respondents, such as use of automated means of collection of the information, to the following address. Please refer to the appropriate OMB control number in all correspondence.

ADDRESSES: Please send comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Department of Interior Desk Officer, electronically to *OIRA_DOCKET@omb.eop.gov,* or via facsmile at (202) 395–6566. Also, please send a copy of your comments to John A. Trelease, Office of Surface Mining Reclamation and Enforcement, 1951 Constitution Ave, NW., Room 210–SIB, Washington, DC 20240, or electronically to *jtreleas@osmre.gov.*

Dated: September 7, 2004.

Sarah E. Donnelly,

Acting Chief, Division of Regulatory Support.

BILLING CODE 4310–05–M

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–1070 (Final)]

Certain Tissue Paper Products and Crepe Paper Products From China

AGENCY: United States International Trade Commission.

ACTION: Revised schedule for the subject investigation.

EFFECTIVE DATE: November 5, 2004.

FOR FURTHER INFORMATION CONTACT: Fred Forstall ((202) 205–3443), Office of Industries, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*http://www.usitc.gov*). The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION: On October 4, 2004, the Commission issued a schedule for the conduct of the final phase of the subject investigation (69 FR 60423, October 8, 2004). Subsequently, counsel on behalf of petitioners in this investigation [1] requested that the Commission extend the deadline for filing posthearing briefs on issues related to tissue paper (also applicable to the deadline for the submission of a written statement of information on issues related to tissue paper by any person who has not entered an appearance as a party to the investigation) by one week or more (letter from Collier Shannon Scott, PLLC to Marilyn R. Abbott, Secretary, October 21, 2004). Upon consideration of the reasons stated for the request, including an overlapping deadline with a related filing on crepe paper from China, the Commission is revising its schedule to extend the deadline for filing posthearing briefs and written statements by non-parties on issues related to tissue paper from January 5, 2005, to January 12, 2005.

For further information concerning this investigation see the Commission's notice cited above and the Commission's Rules of Practice and Procedure, part 201, subparts A through E (19 CFR part 201), and part 207, subparts A and C (19 CFR part 207).

Authority: This investigation is being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.21 of the Commission's rules.

[1] Petitioners are Seaman Paper Company of Massachusetts, Inc.; American Crepe Corp.; Eagle Tissue LLC; Flower City Tissue Mills Co.; Garlock Printing & Converting, Inc.; Paper Service Ltd.; Putney Paper Co., Ltd.; and the Paper, Allied-Industrial, Chemical and Energy Workers International Union AFL–CIO, CLC.

By order of the Commission.

Issued: November 8, 2004.

Marilyn R. Abbott,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Antitrust Division

United States v. Cingular Wireless Corporation, SBC Communications Inc., BellSouth Corporation, and AT&T Wireless Services, Inc.; Competitive Impact Statement, Proposed Final Judgment, Complaint, Preservation of Assets Stipulation and Order

Notice is hereby given pursuant to the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h), that a Complaint, proposed Final Judgment, Preservation of Assets Stipulation and Order, and Competitive Impact Statement have been filed with the U.S. District Court for the District of Columbia in *United States* v. *Cingular Wireless Corps.*, Civil Case No. 1:04CV01850 (RBW). On October 25, 2004, the United States, along with the Attorneys General from the states of Connecticut and Texas, filed a complaint alleging that the proposed acquisition of AT&T Wireless Services, Inc. (''AT&T Wireless'') by Cingular Wireless Corp. (''Cingular''), which is jointly owned by BellSouth Corporation (''BellSouth'') and SBC Communications, Inc. (''SBC''), would violate Section 7 of the Clayton Act, 15 U.S.C. 18, by substantially lessening competition in the provision of mobile wireless telecommunications services and mobile wireless broadband services. The proposed Final Judgment, filed at the same time as the Complaint and Preservation of Assets Stipulation and Order, requires Cingular to divest assets in eleven states—Connecticut, Georgia, Kansas, Kentucky, Louisiana, Massachusetts, Missouri, Michigan, Oklahoma, Tennessee, and Texas—in order to proceed with Cingular Wireless's $41 billion cash acquisition of AT&T Wireless. A Competitive Impact Statement filed by the United States on October 29, 2004 describes the Complaint, the proposed Final Judgment, the industry, and the remedies available to private litigants who may have been injured by the alleged violation.

Copies of the Complaint, proposed Final Judgment, Preservation of Assets Stipulation and Order, the Competitive Impact Statement, and all further papers filed with the Court in connection with the Complaint will be available for inspection at the Antitrust Documents Group, Antitrust Division, Liberty Place Building, Room 215, 325 7th Street, NW., Washington, DC 20530 (202–514–2481), and at the Office of the Clerk of the U.S. District Court for the District of Columbia. Copies of these materials may be obtained from the Antitrust Division upon request and payment of the copying fee set by Department of Justice regulations.

Interested persons may submit comments in writing regarding the proposed consent decree to the United States. Such comments must be received by the Antitrust Division within sixty (60) days and will be filed with the Court by the United States. Comments should be addressed to Nancy Goodman, Chief, Telecommunications & Media Enforcement Section, Antitrust Division, U.S. Department of Justice, 1401 H Street, NW., Suite 8000, Washington, DC 20530 (202–514–5621). At the conclusion of the sixty (60) day comment period. The U.S. District Court for the District of Columbia may enter the proposed consent decree upon finding that it serves the public interest.

J. Robert Kramer II,

Director of Operations, Antitrust Division.

In the United States District Court for the District of Columbia

United State of America, State of Connecticut and State of Texas, Plaintiffs, v. Cingular Wireless Corporation, SBC Communications Inc., Bellsouth Corporation and AT&T Wireless Services, Inc., Defendants; Competitive Impact Statement

Civil No. 1:04CV01850 (RBW).
Filed: October 29, 2004.

Plaintiff United States of America (''United States''), pursuant to Section 2(b) of the Antitrust Procedures and Penalties Act (''APPA'' or ''Tunney Act''), 15 U.S.C. § 16(b)–(h), files this Competitive Impact Statement relating to the proposed Final Judgment submitted for entry in this civil antitrust proceeding.

I. Nature and Purpose of the Proceeding

Defendants Cingular Wireless Corporation (''Cingular''), SBC Communications Inc. (''SBC''), BellSouth Corporation (''BellSouth''), and AT&T Wireless Services, Inc. (''AT&T Wireless Services'') entered into an Agreement and Plan of Merger dated February 17, 2004, pursuant to which Cingular will acquire AT&T Wireless. Plaintiff United States and the states of Connecticut and Texas (''plaintiff states'') filed a civil antitrust Complaint on October 25, 2004, seeking to enjoin the proposed acquisition. The

Compliant alleges that the likely effect of this acquisition would be to lessen competition substantially for mobile wireless telecommunications services and mobile wireless broadband services (collectively, ''Mobile wireless services'') in violation of Section 7 of the Clayton Act, 15 U.S.C. 18. This loss of competition would result in consumers facing higher prices, lower quality or quantity of mobile wireless services, or delayed launch of new mobile wireless services.

At the same time the Complaint was filed, plaintiff United States also filed a Preservation of Assets Stipulation and Order and proposed Final Judgment, which are designed to eliminate the anticompetitive effects of the acquisition. Under the proposed Final Judgment, which is explained more fully below, defendants are required to divest (1) AT&T Wireless's mobile wireless services business and related assets in five markets (''Wireless Business Divesture Assets''); (2) Cingular's or AT&T Wireless's minority interests in other mobile wireless services providers in five markets (''Minority Interests''); and (3) 10 MHz of contiguous PCS wireless spectrum in three markets (''Spectrum Divesture Assets''). Under the terms of the Preservation of Assets Stipulation and Order, defendants will take certain steps to ensure (a) that these assets are preserved and that the Wireless Business Divestiture Assets are operated as competitively independent, economically viable and ongoing businesses; (b) that they will remain independent and uninfluenced by defendants or the consummation of the transaction; and (c) that competition is maintained during the pendency of the ordered divestiture.

Plaintiffs and defendants have stipulated that the proposed Final Judgment may be entered after compliance with the APPA. Entry of the proposed Final Judgment would terminate this action, except that the Court would retain jurisdiction to construe, modify, or enforce the provisions of the proposed Final Judgment and to punish violations thereof. Plaintiffs and defendants have also stipulation that defendants will comply with the terms of the Preservation of Assets Stipulation and Order and the proposed Final Judgment from the date of signing of the Preservation of Assets Stipulation and Order, pending entry of the proposed Final Judgment by the Court and the required divestitures. Should the Court decline to enter the proposed Final Judgment, defendants have also committed to continue to abide by its requirements and those of the Preservation of Assets Stipulation and Order until the expiration of time for appeal.

II. Description of the Events Giving Rise to the Alleged Violation

A. The Defendants and the Proposed Transaction

Cingular, with headquarters in Atlanta, Georgia, is a company organized and existing under the laws of the State of Delaware. Cingular was formed in 2000 by SBC and BellSouth, who own equity interests in it of 60 and 40 percent, respectively. SBC and BellSouth evenly share management control of Cingular. Cingular is the second-largest provider of mobile wireless voice and data services in the United States by number of subscribers; it serves more than 24 million customers. Cingular provides mobile wireless services in areas throughout the United States and is one of only six providers with a national presence. In 2003, Cingular earned revenues of approximately $15.5 billion.

SBC, with headquarters in San Antonio, Texas, is a corporation organized and existing under the laws of the state of Delaware. SBC is one of several regional Bell operating companies (''RBOCs'') formed in 1984 as a result of the breakup of AT&T Corporation's local telephone business. SBC's wireline telecommunications businesses serve 54.7 million access lines in 13 states: Arkansas, California, Connecticut, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin. In 2003, SBC earned approximately $40.8 billion in revenues.

BellSouth, an RBOC with headquarters in Atlanta, Georgia, is a corporation organized and existing under the laws of the state of Georgia. BellSouth's wireline telecommunications businesses serve 23.7 million access lines in nine states: Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee. Its total operating revenues for 2003 were approximately $22.6 billion.

AT&T Wireless, with headquarters in Redmond, Washington, is a corporation organized and existing under the laws of the state of Delaware. Spun off from AT&T Corporation in 2001, it had more than 22 million subscribers as of August 2004 and earned revenues of approximately $16.6 billion in 2003. AT&T Wireless is the third-largest U.S. mobile wireless services provider by number of subscribers, and, like Cingular, it provides mobile wireless services in areas throughout the United States and has a national presence.

Pursuant to an Agreement and Plan of Merger dated February 17, 2004, Cingular will pay AT&T Wireless shareholders $15 in cash per common share and thereby plans to acquire AT&T Wireless for approximately $41 billion. If this transaction is consummated, Cingular and AT&T Wireless combined would have more than 46 million subscribers, with over $32 billion in revenues, making it the largest mobile wireless services provider in the United States, with operations in 49 states covering 97 of the top 100 marketing areas.

The proposed transaction, as initially agreed to by defendants, would lessen competition substantially for mobile wireless telecommunications service in 10 markets and for mobile wireless broadband services in three markets. This acquisition is the subject of the Complaint and proposed Final Judgment filed by plaintiffs.

B. Mobile Wireless Services Industry

Mobile wireless services allow customers to make and receive telephone calls and use data services using radio transmissions without being confined to a small area during the call or data session, and without the need for unobstructed line-of-sight to the radio tower. This mobility is highly prized by customers, as demonstrated by the more than 160 million people in the United States who own mobile wireless telephones. In 2003, revenues for the sale of mobile wireless services in the United States were nearly $90 billion. To provide these services, mobile wireless services providers must acquire adequate and appropriate spectrum, deploy an extensive network of switches, radio transmitters, and receivers, and interconnect this network with those of local and long-distance wireline telecommunications providers and other mobile wireless services providers.

The first wireless voice systems were based on analog technology, now referred to as first-generation or ''1G'' technology. These analog systems were launched after the FCC issued the first licenses for mobile wireless telephone service: two cellular licenses (A-block and B-block) in each geographic area in the early to mid-1980s. The licenses are in the 800 MHz range of the radio spectrum, each license consists of 25 MHz of spectrum, and they are issued for each Metropolitan Statistical Area (''MSA'') and Rural Service Area (''RSA'') (collectively, ''Cellular Marketing Areas'' or ''CMAs''), with a total of 734 CMAs covering the entire

United States. In 1982, one of the licenses was issued to the incumbent local exchange carrier in the market, and the other was issued by lottery to someone other than the incumbent. Cellular licensees must support analog service until February 2008.

In 1995, the FCC allocated and subsequently issued licenses for additional spectrum for the provision of Personal Communications Services (''PCS''), a category of services that includes mobile wireless telephone services comparable to those offered by cellular licensees. These licenses are in the 1.8 GHz range of the radio spectrum and are divided into six blocks. A, B, and C, which consist of 30 MHz each; and D, E, and F, which consist of 10 MHz each. Geographically, the A and B-block 30 MHz licenses are issued by Major Trading Areas (''MTAs''), and C, D, E, and F-block licenses are issued by Basic Trading Areas (''BTAs''), several of which comprise each MTA. MTAs and BTAs do not generally correspond to MSAs and RSAs. With the introduction of the PCS license, both cellular and PCS licensees began offering digital services, thereby increasing capacity, shrinking handsets, and extending battery life. Unlike the cellular licensees, PCS licensees are not required to provide support for analog or any other technology standard. In 1996, one provider, a specialized mobile radio (''SMR'' or ''dispatch'') spectrum licensee, began to use its SMR spectrum of offer mobile wireless telephone services comparable to those offered by other mobile wireless services providers, in conjunction with its dispatch, or ''push-to-talk,'' service.

Today, more than 90 percent of all mobile wireless services customers have digital service, and nearly all mobile wireless voice service has migrated to second-generation or ''2G'' digital technologies: TDMA (time division multiple access), GSM (Global Standard for Mobile, a type of TDMA standard used by all carriers in Europe), and CDMA (code division multiple access). Mobile wireless services providers have chosen to build their networks on these incompatible technologies and most have chosen CDMA or GSM, with TDMA having been orphaned by equipment vendors. (The SMR providers use a fourth incompatible technological standard better suited to the spectrum they own, and, as SMR licensees, they have no obligation to support a specific technology standard.) Even more advanced technologies (''2.5G'') have begun to be deployed for voice and data (e.g., IxRIT (a/k/a CDMA 2000), GPRS (General Packet Radio Service), and EDGE (Enhanced Data for GSM Evolution)). The data transmission speeds of these technologies vary. For example, 1xRTT provides average user speeds of 70 kilobits per second (''kbps''), and GPRS and EDGE provide average user speeds of 20 to 40 kbps and 80 to 110 kbps, respectively.

Currently, the U.S. mobile wireless services industry is taking the next evolutionary step in wireless technology to third-generation or ''3G'' technologies (e.g., for GSM, UMTS (Universal Mobile Telecommunications System) and for CDMA, Ev–DO/DV (Evolution Data Only/Date Voice)) that provide for more capacity and higher data throughout. All of the national mobile wireless services providers and some of the regional providers are considering how and where they will deploy 3G services across their networks. Some providers have already deployed this service in some areas of the country.

C. The Competitive Effects of the Transaction on Mobile Wireless Telecommunications Services and Mobile Wireless Broadband Services

Cingular's proposed acquisition of AT&T Wireless will substantially lessen competition in mobile wireless telecommunications services and mobile wireless broadband services in the relevant geographic areas. Mobile wireless telecommunications services include both voice and data services provided over a radio network and allow customers to maintain their telephone calls or data sessions without wires, such as when traveling. Mobile wireless broadband services offer data speeds four to six times faster than the 2G and 2.5G data offerings currently provided by the mobile wireless services providers. Mobile wireless broadband services, which are now being launched using various 3G technologies, offer average data speeds of 200 to 300 kbps, peaking at 2 megabits per second or higher. These speeds rival wireline broadband services at peak speeds. At average speeds, they are comparable to low-end wireline high-speed data offerings and can support bandwidth-intensive services including video conferencing, video streaming, downloading of music and video files, and voice over Internet protocol (''VoIP'') calling, none of which can be used reliably at slower speeds. Fixed wireless services and other wireless services that have a limited range (e.g., Wi-Fi) do not offer a viable alternative to either mobile wireless telecommunications services or mobile wireless broadband services primarily because customers using these services cannot maintain a call or data session while moving from one location to another.

Most customers use mobile wireless services in close proximity to their workplaces and homes. Thus, customers purchasing mobile wireless telecommunications services and mobile wireless broadband services choose among mobile wireless services providers that offer services where they are located and travel on a regular basis: home, work, other areas they commonly visit, and areas in between. The number and identity of mobile wireless services providers varies from geographic area to geographic area, along with the quality of their services and the breadth of their geographic coverage, all of which are significant factors in customers' purchasing decisions. Mobile wireless services providers can and do offer different promotions, discounts, calling plans, and equipment subsidies in different geographic areas, effectively varying the actual price for customers by geographic area.

The relevant geographic markets for mobile wireless services are, therefore, local in nature and are generally centered around a metropolitan area or a population center and its environs. The FCC has licensed a limited number of mobile wireless services providers in these and other geographical areas based upon the availability of radio spectrum. These FCC spectrum licensing areas often represent the core of the business and social sphere where customers face the same competitive choices for mobile wireless services. Although not all FCC spectrum licensing areas are relevant geographic areas for the purpose of analyzing the antitrust impact of this transaction, the FCC spectrum licensing areas that encompass the 13 geographic areas of concern in this transaction are where consumers in these communities principally use their mobile wireless services. As described in the Complaint, the relevant geographic markets where the transactions will substantially lessen competition for mobile wireless telecommunications services are represented by the following FCC spectrum licensing areas: Oklahoma City, Oklahoma (CMA 045), Topeka, Kansas (CMA 179), Pittsfield, Massachusetts (CMA 213), Athens, Georgia (CMA 234), St. Joseph, Missouri (CMA 275), Connecticut RSA–1 (CMA 357), Kentucky RSA–1 (CMA 443), Oklahoma RSA–3 (CMA 598), Texas RSA–11 (CMA 662), and Shreveport, Louisiana (BTA 419). The relevant geographic markets where the transaction will substantially lessen competition for mobile wireless broadband services are represented by the following FCC spectrum licensing

areas: Dallas-Fort Worth, Texas (CMA 009), Detroit, Michigan (BTA 112), and Knoxville, Tennessee (BTA 232).

The 10 geographic markets of concern for mobile wireless telecommunications services were identified by a fact-specific, market-by-market analysis that included consideration of, but was not limited to, the following factors: the number of mobile wireless services providers and their competitive strengths and weaknesses, Cingular's and AT&T Wireless's market shares along with those of the other providers, whether additional spectrum is or is likely soon to be available, whether any providers are limited by insufficient spectrum or other factors in their ability to add new customers or launch additional services, the population of a market as it affects the need for spectrum to serve the population, the concentration of the market, and the breadth and depth of coverage by different providers in each market.

Cingular and AT&T Wireless both own all or part of businesses that offer mobile wireless telecommunications services in the 10 relevant geographic areas. In five of these areas (Athens, Georgia; Topeka, Kansas; Pittsfield, Massachusetts; St. Joseph, Missouri; and Shreveport, Louisiana), Cingular or AT&T Wireless also owns minority equity interests in another mobile wireless telecommunications services provider that would be a significant competitor to the merged firm for these services. The minority equity interests range from approximately 9 to 24 percent. Based upon these significant minority equity interests and the specific facts of the relationships, it was appropriate to attribute the shares and assets of the mobile wireless services businesses partially owned by Cingular or AT&T Wireless in these markets to either Cingular or AT&T Wireless, thus increasing the percentage of customers served by the merged firm.

The individual market shares of Cingular's and AT&T Wireless's mobile wireless telecommunications services businesses in the 10 relevant geographic markets as measures in terms of subscribers range from 9 to more than 71 percent, and their combined market shares range from 61 to nearly 90 percent. In each relevant geographic market, Cingular or AT&T Wireless has the largest market share, and, in all but one, the other is the second-largest mobile wireless telecommunications services provider. In all but one of the relevant geographic markets, Cingular and AT&T Wireless are the original cellular licensees and, as a result, have the network infrastructures with the greatest depth and breadth of coverage. Cingular and AT&T Wireless are likely closer substitutes for each other than the other mobile wireless telecommunications services providers in the relevant geographic markets. Additionally in these markets, there will be insufficient remaining competitors post-merger with the ability to compete effectively to defeat a small, but significant price increase by the merged firm.

The relevant geographic markets for mobile wireless telecommunications services are highly concentrated. As measured by the Herfindahl-Hirschman index (''HHI''), which is commonly employed in merger analysis and is defined and explained in Appendix A to the Compliant, concentration in these markets ranges from approximately 2600 to more than 5300, which is well above the 1800 threshold at which the Department considers a market to be highly concentrated. After Cingular's proposed acquisition of AT&T Wireless is consummated, the HHIs in the relevant geographic markets will range from approximately 4400 to more than 8000, with increases in the HHI as a result of the merger ranging from approximately 1100 to more than 3500.

Competition between Cingular and AT&T Wireless in the relevant geographic markets has resulted in lower prices and higher quality in mobile wireless telecommunications services than would otherwise have existed in these geographic markets. If Cingular's proposed acquisition of AT&T Wireless is consummated, the relevant geographic markets for mobile wireless telecommunications services will become substantially more concentrated, and the competition between Cingular and AT&T Wireless in mobile wireless telecommunications services will be eliminated in these markets. As a result, the loss of competition between Cingular and AT&T Wireless increases the likelihood of unilateral actions by the merged firm in the relevant geographic markets to increase prices, diminish the quality or quantity of services provided, refrain from or delay making investments in network improvements, and refrain from or delay launching new services.

In the relevant geographic markets for mobile wireless broadband services, Cingular and AT&T Wireless have either launched or are likely soon to launch mobile wireless broadband services. Each has the spectrum necessary to offer mobile wireless broadband services and has business plans to offer these services in these markets. Not all mobile wireless services providers have sufficient spectrum to launch mobile wireless broadband services in these markets, nor do they all have business plans to do so in the near future. In the relevant geographic markets, the current number of mobile wireless services providers that are likely to launch mobile wireless broadband services in the foreseeable future is limited. Because mobile wireless broadband services are nascent, however, HHIs are uninformative.

The competition between Cingular and AT&T Wireless has motivated their efforts to develop and launch mobile wireless broadband services in the relevant geographic markets. If Cingular's proposed acquisition of AT&T Wireless is consummated, the relevant geographic markets will lose one of only a few existing and likely mobile wireless broadband services providers. As a result, the loss of competition between Cingular and AT&T Wireless increases the likelihood of unilateral actions by the merged firm in these relevant geographic markets to increase prices, diminish the quality or quantity of services provided, and refrain from or delay the launch of mobile wireless broadband services.

Entry by a new mobile wireless services provider in the relevant geographic markets would be difficult, time-consuming, and expensive, requiring the acquisition of spectrum licenses and the build-out of a network. Therefore, new entry in response to a small but significant price increase for mobile wireless telecommunications services or mobile wireless broadband services by the merged firm in the relevant geographic markets would not be timely, likely, or sufficient to thwart the competitive harm that would result from Cingular's proposed acquisition of AT&T Wireless.

For these reasons, plaintiffs concluded that Cingular's proposed acquisition of AT&T Wireless will likely substantially lessen competition, in violation of Section 7 of the Clayton Act, in the provision of mobile wireless telecommunications services and mobile wireless broadband services in the relevant geographic markets.

III. Explanation of the Proposed Final Judgment

The divestiture requirements of the proposed Final Judgment will eliminate the anticompetitive effects of the acquisition in mobile wireless telecommunications services and mobile wireless broadband services in the 13 geographic markets of concern. The proposed Final Judgment requires defendants, within 120 days after the filing of the Complaint, or five days after notice of the entry of the Final Judgment by the Court, whichever is later, to

divest the Wireless Business Divestiture Assets, the Minority Interests, and Spectrum Divestiture Assets (collectively, ''Divestiture Assets''). The Wireless Business Divestiture Assets are essentially AT&T Wireless's entire mobile wireless business in the five markets where Cingular and AT&T Wireless both currently own and control providers of mobile wireless telecommunications services. These assets must be divested in such a way as to satisfy plaintiff United States in its sole discretion upon consultation with any relevant plaintiff state that they will be operated by the purchaser as a viable, ongoing business that can compete effectively in the relevant market. Defendants must take all reasonable steps necessary to accomplish the divestitures quickly and shall cooperate with prospective purchasers.

With respect to the Wireless Business Divestiture Assets, in some markets the merged firm may retain some of AT&T Wireless's wireless spectrum (Connecticut RSA–1, Kentucky RSA–1, and Texas RSA–11). The spectrum that must be divested is adequate to support the operation and expansion of the mobile wireless services business being divested, and allowing the merged firm to retain some of AT&T Wireless's spectrum may benefit consumers by allowing the merged firm to provide improved or new services.

In the five markets where either Cingular or AT&T Wireless owns a minority interest in another mobile wireless services provider, the proposed Final Judgment requires defendants to divest these Minority Interests. The proposed Final Judgment allows defendants to retain the Minority Interests in the Missouri, Kansas, and Louisiana areas with the approval of plaintiff United States in its sole discretion if they demonstrate that the retained minority interest will become irrevocably and entirely passive so long as the merged firm owns the interest and will not significantly diminish competition. The size of the minority interests and market concentrations in the Georgia and Massachusetts markets created concerns that allowing the merged firm to continue to hold even a passive interest would diminish competition, and defendants are required to divest fully their interests in those markets.

The Spectrum Divestiture Assets consist of 10 MHz of contiguous PCS spectrum in three markets and must be divested in such a way as to remedy the competitive harm from the transaction in the relevant mobile wireless broadband services markets. The availability of this spectrum will make it more likely that another mobile wireless services provider could offer high-speed data services in these areas. In Knoxville, Tennessee, the merged firm can alternatively restructure its relationship with another spectrum licensee in the market so that the merged firm no longer has an effective controlling interest in the licensee and that the licensee's spectrum will be used by it in a manner that resolves the competitive concerns identified in the Complaint, which is effectively the same as if the merged firm were to divest the required amount of spectrum.

A. Timing of Divestitures

In antitrust cases involving mergers or joint ventures in which plaintiff United States seeks a divestiture remedy, it requires completion of the divestitures within the shortest time period reasonable under the circumstances. The proposed Final Judgment in this case requires, in Section IV.A, divestiture of the Divestiture Assets, within 120 days after the filing of the Complaint, or five days after notice of the entry of the Final Judgment by the Court, whichever is later. Plaintiff United States in its sole discretion upon consultation with any relevant plaintiff state may extend the date for divestiture of the Divestiture Assets by up to 60 days. Because the FCC's approval is required for the transfer of the wireless licenses to a purchaser, Section IV.A provides that if applications for transfer of a wireless license have been filed with the FCC, but the FCC has not acted dispositively before the end of the required divestiture period, the period for divestiture of those assets shall be extended until five days after the FCC has acted. This extension is to be applied only to the individual Divestiture Assets affected by the delay in approval of the license transfer and does not entitle defendants to delay the divestiture of any other Divestiture Assets for which license transfer approval has been granted.

The divestiture timing provisions of the proposed Final Judgment will ensure that the divestitures are carried out in a timely manner, and at the same time will permit defendants an adequate opportunity to accomplish the divestitures through a fair and orderly process. Even if all Divestiture Assets have not been divested upon consummation of the transaction, there should be no adverse impact on competition given the limited duration of the period of common ownership and the detailed requirements of the Preservation of Assets Stipulation and Order.

B. Use of a Management Trustee

The Preservation of Assets Stipulation and Order, entered by the Court on October 26, 2004, ensures, prior to divestiture, that the Divestiture Assets are maintained and the Wireless Business Divestiture Assets remain an ongoing business concern and that the other Divestiture Assets remain economically viable. The Divestiture Assets will remain preserved, independent and uninfluenced by defendants, so that competition is maintained during the pendency of the ordered divestiture.

The Preservation of Assets Stipulation and Order appoints a management trustee selected by plaintiff United States upon consultation with plaintiff states to oversee the Divestiture Assets in the relevant geographic markets. The appointment of a management trustee in this unique situation is required because the Divestiture Assets are not independent facilities that can be held separate and operated as standalone units by the merged firm. Rather, the Wireless Business Divestiture Assets are an integral part of a nationwide network, and to maintain their competitive viability and economic value, they should remain part of that network during the divestiture period. To ensure that these assets are preserved and supported by defendants during this period, yet run independently, a management trustee is necessary to oversee the continuing relationship between defendants and these assets. The management trustee will have the power to operate the Wireless Business Divestiture Assets in the ordinary course of business, so that they will remain preserved, independent, and uninfluenced by defendants, and an ongoing and economically viable competitor to defendants and to other mobile wireless services providers. The management trustee will preserve the confidentiality of competitively sensitive marketing, pricing, and sales information; insure defendants' compliance with the Preservation of Assets Stipulation and Order and the proposed Final Judgment; and maximize the value of the Divestiture Assets so as to permit expeditious divestiture in a manner consistent with the proposed Final Judgment.

The Preservation of Assets Stipulation and Order provides that defendants will pay all costs and expenses of the management trustee, including the cost of consultants, accountants, attorneys, and other representatives and assistants hired by the management trustee as are reasonably necessary to carry out his or her duties and responsibilities. After his

or her appointment becomes effective, the management trustee will file monthly reports with plaintiffs setting forth the efforts to accomplish the goals of the Preservation of Assets Stipulation and Order and the proposed Final Judgment and the extent to which defendants are fulfilling their responsibilities. Finally, the management trustee may become the divestiture trustee, pursuant to the provisions of Section V of the proposed Final Judgment.

C. Use of a Divestiture Trustee

In the event that defendants do not accomplish the divestiture within the periods prescribed in the proposed Final Judgment, the Final Judgment provides that the Court will appoint a trustee selected by plaintiff United States upon consultation with any relevant plaintiff state to effect the divestitures. As part of this divestiture, defendants must relinquish any direct or indirect financial ownership interests and any direct or indirect role in management or participation in control. Pursuant to Section V of the proposed Final Judgment, the divestiture trustee will own and control the systems until they are sold to a final purchaser, subject to safeguards to prevent defendants from influencing their operation.

Section V details the requirements for the establishment of the divestiture trust, the selection and compensation of the divestiture trustee, the responsibilities of the divestiture trustee in connection with the divestiture and operation of the Divestiture Assets, and the termination of the divestiture trust. The divestiture trustee will have the obligation and the sole responsibility, under Section V.D, for the divestiture of any transferred Divestiture Assets. The divestiture trustee has the authority to accomplish divestitures at the earliest possible time and ''at the best price then obtainable upon a reasonable effort by the trustee.'' In addition, to insure that the divestiture trustee can promptly locate and divest to an acceptable purchaser, plaintiff United States, in its sole discretion upon consultation with any relevant plaintiff state, may require defendants to include additional assets, or allow defendants to substitute substantially similar assets, which substantially relate to the Wireless Business Divestiture Assets to be divested by the divestiture trustee.

The divestiture trustee will not only have responsibility for sale of the Divestiture Assets, but will also be the authorized holder of the wireless licenses, with full responsibility for the operations, marketing, and sales of the wireless businesses to be divested, and will not be subject to any control or direction by defendants. Defendants will no longer have any role in the ownership, operation, or management of the Divestiture Assets following consummation of the transaction, as provided by Section V, other than the right to receive the proceeds of the sale, and certain obligations to provide support to the Divestiture Assets, and cooperate with the divestiture trustee in order to complete the divestiture, as indicated in Section VI.L and in the Preservation of Assets Stipulation and Order.

The proposed Final Judgment provides that defendants will pay all costs and expenses of the divestiture trustee. The divestiture trustee's commission will be structured, under Section V.G of the proposed Final Judgment, so as to provide an incentive for the divestiture trustee based on the price obtained and the speed with which the divestitures are accomplished. After his or her appointment becomes effective, the divestiture trustee will file monthly reports with the Court and plaintiffs setting forth his or her efforts to accomplish the divestitures. Section V.J requires the divestiture trustee to divest the Divestiture Assets to an acceptable purchaser or purchasers no later than six months after the assets are transferred to the divestiture trustee. At the end of six months, if all divestitures have not been accomplished, the trustee, plaintiff United States, and any relevant plaintiff state will make recommendations to the Court, which shall enter such orders as appropriate in order to carry out the purpose of the trust, including extending the trust or term of the trustee's appointment.

The divestiture provisions of the proposed Final Judgment will eliminate the anticompetitive effects of the transaction in the provision of mobile wireless telecommunications services and mobile wireless broadband services. The divestitures of the Wireless Business Divestiture Assets and the Minority Interests will preserve competition in mobile wireless telecommunications services by maintaining an independent and economically viable competitor in the relevant geographic markets. The divestiture of the Spectrum Divestiture Assets will preserve competition in mobile wireless broadband services by making assets available to establish a new, independent, and economically viable competitor.

IV. Remedies Available to Potential Private Litigants

Section 4 of the Clayton Act, 15 U.S.C. 15, provides that any person who has been injured as a result of conduct prohibited by the antitrust laws may bring suit in federal court to recover three times the damages the person has suffered, as well as costs and reasonable attorneys' fees. Entry of the proposed Final Judgment will neither impair nor assist the bringing of any private antitrust damage action. Under the provisions of Section 5(a) of the Clayton Act, 15 U.S.C. 16(a), the proposed Final Judgment has no prima facie effect in any subsequent private lawsuit that may be brought against defendants.

V. Procedures Available for Modification of the Proposed Final Judgment

Plaintiffs and defendants have stipulated that the proposed Final Judgment may be entered by a Court after compliance with the provisions of the APPA, provided that plaintiffs have not withdrawn their consent. The APPA conditions entry upon the Court's determination that the proposed Final Judgment is in the public interest.

The APPA provides a period of at least sixty (60) days preceding the effective date of the proposed Final Judgment within which any person may submit to plaintiff United States written comments regarding the proposed Final Judgment. Any person who wishes to comment should do so within sixty (60) days of the date of publication of this Competitive Impact Statement in the **Federal Register**. All comments received during this period will be considered by the Department of Justice, which remains free to withdraw its consent to the proposed Final Judgment at any time prior to the Court's entry of judgment. The comments and the response of plaintiff United States will be filed with the Court and published in the **Federal Register**.

Written comments should be submitted to: Nancy M. Goodman, Chief, Telecommunications and Media Enforcement Section, Antitrust Division, U.S. Department of Justice, 1401 H Street, NW., Suite 8000, Washington, DC 20530. The proposed Final Judgment provides that the Court retains jurisdiction over this action, and the parties may apply to the Court for any order necessary or appropriate for the modification, interpretation, or enforcement of the Final Judgment.

VI. Alternatives to the Proposed Final Judgment

Plaintiff United States considered, as an alternative to the proposed Final

Judgment, a full trail on the merits against defendants. Plaintiff United States could have continued the litigation and sought preliminary and permanent injunctions against Cingular's acquisition of AT&T Wireless. Plaintiff United States is satisfied, however, that the divestiture of assets and other relief described in the proposed Final Judgment will preserve competition for the provision of mobile wireless telecommunications services and mobile wireless broadband services in the relevant markets identified in the Complaint.

VII. Standard of Review Under the APPA for the Proposed Final Judgment

The APPA requires that proposed consent judgments in antitrust cases brought by the United States be subject to a sixty-day comment period, after which the Court shall determine whether entry of the proposed Final Judgment ''is in the public interest.'' 15 U.S.C. 16(e)(1). In making that determination, the Court shall consider:

(A) The competitive impact of such judgment, including termination of alleged violations, provisions for enforcement and modification, duration or relief sought, anticipated effects of alternative remedies actually considered, whether its terms are ambiguous, any other competitive considerations bearing upon the adequacy of such judgment that the court deems necessary to a determination of whether the consent judgment is in the public interest; and

(B) The impact of entry of such judgment upon competition in the relevant market or markets, upon the public generally and individuals alleging specific injury from the violations set forth in the complaint including consideration of the public benefit, if any, to be derived from a determination of the issues at trial.

15 U.S.C. 16(e)(1)(A) & (B). As the United States Court of Appeals for the District of Columbia Circuit has held, the APPA permits a court to consider, among other things, the relationship between the remedy secured and the specific allegations set forth in the government's compliant, whether the consent judgment is sufficiently clear, whether enforcement mechanisms are sufficient, and whether the consent judgment may positively harm third parties. *See United States* v. *Microsoft Corp.,* 56 F.3d 1448, 1458–62 (D.C. Cir. 1995).

''Nothing in this section shall be construed to require the court to conduct an evidentiary hearing or to require the court to permit anyone to intervene.'' 15 U.S.C. 16(e)(2). Thus, in conducting this inquiry, ''[t]he court is nowhere compelled to go to trial or to engage in extended proceedings which might have the effect of vitiating the benefits of prompt and less costly settlement through the consent decree process.'' 119 Cong. Rec. 24,598 (1973) (statement of Senator Tunney).[1] Rather:

[a]bsent a showing of corrupt failure of the government to discharge its duty, the Court, in making its public interest finding, should * * * carefully consider the explanations of the government in the competitive impact statement and its responses to comments in order to determine whether those explanations are reasonable under the circumstances.

United States v. *Mid-America Dairymen, Inc.*, 1977–1 Trade Cas. (CCH) ¶61,508, at 71,980 (W.D. Mo. 1977).

Accordingly, with respect to the adequacy of the relief secured by the proposed Final Judgment, a court may not ''engage in an unrestricted evaluation of what relief would best serve the public.'' *United States* v. *BNS Inc.*, 858 F.2d 456, 462 (9th Cir. 1988) (citing *United States* v. *Bechtel Corp.*, 648 F.2d 660, 666 (9th Cir. 1981)); *see also Microsoft*, 56 F.3d at 1460–62. Courts have held that:

[t]he balancing of competing social and political interest affected by a proposed antitrust consent decree must be left, in the first instance, to the discretion of the Attorney General. The court's role in protecting the public interest is one of insuring that the government has not breached its duty to the public in consenting to the decree. The court is required to determine not whether a particular decree is the one that will best serve society, but whether the settlement is ''*within the reaches of the public interest.*'' More elaborate requirements might undermine the effectiveness of antitrust enforcement by consent decree.

Bechtel, 648 F.2d at 666 (emphasis added) (citations omitted).[2]

The proposed Final Judgment, therefore, should not be reviewed under a standard of whether it is certain to eliminate every anticompetitive effect of a particular practice or whether it mandates certainty of free competition in the future. Court approval of a final judgment requires a standard more flexible and less strict than the standard required for a finding of liability. ''[A] proposed decree must be approved even if it falls short of the remedy the court would impose on its own, as long as it falls within the range of acceptability or is 'within the reaches of public interest.' '' *United States* v. *AT&T Corp.*, 552 F. Supp. 131, 151 (D.D.C. 1982) (citations omitted) (quoting *Gillette*, 406 F. Supp. at 716), *aff'd sub nom. Maryland* v. *United States*, 460 U.S. 1001 (1983); *see also United States* v. *Alcan Aluminum Ltd.*, 605 F. supp. 619, 622 (W.D. Ky. 1985) (approving the consent judgment even though the court would have imposed a greater remedy).

Moreover, the Court's role under the APPA is limited to reviewing the remedy in relationship to the violations that the United States has alleged in its Complaint, and does not authorize the Court to ''construct [its] own hypothetical case and then evaluate the decree against that case.'' *Microsoft*, 56 F.3d at 1459. Because the ''court's authority to review the decree depends entirely on the government's exercising its prosecutorial discretion by bringing a case in the first place,'' it follows that ''the court is only authorized to review the decree itself,'' and not to ''effectively redraft the complaint'' to inquire into other matters that the United States did not pursue. *Id.* at 1459–60.

VIII. Determinative Documents

There are no determinative materials or documents within the meaning of the APPA that were considered by plaintiff United States in formulating the proposed Final Judgment.

Dated: October 29, 2004.

Respectfully submitted,

[1] *See United States* v. *Gillette Co.*, 406 F. Supp. 713, 716 (D. Mass. 1975) (recognizing it was not the court's duty to settle; rather, the court must only answer ''whether the settlement achieved [was] within the reaches of the public interest''). A ''public interest'' determination can be made properly on the basis of the Competitive Impact Statement and Response to Comments field by the Department of Justice pursuant to the APPA. Although the APPA authorizes the use of additional procedures, 15 U.S.C. 16(f), those procedures are discretionary. A court need not invoke any of them unless it believes that the comments have raised significant issues and that further proceedings would aid the court in resolving those issues. *See* H.R. Rep. No. 93–1463, 93d Cong., 2d Sess. 8–9 (1974), *reprinted* in 1974 U.S.C.C.A.N. 6535, 6538–39.

[2] *Cf. BNS*, 858 F.2d at 464 (holding that the court's ''ultimate authority under the [APPA] is limited to approving or disapproving the consent decree''); *Gillette*, 406 F. Supp. at 716 (noting that, in this way, the court is constrained to ''look at the overall picture not hypercritically, nor with a microscope, but with an artist's reducing glass''); *see generally Microsoft*, 56 F.3d at 1461 (discussing whether ''the remedies [obtained in the decree are] so inconsonant with the allegations charged as to fall outside of the 'reaches of the public interest' '').

In the United States District Court for the District of Columbia

United States of America, State of Connecticut and State of Texas, Plaintiffs, v. Cingular Wireless Corporation, SBC Communications Inc., BellSouth Corporation and AT&T Wireless Services, Inc., Defendants; Final Judgment

Civil No.: 1:04CV01850 (RBW)
Filed: November 3, 2004

Whereas, plaintiffs, United States of America, and the states of Connecticut and Texas (''plaintiff states''), filed their Complaint on October 25, 2004, plaintiffs and defendants, Cingular Wireless Corporation, SBC Communications Inc., BellSouth Corporation and AT&T Wireless Services, Inc. (''AT&T Wireless''), by their respective attorneys, have consented to the entry of this Final Judgment without trial or adjudication of any issue of fact or law, and without this Final Judgment constituting any evidence against or admission by any party regarding any issue of fact or law;

And Whereas, defendants agree to be bound by the provisions of this Final Judgment pending its approval by the Court;

And Whereas, the essence of this Final Judgment is the prompt and certain divestiture of certain rights or assets by the defendants to assure that competition is not substantially lessened;

And Whereas, plaintiffs require defendants to make certain divestitures for the purpose of remedying the loss of competition alleged in the Complaint;

And Whereas, defendants have represented to plaintiffs that the divestitures required below can and will be made and that defendants will later raise no claim of hardship or difficulty as grounds for asking the Court to modify any of the divestiture provisions contained below;

Now Therefore, before any testimony is taken, without trial or adjudication of any issue of fact or law, and upon consent of the parties, it is *ordered, adjudged and decreed:*

I. Jurisdiction

This Court has jurisdiction over the subject matter of and each of the parties to this action. The Complaint states a claim upon which relief may be granted against defendants under Section 7 of the Clayton Act, 15 U.S.C. 18.

II. Definitions

As used in this Final Judgment:

A. ''Acquirer'' or ''Acquirers'' means the entity or entities to whom defendants divest the Divestiture Assets.

B. ''AT&T Wireless'' means defendant AT&T Wireless Services, Inc., a Delaware corporation with headquarters in Redmond, Washington, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

C. ''BellSouth'' means defendant BellSouth Corporation, a Georgia corporation with headquarters in Atlanta, Georgia, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

D. ''Cingular'' means defendant Cingular Wireless Corporation, a Delaware corporation with headquarters in Atlanta, Georgia, and Cingular Wireless LLC, a Delaware limited liability company formed as a joint venture between SBC and BellSouth, with headquarters in Atlanta, Georgia, their successors and assigns, and their subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

E. ''Divestiture Assets'' means Wireless Business Divestiture Assets, Spectrum License Divestiture Assets, and Minority Interests, including any direct or indirect financial ownership or leasehold interests and any direct or indirect role in management or participation in control therein.

F. ''Minority Interests'' means the equity interests owned by any defendant in the following entities that are the licensees or operators of mobile wireless services businesses in the specified Metropolitan Statistical Areas (''MSAs'') and Rural Statistical Areas (''RSAs'') (collectively, Cellular Marketing Areas (''CMAs'')) used to define cellular license areas by the Federal Communications Commission (''FCC''):

(1) Alltel Communications of North Louisiana Cellular Limited Partnership, covering the Shreveport, Louisiana MSA (CMA 100), Monroe, Louisiana MSA (CMA 219), Louisiana RSA–1 (CMA 454), Louisiana RSA–2 (CMA 455) and Louisnana RSA–3 (CMA 456);

(2) Athens Cellular Inc., covering the Athens, Georgia MSA (CMA 234);

(3) CellTelCo, covering the St. Joseph, Missouri MSA (CMA 275);

(4) Pittsfield Cellular Telephone Co., covering the Pittsfield, Massachusetts MSA (CMA 213); and

(5) Topeka Cellular Telephone Co., Inc., covering the Topeka, Kansas MSA (CMA 179).

As an alternative to the divestiture of the Alltel Communications of North Louisiana Cellular Limited Partnership, CellTelCo, and Topeka Cellular Telephone Co., Inc. Minority Interests as required by Section IV of this Final Judgment, defendants may request, at least 20 days prior to consummation of the Transaction, approval from plaintiff United States to retain such interests. Plaintiff United States in its sole discretion may approve this request if it is demonstrated that the retained minority interest will become irrevocably and entirely passive, so long as defendants own the minority interests, and will not significantly diminish competition.

G. ''Multi-line Business Customer'' means a corporate or business customer that contracts with AT&T Wireless for mobile wireless services to provide multiple telephones to its employees or members whose services are provided pursuant to a contract with a corporate or business customer.

H. ''SBC'' means defendant SBC Communications Inc., a Delaware corporation with headquarters in San

Antonio, Texas, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

I. ''Skagit'' means Skagit Wireless LLC, an Oregon corporation with headquarters in Portland, Oregon, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

J. ''Spectrum License Divestiture Assets'' means a license for 10 MHz of contiguous PCS spectrum in the specified MSAs and Basic Trading Areas (''BTAs'') used to define cellular and PCS license areas by the FCC:

(1) The Dallas-Fort Worth, Texas MSA (CMA 009);

(2) The Detroit, Michigan BTA (BTA 112), provided that the license to be transferred does not have to include any PCS spectrum in Monroe and Sanilac counties; and

(3) The Knoxville, Tennessee BTA (BTA 232), provided that as an alternative to the divestiture of a license for 10 MHz of contiguous PCS spectrum as required by Section IV of this Final Judgment, defendants, with the approval of plaintiff United States in its sole discretion, can restructure AT&T Wireless's existing relationship with Skagit such that (i) defendants have no equity or leasehold interest in, hold no debt of, and have no managerial or operational interest in Skagit's PCS license in the Knoxville Tennessee BTA, and (ii) Skagit's PCS license in the Knoxville Tennessee BTA is contractually committed to be used in a manner that resolve the competitive concerns alleged by plaintiffs in the Complaint.

K. ''Transaction'' means the Agreement and Plan of Merger By and Among AT&T Wireless Services, Inc., Cingular Wireless Corporation, Cingular Wireless LLC, Links I Corporation, SBC Communications Inc., and BellSouth Corporation, dated February 17, 2004.

L. ''Wireless Business Divestiture Assets'' means, for each mobile wireless business to be divested under this Final Judgment, all types of assets, tangible and intangible, used by defendants in the operation of the mobile wireless businesses to be divested (including the provision of long distance telecommunications services for wireless calls). ''Wireless Business Divestiture Assets'' shall be construed broadly to accomplish the complete divestitures of the entire business of AT&T Wireless in each of the following MSA and RSA license areas as required by this Final Judgment and to ensure that the divested mobile wireless businesses remain viable, ongoing businesses:

(a) Oklahoma City, Oklahoma MSA (CMA 045);

(b) Connecticut RSA–1 (CMA 357), provided that defendants may retain 10 MHz of AT&T Wireless's PCS spectrum, provided that 10 MHz of contiguous PCS spectrum throughout the RSA is divested to an Acquirer;

(c) Kentucky RSA–1 (CMA 443), provided that defendants may retain 15 MHz of AT&T Wireless's PCS spectrum in Fulton county and 10 MHz of AT&T Wireless's PCS spectrum in the other counties contained within the RSA, provided that 30 MHz of contiguous PCS spectrum in Fulton county and 20 MHz of contiguous PCS spectrum in the other counties contained in the RSA is divested to an Acquirer;

(d) Oklahoma RSA–3 (CMA 598); and

(e) Texas RSA–11 (CMA 662), provided that defendants may retain 25 MHz of AT&T Wireless's PCS spectrum in Sabine county, and 20 MHz of AT&T Wireless's PCS spectrum in Angelina, Nacogdoches, and San Augustine counties, provided that 10 MHz of contiguous PCS spectrum throughout the RSA is divested to an Acquirer.

Wireless Business Divestiture Assets shall include, without limitation, all types of real and personal property, monies and financial instruments, equipment, inventory, office furniture, fixed assets and furnishings, supplies and materials, contracts, agreements, leases, commitments, spectrum licenses issued by the FCC and all other licenses, permits and authorizations, operational support systems, cell sites, network infrastructure, switches, customer support and billing systems, interfaces with other service providers, business and customer records and information, customer contracts, customer lists, credit records, accounts, and historic and current business plans which relate primarily to the wireless business being divested, as well as any patents, licenses, sub-licenses, trade secrets, know-how, drawings, blueprints, designs, technical and quality specifications and protocols, quality assurance and control procedures, manuals and other technical information defendants supply to their own employees, customers, suppliers, agents, or licensees, and trademarks, trade names and service marks or other intellectual property, including all intellectual property rights under third-party licenses that are capable of being transferred to an Acquirer either in their entirety, for assets described in (1) below, or through a license obtained through or from the divesting defendant, for assets described in (2) below; provided that defendants shall only be required to divest Multi-line business Customer contracts, if 50 percent or more of the Multi-line Business Customer's subscribers reside or work within any of the five (5) license areas described herein, and further, any subscribers who obtain mobile wireless services through any such contract retained by defendants and who are located within the five (5) geographic areas identified above, shall be given the option to terminate their relationship with defendants, without financial cost, within one year of the closing of the Transaction. Defendants shall provide written notice to these subscribers within 45 days after the closing of the Transaction.

These divestitures of the Wireless Business Divestiture Assets shall be accomplished by:

(1) Transferring to the Acquirers the complete ownership and/or other rights to the assets (other than those assets used substantially in the operations of AT&T Wireless's overall wireless business which must be retained to continue the existing operations of the wireless properties that defendants are not required to divest, and that either are not capable of being divided between the divested wireless businesses and those not divested, or are assets that the defendants and the Acquirer(s) agree, subject to approval of plaintiff United States upon consultation with any relevant plaintiff state, shall not be divided); and

(2) Granting to the Acquirer(s) an option to obtain a non-exclusive, transferable license from defendants for a reasonable period, subject to approval of plaintiff United States upon consultation with any relevant plaintiff state, at the election of an Acquirer to use any of AT&T Wireless's retained assets under paragraph (1) above, used in the operation of the wireless business being divested, so as to enable the Acquirer to continue to operate the divested wireless business without impairment. Defendants shall identify in a schedule submitted to plaintiffs and filed with the Court, as expeditiously as possible following the filing of the Complaint and in any event prior to any divestitures and before the approval by the Court of this Final Judgment, any intellectual property rights under third-party licenses that are used by the wireless businesses being divested but that defendants could not transfer to an Acquirer entirely or by license without third-party consent, and the specific reasons why such consent is necessary and how such consent would be obtained for each asset.

III. Applicability

A. This Final Judgment applies to defendants Cingular, SBC, BellSouth and AT&T Wireless, as defined above, and all other persons in active concert or participation with any of them who receive actual notice of this Final Judgment by personal service or otherwise.

B. Defendants shall require, as a condition of the sale or other disposition of all or substantially all of their assets or of lesser business units that include the Divestiture Assets, that the purchaser agrees to be bound by the provisions of this Final Judgment, provided that defendants need not obtain such an agreement from the Acquirer(s).

IV. Divestitures

A. Defendants are ordered and directed, within 120 days after consummation of the Transaction, or five (5) days after notice of entry of this Final Judgment, whichever is later, to divest the Divestiture Assets to an Acquirer or Acquirers acceptable to plaintiff United States in its sole discretion upon consultation with any relevant plaintiff state, and, if applicable, to a Divestiture Trustee designated pursuant to Section V of this Final Judgment. Plaintiff United States, in its sole discretion upon consultation with any relevant plaintiff state, may agree to one or more extensions of this time period not to exceed 60 days in total, and shall notify the Court in such circumstances. With respect to divestiture of the Divestiture Assets by defendants or the Divestiture Trustee, if applications have been filed with the FCC within the period permitted for divestiture seeking approval to assign or transfer licenses to the Acquirer(s) of the Divestiture Assets, but an order or other dispositive action by the FCC on such applications has not been issued before the end of the period permitted for divestiture, the period shall be extended with respect to divestiture of those Divestiture Assets for which FCC approval has not been issued until five (5) days after such approval is received. Defendants agree to use their best efforts to accomplish the divestitures set forth in this Final Judgment and to seek all necessary regulatory approvals as expeditiously as possible. This Final Judgment does not limit the FCC's exercise of its regulatory powers and process with respect to the Divestiture Assets. Authorization by the FCC to conduct the divestiture of a Divestiture Asset in a particular manner will not modify any of the requirements of this decree.

B. In accomplishing the divestitures ordered by this Final Judgment, defendants shall promptly make known, if they have not already done so, by usual and customary means, the availability of the Divestiture Assets. Defendants shall inform any person making inquiry regarding a possible purchase of the Divestiture Assets that they are being divested pursuant to this Final Judgment and provide that person with a copy of this Final Judgment. Defendants shall offer to furnish to all prospective Acquirers, subject to customary confidentiality assurances, all information and documents relating to the Divestiture Assets customarily provided in a due diligence process except such information or documents subject to the attorney-client or work productive privileges. Defendants shall make available such information to plaintiffs at the same time that such information is made available to any other person.

C. Defendants shall provide to the Acquirer(s) and plaintiffs information relating to the personnel involved in the operation, development, and sale of the Wireless Business Divestiture Assets to enable the Acquirer(s) to make offers of employment. Defendants will not interfere with any negotiations by the Acquirer(s) to employ any defendant employee whose primary responsibility is the operation, development, and sale of the Wireless Business Divestiture Assets.

D. Defendants shall permit prospective Acquirers of the Divestiture Assets to have reasonable access to personnel and to make inspections of the Divestiture Assets; access to any and all environmental, zoning, and other permit documents and information; and access to any and all financial, operational, and other documents and information customarily provided as part of a due diligence process.

E. Defendants shall warrant to all Acquirer(s) that (1) each asset of the Wireless Business Divestiture Assets will be operational on the date of sale, and (2) every wireless spectrum license is in full force and effect on the date of sale.

F. Defendants shall not take any action that will impede in any way the permitting, licensing, operation, or divestiture of the Divestiture Assets.

G. Defendants shall warrant to the Acquirer(s) of the Divestiture Assets that there are no material defects in the environmental, zoning, licensing or other permits pertaining to the operation of each assets, and that following the sale of the Divestiture Assets, defendants will not undertake, directly or indirectly, any challenges to the environmental, zoning, licensing or other permits relating to the operation of the Divestiture Assets.

H. Unless plaintiff United States otherwise consents in writing, upon consultation with any relevant plaintiff state, the divestitures pursuant to Section IV, or by a Divestiture Trustee appointed pursuant to Section V of this Final Judgment, shall include the entire Divestiture Assets and with respect to the Wireless Business Divestiture Assets and Spectrum License Divestiture Assets, shall be accomplished in such a way as to satisfy plaintiff United States, in its sole discretion upon consultation with any relevant plaintiff state, that these assets can and will be used by the Acquirer(s) as part of a viable, ongoing business engaged in the provision of mobile wireless services. Divestiture of the Divestiture Assets may be made to one or more Acquirers, provided that in each instance it is demonstrated to the sole satisfaction of plaintiff United States upon consultation with any relevant plaintiff state, that the Divestiture Assets will remain viable and the divestiture of such assets will remedy the competitive harm alleged in the Complaint. The divestitures of the Wireless Business Divestiture Assets and Spectrum License Divestiture Assets, whether pursuant to Section IV or Section V of this Final Judgment,

(1) Shall be made to an Acquirer (or Acquirers) that, in plaintiff United State's sole judgment upon consultation with any relevant plaintiff state, has the intent and capability (including the necessary managerial, operational, technical, and financial capability) of competing effectively in the provision of mobile wireless services; and

(2) Shall be accomplished so as to satisfy plaintiff United States in its sole discretion upon consultation with any relevant plaintiff state, that none of the terms of any agreement between the Acquirer (or Acquirers) and any defendant shall give defendants the ability unreasonably to raise the Acquirer's costs, to lower the Acquirer's efficiency, or otherwise to interfere with the ability of the Acquirer to compete effectively.

I. At the option of the Acquirer(s), defendants shall enter into a contract for transition services customarily provided in connection with the sale of a business providing mobile wireless services sufficient to meet all or part of the needs of the Acquirer'(s) needs for a period of up to one year. The terms and conditions of any contractual arrangement meant to satisfy this provision must be reasonably related to market conditions.

J. To the extent that the mobile wireless businesses to be divested use intellectual property, as required to be identified by Section II.L, that cannot be transferred or assigned without the consent of the licensor or other third parties, defendants shall use their best efforts to obtain those consents.

K. In the event plaintiff United States approves retention of any Minority Interests, defendants shall not obtain any additional equity interest in such entity.

V. Appointment of Divestiture Trustee

A. If defendants have not divested the Divestiture Assets within the time period specified in Section IV.A, defendants shall notify plaintiff United States and any relevant plaintiff state of that fact in writing, specifically identifying the Divestiture Assets that have not been divested. Then, upon application of plaintiff United States, upon consultation with any plaintiff state, the Court shall appoint a Divestiture Trustee selected by plaintiff United States and approved by the Court to effect the divestiture of the Divestiture Assets. The Divestiture Trustee, will have all the rights and responsibilities of the Management Trustee appointed pursuant to the Preservation of Assets Stipulation and Order, and will be responsible for:

(1) Accomplishing divestiture of all Divestiture Assets transferred to the Divestiture Trustee from defendants, in accordance with the terms of this final Judgment, to an Acquirer or Acquirers approved by plaintiff United States, upon consultation with any relevant plaintiff state, under Sections IV.A and IV.C of this Final Judgment, and

(2) Exercising the responsibilities of the licensee of any transferred Divestiture Assets and controlling and operating any transferred Wireless Business Divestiture Assets, to ensure that the businesses remain ongoing, economically viable competitors in the provision of mobile wireless services in the five (5) license areas specified in the Wireless Business Divestiture Assets, until they are divested to an Acquirer or Acquirers, and the Divestiture Trustee shall agree to be bound by this Final Judgment.

B. Defendants shall submit a proposed trust agreement (''Trust Agreement'') to plaintiff United States and any relevant plaintiff state, which must be consistent with the terms of this Final Judgment and which must receive approval by plaintiff United States in its sole discretion, upon consultation with any relevant plaintiff state, who shall communicate to defendants within ten (10) business days its approval or disapproval of the proposed Trust Agreement, and which must be executed by the defendants and the Divestiture Trustee within five (5) business days after approval by plaintiff United States; and

C. After obtaining any necessary approvals from the FCC for the assignment of the licenses of the remaining Divestiture Assets to the Divestiture Trustee, defendants shall irrevocably divest the remaining Divestiture Assets to the Divestiture Trustee, who will own such assets (or own the stock of the entity owning such assets, if divestiture is to be effected by the creation of such an entity for sale to Acquirer(s)) and control such assets, subject to the terms of the approved Trust Agreement.

D. After the appointment of a Divestiture Trustee becomes effective, only the Divestiture Trustee shall have the right to sell the Divestiture Assets. The Divestiture Trustee shall have the power and authority to accomplish the divestiture to an Acquirer(s) acceptable to plaintiff United States, in its sole judgment upon consultation with any relevant plaintiff state, at such price and on such terms as are then obtainable upon reasonable effort by the Divestiture Trustee, subject to the provisions of Sections IV, V, and VI of this Final Judgment, and shall have such other powers as this Court deems appropriate. Subject to Section V.G of this Final Judgment, the Divestiture Trustee may hire at the cost and expense of defendants the Management Trustee appointed pursuant to the Preservation of Assets Stipulation and Order, and any investment bankers, attorneys or other agents, who shall he solely accountable to the Divestiture Trustee, reasonably necessary in the Divestiture Trustee's judgment to assist in the divestiture.

E. In addition, notwithstanding any provision to the contrary, plaintiff United States, in its sole discretion upon consultation with any relevant plaintiff state, may require defendants to include additional assets, or allow, with the written approval of plaintiff United States, defendants to substitute substantially similar assets, which substantially relate to the Wireless Business Divestiture Assets to be divested by the Divestiture Trustee to facilitate prompt divestiture to an acceptable Acquirer.

F. Defendants shall not object to a sale by the Divestiture Trustee on any ground other than the Divestiture Trustee's malfeasance. Any such objections by defendants must be conveyed in writing to plaintiff United States, any relevant plaintiff state, and the Divestiture Trustee within ten (10) calendar days after the Divestiture Trustee has provided the notice required under Section VI.

G. The Divestiture Trustee shall serve at the cost and expense of defendants, on such terms and conditions as plaintiff United States approves, and shall account for all monies derived from the sale of the assets sold and all costs and expenses so incurred. After approval by the Court of the Divestiture Trustee's accounting, including fees for its services and those of any professionals and agents retained by the Divestiture Trustee, all remaining money shall be paid to defendants and the trust shall then be terminated. The compensation of the Divestiture Trustee and any professionals and agents retained by the Divestiture Trustee shall be reasonable in light of the value of the Divestiture Assets and based on a fee arrangement providing the Divestiture Trustee with an incentive based on the price and terms of the divestiture, and the speed with which it is accomplished, but timeliness is paramount.

H. Defendants shall use their best efforts to assist the Divestiture Trustee in accomplishing the required divestitures including their best efforts to effect all necessary regulatory approvals and will provide any necessary representations or warranties as appropriate related to sale of the Divestiture Assets. The Divestiture Trustee and any consultants, accountants, attorneys, and other persons retained by the Divestiture Trustee shall have full and complete access to the personnel, books, records, and facilities of the business to be divested, and defendants shall develop financial and other information relevant to the assets to be divested as the Divestiture Trustee may reasonably request, subject to reasonable protection for trade secret or other confidential research, development, or commercial information. Defendants shall take no action to interfere with or to impede the Divestiture Trustee's accomplishment of the divestitures.

I. After its appointment, the Divestiture Trustee shall file monthly reports with plaintiff United states, any relevant plaintiff state, and the Court setting forth the Divestiture Trustee's efforts to accomplish the divestitures ordered under this Final Judgment. To the extent such reports contain information that the Divestiture Trustee deems confidential, such reports shall not be filed in the public docket of the Court. Such reports shall include the name, address, and telephone number of each person who, during the preceding

month, made an offer to acquire, expressed an interest in acquiring, entered into negotiations to acquire, or was contacted or made an inquiry about acquiring, any interest in the Divestiture Assets, and shall describe in detail each contact with any such person. The Divestiture Trustee shall maintain full records of all efforts made to divest the Divestiture Assets.

J. If the Divestiture Trustee has not accomplished such divestitures within six months after its appointment, the Divestiture Trustee shall promptly file with the Court a report setting forth (1) the Divestiture Trustee's efforts to accomplish the required divestitures, (2) the reasons, in the Divestiture Trustee's judgment, why the required divestitures have not been accomplished, and (3) the Divestiture Trustee's recommendations. To the extent such reports contain information that the Divestiture Trustee deems confidential, such reports shall not be filed in the public docket of the Court. The Divestiture Trustee shall at the same time furnish such report to the plaintiff United States and any relevant plaintiff state who shall have the right to make additional recommendations consistent with the purpose of the trust. The Court thereafter shall enter such orders as it shall deem appropriate to carry out the purpose of the Final Judgment, which may, if necessary, include extending the trust and the term of the Divestiture Trustee's appointment by a period requested by plaintiff United States upon consultation with any relevant plaintiff state.

K. After defendants transfer the Divestiture Assets to the Divestiture Trustee, and until those Divestiture Assets have been divested to an Acquirer or Acquirers approved by plaintiff United States pursuant to Section IV.A and IV.H the Divestiture Trustee shall have sole and complete authority to manage and operate the Divestiture Assets and to exercise the responsibilities of the licensee, and shall not be subject to any control or direction by defendants. Defendants shall not retain any economic interest in the Divestiture Assets transferred to the Divestiture Trustee, apart from the right to receive the proceeds of the sale or other disposition of the Divestiture Assets.

L. The Divestiture Trustee shall operate the Wireless Business Divestiture Assets consistent with the Preservation of Assets Stipulation and Order and this Final Judgment, with control over operations, marketing and sales. Defendants shall not attempt to influence the business decisions of the Divestiture trustee concerning the operation and management of the Wireless business Divestiture Assets, and shall not communicate with the Divestiture Trustee concerning divestiture of the Divestiture Assets or take any action to influence, interfere with, or impede the Divestiture trustee's accomplishment of the divestitures required by this Final Judgment, except that defendants may communicate with the Divestiture Trustee to the extent necessary for defendants to comply with this Final Judgment and to provide the Divestiture Trustee, if requested to do so, with whatever resources or cooperation may be required to complete divestiture of the Divestiture Assets and to carry out the requirements of the Preservation of Assets Stipulation and Order and this Final Judgment. Except as provided in this Final Judgment and the Preservation of Assets Stipulation and Order, in no event shall defendants provide to, or receive from, the Divestiture Trustee or the mobile wireless businesses under the Divestiture Trustee's control any non-public or competitively sensitive marketing, sales, or pricing information relating to their respective mobile wireless businesses.

VI. Notice of Proposed Divestitures

A. Within two (2) business days following execution of a definitive divestiture agreement, defendants or the Divestiture Trustee, whichever is then responsible for effecting the divestitures required herein, shall notify plaintiff United States and any relevant plaintiff state in writing of any proposed divestiture required by Section IV or V of this Final Judgment. If the Divestiture Trustee is responsible, it shall similarly notify defendants. The notice shall set forth the details of the proposed divestiture and list the name, address, and telephone number of each person not previously identified who offered or expressed an interest in or desire to acquire any ownership interest in the Divestiture Assets, together with full details of the same.

B. Within fifteen (15) calendar days of receipt by plaintiff United States and any relevant plaintiff state of such notice, plaintiff United States and any relevant plaintiff state may request from defendants, the proposed Acquirer or Acquirers, any other third party, or the Divestiture Trustee if applicable additional information concerning the proposed divestiture, the proposed Acquirer or Acquirers, and any other potential Acquirer. Defendants and the Divestiture Trustee shall furnish any additional information requested within fifteen (15) calendar days of the receipt of the request, unless the parties shall otherwise agree.

C. Within thirty (30) calendar days after receipt of the notice or within twenty (20) calendar days after plaintiff United States and any relevant plaintiff state have been provided the additional information requested from defendants, the proposed Acquirer or Acquirers, any third party, and the Divestiture Trustee, whichever is later, plaintiff United States, upon consultation with any relevant plaintiff state, shall provide written notice to defendants and the Divestiture Trustee, if there is one, stating whether or not it objects to the proposed divestiture. If plaintiff United States provides written notice that it does not object, the divestiture may be consummated, subject only to defendants' limited right to object to the sale under Section V.F of this Final Judgment. Absent written notice that plaintiff United States does not object to the proposed Acquirer or upon objection by plaintiff United States, a divestiture proposed under Section IV or Section V shall not be consummated. Upon objection by defendants under Section V.F, a divestiture proposed under Section V shall not be consummated unless approved by the Court.

VII. Financing

Defendants shall not finance all or any part of any divestiture made pursuant to Section IV or V of this Final Judgment.

VIII. Preservation of Assets

Until the divestitures required by this Final Judgment have been accomplished, defendants shall take all steps necessary to comply with the Preservation of Assets Stipulation and Order entered by this Court. Defendants shall take no action that would jeopardize the divestitures ordered by this Court.

IX. Affidavits

A. Within twenty (20) calendar days of the filing of the Complaint in this matter, and every thirty (30) calendar days thereafter until the divestitures have been completed under Section IV or V of this Final Judgment, defendants shall deliver to plaintiff United States and any relevant plaintiff state and affidavit as to the fact and manner of its compliance with Section IV or V of this Final Judgment. Each such affidavit shall include the name, address, and telephone number of each person who during the preceding thirty (30) days, made an offer to acquire, expressed an interest in acquiring, entered into negotiations to acquire, or was contacted or made an inquiry about acquiring, any interest in the Divestiture

Assets, and shall describe in detail each contact with any such person during that period. Each such affidavit shall also include a description of the efforts defendants have taken to solicit buyers for the Divestiture Assets, and to provide required information to prospective Acquirers, including the limitations, if any, on such information. Assuming the information set forth in the affidavit is true and complete, any objection by plaintiff United States, after consultation with any relevant state, to information provided by defendants, including limitation on information, shall be made within fourteen (14) calendar days of receipt of such affidavit.

B. Within twenty (20) calendar days of the filing of the Complaint in this matter, defendants shall deliver to plaintiff United States and any relevant plaintiff state an affidavit that describes in reasonable detail all actions defendants have taken and all steps defendants have implemented on an ongoing basis to comply with Section VIII of this Final Judgment. Defendants shall deliver to plaintiff United States and any relevant plaintiff state an affidavit describing any changes to the efforts and actions outlined in defendants' earlier affidavits provided pursuant to this section within fifteen (15) calendar days after the change is implemented.

C. Defendants shall keep all records of all efforts made to preserve and divest the Divestiture Assets until one year after such divestitures have been completed.

X. Compliance Inspection

A. For the purposes of determining or securing compliance with this Final Judgment, or of determining whether the Final Judgment should be modified or vacated, and subject to any legally recognized privilege, from time to time duly authorized representatives of the United States Department of Justice, including consultants and other persons retained by the United States, shall, upon written request of a duly authorized representative of the Assistant Attorney General in charge of the Antitrust Division, and on reasonable notice to defendants, be permitted:

(1) Access during defendants' office hours to inspect and copy, or at plaintiff United States' option, to require defendants provide copies of, all books, ledgers, accounts, records and documents in the possession, custody, or control of defendants, relating to any matters contained in this Final Judgment; and

(2) To interview, either informally or on the record, defendants' officers, employees, or agents, who may have their individual counsel present, regarding such matters. The interviews shall be subject to the reasonable convenience of the interviewee and without restraint or interference by defendants.

B. Upon the written request of a duly authorized representative of the Assistant Attorney General in charge of the Antitrust Division, defendants shall submit written reports, under oath if requested, relating to any of the matters contained in this Final Judgment as may be requested.

C. No information or documents obtained by the means provided in this section shall be divulged by plaintiff United States to any person other than an authorized representative of the executive branch of the United States or, pursuant to a customary protective Order or waiver of confidentiality by defendants, the FCC, except in the course of legal proceedings to which the United States is a party (including grand jury proceedings), or for the purpose of securing compliance with this Final Judgment, or as otherwise required by law.

D. If at the time information or documents are furnished by defendants to plaintiff United States, defendants represent and identify in writing the material in any such information or documents to which a claim of protection may be asserted under Rule 26(c)(7) of the Federal Rules of Civil Procedure, and defendants mark each pertinent page of such material, ''Subject to claim of protection under Rule 26(c)(7) of the Federal Rules of Civil Procedure,'' then plaintiff United States shall give defendants ten (10) calendar days notice prior to divulging such material in any legal proceeding (other than a grand jury proceeding).

XI. No Reacquisition

Defendants may not reacquire or lease any part of the Divestiture Assets during the term of this Final Judgment.

XII. Retention of Jurisdiction

This Court retains jurisdiction to enable any party to this Final Judgment to apply to this Court at any time for further orders and directions as may be necessary or appropriate to carry out or construe this Final Judgment, to modify any of its provisions, to enforce compliance, and to punish violations of its provisions.

XIII. Expiration of Final Judgment

Unless this Court grants an extension, this Final Judgment shall expire ten years from the date of its entry.

XIV. Public Interest Determination

Entry of this Final Judgment is in the public interest.

Date: _____

_____

United States District Judge

In the United States District Court for the District of Columbia

United States of America, Department of Justice, Antitrust Division, 1401 H Street, NW., Suite 8000, Washington, DC 20530, State of Connecticut, Office of the Attorney General, 55 Elm Street, Hartford, CT 06106, and State of Texas, Office of the Attorney General, P.O. Box 12548, Austin, TX 78711, Plaintiffs, v. Cingular Wireless Corporation, 5565 Glenridge Connector, Atlanta, GA 30349, SBC Communications Inc., 174 East Houston, San Antonio, TX 78205, Bellsouth Corporation, 1155 Peachtree Street, NE., Atlanta, GA 30309, and AT&T Wireless Services, Inc., 7277 164th Avenue, NE., Building 1, Redmond, WA 98052, Defendants; Complaint

Civil No.: 1:04CV01850 (RBW)
Filed: 10/25/04

The United States of America, acting under the direction of the Attorney General of the United States, and the states of Connecticut and Texas (''plaintiff states''), acting under the direction of their respective Attorneys General, or other authorized officials, bring this civil action to enjoin the merger of two of the largest mobile wireless telecommunications services providers in the United States, Cingular Wireless Corporation (''Cingular'') and AT&T Wireless Services, Inc. (''AT&T Wireless''), and to obtain other relief as appropriate. Plaintiffs allege as follows:

1. On February 17, 2004, Cingular, a joint venture between SBC Communications Inc. (''SBC'') and BellSouth Corporation (''BellSouth''), entered into an agreement to acquire AT&T Wireless under which the two companies would combine their mobile wireless services businesses. Plaintiffs seek to enjoin this transaction because it will substantially lessen competition in several geographic markets for mobile wireless telecommunications services and mobile wireless broadband services (collectively, ''mobile wireless services'').

2. Cingular and AT&T Wireless are the second and third-largest mobile wireless services providers in the

United States, with approximately 24 and 22 million subscribers, respectively. They both provide mobile wireless services in areas throughout the United States and are two of only six providers with a national presence. As a result, Cingular and AT&T Wireless both provide mobile wireless services in hundreds of overlapping geographic areas, and in 13 of these areas the combination of Cingular's and AT&T Wireless's assets and business will likely result in substantially less competition for mobile wireless services. In 10 of these overlapping geographic areas located in the states of Connecticut, Georgia, Kansas, Kentucky, Louisiana, Massachusetts, Missouri, Oklahoma, and Texas, the combination of Cingular and AT&T Wireless will substantially lessen competition for mobile wireless telecommunications services, increasing the likelihood of unilateral actions by the merged firm to increase prices, diminish the quality or quantity of services provided, refrain from or delay making investments in network improvements, and refrain from or delay launching new services, substantially lessening competition for these services. In three of these overlapping geographic areas located in the states of Michigan, Tennessee, and Texas, both Cingular and AT&T Wireless have launched or will likely soon launch mobile wireless broadband services, and the transaction will result in the loss of one of only a few existing and likely mobile wireless broadband services providers, substantially lessening competition for these services.

I. Jurisdiction and Venue

3. Complaint is filed by the United States under Section 15 of the Clayton Act, 15 U.S.C. 25, to prevent and restrain defendants from violating Section 7 of the Clayton Act, 15 U.S.C. 18.

4. Plaintiff states bring this action under Section 16 of the Clayton Act, 15 U.S.C. 26, to prevent and restrain the violation by defendants of Section 7 of the Clayton Act, 15 U.S.C. 18. Plaintiff states, by and through their respective Attorneys General, or other authorized officials, bring this action in their sovereign capacities and as parens patriae on behalf of the citizens, general welfare, and economy of each of their states.

5. Cingular, AT&T Wireless, SBC, and BellSouth are engaged in interstate commerce and in activities substantially affecting interstate commerce. The Court has jurisdiction over this action pursuant to Sections 15 and 16 of the Clayton Act, 15 U.S.C. 25, 26, and 28 U.S.C. 1331, 1337.

6. Cingular, AT&T Wireless, SBC, and BellSouth transact business or are found in the District of Columbia. Venue is proper in this Court pursuant to Section 12 of the Clayton Act, 15 U.S.C. 22 and 28 U.S.C. 1391(b) and (c).

II. The Defendants and the Transaction

7. Cingular, which headquarters in Atlanta, Georgia, is a company organized and existing under the laws of the state of Delaware. Cingular was formed in 2000 by SBC and BellSouth, who own equity interests in it of 60 and 40 percent, respectively, SBC and BellSouth evenly share management control of Cingular. Cingular is the second-largest provider of mobile wireless voice and data services in the United States by number of subscribers; it serves more than 24 million customers. In 2003, Cingular earned revenues of approximately $15.5 billion.

8. SBC, with headquarters in San Antonio, Texas, is a corporation organized and existing under the laws of the state of Delaware. SBC is a regional bell operating company (''RBOC''), one of several regional holding companies formed in 1984 as a result of the breakup of AT&T Corporation's local telephone business. SBC's wireless telecommunications businesses serve 54.7 million access lines in 13 states; Arkansas, California, Connecticut, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin. In 2003, SBC earned approximately $40.8 billion in revenues.

9. BellSouth, an RBOC with headquarters in Atlanta, Georgia, is a corporation organized and existing under the laws of the state of Georgia. BellSouth's wireline telecommunications businesses serves 23.7 million access lines in 9 states: Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Caroline, South Carolina, and Tennessee. Its total operating revenues for 2003 were approximately $22.6 billion.

10. AT&T Wireless, with headquarters in Redmond, Washington, is a corporation organized and existing under the laws of the state of Delaware. spun off from AT&T Corporation in 2001, it had more than 22 million subscribers as of August 2004 an earned revenues of approximately $16.6 billion in 2003. AT&T Wireless is the third-largest U.S. mobile wireless services provider by number of subscribers.

11. Pursuant to an Agreement and Plan of Merger dated February 17, 2004, Cingular will pay AT&T Wireless shareholders $15 per common share and thereby plans to acquire AT&T Wireless for approximately $41 billion in cash. If this transaction is consummated, Cingular and AT&T Wireless combined would have more than 46 million subscribers, with over $32 billion in revenues, making it the largest mobile wireless sevices provider in the United States, with operations in 49 states covering 97 of the top 100 marketing areas.

III. Trade and Commerce

A. Nature of Trade and Commerce

12. Mobile wireless services allow customers to make and receive telephone calls and use data services using radio transmissions without being confined to a small area during the call or data session, and without the need for unobstructed line-of-sight to the radio tower. This mobility is highly prized by customers, as demonstrated by the more than 160 million people in the United States who own mobile wireless telephones. In 2003, revenues from the sale of mobile wireless services in the United States were nearly $90 billion.

13. The first wireless voice systems were based on analog technology, now referred to as first-generation or ''1G'' technology. These analog systems were launched after the FCC issued the first licenses for mobile wireless telephone service: two cellular licenses (A-block and B-block) in each geographic area in the early to mid-1980s. The licenses are in the 800 MHz range of the radio spectrum, each license consists of 25 MHz of spectrum, and they are issued for each Metropolitan Statistical Area (''MSA'') and Rural Service Area (''RSA'') (collectively, ''Cellular Marketing Areas'' or ''CMAs''), with a total of 734 CMAs covering the entire United States. In 1982, one of the licenses was issued to the incumbent local exchange carrier in the market, and the other was issued by lottery to someone other than the incumbent. Cellular licensees must support analog service until February 2008.

14. In 1995, the FCC allocated and subsequently issued licenses for additional spectrum for the provision of Personal Communications Services (''PCS''), a category of services that includes mobile wireless telephone services comparable to those offered by cellular licensees. These licenses are in the 1.8 GHz range of the radio spectrum and are divided into six blocks: A, B, and C, which consist of 30 MHz each; and D, E, and F, which consist of 10 MHz each. Geographically, the A- and B-block 30 MHz licenses are issued by Major Trading Areas (''MTAs''), and C-, D-, E-, and F-block licenses are issued by Basic Trading Areas

(''BTAs''), several of which comprise each MTA. MTAs and BTAs do not generally correspond to MSAs and RSAs. With the introduction of the PCS licenses, both cellular and PCS licensees began offering digital services, thereby increasing capacity, shrinking handsets, and extending battery life. Unlike the cellular licenses, PCS licensees are not required to provide support for analog or any other technology standard. In 1996, one provider, a specialized mobile radio (''SMR'' or ''dispatch'') spectrum licensee, began to use its SMR spectrum to offer mobile wireless telephone services comparable to those offered by other mobile wireless services providers, in conjunction with its dispatch, or ''push-to-talk,'' service.

15. Today, more than 90 percent of all mobile wireless services customers have digital service, and nearly all mobile wireless voice service has migrated to second-generation or ''2G'' digital technologies: TDMA (time division multiple access), GSM (Global Standard for Mobile, a type of TDMA standard used by all carriers in Europe), and CDMA (code division multiple access). Mobile wireless services providers have chosen to build their networks on these incompatible technologies and most have chosen CDMA or GSM, with TDMA having been orphaned by equipment vendors. (The SMR providers use a fourth incompatible technological standard better suited to the spectrum they own, and, as SMR licensees, they have no obligation to support a specific technology standard.) Even more advanced technologies (''2.5G'') have begun to be deployed for voice and data (e.g., 1xRTT (a/k/a CDMA 2000), GPRS (General Packet Radio Service), and EDGE (Enhanced Data for GSM Evolution)). The data transmission speeds of these technologies vary. For example, 1xRTT provides average user speeds of 70 kilobits per second (''kbps''), and GRPS and EDGE provide average user speeds of 20 to 40 kbps and 80 to 110 kbps, respectively.

16. The U.S. mobile wireless services industry is taking the next evolutionary step in wireless technology to third-generation or ''3G'' technologies (e.g., for GSM, UMTS (Universal Mobile Telecommunications System) and for CDMA, Ev-DO/DV (Evolution Data Only/Data Voice)) that provide for more capacity and higher data throughout. All of the national mobile wireless services providers and some of the regional providers are considering how and where they will deploy 3G services across their networks. The data transmission speeds of these technologies vary. UMTS provides average user speeds of 200 to 300 kbps, whereas Ev-DO provides average user speeds of 300 to 500 kbps.

B. Relevant Product Markets

17. Mobile wireless telecommunications services and mobile wireless broadband services are relevant product markets (collectively, ''mobile wireless services'').

1. Mobile Wireless Telecommunications Services

18. Mobile wireless telecommunications services include both voice and data services provided over a radio network and allow customers to maintain their telephone calls or data sessions without wires, such as when traveling. There are no cost-effective alternatives to mobile wireless telecommunications services. Fixed wireless services are not mobile, and other wireless services have a limited range (e.g., Wi-Fi); neither offers a viable alternative to mobile wireless telecommunications services. It is unlikely that a sufficient number of customers would switch away from mobile telecommunications services to make a small but significant price increase in those services unprofitable. Mobile wireless telecommunications services is a relevant product market under Section 7 of the Clayton Act, 15 U.S.C. 18.

2. Mobile Wireless Broadband Services

19. Mobile wireless broadband services offer data speeds four to six times faster than the current data offerings fully deployed in any mobile wireless services provider's network. Mobile wireless broadband services, which are now being launched using various 3G technologies, offer average data speeds of 200 to 300 kbps, peaking at 2 megabits per second or higher. These speeds rival wireline broadband services at peak speeds. At average speeds, they are comparable to low-end wireline high-speed data offerings and can support bandwidth-intensive services including video conferencing, video streaming, downloading of music and video files, and voice over Internet protocol (''VoIP'') calling, none of which can be used reliably at slower speeds. There are no cost-effective alternatives to mobile wireless broadband services. As with mobile wireless telecommunications services, fixed wireless services and other wireless services that have a limited range (e.g., Wi-Fi) do not offer a viable alternative to mobile wireless broadband services. It is unlikely that a sufficient number of customers would switch away from mobile wireless broadband services to make a small but significant price increase in those services unprofitable. Mobile wireless broadband services is a relevant product market under Section 7 or the Clayton Act, 15 U.S.C. 18.

C. Relevant Geographic Markets

20. The large majority of customers use mobile wireless services in close proximity to their workplaces and homes. Thus, customers purchasing mobile wireless telecommunications services and mobile wireless broadband services choose among mobile wireless services providers that offer services where they are located and travel on a regular basis: home, work, other areas they commonly visit, and areas in between. The number and identity of mobile wireless services providers varies from geographic area to geographic area, along with the quality of their services and the breadth of their geographic coverage, all of which are significant factors in customers' purchasing decisions. Mobile wireless services providers can and do offer different promotions, discounts, calling plans, and equipment subsidies in different geographic areas, effectively varying the actual price for customers by geographic area.

21. The United States comprises numerous local geographic markets for mobile wireless services. These local geographic markets are generally centered around a metropolitan area or a population center and its environs. The FCC has licensed a limited number of mobile wireless services providers in these and other geographic areas based upon the availability of radio spectrum. These FCC spectrum licensing areas therefore often represent the core of the business and social sphere where customers face the same competitive choices for mobile wireless services. The relevant geographic markets in which this transaction will substantially lessen competition in mobile wireless telecommunications services and mobile wireless broadband services are effectively represented, but not defined, by FCC spectrum licensing areas.

22. The relevant geographic markets, under Section 7 of the Clayton Act, 15 U.S.C. 18, where the transaction will substantially lessen competition for mobile wireless telecommunications services are represented by the following FCC spectrum licensing areas: Oklahoma City, Oklahoma (CMA 045), Topeka, Kansas (CMA 179), Pittsfield, Massachusetts (CMA 213), Athens, Georgia (CMS 234), St. Joseph, Missouri (CMA 275), Connecticut RSA–1 (CMA 357), Kentucky RSA–1 (CMA 443), Oklahoma RSA–3 (CMA 598), Texas

RSA–11 (CMA 662), and Shreveport, Louisiana (BTA 419).

23. The relevant geographic markets, under Section 7 of the Clayton Act, 15 U.S.C. 18, where the transaction will substantially lessen competition for mobile wireless broadband services are represented by the following FCC spectrum licensing areas: Dallas-Fort Worth, Texas (CMA 009), Detroit, Michigan (BTA 112), and Knoxville, Tennessee (BTA 232).

24. It is unlikely that a sufficient number of customers would switch to mobile wireless services providers in a different geographic market to make a small but significant price increase in the relevant geographic markets unprofitable for mobile wireless telecommunications services or mobile wireless broadband services.

D. Anticompetitive Effects

1. Mobile Wireless Telecommunications Services

25. Currently, Cingular and AT&T Wireless both own all or part of businesses that offer mobile wireless telecommunications services in the 10 relevant geographic areas. In Athens, Georgia; Topeka, Kansas; Pittsfield, Massachusetts; and St. Joseph, Missouri, AT&T Wireless owns a minority equity interest in Verizon Wireless's business providing mobile wireless telecommunications services. In Shreveport, Louisiana, Cingular owns a minority equity interest in AllTel Corporations' business providing mobile wireless telecommunications services. The minority equity interest range from approximately 9 to 24 percent. Based upon these significant minority equity interests and the specific facts of the relationships, the shares and assets of the mobile wireless services business partially owned by Cingular or AT&T Wireless in these markets should be attributed to either Cingular or AT&T Wireless.

26. The individual market shares of Cingular's and AT&T Wireless's mobile wireless telecommunications services businesses in the relevant geographic markets as measured in terms of subscribers range from 9 to more than 71 percent, and their combined market shares range from 61 to nearly 90 percent. In each relevant geographic market, Cingular or AT&T Wireless has the largest market share, and in all but one, the other is the second-largest mobile wireless telecommunications services provider. In all but one of the relevant geographic markets, Cingular and AT&T Wireless are the original cellular licensees and, as a result, have the network infrastructures with the greatest depth and breadth of coverage. Therefore, Cingular and AT&T Wireless are likely closer substitutes for each other than the other mobile wireless telecommunications services providers in the relevant geographic markets.

27. The relevant geographic markets for mobile wireless telecommunications services are highly concentrated. As measured by the Herfindahl-Hirschman Index (''HHI''), which is commonly employed in merger analysis and is defined and explained in Appendix A to this Complaint, concentration in these markets ranges from approximately 2600 to more than 5300, which is well above the 1800 threshold at which the Department considers a market to be highly concentrated. After Cingular's proposed acquisition of AT&T Wireless is consummated, the HHIs in the relevant geographic markets will range from approximately 4400 to more than 8000, with increases in the HHI as a result of the merger ranging from approximately 1100 to more than 3500, much higher than the thresholds below which the Department considers a transaction unlikely to cause competitive harm.

28. Competition between Cingular and AT&T Wireless in the relevant geographic markets has resulted in lower prices and higher quality in mobile wireless telecommunications services, than would otherwise have existed in these geographic markets. If Cingular's proposed acquisition of AT&T Wireless is consummated, the relevant geographic markets for mobile wireless telecommunications services will become substantially more concentrated, and the competition between Cingular and AT&T Wireless in mobile wireless telecommunications services will be eliminated in these markets. As a result, the loss of competition between Cingular and AT&T Wireless increases the likelihood of unilateral actions by the merged firm in the relevant geographic markets to increase prices, diminish the quality of services provided, refrain from or delay making investments in network improvements, and refrain from or delay launching new services. Therefore, Cingular's proposed acquisition of AT&T Wireless will likely result in substantially less competition in mobile wireless telecommunications services in the relevant geographic markets.

2. Mobile Wireless Broadband Services

29. In the relevant geographic markets for mobile wireless broadband services, Cingular and AT&T Wireless have either launched or are likely soon to launch mobile wireless broadband services. Each has the available spectrum necessary to offer mobile wireless broadband services and has business plans to offer these services in these markets. Not all mobile wireless services providers have sufficient spectrum to launch mobile wireless broadband services in these markets, nor do they all have business plans to do so. In the relevant geographic markets, the current number of mobile wireless services providers that are likely to launch mobile wireless broadband services in the foreseeable future is limited. Because mobile wireless broadband services are nascent, however, HHIs are uninformative.

30. The competition between Cingular and AT&T Wireless has motivated their efforts to develop and launch mobile wireless broadband services in the relevant geographic markets. If Cingular's proposed acquisition of AT&T Wireless is consummated, the relevant geographic markets will lose one of only a few existing and likely mobile wireless broadband services providers. As a result, the loss of competition between Cingular and AT&T Wireless increases the likelihood of unilateral actions by the merged firm in these relevant geographic markets to increase prices, diminish the quality or quantity of services provided, refrain from or delay making investments in network improvements, and refrain from or delay launching mobile wireless broadband services. Therefore, Cingular's proposed acquisition of AT&T Wireless will likely result in substantially less competition in mobile wireless broadband services in the relevant geographic markets.

3. Entry

31. Entry by a new mobile wireless services provider in the relevant geographic markets would be difficult, time-consuming, and expensive, requiring the acquisition of spectrum licenses and the build-out of a network. Therefore, new entry in response to a small but significant price increase for mobile wireless telecommunications services or mobile wireless broadband services by the merged firm in the relevant geographic markets would not be timely, likely, or sufficient to thwart the competitive harm resulting from Cingular's proposed acquisition of AT&T Wireless, if it were to be consummated.

IV. Violation Alleged

32. The effect of Cingular's proposed acquisition of AT&T Wireless, if it were to be consummated, may be substantially to lessen competition in interstate trade and commerce in the relevant geographic markets for mobile

wireless telecommunications services and mobile wireless broadband services, in violation of Section 7 of the Clayton Act, 15 U.S.C. 18.

33. Unless restrained, the transaction will likely have the following effects in mobile wireless telecommunications services and mobile wireless broadband services in the relevant geographic markets, among others:

a. Actual and potential competition between Cingular and AT&T Wireless will be eliminated;

b. Competition in general will be lessened substantially;

c. Prices are likely to increase;

d. The quality and quantity of services are likely to decrease;

e. Incentives to improve wireless networks will be reduced; and

f. Incentives to innovate or launch new services will be reduced.

V. Requested Relief

34. That Cingular's proposed acquisition of AT&T Wireless be adjudged to violate Section 7 of the Clayton Act, 15 U.S.C. 18;

35. That defendants be permanently enjoined from and restrained from carrying out the Agreement and Plan of merger, dated February 17, 2004, or from entering into or carrying out any agreement, understanding, or plan, the effect of which would be to bring the wireless telecommunications services businesses of Cingular and AT&T Wireless under common ownership or control;

36. That plaintiffs be awarded their costs of this action; and

37. That plaintiffs have such other relief as the Court may deem just and proper.

Dated: October 25, 2004.

Respectfully Submitted,

For Plaintiff United States of America:

Signature by the State of Texas on Complaint in *United States of America, State of Connecticut and State of Texas* v. *Cingular Wireless Corporation, SBC Communications Inc., BellSouth Corporation and AT&T Wireless Services, Inc.*

Appendix A—Herfindahl-Hirschman Index

''HHI'' means the Herfindahl-Hirschman Index, a commonly accepted measure of market concentration. It is calculated by squaring the market share of each firm competing in the market and then summing the resulting numbers. For example, for a market consisting of four firms with shares of 30, 30, 20, and 20 percent, the HHI is 2600 ($30^2 + 30^2 + 20^2 + 20^2 = 2600$). (**Note:** Throughout the Complaint, market share percentages have been rounded to the nearest whole number, but HHIs have been estimated using unrounded percentages in order to accurately reflect the concentration of the various markets.) The HHI takes into account the relative size distribution of the firms in a market and approaches zero when a market consists of a large number of small firms. The HHI increases both as the number of firms in the market decreases and as the disparity in size between those firms increases.

Markets in which the HHI is between 1000 and 1800 points are considered to be moderately concentrated, and those in which the HHI is in excess of 1800 points are considered to be highly concentrated. *See Horizontal Merger Guidelines* ¶1.51 (revised Apr. 8, 1997). Transactions that increase the HHI by more than 100 points in concentrated markets presumptively raise antitrust concerns under the guidelines issued by the U.S. Department of Justice and Federal Trade Commission. *See id.*

In the United States District Court for the District of Columbia

United States of America, State of Connecticut and State of Texas, Plaintiffs, v. Cingular Wireless Corporation, SBC Communications Inc., Bellsouth Corporation and AT&T Wireless Services, Inc., Defendants; Preservation of Assets Stipulation and Order

Civil No.: 1:04CV01850 (RBW)

Filed: 10/25/04

It is hereby stipulated and agreed by and between the undersigned parties, subject to approval and entry by the Court, that:

I. Definitions

As used in this Preservation of Assets Stipulation and Order:

A. ''Acquirer'' or ''Acquirers'' means the entity or entities to whom defendants divest the Divestiture Assets.

B. ''AT&T Wireless'' means defendant AT&T Wireless Services, Inc., a Delaware corporation with headquarters in Redmond, Washington, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

C. ''BellSouth'' means defendant BellSouth Corporation, a Georgia corporation with headquarters in Atlanta, Georgia, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

D. ''Cingular'' means defendant Cingular Wireless Corporation, a Delaware corporation with headquarters in Atlanta, Georgia, and Cingular Wireless LLC, a Delaware limited liability company formed as a joint venture between SBC and BellSouth, with headquarters in Atlanta, Georgia, their successors and assigns, and their subsidiaries, divisions, groups, affiliates, partnerships and joint

ventures, and their directors, officers, managers, agents, and employees.

E. ''Divestiture Assets'' means Wireless Business Divestiture Assets, Spectrum License Divestiture Assets, and Minority Interests, including any direct or indirect financial ownership or leasehold interests and any direct or indirect role in management or participation in control therein.

F. ''Minority Interests'' means the equity interests owned by any defendant in the following entities that are the licensees or operators of wireless mobile telephone businesses in the specified Metropolitan Statistical Areas (''MSAs'') and Rural Statistical Areas (''RSAs'') (collectively, Cellular Marketing Areas (''CMAs'')) used to define cellular license areas by the Federal Communications Commission (''FCC''):

(1) Alltel Communications of North Louisiana Cellular Limited Partnership, covering the Shreveport, Louisiana MSA (CMA 100), Monroe, Louisiana MSA (CMA 219), Louisiana RSA–1 (CMA 454), Louisiana RSA–2 (CMA 455) and Louisiana RSA–3 (CMA 456);

Athens Cellular Inc., covering the Athens, Georgia MSA (CMA 234);

(3) CellTelCo, covering the St. Joseph, Missouri MSA (CMA 275);

(4) Pittsfield Cellular Telephone Co., covering the Pittsfield, Massachusetts MSA (CMA 213); and

(5) Topeka Cellular Telephone Co., Inc., covering the Topeka, Kansas MSA (CMA 179).

As an alternative to the divestiture of the Alltel Communications of North Louisiana Cellular Limited Partnership, CellTelCo, and Topeka Cellular Telephone Co., Inc. Minority Interests as required by Section IV of the proposed Final Judgment, defendants may request, at least 20 days prior to consummation of the Transaction, approval from plaintiff United States to retain such interests. Plaintiff United States in its sole discretion may approve this request if it is demonstrated that the retained minority interest will become irrevocably and entirely passive, so long as defendants own the minority interests, and will not significantly diminish competition.

G. ''Multi-line Business Customer'' means a corporate or business customer that contracts with AT&T Wireless for mobile wireless services to provide multiple telephones to its employees or members whose services are provided pursuant to the contract with the corporate or business customer.

H. ''SBC'' means defendant SBC Communications, Inc., a Delaware corporation with its headquarters in San Antonio, Texas, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

I. ''Skagit'' means Skagit Wireless LLC, an Oregon corporation with headquarters in Portland, Oregon, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

J. ''Spectrum License Divestiture Assets'' means a license for 10 MHz of contiguous PCS spectrum in the specified MSAs and Basic Trading Areas (''BTA'') used to define cellular and PCS license areas by the FCC:

(1) The Dallas-Fort Worth, Texas MSA (CMA 009);

(2) The Detroit, Michigan BTA (BTA 112), provided that the license to be transferred does not include any PCS spectrum in Monroe and Sanilac counties; and

(3) The Knoxville, Tennessee BTA (BTA 232), provided that as an alternative to the divestiture of a license for 10 MHz of contiguous PCS spectrum as required by Section IV of the proposed Final Judgment, defendants, with the approval of plaintiff United States in its sole discretion, can restructure AT&T Wireless's existing relationship with Skagit such that (i) defendants have no equity or leasehold interest in, hold no debt of, and have no managerial or operational interest in Skagit's PCS license in the Knoxville Tennessee BTA, and (ii) Skagit's PCS license in the Knoxville Tennessee BTA is contractually committed to be used in a manner that resolves the competitive concerns alleged by plaintiffs in the Complaint.

K. ''Transaction'' means the Agreement and Plan of Merger By and Among AT&T Wireless Services, Inc., Cingular Wireless Corporation, Cingular Wireless LLC, Links I Corporation, SBC Communications Inc., and Bell South Corporation, dated February 17, 2004.

L. ''Wireless Business Divestiture Assets'' means, for each mobile wireless business to be divested under the proposed Final Judgment, all types of assets, tangible and intangible, used by defendants in the operation of the mobile wireless businesses to be divested (including the provision of long distance telecommunications services for wireless calls). ''Wireless Business Divestiture Assets'' shall be construed broadly to accomplish the complete divestitures of the entire business of AT&T Wireless in each of the following MSA and RSA license areas as required by the proposed Final Judgment and to ensure that the divested mobile wireless businesses remain viable, ongoing businesses:

(a) Oklahoma City, Oklahoma MSA (CMA 045);

(b) Connecticut RSA–1 (CMA 357), provided that defendants may retain 10 MHz of AT&T Wireless's PCS spectrum, provided that 10 MHz of contiguous PCS spectrum throughout the RSA is divested to the Acquirer;

(c) Kentucky RSA–1 (CMA 443), provided that defendants may retain 15 MHz of AT&T Wireless's PCS spectrum in Fulton country and 10 MHz of AT&T Wireless's PCS spectrum in the other counties contained within the RSA, provided that 30 MHz of contiguous PCS spectrum in Fulton county and 20 MHz of contiguous PCS spectrum in the other counties contained in the RSA is divested to an Acquirer;

(d) Oklahoma RSA–3 (CMA 598); and

(e) Texas RSA–11 (CMA 662), provided that defendants may retain in Sabine County, 25 MHz of AT&T Wireless's PCS spectrum, and in Angelina, Nacogdoches, and San Augustine counties, defendants may retain 20 MHz of AT&T Wireless's PCS spectrum, provided that 10 MHz of contiguous PCS spectrum throughout the RSA is divested to an Acquirer.

Wireless Business Divestiture Assets shall include, without limitation, all types of real and personal property, monies and financial instruments, equipment, inventory, office furniture, fixed assets and furnishings, supplies and materials, contracts, agreements, leases, commitments, spectrum licenses issued by the FCC and all other licenses, permits and authorizations, operational support systems, cell sites, network infrastructure, switches, customer support and billing systems, interfaces with other service providers, business and customer records and information, customer contracts, customer lists, credit records, accounts, and historic and current business plans which relate primarily to the wireless business being divested, as well as any patents, licenses, sub-licenses, trade secrets, know-how, drawings, blueprints, designs, technical and quality specifications and protocols, quality assurance and control procedures, manuals and other technical information defendants supply to their own employees, customers, suppliers, agents, or licenses, and trademarks, trade names and service marks or other intellectual property, including all intellectual property rights under third-party licenses that are capable of being transferred to an Acquirer either in their entirety, for assets described in (1) below, or through a license obtained through or from the divesting defendant,

for assets described in (2) below; provided that defendants shall only be required to divest Multi-line Business Customer contracts, if 50 percent or more of the Multi-line Business Customer's subscribers reside or work within any of the five (5) license areas described herein, and further, any subscribers who obtain mobile wireless services through any such contract retained by defendants and who are located within the five (5) geographic areas identified above, shall be given the option to terminate their relationship with defendants, without financial cost, within one year of the closing of the Transaction. Defendants shall provide written notice to these subscribers within 45 days after the closing of the Transaction.

These divestitures of the Wireless Business Divestiture Assets as defined in Section II.L shall be accomplished by:

(1) Transferring to the Acquirer(s) the complete ownership and/or other rights to the assets (other than those assets used substantially in the operations of AT&T Wireless's overall wireless business which must be retained to continue the existing operations of the wireless properties that defendants are not required to divest, and that either are not capable of being divided between the divested wireless businesses and those not divested, or are assets that the defendants and the Acquirer(s) agree, subject to approval of plaintiff United States upon consultation with any relevant plaintiff state, shall not be divided); and

(2) Granting to the Acquirer(s) an option to obtain a non-exclusive, transferable license from defendants for a reasonable period, subject to approval of plaintiff United States upon consultation with any relevant plaintiff state, at the election of an Acquirer to use any of AT&T Wireless's retained assets under paragraph (1) above, used in the operation of the wireless business being divested, so as to enable the Acquirer to continue to operate the divested wireless business without impairment. Defendants shall identify in a schedule submitted to plaintiffs and filed with the Court, as expeditiously as possible following the filing of the Complaint and in any event prior to any divestitures and before the approval by the Court of the proposed Final Judgment, any intellectual property rights under third-party licenses that are used by the wireless businesses being divested but that defendants could not transfer to an Acquirer entirely or by license without third-party consent, and the specific reasons why such consent is necessary and how such consent would be obtained for each asset.

II. Objectives

The Final Judgment filed in this case is meant to ensure defendants' prompt divestiture of the Divestiture Assets for the purpose of preserving viable competitors in the provision of mobile wireless services in order to remedy the effects that plaintiffs allege would otherwise result from Cingular's acquisition of AT&T Wireless. This Preservation of Assets Stipulation and Order ensures, prior to such divestitures, that competition is maintained during the pendency of the ordered divestitures, and that the Wireless Business Divestiture Assets remain an ongoing business concern and the Divestiture Assets remain economically viable. The Divestiture Assets will remain, as provided herein, preserved, independent and uninfluenced by defendants.

III. Jurisdiction and Venue

This Court has jurisdiction over the subject matter of this action and each of the parties hereto, and venue of this action is proper in the United States District Court for the District of Columbia. The Complaint states a claim upon which relief may be granted against defendants under Section 7 of the Clayton Act, 15 U.S.C. 18.

IV. Compliance With and Entry of Final Judgment

A. The parties stipulate that a proposed Final Judgment in the form attached hereto as Exhibit A may be filed with and entered by the Court, upon the motion of any party or upon the Court's own motion, at any time after compliance with the requirements of the Antitrust Procedures and Penalties Act, 15 U.S.C. 16, and without further notice to any party or other proceedings, provided that no plaintiff has withdrawn its consent, which it may do at any time before the entry of the proposed Final Judgment by serving notice thereof on defendants and other plaintiffs and by filing that notice with the Court.

B. Defendants shall abide by and comply with the provisions of the proposed Final Judgment, pending the Judgment's entry by the Court, or until expiration of time for all appeals of any Court ruling declining entry of the proposed Final Judgment, and shall, from the date of the signing of this Stipulation by the parties, comply with all the terms and provisions of the proposed Final Judgment as though the same were in full force and effect as an order of the Court.

C. Defendants shall not consummate the transaction sought to be enjoined by the Complaint herein before the Court has signed this Preservation of Assets Stipulation and Order.

D. This Stipulation shall apply with equal force and effect to any amended proposed Final Judgment agreed upon in writing by the parties and submitted to the Court.

E. In the event (1) any plaintiff has withdrawn its consent, as provided in Section IV.A above, or (2) the proposed Final Judgment is not entered pursuant to this Stipulation, the time has expired for all appeals of any Court declining entry of the proposed Final Judgment, and the Court has not otherwise ordered continued compliance with the terms and provisions of the proposed Final Judgment, then the parties are released from all further obligations under this Stipulation, and the making of this Stipulation shall be without prejudice to any party in this or any other proceeding.

F. Defendants represent that the divestitures ordered in the proposed Final Judgment can and will be made, and that defendants will later raise no claim of mistake, hardship or difficulty of compliance as grounds for asking the Court to modify any of the provisions contained therein.

V. Management Trustee

A. Plaintiff United States nominates Joseph J. Simons as Management Trustee in this case. The plaintiff states consent to, and defendants have no objection to, his immediate appointment by this Court. Accordingly, this Court appoints Joseph J. Simons as Management Trustee to serve as manager of the Divestiture Assets until the Divestiture Assets are sold or transferred to a Divestiture Trustee pursuant to Section V of the proposed Final Judgment. Nothing in this Stipulation shall be interpreted to prevent the Management Trustee from becoming the Divestiture Trustee pursuant to Section V of the proposed Final Judgment.

B. Within five (5) business days of the entry of this Stipulation by the Court, defendants shall enter into a trust agreement with Mr. Simons subject to the approval of plaintiff United States in its sole discretion upon consultation with plaintiff states, that will grant the rights, powers, and authorities necessary to permit him to perform the duties and responsibilities of the Management Trustee pursuant to this Stipulation. The trust agreement shall enable him to assume all rights, powers, and authorities necessary to perform his duties and responsibilities, pursuant to this Stipulation and the proposed Final Judgment and consistent with their

purposes. Mr. Simons or any other subsequently appointed Management Trustee shall serve at the cost and expense of defendants, on such terms and conditions as plaintiff United States approves upon consultation with plaintiff states, with a fee arrangement that is reasonable in light of the person's experience and responsibilities.

C. The Management Trustee will have the following powers and responsibilities with respect to the Divestiture Assets:

(1) The Management Trustee will have the power to manage the Divestiture Assets in the ordinary course of business consistent with this Stipulation. Only with the prior written approval of plaintiff United States upon consultation with plaintiff states, may the Management Trustee make any decision, take any action, or enter any transaction that is outside the ordinary course of business;

(2) The Management Trustee shall have a duty to, consistent with the terms of this Stipulation and the proposed Final Judgment, monitor the organization of the Divestiture Assets; manage the Divestiture Assets in order to maximize their value so as to permit expeditious divestitures in a manner consistent with the proposed Final Judgment; maintain the independence of the Divestiture Assets from defendants; control and operate the Wireless Business Divestiture Assets to ensure that the Wireless Business Divestiture Assets remain an independent, ongoing, economically viable competitor to the other mobile wireless services providers; and assure defendants' compliance with their obligations pursuant to this Stipulation and the proposed Final Judgment;

(3) The Management Trustee shall have the authority to employ, at the cost and expense of defendants, such consultants, accountants, attorneys, and other representatives and assistants as are reasonably necessary to carry out the Management Trustee's duties and responsibilities;

(4) The Management Trustee and any consultants, accountants, attorneys, and any other persons retained by the Management Trustee, shall have full and complete access to all personnel, books, records, documents, and facilities of the Divestiture Assets or to any other relevant information as the Management Trustee may reasonably request, including, but not limited to, all documents and records kept in the normal course of business that relate to the Divestiture Assets. Defendants shall develop such financial or other information as the Management Trustee may request and shall cooperate with the Management Trustee. Defendants shall take no action to interfere with or impede the Management Trustee's ability to monitor defendants' compliance with this Stipulation and the proposed Final Judgment or otherwise to perform his duties and responsibilities consistent with the terms of this Stipulation and the proposed Final Judgment;

(5) The Management Trustee will ensure that the Divestiture Assets shall be staffed with sufficient employees to maintain their viability and competitiveness. To the extent that any employees whose principal responsibilities related to the Divestiture Assets leave or have left the Divestiture Assets prior to divestiture of the Divestiture Assets, the Management Trustee may replace departing or departed employees with persons who have similar experience and expertise or determine not to replace such departing or departed employees; and

(6) Thirty (30) days after the Management Trustee has been appointed by the Court, and every thirty (30) days thereafter until the Divestiture Assets are either transferred to an Acquirer or to the Divestiture Trustee, the Management Trustee shall report in writing to the plaintiffs concerning the efforts to accomplish the purposes of this Stipulation and the proposed Final Judgment. Included within that report shall be the Management Trustee's assessment of the extent to which the Divestiture Assets are meeing (or exceeding) their projected goals as are reflected in existing or revised operating plans, budgets, projections or any other regularly prepared financial statements and the extent to which defendants are fulfilling their responsibilities under this Stipulation and the proposed Final Judgment.

D. The following limitations shall apply to the Management Trustee:

(1) The Management Trustee shall not be involved, in any way, in the operations of the other businesses of defendants;

(2) The Management Trustee shall have no financial interests affected by defendants' revenues, profits or profit margins, except that the Management Trustee's compensation for managing the Divestiture Assets may include economic incentives dependent on the financial performance of the Divestiture Assets provided that those incentives are consistent with the objectives of this Stipulation and the proposed Final Judgment and are approved by plaintiff United States upon consultation with plaintiffs states; and

(3) The Management Trustee shall be prohibited from performing any further work for defendants for two (2) years after the close of the divestiture transactions.

E. Defendants and the Management Trustee will take all reasonable efforts to preserve the confidentiality of information that is material to the operation of either the Divestiture Assets or defendants' businesses. Defendants' personnel supplying services to the Divestiture Assets pursuant to this Stipulation must retain and maintain the confidentiality of any and all confidential information material to the Divestiture Assets. Except as permitted by this Stipulation and the proposed Final Judgment, such persons shall be prohibited from providing, discussing, exchanging, circulating or otherwise furnishing the confidential information of the Divestiture Assets to or with any person whose employment involves any of defendants' businesses, except as necessary to fulfill the purposes of this Stipulation and the proposed Final Judgment.

F. If in the judgment of the Management Trustee, defendants fail to provide the services listed in Section VI of this Stipulation to the satisfaction of the Management Trustee, upon notification to defendants and approval by plaintiff United States upon consultation with plaintiff states, the Management Trustee may engage third parties unaffiliated with the defendants to provide those services for the Divestiture Assets, at the cost and expense of defendants, provided that defendants may have reasonable access to information to satisfy themselves that after the services have been provided, the Divestiture Assets are in compliance with all applicable laws, rules, and regulations.

G. At the option of the Management Trustee, defendants may also provide other products and services, on an arms-length basis provided that the Management Trustee is not obligated to obtain any other product or service from defendants and may acquire any such products or services from third parties unaffiliated with defendants.

H. If the Management Trustee ceases to act or fails to act diligently and consistently with the purposes of this Stipulation and the proposed Final Judgment, if the Management Trustee proposed by plaintiff United States is not approved by this Court or resigns, or if for any other reason the Management Trustee ceases to serve in his or her capacity as Management Trustee, the United States may select upon consultation with any relevant plaintiff state, a substitute Management Trustee. In this event, plaintiff United States will

identify to defendants the individual or entity it proposes to select as Management Trustee. Defendants must make any such objection to this selection within five (5) business days after plaintiff United States notifies defendants of the Management Trustee's selection. Upon application of the United States, the Court shall approve and appoint a substitute Management Trustee. Within five (5) business days of such appointment, defendants shall enter into a trust agreement with the Management Trustee subject to the approval of plaintiff United States in its sole discretion upon consultation with plaintiff states, as described in Section V.B of this Stipulation.

VI. Preservation of Assets

Until the divestitures required by the proposed Final Judgment have been accomplished, except as otherwise approved in advance in writing by plaintiff United States upon consultation with plaintiff states:

A. Defendants and the Management Trustee shall preserve, maintain, and continue to support the Divestiture Assets, take all steps necessary to manage the Divestiture Assets in order to maximize their revenue, profitability and viability so to permit expeditious divestitures in a manner consistent with this Stipulation and the proposed Final Judgment.

B. The Wireless Business Divestiture Assets shall be operated by the Management Trustee as part of an independent, ongoing, economically viable competitive business to other mobile wireless services providers operating in the same license area. Defendants and the Management Trustee shall take all steps necessary to ensure that:

(1) The management, sales, and operations of the Wireless Business Divestiture Assets are independent from defendants' other operations; provided at the request of the Management Trustee, defendants shall include the marketing, pricing and sales of the mobile wireless services generated by the Wireless Business Divestiture Assets in the license areas served by the Wireless Business Divestiture Assets within its marketing, promotional, and service offerings, in the ordinary course of business, in any national, regional, and local marketing programs. Nothing in this Section shall prohibit the Management Trustee from developing his own reasonable marketing, sales, pricing or promotional offers, which shall be funded and supported by defendants;

(2) The Wireless Business Divestiture Assets are maintained by adhering to normal and planned repair, capital improvement, upgrade and maintenance schedules;

(3) The management of the Wireless Business Divestiture Assets will not be influenced by defendants;

(4) The books, records, competitively sensitive sales, marketing and pricing information, and decision-making concerning marketing, pricing or sales of mobile wireless services generated by the Wireless Business Divestiture Assets will be kept separate and apart from defendants' other operations; and

(5) The management of the Wireless Business Divestiture Assets acts to maintain and increase the sales and revenues of the mobile wireless services generated by the Wireless Business Divestiture Assets, and maintain at previously approved levels for 2004 and 2005, whichever are higher, all promotional, advertising, sales, marketing, and technical support for the Wireless Business Divestiture Assets.

C. The management of the Spectrum License Divestiture Assets and the Minority Interests shall be held entirely separate, distinct, and apart from those of defendants' other operations.

D. Defendants shall provide sufficient working capital and lines and sources of credit as deemed necessary by the Management Trustee to continue to maintain the Divestiture Assets consistent with this Stipulation.

E. Except (1) as recommended by the Management Trustee and approved by plaintiff United States upon consultation with plaintiff states, or (2) as part of a divestiture approved by plaintiff United States upon consultation with any relevant plaintiff state, in accordance with the terms of the proposed Final Judgment, defendants shall not remove, sell, lease, assign, transfer, pledge or otherwise dispose of any of the Divestiture Assets outside the ordinary course of business.

F. The Management Trustee, with defendants' cooperation consistent with this Stipulation and the proposed Final Judgment, shall maintain, in accordance with sound accounting principles, separate, accurate, and complete financial ledgers, books and records that report on a periodic basis, such as the last business day of every month, consistent with past practices, the assets, liabilities, expenses, revenues, and income of the Divestiture Assets.

G. Defendants shall take no action that would jeopardize, delay, or impede the sale of the Divestiture Assets nor shall defendants take any action that would interfere with the ability of any Divestiture Trustee appointed pursuant to the proposed Final Judgment to operate and manage the Divestiture Assets or to complete the divestitures pursuant to the proposed Final Judgment to an Acquirer(s) acceptable to plaintiff United States.

H. Upon the filing of the Complaint in the action, defendants shall appoint sufficient employees for each of the Wireless Business Divestiture Assets, who are familiar with and have had responsibility for the management, operation, marketing, and sales of the Divestiture Assets, to assist the Management Trustee with his duties and responsibilities hereunder.

I. Except for employees (1) whose primary employment responsibilities relate to the Divestiture Assets, or (2) who are involved in providing support services to the Divestiture Assets pursuant to Sections V and VI of this Stipulation and Section V of the proposed Final Judgment, defendants shall not permit any other of their employees, officers, or directors to be involved in the operations of the Divestiture Assets.

J. Except as required by law in the course of (1) complying with this Stipulation and the proposed Final Judgment; (2) overseeing compliance with policies and standards concerning the safety, health, and environmental aspects of the operations of the Divestiture Assets and the integrity of their financial controls; (3) defending legal claims, investigations or enforcement actions threatened or brought against the Divestiture Assets; or (4) obtaining legal advice, defendants' employees (excluding employees (a) whose primary employment responsibilities relate to the Divestiture Assets, or (b) who are involved in providing support services to the Divestiture Assets pursuant to Sections V and VI of this Stipulation and Sections V of the proposed Final Judgment) shall not receive, or have access to, or use any material confidential information, not in the public domain, of the Divestiture Assets. Defendants may receive aggregate financial information relating to the Divestiture Assets to the extent necessary to allow defendants to prepare the defendants' consolidated financial reports, tax returns, reports required by securities laws, and personnel reports. Any such information that is obtained pursuant to this subparagraph shall be used only for the purposes set forth in this subparagraph.

K. Defendants may offer a bonus or severance to employees whose primary employment responsibilities relate to the Divestiture Assets, that continue their employment until divestiture (in addition to any other bonus or

severance to which the employees would otherwise be entitled).

L. Until the Divestiture Assets are divested to an Acquirer(s) acceptable to plaintiff United States upon consultation with any relevant plaintiff state, defendants shall provide to the Divestiture Assets, at no cost, support services needed to maintain the Divestiture Assets in the ordinary course of business, including but not limited to:

(1) Federal and state regulatory policy development and compliance;

(2) Human resources administrative services;

(3) Environmental, health and safety services, and developing corporate policies and ensuring compliance with federal and state regulations and corporate policies;

(4) Preparation of tax returns;

(5) Financial accounting and reporting services;

(6) Audit services;

(7) Legal services;

(8) Routine network maintenance, repair, improvements, and upgrades;

(9) Switching, call completion, and other services necessary to allow subscribers to use mobile wireless services and complete calls; and

(10) Billing, customer care and customer service related functions necessary to maintain the subscriber account and relationship.

M. Within twenty (20) days after the filing of the Complaint, defendants will notify plaintiff United States and plaintiff states in writing of the steps defendants have taken to comply with this Section.

N. This Preservation of Assets Stipulation and Order shall remain in effect until consummation of the divestitures required by the proposed Final Judgment or until further order of the Court.

Dated: October 25, 2004

Respectfully submitted,

For Plaintiff United States

BILLING CODE 4410–11–M

DEPARTMENT OF LABOR

Employment and Training Administration

Workforce Security Programs: Unemployment Insurance Program Letter Interpreting Federal Law

The Employment and Training Administration interprets Federal law requirements pertaining to unemployment compensation. These interpretations are issued in Unemployment Insurance Program Letters (UIPLs) to the State Workforce Agencies. UIPL 30–04, Change 1 is published in the **Federal Register** in order to inform the public.

This UIPL provides additional guidance to the states regarding enacting legislation which conforms to the ''SUTA Dumping Prevention Act of 2004,'' which was signed by the President on August 9, 2004.

Dated: November 8, 2004.

Emily Stover DeRocco,

Assistant Secretary of Labor.

Employment and Training Administration, Advisory System, U.S. Department of Labor, Washington, DC 20210

Advisory: Unemployment Insurance Program Letter No. 30–04 Change 1

To: State Workforce Agencies.

From: Cheryl Atkinson, Administrator, Office of Workforce Security.

Subject: SUTA Dumping—Amendments to Federal Law Affecting the Federal-State Unemployment Compensation Program—Additional Guidance.

1. *Purpose.* To provide additional guidance to states concerning the amendments to Federal law designed to prohibit ''SUTA Dumping.''

2. *References.* Public Law (Pub. L.) 108–295, the ''SUTA Dumping Prevention Act of 2004,'' signed by the President on August 9, 2004; the Social Security Act (SSA); the Internal Revenue Code (IRC), including the Federal Unemployment Tax Act (FUTA); and Unemployment Insurance Program Letters (UIPLs) 30–04, 14–84, and 29–83, Change 3.

3. *Background.* UIPL 30–04 informed states of the amendments to Federal unemployment compensation (UC) law made by Pub. L. 108–295, the ''SUTA Dumping Prevention Act of 2004.'' Pub. L. 108–295 amended the SSA by adding section 303(k) to establish a nationwide minimum standard for curbing SUTA dumping. States will need to amend their UC laws to conform with the new legislation.

Since the issuance of UIPL 30–04, the Department of Labor has received requests for clarification and other questions on the Federal SUTA dumping requirements. This UIPL is issued to respond to these requests and questions. As was UIPL 30–04, it is a question and answer (Q&A) format. States are especially directed to Q&As 1, 2, 14, and 15, which include additions and modifications to the draft legislative language provided with UIPL 30–04.

4. *Action.* State administrators should distribute this advisory to appropriate staff. States must adhere to the requirements of Federal law contained in this advisory.

5. *Inquiries.* Questions should be addressed to your Regional Office.

6. *Attachment.*

Questions and Answers (Q&As)

Mandatory Transfers—Section 303(k)(1)(A), SSA

1–1. Question: In anticipation of a major layoff, Employer A transfers the portion of its business and workforce which it will be laying off to a small company, Employer B. Since there is substantially common ownership, experience is also transferred. Employer B then lays off all of the transferred workforce and is charged for the resulting UC payments. Employer B then either ceases operating or operates with a greatly reduced workforce, thereby minimizing its UC costs. May the transfer of experience from Employer A to Employer B be voided in this case? If not, what can be done to avoid this type of SUTA dumping?

Answer: Since there is substantially common ownership, experience must be transferred from Employer A to Employer B under the mandatory transfer provisions.

Although Federal law does not require states to prevent this type of SUTA dumping, states may take action. (States which charge benefits to the separating employer may be particularly vulnerable to this type of SUTA dumping.) If the state determines that a substantial purpose of the transfer of trade or business was to obtain a lower rate, then both Employer A and Employer B's accounts could be treated as a single account for experience rating purposes. This will prevent Employer A from escaping its poor experience. It is consistent with Federal law both because Section 303(k)(2)(B), SSA, permits states to define ''employer'' and because Section 3303(a)(1), FUTA, has long permitted the establishment of joint accounts. To this end, the draft legislative language contained in Attachment II to UIPL 30–04 is revised as follows:

• By inserting ''(1)'' after ''(a)'' in the provision addressing mandatory transfers, and

• By inserting the following new language:

(2) If, following a transfer of experience under paragraph (1), the Commissioner determines that a substantial purpose of the transfer of trade or business was to obtain a reduced liability for contributions, then the experience rating accounts of the employers involved shall be combined into a single account and a single rate assigned to such account.

The Department recommends that states consider addressing this matter.

Alternatively, nothing prohibits a state from revisiting its determination that Employer B was a separate legal entity for UC purposes. If, for example, the state determines that Employer B has no business existence separate and apart from Employer A, and, therefore, under its law should not have been established as a separate employer for UC purposes, then its establishment as a separate employer may be voided and its experience will revert to Employer A. (Note this approach would not cover transfers to a long-established business that has a separate business identity.)

1–2. Question: Although the answer to Q&A 5 of UIPL 30–04 provides that an ''employer's workforce is necessarily a part of its business,'' the draft legislative language attached to that UIPL does not specifically address transferring workforce. Instead, it simply refers to transfers of trade or business. May the draft legislative language be modified to specifically cite transfers of workforce or employees?

Answer: Yes. The draft legislative language is just that—draft language. It may, therefore, be modified to explicitly provide that transfers of trade or business include situations where employees are transferred. The following language is added at the end of subsection (a) of the draft legislative language as optional language that the state may consider using:

The transfer of some or all of an employer's workforce to another employer shall be considered a transfer of trade or business when, as the result of such transfer, the transferring employer no longer performs trade or business with respect to the transferred workforce, and such trade or business is performed by the employer to whom the workforce is transferred.

Care should be taken to assure the state law does not require transfers of experience where an employee is ''moved'' from one employer to another, without any transfer of trade or business. See Q&A 1–7.

1–3. Question: The answer to Q&A 6 in UIPL 30–04 indicates that the Department is not defining a ''bright line'' test of what constitutes ''substantially common ownership, management, or control.'' Does this mean state law may contain a test of ''substantially common'' that requires more than 90 percent commonality? Or more than 50 percent commonality?

Answer: No, a 90 percent test would be a ''substantial majority'' test, while a 50 percent test would be a simple ''majority'' test. Congress could have specified either of these tests, but it instead chose a test of ''substantial'' commonality. Therefore, ''substantially'' could include less than 50% common ownership, management, or control. ''Substantial'' common management, for example, might even occur where Company A and Company B share only one manager, but that one manager exercises pervasive control as the chief executive officer of both companies.

1–4. Question: The answer to Q&A 8 in UIPL 30–04 ''strongly recommends that states reassign rates immediately upon completion of the transfer'' of experience to avoid a SUTA dump between the completion of a transfer and assignment of a new rate. If a state currently lacks the capability to assign two different rates to the same employer for the same year, may it retroactively change the employers' rates to the beginning of the rate year to reflect the transferred experience?

Answer: No. Section 3303(a)(1), FUTA, requires that ''reduced rates'' be assigned to an employer based on ''his'' experience during ''not less than the 3 consecutive years immediately preceding the computation date.'' If a rate based on transferred experience is assigned to an employer for a period before it becomes ''his'' experience, the employer cannot be said to be receiving a rate based on ''his'' experience for that period.

States have other options to address this concern. States may establish a different employer account number for the employer(s) and assign the recalculated rate to that new account number.

States may also retroactively impose the state's standard rate of contributions or the state's highest rate of contributions since these rates are not ''reduced rates'' subject to FUTA. (*See* UIPL 14–84 for guidance in determining the state's standard rate. Caution should be taken in using standard rates since in some states the standard rate may be lower than the employer's experience rate, either prior to or after any transfer.) Although this approach is consistent with FUTA, states should consider whether retroactively imposing higher rates on employers is equitable since employers will not have budgeted for retroactive costs and because the rates are not based on experience.

1–5. Question: Recalculating an employer's reduced rate in the middle of the rate year may be administratively cumbersome. May a state simply assign the employer the higher of the two rates for the remainder of the rate year? For example, assume Employer A has a rate of 5.0 percent and is purchased by Employer B which has a rate of 4.0 percent. May the state assign a rate of 5.0 percent to Employer B for the remainder of the rate year? (This method is authorized by UIPL 29–83, Change 3, which discusses transfers of experience, but only when Employer B is not an existing employer.)

Answer: Yes, the state may assign the higher of the two rates. FUTA's experience rating requirements apply to ''reduced rates.'' This approach always serves to increase the employer's rate. As noted in UIPL 29–83, Change 3, ''Since assigning the highest rate results in an increased rate (even though it may be less than the standard rate), there is no conflict with FUTA.'' Although UIPL 29–83, Change 3, addressed only cases where the successor was not an existing employer, this principle also applies to cases where the successor is an employer.

States should note that this approach may raise fairness issues. For example, assuming substantial commonality of ownership, management, or control at the time of the transfer or trade or business, an employer with a workforce of 10 individuals and an experience rate of 5.4 percent could have its trade/business and experience transferred to an employer with a workforce of 1,000 individuals and an experience rate of 2.0 percent. The result of assigning a higher rate would be a significantly higher rate on a significantly larger workforce.

1–6. Question: The answer to Q&A 8 in UIPL 30–04 provides for the option of ''immediately'' recalculating an employer's rate ''after the completion of the transfer of trade or business.'' This could be problematic since this rate change could occur in the middle of a quarter. May the recalculated rate take effect with the start of the quarter following the transfer?

Answer: Yes. Since nothing in the SUTA dumping amendments requires rates be

recalculated prior to the next time the state calculates rates for all employers, states have latitude in this matter.

1–7. Question: The answer to Q&A 9 in UIPL 30–04, says that where ''[a]n employee of one legal entity is moved to another legal entity,'' no transfer of experience is required. (Emphasis added.) However, the answer to Q&A 13 in that UIPL says the SUTA Dumping amendment applies to ''all transfers, large and small.'' What is the distinction between the two?

Answer: Q&A 13 applies to cases where there is a transfer of trade or business. (Q&As 5 and 14 in UIPL 30–04 and 1–2 in this UIPL also apply to situations where trade or business is transferred.)

The answer to Q&A 9 applies to cases where an employee is ''moved'' from one legal entity to another, but where there is no transfer of trade or business. For example, an owner of two separate legal entities ''moves'' an individual from head of widget making for Entity A to head of graphic design for Entity B, but does not transfer any of the widget-making trade/business to Entity B. In this case, no trade or business is transferred and the ''move'' of the individual is in the nature of a reassignment.

In cases where no trade or business has been transferred, experience may not be transferred. Therefore, when an employee's ''move'' is merely in the nature of a reassignment, the state may not transfer experience.

1–8. Question: State law allows employers to voluntarily combine their experience rating histories into joint accounts under certain conditions. Does the SUTA dumping legislation affect this?

Answer: No. Joint accounts may continue to be established in accordance with state law.

The SSA's mandatory transfer provisions affect joint accounts in the same way they affect individual employer accounts. That is, if an employer participating in a joint account transfers trade or business to another employer and a transfer of experience is required under provisions of state law implementing the SSA's mandatory transfer provisions, then any subsequent calculation of the experience rate of the joint account must take into account this transfer.

1–9. Question: Do the amendments mandating a transfer of experience affect what constitute taxable wages?

Answer: The amendments address the transfer of experience and of rates based on that experience. They do not affect determinations of what constitute taxable wages under the state's law. As a result, after trade and business is transferred, the state may either give effect to taxable wages paid by the predecessor in determining whether the taxable wage base is met, or ''restart'' the taxable wage base for the individual at zero.

1–10. Question: Do the mandatory transfer provisions for SUTA Dumping apply when an employer is ''reorganized?''

Answer: The keys under section 303(k)(1)(A), SSA, are whether there is a transfer of trade or business and whether there is substantially common ownership, management, or control. Thus, the answer depends on whether the reorganization involves a transfer of trade or business between entities under substantially common ownership, management or control.

As used in bankruptcy law, a reorganization is a ''financial restructuring of a corporation, esp. in the repayment of debts, under a plan created by a trustee and approved by a court.'' (Black's Law Dictionary (8th edition, 2004).) Thus, if a single employer simply ''financially restructures'' itself, without transferring trade or business, then the mandatory transfer provisions do not apply.

In other cases, reorganizations are mergers of corporations which involve a transfer of trade or business. For example, a reorganization may be a ''restructuring of a corporation, as by a merger or recapitalization, in order to improve its tax treatment under the Internal Revenue Code.'' (Black's Law Dictionary (8th edition, 2004).) When there is a merger, the mandatory transfer provisions will apply if there is substantially common ownership, management, or control at the time of the transfer of trade or business.

Note the mandatory transfer provision of Section 303(k)(1)(A), SSA, does not speak in terms of ''acquisitions.'' In many reorganizations, there may be mergers involving stock swaps or stock-for-asset exchanges, and it may be argued that no ''acquisition'' has occurred, even though workforce has been moved to another legal entity within a corporate umbrella. For purposes of the mandatory SUTA dumping amendments, whether there has been an ''acquisition'' is immaterial. What is significant is whether trade or business was transferred when, at the time of the transfer, there is substantially common ownership, management, or control. If this occurs, then the experience must also be transferred.

Required Penalties—Section 303(k)(1)(D), SSA

1–11. Question: The draft legislative language attached to UIPL 30–04 provides that, in addition to any civil penalty, ''any violation of this section *may be* prosecuted as a'' criminal offense. (Emphasis added.) Does this mean that inclusion of criminal penalties is optional on the part of the state?

Answer: No, section 303(k)(1)(D), SSA, clearly requires that state law must provide that ''meaningful civil and criminal penalties'' are imposed under certain circumstances. (*See* Q&A 19 in UIPL 30–04.) The draft legislative language quoted in the question merely indicates that the state has discretion to apply criminal penalties as appropriate. As noted in Q&A 20 in UIPL 30–04, ''States will take into account the amounts at issue and the likelihood of successful prosecution in determining which cases will result in criminal prosecutions.''

1–12. Question: State law must provide for the imposition of penalties for persons who ''knowingly'' violate or attempt to violate those provisions of state law that implement section 303(k), SSA, and for those who ''knowingly'' advise another person to violate such provisions. Since it is often difficult to prove that an action is done ''knowingly,'' may state law provide that penalties may be imposed using a lower level of proof?

Answer: Yes. The ''knowingly'' test is the minimum standard that state law must contain to meet the requirements of Section 303(k)(1)(D), SSA. States must assure that any such test is at least as encompassing as the ''knowingly'' standard.

Statute of Limitations

1–13. Question: Assume a ''SUTA dump'' occurred five years before the state identified it. The state's statute of limitations prevents the state from assessing contributions more than three years prior to the date of detection. Does this statute of limitations conflict with the SUTA dumping amendments?

Answer: No. Nothing in the SUTA dumping legislation overrides a state's statute of limitations. As a result, in the above example, the state may limit its assessment of contributions to the three-year period provided in its statute of limitations.

Draft Legislative Language

1–14. Question: Subsection (c)(1) of the draft legislative language attached to UIPL 30–4 provides for civil penalties for persons knowingly violating or attempting to violate ''subsections (a) *and* (b) or any other provision of this Chapter related to determining the assignment of a contribution rate? (Emphasis added.) Should the ''and'' be an ''or''?

Answer: Yes. The word ''and'' could be read to mean that the person must have violated, or attempted to violate, both the mandatory transfer provision and the prohibited transfer provision. Therefore the draft legislative language should be corrected by changing ''and'' to ''or''.

Also, note there is a typo in subsection (e)(2) of the draft legislative language. ''Trade *of* business'' should be corrected to ''Trade *or* business.'' (Emphasis added.)

1–15. Question: Subsection (c)(4) of the draft legislative language attached to UIPL 30–4 provides that ''In addition to the penalty imposed by paragraph (1), any violation of this section may be prosecuted.* * *'' May ''section'' be changed to ''Chapter''?

Answer: Yes. Using the word ''chapter'' will have the effect of making the criminal penalties applicable to any other provision of the state's UC law related to determining the assignment of a contribution rate. Note that states are not required to apply the penalties they develop for SUTA dumping to other violations of state law. (*See* Q&A 24 in UIPL 30–04.)

BILLING CODE 3710–GX–M

NUCLEAR REGULATORY COMMISSION

[NUREG–1600]

NRC Enforcement Policy

AGENCY: Nuclear Regulatory Commission.

ACTION: Policy statement: revision.

SUMMARY: The Nuclear Regulatory Commission (NRC) is revising its General Statement of Policy and Procedure for NRC Enforcement Actions (NUREG–1600) (Enforcement Policy or Policy) to include an administrative change that provides that the appropriate Regional Administrator will issue all Notices of Enforcement Discretion (NOEDs) for power reactors.

DATES: This revision is effective November 15, 2004. Comments on this revision to the Enforcement Policy may be submitted on or before December 15, 2004.

ADDRESSES: Submit written comments to: Michael T. Lesar, Chief, Rules and Directives Branch, Division of Administrative Services, Office of Administration, Mail Stop: T6D59, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001. Hand deliver comments to: 11555 Rockville Pike, Rockville, Maryland, between 7:30 a.m. and 4:15 p.m., Federal workdays. Copies of comments received may be examined at the NRC Public Document Room, Room O1F21, 11555 Rockville Pike, Rockville, MD. You may also e-mail comments to *nrcrep@nrc.gov*.

The NRC maintains the current Enforcement Policy on its Web site at *http://www.nrc.gov*, select What We Do, Enforcement, then Enforcement Policy.

FOR FURTHER INFORMATION CONTACT: Herbert N. Berkow, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, (301) 415–1395, e-mail (*HNB@nrc.gov*) or Renée Pedersen, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, (301) 415–2742, e-mail (*RMP@nrc.gov*).

SUPPLEMENTARY INFORMATION: Section VII.C of the Enforcement Policy describes the circumstances when the staff may exercise enforcement discretion in the form of a NOED for power reactors.

On occasion, circumstances may arise where a licensee's compliance with a Technical Specification (TS) Limiting Condition for Operation (LCO) or other license condition would involve: (1) An unnecessary plant transient; (2) performance of testing, inspection, or system realignment that is inappropriate with the specific plant conditions; or, (3) unnecessary delays in plant startup without a corresponding health and safety benefit. The staff may also grant enforcement discretion in cases involving severe weather or other natural phenomena. This decision is based upon balancing the public health and safety or common defense and security of not operating against the potential radiological or other hazards associated with continued operation, resulting in a determination that safety will not be impacted unacceptably by exercising this discretion. The Commission is to be informed expeditiously following the granting of a NOED in such situations.

In these circumstances, the NRC staff may choose to not enforce the applicable TS or other license condition. This enforcement discretion, designated as a NOED, is only exercised if the NRC staff is clearly satisfied that the action is consistent with protecting the public health and safety. NRC guidance for implementing the NOED policy for power reactors is provided in the *NRC Inspection Manual* Part 9900 guidance.

The Enforcement Policy and implementing guidance have historically recognized the distinction between: (1) Those instances where a noncompliance is temporary and nonrecurring when an amendment is not practical, and (2) those instances where a noncompliance will occur during the brief period of time required for the NRC staff to process an emergency or exigent license amendment under the provisions of 10 CFR 50.91(a)(5) or (6). In the first situation, the Regional Administrator has issued the NOED and subsequently documented the decision for granting the NOED. In the second situation, the Director, Office of Nuclear Reactor Regulation (NRR) has issued the NOED and subsequently documented the decision for granting the NOED. In other words, the current distinction between region-issued and NRR-issued NOEDs for power reactors is based on the duration of the NOED and whether or not a follow-up license amendment is appropriate.

This revision of the Enforcement Policy eliminates the distinction between region-issued and NRR-issued NOEDs for power reactors. Although historically most NOEDs have been issued and documented by the cognizant regions without follow-up license amendments, all NOED requests have been evaluated and decisions made jointly by the regional and NRR staffs. Thus, the distinction is unnecessary.

The Enforcement Policy revision specifies that the associated regional and headquarters staff will together determine the appropriateness of granting a requested NOED. If the NOED is determined to be appropriate, regional staff will complete the documentation process associated with granting the NOED.

The revision provides that, for all power reactor NOED determinations, the Regional Administrator, or his or her designee, may issue a NOED after consultation with headquarters and therefore eliminates the need to categorize NOEDs as regional- or headquarters-lead. This clarification will provide a more predictable, clear, and consistent process for licensees when requesting NRC to consider granting a NOED.

This policy revision, as well as other NOED process improvements, was discussed with representatives of the Nuclear Energy Institute (NEI) and other stakeholders at a public meeting with the NRC staff on July 14, 2004. The NRC plans on completely revising and reissuing its Part 9900 guidance later in the year. In addition to the Enforcement Policy revision, other process improvements include emphasizing that the license amendment process should be used in preference to NOEDs whenever possible and developing improved guidance to address the NOED request requirement to demonstrate no net increase in radiological risk. In addition, other concurrent improvements to the NOED process will result in most NOEDs having follow-up license amendments regardless of the NOED duration.

The revision to the Enforcement Policy is strictly administrative in nature and will support simplification of the NOED process by providing a clear understanding of the roles and responsibilities of NRC regional and headquarters staff associated with issuance of NOEDs.

It is anticipated that the Enforcement Policy revision will have minimal, if any, impact on external stakeholders.

Paperwork Reduction Act

This policy statement does not contain new or amended information collection requirements subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) Existing requirements were approved by the Office of Management and Budget (OMB), approval number 3150–0136. The approved information collection requirements contained in this policy statement appear in Section VII.C.

Public Protection Notification

The NRC may not conduct or sponsor, and a person in not required to respond to, collection of information unless it displays a currently valid OMB control number.

Small Business Regulatory Enforcement Fairness Act

In accordance with the Small Business Regulatory Enforcement Fairness Act of 1996, the NRC had determined that this action is not a major rule and has verified this determination with the Office of Information and Regulatory Affairs of OMB.

Accordingly, the proposed revision to the NRC Enforcement Policy reads as follows:

General Statement of Policy and Procedure for NRC Enforcement Actions

* * * * *

VII. Exercise of Discretion

* * * * *

C. Notice of Enforcement Discretion for Power Reactors and Gaseous Diffusion Plants

On occasion, circumstances may arise where a power reactor's compliance with a Technical Specification (TS) Limiting Condition for Operation or with other license conditions would involve an unnecessary plant transient or performance of testing, inspection, or system realignment that is inappropriate with the specific plant conditions, or unnecessary delays in plant startup without a corresponding health and safety benefit. Similarly, for a gaseous diffusion plant (GDP), circumstances may arise where compliance with a Technical Safety Requirement (TSR) or technical specification or other certificate condition would unnecessarily call for a total plant shutdown or, notwithstanding that a safety, safeguards, or security feature was degraded or inoperable, compliance would unnecessarily place the plant in a transient or condition where those features could be required.

In these circumstances, the NRC staff may choose not to enforce the applicable TS, TSR, or other license or certificate condition. This enforcement discretion, designated as a Notice of Enforcement Discretion (NOED), will only be exercised if the NRC staff is clearly satisfied that the action is consistent with protecting the public health and safety. The NRC staff may also grant enforcement discretion in cases involving severe weather or other natural phenomena, based upon balancing the public health and safety or common defense and security of not operating against the potential radiological or other hazards associated with continued operation, and a determination that safety will not be impacted unacceptably by exercising this discretion. The Commission is to be informed expeditiously following the granting of a NOED in these situations. A licensee or certificate holder seeking the issuance of a NOED must provide a written justification, or in circumstances where good cause is shown, oral justification followed as soon as possible by written justification, that documents the safety basis for the request and provides whatever other information necessary for the NRC staff to make a decision on whether to issue a NOED.

For power reactors, the appropriate Regional Administrator, or his or her designee, may issue a NOED after consultation with the Director, Office of Nuclear Reactor Regulation, or his or her designee, to determine the appropriateness of granting a NOED where (1) the noncompliance is temporary and nonrecurring when an amendment is not practical or (2) if the expected noncompliance will occur during the brief period of time it requires the NRC staff to process an emergency or exigent license amendment under the provisions of 10 CFR 50.91 (a)(5() or (6). For gaseous diffusion plants, the appropriate Regional Administrator, or his or her designee, may issue and document a NOED where the noncompliance is temporary and nonrecurring and when an amendment is not practical. The Director, Office of Nuclear Materials Safety and Safeguards, or his or her designee, may issue a NOED if the expected noncompliance will occur during the brief period of time it requires the NRC staff to process a certificate amendment under 10 CFR 76.45. The person exercising enforcement discretion will document the decision.

For an operating reactor, this exercise of enforcement discretion is intended to minimize the potential safety consequences of unnecessary plant transients with the accompanying operational risks and impacts or to eliminate testing, inspection, or system realignment which is inappropriate for the particular plant conditions. For plants in a shutdown condition, exercising enforcement discretion is intended to reduce shutdown risk by, again, avoiding testing, inspection or system realignment which is inappropriate for the particular plant conditions, in that, it does not provide a safety benefit or may, in fact, be detrimental to safety in the particular plant condition. Exercising enforcement discretion for plants attempting to startup is less likely than exercising it for an operating plant, as simply delaying startup does not usually leave the plant in a condition in which it could experience undesirable transients. In such cases, the Commission would expect that discretion would be exercised with respect to equipment or systems only when it has at least concluded that, notwithstanding the conditions of the license: (1) The equipment or system does not perform a safety function in the mode in which operation is to occur; (2) the safety function performed by the equipment or system is of only marginal safety benefit, provided remaining in the current mode increases the likelihood of an unnecessary plant transient; or (3) the TS or other license condition requires a test, inspection, or system realignment that is inappropriate for the particular plant conditions, in that it does not provide a safety benefit, or may, in fact, be detrimental to safety in the particular plant condition.

For GDPs, the exercise of enforcement discretion would be used where compliance with a certificate condition would involve an unnecessary plant shutdown or, notwithstanding that a safety, safeguards, or security feature was degraded or inoperable, compliance would unnecessarily place the plant in a transient or condition where those features could be required. Such regulatory flexibility is needed because a total plant shutdown is not necessarily the best response to a plant condition. GDPs are designed to operate continuously and have never been shut down. Although portions can be shut down for maintenance, the NRC staff has been informed by the certificate holder that restart from a total plant shutdown may not be practical and the staff agrees that the design of a GDP

does not make restart practical. Hence, the decision to place either GDP in plant-wide shutdown condition would be made only after determining that there is inadequate safety, safeguards, or security and considering the total impact of the shutdown on safety, the environment, safeguards, and security. A NOED would not be used for noncompliances with other than certificate requirements, or for situations where the certificate holder cannot demonstrate adequate safety, safeguards, or security.

The decision to exercise enforcement discretion does not change the fact that a violation will occur nor does it imply that enforcement discretion is being exercised for any violation that may have led to the violation at issue. In each case where the NRC staff has chosen to issue a NOED, enforcement action will normally be taken for the root causes, to the extent violations were involved, that led to the noncompliance for which enforcement discretion was used. The enforcement action is intended to emphasize that licensees and certificate holders should not rely on the NRC's authority to exercise enforcement discretion as a routine substitute for compliance or for requesting a license or certificate amendment.

Finally, it is expected that the NRC staff will exercise enforcement discretion in this area infrequently. Although a plant must shut down, refueling activities may be suspended, or plant startup may be delayed, absent the exercise of enforcement discretion, the NRC staff is under no obligation to take such a step merely because it has been requested. The decision to forego enforcement is discretionary. When enforcement discretion is to be exercised, it is to be exercised only if the NRC staff is clearly satisfied that the action is warranted from a health and safety perspective.

* * * * *

Dated at Rockville, MD, this 8th day of November, 2004.

For the Nuclear Regulatory Commission.

Annette L. Vietti-Cook,

Secretary of the Commission.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 030–34325]

Notice of Availability of Environmental Assessment and Finding of No Significant Impact for License Amendment for Release of Facility for Unrestricted Use for the Department of Veterans Affairs Chicago Health Care System Lakeside Campus—Medical Sciences Building, Chicago, IL

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of availability.

FOR FURTHER INFORMATION CONTACT: William Snell, Senior Health Physicist, Decommissioning Branch, Division of Nuclear Material Safety, Region III, U.S. Nuclear Regulatory Commission, 2443 Warrenville Road, Lisle, Illinois 60532; telephone: (630) 829–9871; fax number: (630) 515–1259; e-mail: *wgs@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The Nuclear Regulatory Commission (NRC) is issuing a license amendment to Material License No. 03–23853–01VA issued to the Department of Veterans Affairs (DVA) (the licensee), to authorize release of its Chicago Health Care System, Lakeside Campus—Medical Sciences Building in Chicago, Illinois for unrestricted use, and has prepared an Environmental Assessment (EA) in support of this amendment in accordance with the requirements of 10 CFR part 51. Based on the EA, the NRC has concluded that a Finding of No Significant Impact (FONSI) is appropriate. The amendment will be issued following the publication of this notice.

II. EA Summary

The purpose of the proposed amendment is to allow for the release of the licensee's Chicago, Illinois facility for unrestricted use. The DVA has occupied the Chicago Health Care System, Lakeside Campus—Medical Sciences Building since 1978, and during that period was authorized to use byproduct, source, and special nuclear material for medical diagnosis, therapy, and research. The Chicago, Illinois facility is a permittee under the DVA NRC Master Material License (MML) Number 03–23853–01VA, and on October 1, 2004, requested the NRC release the facility for unrestricted use. The approval is consistent with a March 17, 2003, Letter of Understanding (LOU) between the NRC and DVA for DVA permittees. The LOU requires the DVA to submit for NRC review, permittee requests for the release of buildings for unrestricted use where radioactive materials with a half-life greater than 120 days were used. The DVA identified four isotopes with half-lives greater than 120 days that it used in the Medical Sciences Building: hydrogen-3, carbon-14, sodium-22, and chlorine-36. The DVA has conducted surveys of the facility and provided information to the NRC to demonstrate that the site meets the licensee termination criteria in subpart E of 10 CFR part 20 for unrestricted release.

The staff has prepared an EA in support of the proposed license amendment. Based on its review, the staff determined there were no radiological or non-radiological environmental impacts associated with the action since no radiological remediation activities were required to complete the proposed action. The staff has determined that the proposed action is administrative and/or procedural in nature and will not affect listed species or critical habitat. Likewise, NRC staff has determined that the proposed action is not the type of activity that has the potential to cause effects on historic properties because it is an administrative and/or procedural action.

III. Finding of No Significant Impact

The staff has prepared an EA in support of the proposed license amendment to release the site for unrestricted use. The staff has found that the radiological environmental impacts from the proposed amendment are bounded by the impacts evaluated by NUREG–1496, Volumes 1–3, ''Generic Environmental Impact Statement in Support of Rulemaking on Radiological Criteria for License Termination of NRC-Licensed Facilities'' (ML042310492, ML042320379, and ML042330385). The staff has also found that the non-radiological impacts are not significant. On the basis of the EA, NRC has concluded that there are no significant environmental impacts from the proposed amendment and has determined not to prepare an environmental impact statement.

IV. Further Information

Documents related to this action, including the application for amendment and supporting documentation, are available electronically at the NRC's Electronic Reading Room at *http://www.nrc.gov/reading-rm/adams.html.* From this site, you can access the NRC's Agencywide Document Access and Management System (ADAMS), which provides text

and image files of NRC's public documents. The ADAMS accession numbers for the documents related to this notice are: the DVA letter dated October 1, 2004 (Accession No. ML042920457); the Final Status Survey Report, VA Chicago—Lakeside Campus, Medical Sciences Building, September 9, 2004 (Accession No. ML042920463); and the EA summarized above (Accession No. ML043010491). Please note that on October 25, 2004, the NRC terminated public access to ADAMS and initiated an additional security review of publicly available documents to ensure that potentially sensitive information is removed from the ADAMS database accessible through the NRC's web site. Interested members of the public may obtain copies of the referenced documents for review and/or copying by contacting the Public Document Room pending resumption of public access to ADAMS. The NRC Public Documents Room is located at NRC Headquarters in Rockville, MD, and can be contacted at (800) 397–4209, (301) 415–4737 or by e-mail to *pdr@nrc.gov*.

These documents may also be viewed electronically on the public computers located at the NRC's PDR, O 1 F21, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852. The PDR reproduction contractor will copy documents for a fee.

Dated in Lisle, Illinois, this 4th day of November 2004.

For the Nuclear Regulatory Commission,

Kenneth G. O'Brien,

Chief, Decommissioning Branch, Division of Nuclear Materials Safety, Region III.

[FR Doc. 04–25258 Filed 11–12–04; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Nuclear Waste; Notice of Meeting

The Advisory Committee on Nuclear Waste (ACNW) will hold its 155th meeting on November 16–18, 2004, Room T–2B3, 11545 Rockville Pike, Rockville, Maryland.

The schedule for this meeting is as follows:

Tuesday, November 16, 2004

10:30 a.m.–10:40 a.m.: Opening Statement (Open)—The ACNW Chairman will open the meeting with brief opening remarks.

10:40 a.m.–11:40 a.m.: NMSS Division Directors' Semi-Annual Briefing (Open)—The Committee will be briefed by the Director, Division of High Level Waste Repository Safety and the Director, Division of Waste Management and Environmental Protection on recent activities of interest.

11:40 a.m.–12:40 p.m.: International Transportation Meetings (Open)—The Director, SFPO will report on recent international transportation-related meetings/activities of interest.

2 p.m.–3 p.m.: Format and Content of the U.S. Department of Energy Yucca Mountain License Application (Open)—The Committee will be briefed by a DOE representative on the general DOE format and content of the forthcoming DOE license application.

3:15 p.m.–5:15 p.m.: ACNW 2005 Action Plan (Open)—The ACNW Committee will continue its discussion of potential topics for inclusion in its draft 2005 Action Plan.

Wednesday, November 17, 2004

8:30 a.m.–8:35 a.m.: Opening Statement (Open)—The ACNW Chairman will make opening remarks regarding the conduct of today's sessions.

8:35 a.m.–10 a.m.: Working Group Planning Session (Open)—The Committee Members will discuss potential future activities including proposed 2005 working group meetings.

10 a.m.–12 Noon: Preparation of ACNW Reports (Open)—The Committee will discuss potential ACNW reports on matters discussed during this meeting. It may also discuss possible reports on matters discussed during prior meetings.

Thursday, November 18, 2004

8:30 a.m.–8:35 a.m.: Opening Remarks by the ACNW Chairman (Open)—The Chairman will make opening remarks regarding the conduct of today's sessions.

8:35 a.m.–12 Noon: Miscellaneous (Open)—The Committee will discuss matters related to the conduct of Committee activities and matters and specific issues that were not completed during previous meetings, as time and availability of information permit.

Procedures for the conduct of and participation in ACNW meetings were published in the **Federal Register** on October 18, 2004 (69 FR 61416). In accordance with these procedures, oral or written statements may be presented by members of the public. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Persons desiring to make oral statements should notify Mr. Howard J. Larson, (Telephone (301) 415–6805), between 7:30 a.m. and 4:00 p.m. e.t., as far in advance as practicable so that appropriate arrangements can be made to schedule the necessary time during the meeting for such statements. Use of still, motion picture, and television cameras during this meeting will be limited to selected portions of the meeting as determined by the ACNW Chairman. Information regarding the time to be set aside for taking pictures may be obtained by contacting the ACNW office prior to the meeting. In view of the possibility that the schedule for ACNW meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should notify Mr. Howard J. Larson as to their particular needs.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted, therefore can be obtained by contacting Mr. Howard J. Larson.

ACNW meeting agenda, meeting transcripts, and letter reports are available through the NRC Public Document Room at *pdr@nrc.gov,* or by calling the PDR at 1–800–397–4209, or from the Publicly Available Records System (PARS) component of NRC's document system (ADAMS) which is accessible from the NRC Web site at *http://www.nrc.gov/reading-rm/adams.html* or *http://www.nrc.gov/reading-rm/doc-collections/* (ACRS & ACNW Mtg schedules/agendas).

Video Teleconferencing service is available for observing open sessions of ACNW meetings. Those wishing to use this service for observing ACNW meetings should contact Mr. Theron Brown, ACNW Audiovisual Technician (301) 415–8066), between 7:30 a.m. and 3:45 p.m. e.t., at least 10 days before the meeting to ensure the availability of this service. Individuals or organizations requesting this service will be responsible for telephone line charges and for providing the equipment and facilities that they use to establish the video teleconferencing link. The availability of video teleconferencing services is not guaranteed.

Dated: November 8, 2004.

Andrew L. Bates,

Advisory Committee Management Officer.

[FR Doc. 04–25259 Filed 11–12–04; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 40–8904]

Establishment of the U.S. Department of Energy as the Long-Term Custodian of the L-Bar Uranium Mill Tailings Site Near Seboyeta, NM, and Termination of the Sohio Western Mining Company Source Materials License for the L-Bar Site

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of establishment of the U.S. Department of Energy (DOE) as the long-term custodian of the L-Bar uranium mill tailings site near Seboyeta, New Mexico, under the general license provisions of 10 CFR 40.28, and termination of the Sohio Western Mining Company specific Source Materials License SUA–1472 for the L-Bar site.

FOR FURTHER INFORMATION CONTACT: Rick Weller, Project Manager, Fuel Cycle Facilities Branch, Division of Fuel Cycle Safety and Safeguards, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001. Telephone: (301) 415–7287; fax number: (301) 415–5955; e-mail: *rmw2@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

On September 22, 2004, the Sohio Western Mining Company (SWMC) transferred ownership of the L-Bar uranium mill tailings site near Seboyeta, New Mexico, to the DOE, as required by 10 CFR 40, Appendix A, Criterion 11, prior to termination of SWMC's specific license. Subsequently, by letter dated October 13, 2004, the DOE submitted the final Long-Term Surveillance Plan (LTSP) for the L-Bar site for review by the U.S. Nuclear Regulatory Commission (NRC). Based on the review of the LTSP, the NRC has determined that the LTSP satisfies the requirements in 10 CFR part 40, Appendix A, Criterion 12, and § 40.28 for the long-term surveillance of a tailings disposal site. Accordingly, notice is hereby given that the NRC has accepted the LTSP for the L-Bar site. This acceptance establishes the DOE as the long-term custodian and caretaker of the L-Bar site under the general license specified in 10 CFR 40.28. In a concurrent action, the NRC has terminated the SWMC specific Source Materials License SUA–1472 for the L-Bar site. These actions complete all requirements for closure of the L-Bar site under the Uranium Mill Tailings Radiation Control Act of 1978, as amended. These actions do not require an environmental assessment as they are categorically excluded under 10 CFR 51.22(c)(11).

II. Further Information

The NRC has prepared correspondence which documents the actions that establish the DOE as the long-term custodian of the L-Bar site under the general license specified in 10 CFR 40.28 and terminate the SWMC specific Source Materials License SUA–1472 for the L-Bar site. In accordance with 10 CFR 2.390 of the NRC's ''Rules of Practice,'' copies of this correspondence, as well as the L-Bar LTSP submitted by DOE letter dated October 13, 2004, are available electronically at the NRC's Electronic Reading Room at *http://www.nrc.gov/reading-rm/adams.html.* From this site, you can access the NRC's Agencywide Document Access and Management System (ADAMS), which provides text and image files of NRC's public documents. The ADAMS accession numbers for the documents related to this notice are listed below. If you do not have access to ADAMS or if there are problems in accessing the documents located in ADAMS, contact the NRC Public Document Room (PDR) Reference staff at 1–800–397–4209, 301–415–4737, or by e-mail to *pdr@nrc.gov.*

Documents Related to This Notice

1. Letter dated October 13, 2004, from J. Sink, DOE, to G. Janosko, NRC, submitting the final LTSP for the L-Bar site. ML042920474.

2. Letter dated October 21, 2004, from G. Janosko, NRC, to J. Sink, DOE, accepting the final LTSP for the L-Bar site. ML043020020.

3. Letter dated October 21, 2004, from G. Janosko, NRC, to J. Trummel, Kennecott Energy Company, terminating the SWMC specific Source Materials License SUA–1472 for the L-Bar site. ML043020032.

These documents may also be viewed electronically on the public computers located at the NRC's PDR, O 1 F21, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852. The PDR reproduction contractor will copy documents for a fee.

Dated in Rockville, Maryland, this 5th day of November, 2004.

For the Nuclear Regulatory Commission.

Gary S. Janosko,

Chief, Fuel Cycle Facilities Branch, Division of Fuel Cycle Safety and Safeguards, Office of Nuclear Material Safety and Safeguards.

[FR Doc. 04–25257 Filed 11–12–04; 8:45 am]

BILLING CODE 7590–01–P

PENSION BENEFIT GUARANTY CORPORATION

Required Interest Rate Assumption for Determining Variable-Rate Premium; Interest Assumptions for Multiemployer Plan Valuations Following Mass Withdrawal

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Notice of interest rates and assumptions.

SUMMARY: This notice informs the public of the interest rates and assumptions to be used under certain Pension Benefit Guaranty Corporation regulations. These rates and assumptions are published elsewhere (or can be derived from rates published elsewhere), but are collected and published in this notice for the convenience of the public. Interest rates are also published on the PBGC's Web site (*http://wow.pbgc.go*).

DATES: The required interest rate for determining the variable-rate premium under part 4006 applies to premium payment years beginning in November 2004. The interest assumptions for performing multiemployer plan valuations following mass withdrawal under part 4281 apply to valuation dates occurring in December 2004.

FOR FURTHER INFORMATION CONTACT: Harold J. Ashier, Assistant General Counsel, Office of the General Counsel, Pension Benefit Guaranty Corporation, 1200 K Street, NW., Washington, DC 20005, 202–326–4024. (TTY/TDD users may call the Federal relay service toll-free at 1–800–877–8339 and ask to be connected to 202–326–4024.)

SUPPLEMENTARY INFORMATION:

Variable-Rate Premiums

Section 4006(a)(3)(E)(iii)(II) of the Employee Retirement Income Security Act of 1974 (ERISA) and § 4006.4(b)(1) of the PBGC's regulation on Premium Rates (29 CFR part 4006) prescribe use of an assumed interest rate (the ''required interest rate'') in determining a single-employer plan's variable-rate premium. Pursuant to the Pension Funding Equity Act of 2004, for premium payment years beginning in 2004 or 2005, the required interest rate is the ''applicable percentage'' (currently 85 percent) of the annual rate of interest determined by the Secretary of the Treasury on amounts invested conservatively in long-term investment grade corporate bonds for the month preceding the beginning of the plan year for which premiums are being paid. Thus, the required interest rate to be used in determining variable-rate premiums for premium payment years

beginning in November 2004 is 4.73 percent (*i.e.*, 85 percent of the 5.57 percent composite corporate bond rate for October 2004 as determined by the Treasury).

The following table lists the required interest rates to be used in determining variable-rate premiums for premium payment years beginning between December 2003 and November 2004. Note that the required interest rate for premium payment years beginning in December 2003 was determined under the Job Creation and Worker Assistance Act of 2002, and that the required interest rates for premium payment years beginning in January through November 2004 were determined under the Pension Funding Equity Act of 2004.

For premium payment years beginning in:	The required interest rate is:
December 2003*	5.12
January 2004**	4.94
February 2004**	4.83
March 2004**	4.79
April 2004**	4.62
May 2004**	4.98
June 2004**	5.26
July 2004**	5.25
August 2004**	5.10
September 2004**	4.95
October 2004**	4.79
November 2004**	4.73

* The required interest rate for premium payment years beginning in December 2003 was determined under the Job Creation and Worker Assistance Act of 2002.

** The required interest rates for premium payment years beginning in January through November 2004 were determined under the Pension Funding Equity Act of 2004.

Multiemployer Plan Valuations Following Mass Withdrawal

The PBGC's regulation on Duties of Plan Sponsor Following Mass Withdrawal (29 CFR part 4281) prescribes the use of interest assumptions under the PBGC's regulation on Allocation of Assets in Single-Employer Plans (29 CFR part 4044). The interest assumptions applicable to valuation dates in December 2004 under part 4044 are contained in an amendment to part 4044 published elsewhere in today's **Federal Register**. Tables showing the assumptions applicable to prior periods are codified in appendix B to 29 CFR part 4044.

Issued in Washington, DC, on this day of November 2004.

Joseph H. Grant,

Deputy Executive Director and Chief Operating Officer, Pension Benefit Guaranty Corporation.

BILLING CODE 7708–01–P

RAILROAD RETIREMENT BOARD

Agency Forms Submitted for OMB Review

Summary: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Railroad Retirement Board (RRB) has submitted the following proposal(s) for the collection of information to the Office of Management and Budget for review and approval.

Summary of Proposal(s)

(1) *Collection title:* Report of Medicaid State Office on Beneficiary's Buy-In-Status.

(2) *Form(s) submitted:* RL–380–F.

(3) *OMB Number:* 3220–0185.

(4) *Expiration date of current OMB clearance:* 02/28/2005.

(5) *Type of request:* Extension of a currently approved collection.

(6) *Respondents:* State, local or tribal government.

(7) *Estimated annual number of respondents:* 600.

(8) *Total annual responses:* 600.

(9) *Total annual reporting hours:* 100.

(10) *Collection description:* Under the Railroad Retirement Act, the Railroad Retirement Board administers the Medicare program for persons covered by the railroad retirement system. The collection obtains the information needed to determine if certain railroad beneficiaries are entitled to receive Supplementary Medical Insurance program coverage under a state buy-in agreement in states in which they reside.

Additional Information or Comments

Copies of the forms and supporting documents can be obtained from Charles Mierzwa, the agency clearance officer (312–751–3363).

Comments regarding the information collection should be addressed to Ronald J. Hodapp, Railroad Retirement Board, 844 North Rush Street, Chicago, Illinois, 60611–2092 and to the OMB Desk Officer for the RRB, at the Office of Management and Budget, Room 10230, New Executive Office Building, Washington, DC 20503.

Charles Mierzwa,

Clearance Officer.

BILLING CODE 7905–01–P

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meeting

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Pub. L. 94–409, that the Securities and Exchange Commission will hold the following meeting during the week of November 15, 2004:

A closed meeting will be held on Tuesday, November 16, 2004, at 2 p.m.

Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters may also be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(3), (5), (6), (7), (9)(B), and (10) and 17 CFR 200.402(a)(3), (5), (7), 9(ii) and (10), permit consideration of the scheduled matters at the closed meeting.

Commissioner Atkins, as duty officer, voted to consider the items listed for the closed meeting in closed session.

The subject matter of the closed meeting scheduled for Tuesday, November 16, 2004, will be:

Formal orders of investigations;

Institution and settlement of injunctive actions; and

Institution and settlement of administrative proceedings of an enforcement nature.

At times, changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact:

The Office of the Secretary at (202) 942–7070.

Dated: November 9, 2004.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–50642; File No. SR–FICC–2004–06]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Notice of Filing of Proposed Rule Change To Institute Fines for Late Payment of Cash Obligations and Margin and To Institute Informal Hearing Procedures for Fine Disputes

November 5, 2004.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] notice is hereby given that on March 18, 2004, the Fixed Income

[1] 15 U.S.C. 78s(b)(1).

Clearing Corporation (''FICC'') filed with the Securities and Exchange Commission (''Commission'') and on April 16, 2004, amended the proposed rule change described in items I, II, and III below, which items have been prepared primarily by FICC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested parties.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The purpose of the proposed rule change is to institute at the Mortgage Backed Securities Division (''MBSD'') (i) fines for the late payment of cash obligation items [2] and margin deficits and (ii) informal hearing procedures for disputed MBSD fines.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FICC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in item IV below. FICC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of these statements.[3]

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The purpose of the proposed rule change is to institute at the MBSD (i) fines for the late payment of cash obligation items and margin deficits and (ii) informal hearing procedures for disputed MBSD fines.

1. Fines for Late Payments

The MBSD has for some time imposed fees in order to promote greater compliance with its cash obligation and margin payment deadlines.[4] Fees differ from fines in that fines must be reported by FICC to the Commission. FICC management believes that, consistent with the practice of the Government Securities Division (''GSD'') of FICC, assessments for late payment of margin and cash obligation items should be categorized as fines. Management believes that this change will provide a greater incentive for participant compliance with appropriate payment timeframes which will reduce risk to all MBSD participants.

2. Procedures Relating to Disputed Fines

The rules of the MBSD currently contain procedures whereby a participant can dispute any fine assessment through a formal appeal process. FICC believes that, consistent with the practice of the GSD, the fine process would be more effective and equitable and would provide participants with additional due process if an initial less formal dispute process was also included in MBSD's rules. The initial dispute process would be utilized by participants prior to availing themselves of the formal appeal process. A participant that becomes subject to a fine would have the opportunity within seven calendar days to dispute the fine by explaining in writing any mitigating circumstances that contributed to the participant's infraction and to request a fine waiver. Based on such written documentation provided by the participant, management would have the discretion to waive a fine if it believed that sufficient mitigating circumstances had been shown by the participant. If management waives a fine, it would have to inform the Membership and Risk Management Committee (''Committee'') at the next regularly scheduled Committee meeting and would have to explain management's reasons for doing so. The Committee would then have the opportunity to overrule management's action with respect to the waiver. If management chooses to not waive a fine or if its waiver is overruled by the Committee, the participant would have the right to pursue the formal hearing process currently provided for in the FICC Rules.

FICC is proposing to make parallel changes with respect to the fine dispute process to the MBSD's EPN rules.

In addition, FICC is proposing certain technical changes to the MBSD's Schedules of Charges to (i) delete references to ''MBSCC'' and replace them with references to ''MBSD'' and (ii) eliminate obsolete fees which are no longer being charged by the MBSD.

FICC believes that the proposed rule change is consistent with the requirements of section 17A of the Act [5] and the rules and regulations thereunder applicable to FICC because it is designed to perfect the mechanism of a national system for the prompt and accurate clearance and settlement of securities transactions by (i) encouraging participants to make timely payments of cash obligation items and margin to MBSD and (ii) clearly setting forth in FICC's rules procedures for management's review and possible waiver of fines which should provide members with a more efficient and less burdensome method for the possible resolution of disputed fines before a full hearing takes place.

(B) Self-Regulatory Organization's Statement on Burden on Competition

FICC does not believe that the proposed rule change will have any impact or impose any burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments relating to the proposed rule change have not yet been solicited or received. FICC will notify the Commission of any written comments received by FICC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to ninety days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an E-mail to *rule-comments@sec.gov*. Please include File Number SR–FICC–2004–06 on the subject line.

[2] Cash obligation items are cash receivables/payables that have been assigned a due date by the MBSD.

[3] The Commission has modified the text of the summaries prepared by FICC.

[4] Currently, the MBSD rules state that failure to pay a cash settlement obligation will result in the assessment of a fine. However, the MBSD Schedule of Charges refers to such charges as ''fees,'' and they have been processed as fees by MBSD in the past.

[5] 15 U.S.C. 78q–1.

Paper Comments

• Send paper comments in triplicate to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609.

All submissions should refer to File Number SR–FICC–2004–06. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC 20549. Copies of such filing also will be available for inspection and copying at the principal office of FICC and on FICC's Web site at *http://www.ficc.com*. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

All submissions should refer to File Number SR–FICC–2004–06 and should be submitted on or before December 6, 2004.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.[6]

Margaret H. McFarland,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–50640; File No. SR–NASD–2004–172]

Self-Regulatory Organizations; National Association of Securities Dealers, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Regarding Pilot Modifications and Minor Modifications to the Nasdaq Opening Process for Nasdaq-Listed Stocks

November 5, 2004.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 3, 2004, the National Association of Securities Dealers, Inc. (''NASD''), through its subsidiary, The Nasdaq Stock Market, Inc. (''Nasdaq''), filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in items I and II below, which items have been prepared by Nasdaq. Nasdaq has designated the proposed rule change as ''non-controversial'' under section 19(b)(3)(A) of the Act [3] and Rule 19b–4(f)(6) thereunder,[4] which renders the proposed rule change effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Nasdaq is filing the proposed rule change to modify the opening process for Nasdaq securities as follows: (1) Establish a three-month pilot during which Nasdaq would reject the entry of Total Day Orders prior to 9:25 a.m.; (2) clarify the language of Rule 4704(a)(8) which governs the suspension between 9:28 and 9:30 a.m. of requests for cancellation or modification of Regular Hours Orders; and (3) clarify the language of Rule 4120(a)(7) which governs the opening of stocks that are subject to a trade halt. The text of the proposed rule change is set forth below.[5] Proposed new language is in italics; proposed deletions are in [brackets].[6]

* * * * *

4120. Trading Halts

(a) No Change.

(b) Procedure for Initiating a Trading Halt.

(1)–(6) No Change.

(7) A trading halt initiated under Rule 4120(a)(7) shall be terminated when Nasdaq releases the security for trading. Prior to terminating the halt, there will be a 15-minute period during which market participants may enter quotes in that security in Nasdaq systems. [If the inside market is not locked or crossed at the conclusion of that 15-minute period, Nasdaq will release the security for trading and terminate the halt. If the inside market is locked or crossed at the conclusion of the initial 15-minute period, Nasdaq will extend the halt for an additional 15 minutes during which quotations may be entered in Nasdaq systems.] At the conclusion of the [second] 15-minute period, the halt shall be terminated and the security released for trading.

* * * * *

4701. Definitions

(a)–(rr) No Change.

(ss) The term ''Total Day'' or ''X Order'' shall mean,

(a) No Change.

(b) For orders in Nasdaq-listed securities so designated, that if after entry into the Nasdaq Market Center, the order is not fully executed, the order (or unexecuted portion thereof) shall remain available for potential display [between 7:30 a.m. and 4:00 p.m. and for potential] *and* execution between 9:25 a.m. and 4:00 p.m., after which it shall be returned to the entering party. *X Orders entered prior to 9:25 a.m. will be rejected back to the entering party.*

(tt)–(uu) No Change.

* * * * *

4704. Opening Process for Nasdaq-Listed Securities

(a) Definitions. For the purposes of this rule the term:

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A).

[4] 17 CFR 240.19b–4(f)(6).

[5] The proposed rule change is marked to show changes from the rule text appearing in the NASD Manual available at *www.nasd.com* and the rule text approved by the Commission in Securities Exchange Act Release No. 50405 (September 16, 2004), 69 FR 57118 (September 23, 2004) (SR–NASD–2004–071), and amended in Securities Exchange Act Release No. 50602 (October 28, 2004), 69 FR 64350 (November 4, 2004) (SR–NASD–2004–152). This sentence was corrected by the Commission to reflect the fact that the NASD Manual available at *www.nasd.com* has not been updated to include the rule text for NASD Rule 4704. Telephone conversation between Jeffrey S. Davis, Associate Vice President and Associate General Counsel, Nasdaq, and Ann E. Leddy, Special Counsel, Division of Market Regulation (''Division''), Commission (November 4, 2004).

[6] The Commission corrected proposed rule text on Nasdaq's behalf to mark changes in Rule 4704(a)(8) and new subparagraph (b)(3). Telephone conversation between Jeffrey S. Davis, Associate Vice President and Associate General Counsel, Nasdaq, and Ann E. Leddy, Special Counsel, Division, Commission (November 4, 2004).

(1)–(7) No Change.

(8) ''Regular Hours Orders'' shall mean any order that may be entered into the system and designated with a time-in-force of IOC, DAY, or GTC. Regular Hours Orders shall be available for execution only during the opening and then during normal trading hours. Regular Hours Orders shall be designated as ''Early Regular Hours Orders'' if entered into the system prior to 9:28 a.m. and designated as ''Late Regular Hours Orders'' if entered into the system at 9:28 a.m. or after. Beginning at 9:28 a.m., requests to cancel or modify Regular Hours Orders shall be suspended until after completion of the Opening Cross at which time such requests shall be processed*, to the extent that such orders remain available within the system.*

(b) Trading Prior To Normal Market Hours. The system shall open all eligible Quotes[/Orders] in Nasdaq-listed securities at 9:25 a.m. in the following manner to prevent the creation of locked/crossed markets.

(1) At 9:25 a.m., the system shall open all Quotes [and limit priced X Orders] in time priority. Quotes [and X Orders] whose limit price does not lock or cross the book shall be added to the book in strict time priority. Quotes [and X Orders] whose limit price would lock or cross the book shall be placed in an ''In Queue'' state.

(2) Next, the system shall begin processing the In Queue Quotes[, IOX Orders, and X Orders] in strict time priority against the best bid (ask) if the In Queue order is a sell (buy) order. If an In Queue Quote [or X Order] is not executable when it is next in time for execution, the system shall automatically add that Quote [or X Order] to the book.

[(3) All Quotes and X Orders that are entered while the system is completing subparagraphs (1) and (2) shall be added to the In Queue file in strict time priority.]

([4]*3*) Once the process set forth in subparagraphs (1)–([3]*2*) is complete, the system shall begin processing Quotes and X and IOX Orders in accordance with their entry parameters

(5)–(6) Re-numbered as (4) and (5).

(c)–(d) No Change.

* * * * *

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, Nasdaq included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in item IV below. Nasdaq has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Nasdaq has previously proposed to create two new voluntary opening processes—the Modified Opening Process and the Nasdaq Opening Cross—that together constitute the beginning of the trading day for all Nasdaq-listed securities. The Commission approved that proposal on September 16, 2004.[7] Upon implementation of the Opening Cross, Nasdaq has identified several modifications to the operation and rules governing the pre-opening trading environment that it believes would improve the fair and orderly opening of the market in Nasdaq listed securities.

Specifically, upon implementing the improved pre-opening trading environment set forth in Rule 4704(b), Nasdaq identified a harmful unintended consequence of the Modified Opening Process (''MOP'') by which Nasdaq establishes its opening order book and unlocks and uncrosses the market. As described in SR–NASD–2004–071, firms have three options for determining the price at which their carryover quotes are opened at 9:25: (1) The last quotation price entered during the previous day; (2) the last quotation price the firm enters after 7:30 and before 9:25 a.m.; or (3) the quote limits for Nasdaq, currently $.01 (bid) and $2,000 (ask). Many Nasdaq participants have programmed their quotation management systems to select the first option, carrying over the final quotation entered during the previous trading day. At the same time, a small number of firms have entered X Orders into Nasdaq's system that cross the market by a significant amount, in some cases by as much as 20 dollars. When Nasdaq applies the MOP, which automatically executes orders that would cross the market, the system executes those X Orders that are significantly away from the market against the stale carryover quotations of other members resulting in inferior executions.

To address this situation quickly, Nasdaq proposes to change the pre-opening trading environment for a three-month pilot period. Specifically, Nasdaq proposes to move the beginning entry time for X Orders from 7:30 a.m. to 9:25 a.m. As a result, X Orders would not participate in the market opening process described in Rule 4704(b), which begins at 9:25 a.m., and there would be no risk of X Orders automatically executing against a stale quote during that process. Nasdaq believes that this proposed change is necessary and sufficient to address quickly the harmful unintended consequence described above and preserve a fair and orderly opening of trading in Nadsaq. Nasdaq is aware that these changes impose a burden on some firms, but it has concluded that this approach would be the fastest way to effectively address the situation and improve the quality of executions in the MOP. It is important to note that participation in pre-opening trading is completely voluntary on firms' part, that the actual opening of the market and concomitant market maker obligations would continue to begin at 9:30 a.m. as is the case today.

In addition, Nasdaq is already designing further system modifications that would address the problem on a permanent basis. Specifically, Nasdaq is considering three potential changes: (1) Applying the Market Opening Process at 9 a.m. rather than 9:25 as currently approved; (2) extending the availability of Total Day and Total Immediate or Cancel Orders to 9 a.m. from 9:25 as currently approved; and (3) establishing a system default that protects market participants from unexpected executions upon the opening of Nasdaq's execution functionality at 9 a.m. These modifications would provide a more efficient long-term solution, but they would take longer to implement than simply rejecting X Orders until 9:25. Nasdaq believes it is imperative to address the situation quickly and to simultaneously pursue a long-term solution.

Nasdaq has identified two additional technical modifications, unrelated to the substantive proposal at hand, that it believes would eliminate potential confusion about the effect of Nasdaq's approved rules. First, Nasdaq proposes to clarify that requests for suspension or modification of orders governed by Rule 4704(a)(8) would be processed only if such orders remain available for execution within Nasdaq's system. Such orders would not be available if, for example, the system executed the order during the Nasdaq Opening Cross or during the opening process for non-cross eligible Nasdaq securities.

[7] *See,* Securities Exchange Act Release No. 50405 (September 16, 2004), 69 FR 57118 (September 23, 2004) (SR–NASD–2004–071).

Second, Nasdaq proposes to modify the language of Rule 4120(a)(7) to clarify the manner in which Nasdaq will open trading in stocks that are the subject of an initial public offering (''IPO''). Currently Rule 4120(a)(7) provides for up to two 15-minute Quote Only Periods prior to the release of trading in an IPO. The second quote only period is necessary only in the event that the market is locked or crossed at the end of the first quote only period. The MOP is designed to create an unlocked and uncrossed bid and offer for the opening of trading, and to execute quotes and orders that would lock or cross the market in a fair and orderly manner. Because Nasdaq would apply the MOP at the close of the first 15-minute Quote Only Period, and the MOP will automatically unlock/uncross the market, the second 15-minute period is unnecessary.

2. Statutory Basis

Nasdaq believes that the proposed rule change is consistent with the provisions of section 15A of the Act,[8] in general, and with section 15A(b)(6) of the Act,[9] in particular, in that section 15A(b)(6) requires, among other things, that the NASD's rules be designed to protect investors and the public interest. Nasdaq believes that its current proposal is consistent with the NASD's obligations under these provisions of the Act because it would result in a more orderly opening for all Nasdaq stocks. The proposed rule change would create a fair, orderly, and unified opening for Nasdaq stocks, prevent the occurrence of locked and crossed markets in halted securities, and preserve price discovery and transparency that is vital to an effective opening of trading.

B. Self-Regulatory Organization's Statement on Burden on Competition

Nasdaq does not believe that the proposed rule change would result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Nasdaq neither solicited nor received written comments with respect to the proposed rule change.

[8] 15 U.S.C. 78*o*–3.

[9] 15 U.S.C. 78*o*–3(b)(6).

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not:

(i) Significantly affect the protection of investors or the public interest;

(ii) Impose any significant burden on competition; and

(iii) Become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest,[10] it has become effective pursuant to section 19(b)(3)(A) of the Act[11] and Rule 19b–4(f)(6) thereunder.[12] At any time within 60 days of the filing of the proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

Nasdaq has requested that the Commission waive the 30-day operative delay. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because it will allow Nasdaq to implement the proposed pilot without delay, which should provide a temporary remedy to the problem posed by X Orders automatically executing against stale quotes during the MOP. The Commission also believes that waiving the 30-day operative delay would permit Nasdaq to effect the clarifying changes to Rule 4120(b)(7) and Rule 4704(a)(8) without delay. For this reason, the Commission designates the proposal to be effective and operative upon filing with the Commission.[13]

[10] The Commission revised this section to add the representations on Nasdaq's behalf that the proposed rule change does not significantly affect the protection of investors or the public interest and does not impose any significant burden on competition. Nasdaq made these representations in the filing itself but failed to include them in the exhibit. Telephone conversation between Jeffrey S. Davis, Associate Vice President and Associate General Counsel, Nasdaq, and Ann E. Leddy, Special Counsel, Division, Commission (November 4, 2004).

[11] 15 U.S.C. 78s(b)(3)(A).

[12] 17 CFR 240.19b–4(f)(6). The Commission notes that Nasdaq provided written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change at least five business days prior to the date of filing of the proposed rule change.

[13] For purposes only of waiving the 30-day operative delay of the proposed rule change, the Commission considered the proposed rule's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form *(http://www.sec.gov/rules/sro.shtml);* or
- Send an e-mail to *rule-comments@sec.gov.* Please include File Number SR–NASD–2004–172 on the subject line.

Paper Comments

- Send paper comments in triplicate to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609.

All submissions should refer to File Number SR–NASD–2004–172. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site *(http://www.sec.gov/rules/sro.shtml).* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of such filing also will be available for inspection and copying at the principal office of the NASD. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NASD–2004–172 and should be submitted on or before December 6, 2004.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[14]

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–50647; File No. SR–NASD–2004–158]

Self-Regulatory Organizations; Notice of Filing and Immediate Effectiveness of Proposed Rule Change by the National Association of Securities Dealers, Inc. To Establish Fee for Direct ECN Connections to the Nasdaq Market Center

November 8, 2004.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 22, 2004, the National Association of Securities Dealers, Inc. (''NASD''), through its subsidiary, the Nasdaq Stock Market, Inc. (''Nasdaq''), filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in items I, II, and III below, which Items have been prepared by Nasdaq. Nasdaq has designated this proposal as one establishing or changing a due, fee, or other charge imposed by the self-regulatory organization under section 19(b)(3)(A)(ii) of the Act[3] and Rule 19b–4(f)(2) thereunder,[4] which renders the rule effective upon Commission receipt of this filing. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

Nasdaq proposes to establish a fee for direct connections by electronic communication networks (''ECNs'') to the Nasdaq Market Center. Nasdaq will implement the proposed rule change immediately. The text of the proposed rule change is below. Proposed new language is in italic.

7000. Charges for Services and Equipment

7010. System Services

(a)–(e) No change.

(f) Nasdaq Workstation™ Service.

(1) (A) The following charges shall apply to the receipt of Level 2 or Level 3 Nasdaq Service via equipment and communications linkages prescribed for the Nasdaq Workstation II Service:

Service Charge	$2,035/month per service delivery platform (''SDP'') connected via T1 circuits; $1,000/month per SDP connected via Digital Subscriber Line (''DSL''), plus $1,000 per DSL early termination fee if service is terminated within 60 days of installation.
Display Charge	$525/month per logon for the first 150 logons; $200/month for each additional logon.
Additional Circuit/SDP Charge	$3,235/month.
PD and SDP Maintenance:	
Monthly maintenance agreement	$55/presentation device (''PD'') logon or SDP/month.
Hourly fee for maintenance provided without monthly maintenance agreement.	$195 per hour (two hour minimum), plus cost of parts.
ECN Direct Connection	*$1,000 per port pair per month.*

(2) No change.

(g)–(w) No change.

* * * * *

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, Nasdaq included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in item IV below. Nasdaq has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Currently, ECNs connect to Nasdaq through an application programming interface (''API'') protocol that relies upon a Service Delivery Platform (''SDP''), a server machine containing Nasdaq-installed software that is located at the premises of the ECN. Nasdaq is now introducing an option for ECNs to connect to Nasdaq through a dedicated point-to-point linkage to Nasdaq Market Center host computers, rather than through an SDP. Nasdaq believes that allowing ECNs to establish a direct connection will enhance their ability to interact with the Nasdaq Market Center in an efficient manner, and that those ECNs that continue to quote in Nasdaq will respond favorably to being allowed to establish direct connections. In fact, one such ECN has already commenced testing such a connection and is prepared to avail itself of the service once it is made available. Accordingly, Nasdaq is proposing to offer such connections at a fee of $1,000 per port pair per month, as an alternative to an SPD/API connection. This fee compares favorably with the current fee of $2,035 per SPD per month.[5]

2. Statutory Basis

Nasdaq believes that the proposed rule change is consistent with the provisions of section 15A of the Act,[6] in general, and sections 15A(b)(5) of the Act,[7] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility or system which the NASD operates or controls. The proposed rule change will provide ECNs

[14] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(ii).

[4] 17 CFR 240.19b–4(f)(2).

[5] NASD Rules provide that order-delivery ECNs must respond to messages sent to them by the system within 5 seconds on average, and in no event later than 30 seconds for any one message. Nasdaq recently filed a related proposed rule change to NASD Rule 4710 to provide that the response time of an order-delivery ECN may be measured either by the ECN's SDP (in the case of ECN's using SDPs) or by the Nasdaq Market Center (in the case of ECNs opting to establish direct connections. *See* SR–NASD–2004–156 (October 15, 2004).

[6] 15 U.S.C. 78o–3.

[7] 15 U.S.C. 78o–3(5).

with a cost-effective means to establish direct connections, which can be expected to improve the speed and certainty of execution in the market, to the benefit of all market participants.

B. Self-Regulatory Organization's Statement on Burden on Competition

Nasdaq does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to section 19(b)(3)(A)(ii) of the Act [8] and subparagraph (f)(2) of Rule 19b–4 thereunder,[9] because it establishes or changes a due, fee, or other charge. At any time within 60 days of the filing of the proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change, as amended, is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an e-mail to *rule-comments@sec.gov.* Please include File Number SR–NASD–2004–158 on the subject line.

Paper Comments

- Send paper comments in triplicate to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609.

All submissions should refer to File Number SR–NASD–2004–158. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC 20549. Copies of such filing also will be available for inspection and copying at the principal office of the NASD. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NASD–2004–158 and should be submitted on or before December 6, 2004.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[10]

Jill M. Peterson,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–50643; File No. SR–PCX–2004–98]

Self-Regulatory Organizations; Notice of Filing and Immediate Effectiveness of Proposed Rule Change by the Pacific Exchange, Inc. To Extend Until 1:15 (Pacific Time) the Core Trading Session and Change the Closing Auction Time for Certain ETFs

November 5, 2004.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 12, 2004, the Pacific Exchange, Inc. (''PCX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in items I, II, and III below, which items have been prepared by the PCX. On November 3, 2004, the PCX filed Amendment No. 1 to the proposed rule change.[3] The Exchange proposed the rule change under section 19(b)(3)(A) of the Act [4] and Rule 19b–4(f)(6) thereunder,[5] which renders it effective upon filing.[6] The Commission is publishing this notice to solicit comments on the proposed rule change, as amended, from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The PCX, through its wholly owned subsidiary PCX Equities, Inc. (''PCXE''), proposes to amend its Core Trading Session rule (PCXE Rule 7.34(a)(2)) and its Closing Auction rule (PCXE 7.35) as they apply to certain Exchange Traded Funds (''ETFs'').

The text of the proposed rule change, as amended, is below. Proposed new language is in italics; proposed deletions are in brackets.

* * * * *

Rule 7.34 Trading Sessions

(a) (1) No change.

(2) Core Trading Session. The Core Trading Session shall begin for each security at 6:30:00 am (Pacific Time) or at the conclusion of the Market Order Auction, whichever comes later, and conclude at 1:00:00 pm (Pacific Time).

(A) The Core Trading Session for the Exchange Traded Funds, defined in PCXE Rules 5.1(b)(13), 5.2(j)(3), and 8.100, shall conclude at 1:15:00 pm (Pacific Time) unless otherwise determined by the Corporation.

(3) No change.

(b)–(f) No change.

Rule 7.35 Auctions

(a)–(d) No change.

(e) (1)–(3) No change.

(A)–(C) No change.

(D) Notwithstanding other provisions of PCXE Rule 7.35(e):

i. The Closing Auction for the Exchange Traded Funds defined in PCXE Rules 5.1(b)(13), 5.2(j)(3), and

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Letter from Mai Shiver, Director, Regulatory Policy, PCX, to Nancy Sanow, Assistant Director, Division of Market Regulation, Commission, dated November 2, 2004 (''Amendment No. 1''). Amendment No. 1 replaced and superseded the original filing in its entirety.

[4] 15 U.S.C. 78s(b)(3)(A).

[5] 17 CFR 240.19b–4(f)(6).

[6] For purpose of calculating the 60-day period within which the Commission may summarily abrogate the proposed rule change under section 19(b)(3)(C) of the Act, the Commission considers that period to commence on November 3, 2004, the date that the PCX filed Amendment No. 1.

8.100 and determination of the Closing Auction Price as defined in PCXE Rule 7.35(e)(3) will commence at 1:15 p.m. (Pacific Time) unless otherwise determined by the Corporation.

ii. Between 1:13 p.m. (Pacific Time) and the conclusion of the Closing Auction, Market-On-Close and Limit-On-Close Orders for the Exchange Traded Funds defined in PCXE Rules 5.1(b)(13), 5.2(j)(3), and 8.100 may not be cancelled.

iii. Between 1:13 pm (Pacific Time) and the conclusion of the Closing Auction, Market-on-Close Orders and Limit-on-Close Orders for the Exchange Traded Funds defined in PCXE Rules 5.1(b)(13), 5.2(j)(3), and 8.100 may not be entered on the same side as the Imbalance. Market-on-Close Orders and Limit-on-Close Orders for these Exchange Traded Funds that create equilibrium and thereafter convert the Imbalance from a buy to a sell (or convert the Imbalance from a sell to a buy) Imbalance will be rejected.

* * * * *

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

As part of its continuing efforts to enhance participation on its Archipelago Exchange (''ArcaEx'') facility, the PCX is proposing to include certain ETFs [7] in its Closing Auction process [8] and to delay the commencement of the Closing Auction and the conclusion of the Core Trading Session [9] for these ETFs. Currently the Closing Auction commences at the end of regular trading hours [10] for all securities on ArcaEx other than ETFs. Unlike other securities in which regular trading hours cease at 1 p.m. (Pacific time), ETFs generally trade on other exchanges until 1:15 p.m. (Pacific time). Accordingly, the Exchange seeks to modify its Closing Auction start time for the ETFs defined in PCXE Rules 5.1(b)(13), 5.2(j)(3), and 8.100 to 1:15 p.m. (Pacific Time) unless otherwise determined. Consistently, the Exchange seeks to change the conclusion of the Core Trading Session for this same group of ETFs to 1:15:00 pm (Pacific Time) to coincide with the time of the closing session.

In conjunction with modifying the Closing Auction start time, the PCX seeks to modify the timing of the determination of the Closing Auction Price as described in PCXE Rule 7.35(e)(3) to 1:15 p.m. (Pacific time) for these ETFs. In addition, the Exchange seeks to modify the freeze period for entering Market-on-Close and Limit-on-Close Orders for the Closing Auction as defined in PCXE Rule 7.35(e)(2)(iii) to 1:13 p.m. (Pacific time) for these ETFs in order to limit the freeze period to two minutes before the Closing Auction, as is the case for the Closing Auctions for other securities. All other Closing Auction times described in PCXE Rule 7.35(e) will remain unchanged. For example, the dissemination of the Indicative Match Price [11] and Imbalances [12] associated with the Closing Auction for these ETFs as described in PCXE Rule 7.35(e)(1) will commence at 12 p.m. (Pacific time) and end upon the conclusion of the Closing Auction. Similarly, the determination of re-opening after trading halts as described in PCXE Rule 7.35(f) for these ETFs will be consistent with other securities traded on ArcaEx.

The PCX believes that implementing these rules to affect commencement times for the Closing Auctions and conclusion times for Core Trading Sessions for certain ETFs will provide investors and ETP Holders [13] with greater opportunities for executing ETF orders at the close and will result in the Closing Auction being priced for such securities within the range of prices then found at the end of the day's regular trading session.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with section 6(b) of the Act,[14] in general, and furthers the objectives of section 6(b)(5) of the Act,[15] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanism of a free and open market and a national market system.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments on the proposed rule change were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

PCX has designated that the proposed rule change as a ''non-controversial'' rule change pursuant to section 19(b)(3)(A) of the Act [16] and subparagraph (f)(6) of Rule 19b–4 thereunder.[17] The Exchange has stated that the foregoing rule change: (1) Does not significantly affect the protection of investors or the public interest; (2) does not impose any significant burden on competition; and (3) by its terms does not become operative for 30 days after the date of this filing, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest.[18]

The PCX has requested that the Commission waive the 30-day operative delay. The Commission believes that

[7] The three ETFs that the Exchange seeks to include in this proposal are all subject to the delayed closing auction commencement time on the American Stock Exchange (''Amex''), and are as follows: Unit Investment Trusts as defined in PCXE Rule 5.1(b)(13) (Amex Rule 1, Commentary .03); Investment Company Units as defined in PCXE Rule 5.2(j)(3) (Amex Rule 1000A, Commentary .02(f)—known as Index Fund Shares); and Portfolio Depositary Receipts (''PDRs'') as defined in the PCXE Rule 8.100 (Amex Rule 1000, Commentary .02).

[8] *See* PCXE Rule 7.35(e).

[9] *See* PCXE Rule 7.34(a)(2).

[10] PCXE Rule 7.35(e) specifies that the Closing Auction occurs at 1 p.m. (Pacific time).

[11] *See* PCXE Rule 1.1(r).

[12] *See* PCXE Rule 1.1(q).

[13] *See* PCXE Rule 1.1(n).

[14] 15 U.S.C. 78f(b).

[15] 15 U.S.C. 78f(b)(5).

[16] 15 U.S.C. 78s(b)(3)(A).

[17] 17 CFR 240.19b–4(f)(6).

[18] Rule 19b–4(f)(6)(iii) under the Act also requires that a self-regulatory organization provide the Commission with written notice of its intent to file a proposed rule change, along with a brief description and text of the proposed rule change, at least five days prior to the date of filing the proposed rule change. The Exchange complied with this requirement.

PCX's proposal does not raise any new regulatory issues because the Commission previously has approved trading of the same ETFs until 4:15 p.m. (eastern time) on the Amex.[19] Therefore, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. The Commission hereby waives the 30-day operative delay.

At any time within 60 days of the filing of the proposed rule change, the Commission may summarily abrogate the rule change if it appears to the Commission that the action is necessary or appropriate in the public interest, for the protection of investors, or would otherwise further the purposes of the Act.[20]

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an e-mail to *rule-comments@sec.gov*. Please include File No. SR–PCX–2004–98 on the subject line.

Paper Comments

- Send paper comments in triplicate to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609.

All submissions should refer to File No. SR–PCX–2004–98. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room, 450 Fifth Street, NW., Washington, DC 20549. Copies of such filing will also be available for inspection and copying at the principal office of the PCX. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR–PCX–2004–98 and should be submitted on or before December 6, 2004.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[21]

Margaret H. McFarland,

Deputy Secretary.

[FR Doc. E4–3158 Filed 11–12–04; 8:45 am]

BILLING CODE 8010–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–50645; File No. SR–PCX–2004–59]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change and Amendment Nos. 1 and 2 Thereto by the Pacific Exchange, Inc. Relating to a New Order Modifier Entitled ''Proactive if Locked Reserve''

November 5, 2004.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 1, 2004, the Pacific Exchange, Inc. (''PCX'' or ''Exchange''), through its wholly-owned subsidiary PCX Equities, Inc. (''PCXE''), filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in items I, II, and III below, which items have been prepared by the PCX. On October 26, 2004, the PCX submitted Amendment No. 1 to the proposed rule change.[3] On October 28, 2004, the PCX submitted Amendment No. 2 to the proposed rule change.[4] The Commission is publishing this notice to solicit comments on the proposed rule change, as amended, from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The PCX proposes to amend its rules governing the Archipelago Exchange (''ArcaEx''), the equities trading facility of PCXE, by adding new processing capability for ArcaEx Reserve Orders in situations where a Reserve Order in an exchange-listed security is locked by another market. Below is the text of the proposed rule change. Proposed new language is *italicized*; proposed deletions are in [brackets].

* * * * *

Rule 7

Equities Trading

Orders and Modifiers

* * * * *

Rule 7.31 Orders and Modifiers

* * * * *

(hh) Proactive if Locked Reserve. A Reserve Order that will route to another market center pursuant to PCXE Rule 7.37(d) for the away market's displayed size up to such reserve amount in the instance in which the other market center has locked the order and the locking market has not resolved the locked market situation in a timely manner based upon average response times from ITS Participants. In the event that the order routed from the Archipelago Exchange to the other market center is not executed in its entirety, the Archipelago Exchange shall post the order or portion thereof in the ArcaEx Book. Proactive if Locked Reserve will apply only to exchange-listed securities.

Amendment No. 1 replaced and superceded the originally filed proposed rule change.

[4] *See* letter from Steven B. Matlin, Senior Counsel, Regulatory Policy, PCX, to Nancy J. Sanow, Assistant Director, Division, Commission, dated October 25, 2004 (''Amendment No. 2''). Amendment No. 2 made technical corrections to the proposed rule text of the proposed rule change, as amended.

on the proposed rule change. The text of these statements may be examined at the places specified in item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The PCX states that, as part of its continuing efforts to enhance participation on the ArcaEx facility, it is proposing to include additional processing capability for ArcaEx Reserve Orders in exchange-listed securities. The new order modifier would be entitled ''Proactive if Locked Reserve'' and would be utilized when a Reserve Order in an exchange-listed security is locked by another market and the offending market has not shipped a commitment or moved their quote to clear the lock.

Currently, PCXE Rule 7.56 describes interaction between markets in exchange-listed securities when an order in the ArcaEx Book is locked by an away market. Specifically, the ITS Plan and the provisions of this rule require that, in locked market situations, upon receiving a locked market complaint, the offending market shall either ship a commitment to trade to the market that was locked or move its quote so as to unlock the market.[5] The Exchange states that, in many cases, however, away markets that lock or cross ArcaEx do not adequately respond to complaints or do not move quotes to unlock or uncross the market. The proposed Proactive if Locked Reserve order modifier is designed to address this issue.

Under the proposed rule change, Equity Trading Permit Holders (''ETP Holders'') using the Proactive if Locked Reserve modifier would be able to request, for exchange-listed securities, that the away market's displayed size up to the reserve amount for a Reserve Order[6] be shipped to an away market when the Reserve Order has been locked (or crossed) by the away market and there has been no resolution of the locked (or crossed) market by the offending away market. According to the Exchange, if the away market does not promptly respond to a locked market complaint as provided for under the ITS Plan, ArcaEx would proactively ship commitments to the offending market under the Proactive if Locked Reserve process.[7]

For example, assume ArcaEx posts a Reserve order with a Proactive if Locked Reserve Modifier for 50,000 Buy at 30.10, with 1,000 shares displayed and 49,000 shares in reserve. An away market subsequently locks this quote by offering 10,000 shares at 30.10. ArcaEx would first send an ITS complaint to the offending away market, indicating that the away market has locked a quote on ArcaEx. ArcaEx would simultaneously begin to monitor the time elapsing before receiving a response to its complaint. If the away market does not respond within a sufficient amount of time based upon average response times from ITS Participants, ArcaEx would ship 10,000 shares of the 49,000 shares in reserve to the away market (*i.e.*, the away market's displayed quote) from the ArcaEx Reserve order at 30.10. In the above example, ArcaEx would ship as many shares as it had in reserve for the order with a Proactive if Locked Reserve Modifier to match the away market's displayed quote. Accordingly, if the away market was offering 50,000 shares at 30.10 instead of 10,000 shares, ArcaEx would ship all 49,000 shares in the Reserve order while keeping the 1,000 shares displayed.

The proposed Proactive if Locked Reserve modifier is utilized only if the offending market does not respond to the ArcaEx ITS complaint within an acceptable time period, based upon average response times from ITS Participants. If the away market declines the ArcaEx commitment, ArcaEx would post the declined total back to the Reserve order,[8] for example, showing 1,000 shares Buy at 30.10 with a reserve amount of 49,000 shares. If the order is executed by the away market, and ArcaEx remains locked (or crossed), ArcaEx would ship the away market's display amount from the reserve portion of the Reserve Order to the offending market again, until the order is depleted. The display portion of the Reserve Order, however, will continue to be displayed and will not ship to the away market.

Furthermore, in the instance where a limit order in the Arca Book that is at the same price as, but superior in time to, the Proactive if Locked Reserve Order is locked by an away market, ArcaEx would follow the aforementioned procedures. Specifically, ArcaEx would first send an ITS complaint to the offending away market indicating that the away market locked the ArcaEx limit order. If the away market does not respond within a sufficient amount of time based upon average response times from ITS Participants, ArcaEx would ship from the Proactive if Locked Reserve Order the away market's displayed size up to the reserve amount. The limit order and display portion of the Proactive if Locked Reserve Order would continue to be displayed. Any portion of the Proactive if Locked Reserve Order that is sent to the away market and subsequently declined would be re-posted in the Arca Book pursuant to the description above.

The PCX believes that the proactive shipping of commitments facilitated by the proposed Proactive if Locked Reserve modifier will mitigate locked or crossed markets, prevent unresponsive away markets from delaying executions, and provide increased opportunities for executing orders. The Exchange believes that the Proactive if Locked Reserve modifier will therefore aid enhanced order interaction and foster price competition. The PCX believes that the proposal also promotes a more efficient and effective market operation, and enhances the investment choices available to investors over a broad range of trading scenarios.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with section 6(b) of the Act[9] in general, and furthers the objectives of section 6(b)(5) of the Act[10] in particular, because it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments and perfect the mechanism of a free and open market, and, in general, to protect investors and the public interest.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

[5] *See* ITS Plan Exhibit B, Section (d).

[6] Reserve Orders, defined in PCXE Rule 7.31, are limit orders with a portion of the size displayed and with a reserve portion of the size not displayed.

[7] *See* ITS Plan Exhibit B, Section (d).

[8] The Exchange states that any portion of an order which is sent to an away market and declined would re-enter ArcaEx as part of the original Reserve Order with its original time priority in accordance with PCXE Rule 7.36. To the extent the Reserve Order is executed in its entirety in the interim, the portion of the order that was sent to an away market and declined would establish a new time priority upon re-posting in the Arca Book pursuant to PCXE Rule 7.36.

[9] 15 U.S.C. 78f(b).

[10] 15 U.S.C. 78f(b)(5).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments on the proposed rule change were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding, or (ii) as to which the Exchange consents, the Commission will:

(A) By order approve such proposed rule change; or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an e-mail to *rule-comments@sec.gov*. Please include File Number SR–PCX–2004–59 on the subject line.

Paper Comments

• Send paper comments in triplicate to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609.

All submissions should refer to File Number SR–PCX–2004–59. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC 20549. Copies of such filing also will be available for inspection and copying at the principal office of the PCX. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PCX–2004–59 and should be submitted on or before December 6, 2004.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[11]

Margaret H. McFarland,

Deputy Secretary.

SMALL BUSINESS ADMINISTRATION

[License No. 02/72–0610]

Gefus SBIC, L.P.; Notice Seeking Exemption Under Section 312 of the Small Business Investment Act, Conflicts of Interest

Notice is hereby given that Gefus SBIC, L.P., 375 Park Avenue, Suite 2401, New York, NY 10152, a Federal Licensee under the Small Business Investment Act of 1958, as amended (''the Act''), in connection with the financing of a small concern, has sought an exemption under section 312 of the Act and section 107.730, Financings which Constitute Conflicts of Interest of the Small Business Administration (''SBA'') Rules and Regulations (13 CFR 107.730). Gefus SBIC, L.P. proposes to provide equity/debt security financing to Idetic, Inc. The financing is contemplated for operating expenses and for general corporate purposes.

The financing is brought within the purview of § 107.730(a)(1) of the Regulations because Gefus Capital Partners I, L.P. , Gefus Strategic Partners I, L.P., Inman Ventures I, L.P. and Admiral Bobby Inman, all Associates of Gefus SBIC, L.P., own more than ten percent of Idetic, Inc.

[11] 17 CFR 200.30–3(a)(12).

Notice is hereby given that any interested person may submit written comments on the transaction to the Associate Administrator for Investment, U.S. Small Business Administration, 409 Third Street, SW., Washington, DC 20416.

Dated: November 9, 2004.

Harry Haskins,

Acting Associate Administrator for Investment.

SMALL BUSINESS ADMINISTRATION

Small Business Size Standards: Waiver of the Nonmanufacturer Rule

AGENCY: U.S. Small Business Administration.

ACTION: Notice of waiver of the nonmanufacturer rule for sporting and athletic goods manufacturing.

SUMMARY: The U.S. Small Business Administration (SBA) is granting a waiver of the Nonmanufacturer Rule for Sporting and Athletic Goods Manufacturing. The basis for waivers is that no small business manufacturers are supplying these classes of products to the Federal government. The effect of a waiver would be to allow otherwise qualified regular dealers to supply the products of any domestic manufacturer on a Federal contract set aside for small businesses, service disabled veteran-owned small businesses, SBA's Very Small Business Program or awarded through the SBA's 8(a) Business Development Program.

DATE: This waiver is effective November 30, 2004.

FOR FURTHER INFORMATI0N CONTACT: Edith Butler, Program Analyst, by telephone at (202) 619–0422; by FAX at (202) 205–7280; or by e-mail at *edith.butler@sba.gov*.

SUPPLEMENTARY INFORMATION: Section 8(a)(17) of the Small Business Act, (Act) 15 U.S.C. 637(a)(17), requires that recipients of Federal contracts set aside for small businesses, service disabled veteran-owned small businesses, SBA's Very Small Business Program or awarded through the SBA's 8(a) Business Development Program provide the product of a small business manufacturer or processor, if the recipient is other than the actual

manufacturer or processor of the product.

This requirement is commonly referred to as the Nonmanufacturer Rule. The SBA regulations imposing this requirement are found at 13 CFR 121.406(b). Section 8(a)(17)(b)(iv) of the Act authorizes SBA to waive the Nonmanufacturer Rule for any ''class of products'' for which there are no small business manufacturers or processors available to participate in the Federal market.

As implemented in SBA's regulations at 13 CFR 121.1204, in order to be considered available to participate in the Federal market for a class of products, a small business manufacturer must have submitted a proposal for a contract solicitation or received a contract from the Federal government within the last 24 months. The SBA defines ''class of products'' based on six digit coding systems. The first coding system is the Office of Management and Budget North American Industry Classification System (NAICS). The second is the Product and Service Code established by the Federal Procurement Data System.

The SBA received a request on July 15, 2004 to waive the Nonmanufacturer Rule for Sporting and Athletic Goods Manufacturing. In response, on July 30, 2004, SBA published in the **Federal Register** a notice of intent to waive the Nonmanufacturer Rule for Sporting and Athletic Goods Manufacturing.

SBA explained in the notice that it was soliciting comments and sources of small business manufacturers of this class of products. In response to this notice, comments were received from interested parties. SBA has determined from these sources that there are no small business manufacturers of this class of products, and is therefore granting the waiver of the Nonmanufacturer Rule for Sporting and Athletic Goods Manufacturing, NAICS 339920.

Authority: 15 U.S.C. 637(a)(17).

Dated: November 3, 2004.

Arthur Collins,

Deputy Associate Administrator for Government Contracting.

BILLING CODE 8025–01–P

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Andean Trade Preference Act (ATPA), as Amended: Notice Regarding the 2003 and 2004 Annual Reviews

AGENCY: Office of the United States Trade Representative.

ACTION: Notice.

SUMMARY: The Office of the United States Trade Representative (USTR) received petitions in September 2004 to review certain practices in certain beneficiary developing countries to determine whether such countries are in compliance with the ATPA eligibility criteria. This notice publishes a list of the September 2004 petitions that were filed in response to the announcement of the annual review. In addition, this notice specifies the status of those petitions filed in 2003 that have remained under review.

FOR FURTHER INFORMATION CONTACT: Bennett M. Harman, Deputy Assistant U.S. Trade Representative for Latin America, at (202) 395–9446.

SUPPLEMENTARY INFORMATION: The ATPA (19 U.S.C. 3201 *et seq.*), as renewed and amended by the Andean Trade Promotion and Drug Eradication Act of 2002 (ATPDEA) in the Trade Act of 2002 (Pub. L. 107–210), provides trade benefits for eligible Andean countries. Pursuant to section 3103(d) of the ATPDEA, USTR promulgated regulations (15 CFR part 2016) (68 FR 43922) regarding the review of eligibility of countries for the benefits of the ATPA, as amended.

In a **Federal Register** notice dated August 14, 2003, USTR initiated the 2003 ATPA Annual Review and announced a deadline of September 15, 2003, for the filing of petitions (68 FR 48657). Several of these petitions requested the review of certain practices in certain beneficiary developing countries regarding compliance with the eligibility criteria set forth in sections 203(c) and (d) and section 204(b)(6)(B) of the ATPA, as amended (19 U.S.C. 3203 (c) and (d); 19 U.S.C. 3203(b)(6)(B)).

In a **Federal Register** notice dated November 13, 2003, USTR published a list of the responsive petitions filed pursuant to the announcement of the annual review. The Trade Policy Staff Committee (TPSC) has conducted a preliminary review of these petitions. 15 CFR 2016.2(b) provides for announcement of the results of the preliminary review on or about December 1. 15 CFR 2016.2(b) also provides for modification of the schedule if specified by **Federal Register** notice. In a **Federal Register** notice dated December 30, 2003, USTR modified the schedule for this review, specifying that the results would be announced on or about March 31, 2004. In a **Federal Register** notice dated April 5, 2004, USTR modified the schedule for this review. In a **Federal Register** notice dated July 21, 2004, USTR announced that the Trade Policy Staff Committee had determined that certain of the petitions do not require action and terminated their review. The TPSC also decided to modify the date of the announcement of the results of preliminary review for the remaining 2003 petitions to coincide with the 2004 review: Engelhard—Peru; Princeton Dover—Peru; LeTourneau—Peru; Duke Energy—Peru; AFL–CIO—Ecuador; Human Rights Watch—Ecuador; and US/LEAP—Ecuador.

In a **Federal Register** notice dated August 17, 2004, USTR initiated the 2004 ATPA Annual Review and announced a deadline of September 15, 2004 for the filing of petitions (69 FR 51138). Following is the list of responsive petitions that were filed for the 2004 review:

Ecuador—American Cast Iron Pipe Company
Ecuador—Chevron Texaco
Ecuador—Electrolux Home Products, Inc.
Peru—Parsons Corporation

USTR also received updated information regarding certain matters under consideration from the 2003 ATPA review:

Ecuador—Human Rights Watch
Ecuador—U.S./Labor Education in the Americas Project
Peru—LeTourneau of Peru

USTR will announce the results of the preliminary review of the 2004 petitions and the remaining 2003 petitions on or about December 1, 2004.

Carmen Suro-Bredie,

Chairman, Trade Policy Staff Committee.

BILLING CODE 3190–W4–P

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Generalized System of Preferences (GSP): Extension of Deadline for Submission of Petitions for the 2004 Annual GSP Product and Country Eligibility Practices Review

AGENCY: Office of the United States Trade Representative.

ACTION: Notice.

SUMMARY: This notice extends the deadline for the submission of petitions

for the 2004 Annual GSP Product and Country Eligibility Practices Review to December 13, 2004. Notification of which petitions are accepted for the 2004 Annual GSP Review and of other relevant dates will be published in the **Federal Register**.

ADDRESSES: Submit petitions by electronic mail (e-mail) to *FR0441@ustr.gov.* If unable to submit petitions by e-mail, contact the GSP Subcommittee of the Trade Policy Staff Committee (TPSC), Office of the United States Trade Representative (USTR), 1724 F Street, NW., Room F–220, Washington, DC 20508, at (202) 395–6971.

FOR FURTHER INFORMATION CONTACT: The GSP Subcommittee of the Trade Policy Staff Committee (TPSC), Office of the United States Trade Representative (USTR), 1724 F Street, NW., Room F–220, Washington, DC 20508. The telephone number is (202) 395–6971.

SUPPLEMENTARY INFORMATION: The GSP provides for the duty-free importation of designated articles when imported from beneficiary developing countries. The GSP is authorized by Title V of the Trade Act of 1974 (19 U.S.C. 2461, *et seq.*), as amended (the ''Trade Act''), and is implemented in accordance with Executive Order 11888 of November 24, 1975, as modified by subsequent Executive Orders and Presidential Proclamations.

2004 Annual GSP Review

The GSP regulations (15 CFR part 2007) provide the schedule of dates for conducting an annual review, unless otherwise specified by **Federal Register** notice. Notice is hereby given that, in order to be considered in the 2004 Annual GSP Product and Country Eligibility Practices Review, all petitions to modify the list of articles eligible for duty-free treatment under GSP or to review the GSP status of any beneficiary developing country must be received by the GSP Subcommittee of the Trade Policy Staff Committee no later than 5 p.m. on December 13, 2004. Petitions submitted after the extended deadline will not be considered for review.

Interested parties, including foreign governments, may submit petitions to: (1) Designate additional articles as eligible for GSP benefits, including to designate articles as eligible for GSP benefits only for countries designated as least-developed beneficiary developing countries, or only for countries designated as beneficiary sub-Saharan African countries under the African Growth and Opportunity Act (AGOA); (2) withdraw, suspend or limit the application of duty-free treatment accorded under the GSP with respect to any article, either for all beneficiary developing countries, least-developed beneficiary developing countries or beneficiary sub-Saharan African countries, or for any of these countries individually; (3) waive the ''competitive need limitations'' for individual beneficiary developing countries with respect to specific GSP-eligible articles (these limits do not apply to either least-developed beneficiary developing countries or beneficiary sub-Saharan African countries); and (4) otherwise modify GSP coverage. As specified in 15 CFR 2007.1, all product petitions must include a detailed description of the product and the subheading of the Harmonized Tariff Schedule of the United States (HTSUS) under which the product is classified.

Any person may also submit petitions to review the designation of any beneficiary developing country, including any least-developed beneficiary developing country, with respect to any of the designation criteria listed in sections 502(b) or 502(c) of the Trade Act (19 U.S.C. 2462(b) and (c)) (petitions to review the designation of beneficiary Sub-Saharan African countries are considered in the Annual Review of the AGOA, a separate administrative process not governed by the GSP regulations). Such petitions must comply with the requirements of 15 CFR 2007.0(b).

Requirements for Submissions

All such submissions must conform to the GSP regulations set forth at 15 CFR part 2007, except as modified below. These regulations are reprinted in ''A Guide to the U.S. Generalized System of Preferences (GSP)'' (August 1991) (''GSP Guidebook''), available at *http://www.ustr.gov.*

Any person or party making a submission is strongly advised to review the GSP regulations. Submissions that do not provide the information required by sections 2007.0 and 2007.1 of the GSP regulations will not be accepted for review, except upon a detailed showing in the submission that the petitioner made a good faith effort to obtain the information required. Petitions with respect to waivers of the ''competitive need limitations'' must meet the information requirements for product addition requests in section 2007.1(c) of the GSP regulations. A model petition format is available from the GSP Subcommittee and is included in the GSP Guidebook. Petitioners are requested to use this model petition format so as to ensure that all information requirements are met. Furthermore, interested parties submitting petitions that request action with respect to specific products should list on the first page of the petition the following information after typing ''2004 Annual GSP Review'': (1) The requested action; (2) the HTSUS subheading in which the product is classified; and (3) if applicable, the beneficiary developing country. Petitions and requests must be submitted, in English, to the Chairman of the GSP Subcommittee, Trade Policy Staff Committee, and must be received no later than December 13, 2004. Submissions in response to this notice will be available for public inspection by appointment with the staff of the USTR Public Reading Room, except for information granted ''business confidential'' status pursuant to 15 CFR 2003.6. If the submission contains business confidential information, a non-confidential version of the submission must also be submitted that indicates where confidential information was redacted by inserting asterisks where material was deleted. In addition, the confidential submission must be clearly marked ''BUSINESS CONFIDENTIAL'' in large, bold letters at the top and bottom of each and every page of the document. The public version that does not contain business confidential information must also be clearly marked in large, bold letters at the top and bottom of each and every page (either ''PUBLIC VERSION'' or ''NON–CONFIDENTIAL''). Documents that are submitted without any marking might not be accepted or will be considered public documents.

In order to facilitate prompt consideration of submissions, USTR strongly urges and prefers electronic mail (e-mail) submissions in response to this notice. Hand-delivered submissions will not be accepted. E-mail submissions should be single copy transmissions in English with the total submission including attachments not to exceed 50 pages in 12-point type and 3 megabytes as a digital file attached to an e-mail transmission. E-mail submissions should use the following subject line: ''2004 Annual GSP Review-Petition.'' Documents must be submitted as either WordPerfect (''.WPD''), MSWord (''.DOC''), or text (''.TXT'') file. Documents cannot be submitted as electronic image files or contain imbedded images (for example, ''.JPG'', ''.TIF'', ''.PDF'', ''.BMP'', or ''.GIF'') as these type files are generally excessively large. E-mail submissions containing such files will not be accepted. Supporting documentation submitted as spreadsheets are acceptable as Quattro Pro or Excel, pre-formatted for printing

on 8½ by 11 inch paper. To the extent possible, any data attachments to the submission should be included in the same file as the submission itself, and not as separate files. E-mail submissions should not include separate cover letters or messages in the message area of the e-mail; information that might appear in any cover letter should be included directly in the attached file containing the submission itself, including identifying information on the sender, including sender's e-mail address.

For any document containing business confidential information submitted as an electronic attached file to an e-mail transmission, in addition to the proper marking at the top and bottom of each page as previously specified, the file name of the business confidential version should begin with the characters ''BC–'', and the file name of the public version should begin with the characters ''P–''. The ''P–'' or ''BC–'' should be followed by the name of the person or party (government, company, union, association, etc.) submitting the petition. Submissions by e-mail should not include separate cover letters or messages in the message area of the e-mail; information that might appear in any cover letter should be included directly in the attached file containing the submission itself. The electronic mail address for these submissions is *FR0441@USTR.GOV*.

Documents not submitted in accordance with the GSP regulations as modified by these instructions might not be considered in this review.

Public versions of all documents relating to this review will be available for review approximately 30 days after the due date by appointment in the USTR Public Reading Room, 1724 F Street, NW., Washington, DC. Availability of documents may be ascertained, and appointments may be made from 9:30 a.m. to noon and 1 p.m. to 4 p.m., Monday through Friday, by calling (202) 395–6186.

Dated:

H.J. Rosenbaum,

Acting Executive Director GSP; Acting Chairman, GSP Subcommittee of the Trade Policy Staff Committee.

BILLING CODE 3190–W5–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

Notice of Disclosure

AGENCY: Office of the Secretary (OST), Department of Transportation.

ACTION: Notice on disclosure of higher prices for airfares purchased over the telephone via telephone reservations centers or at airline ticket offices, and surcharges that may be listed separately in fare advertisements.

SUMMARY: The Department is publishing the following notice disclosure of higher prices for airfares purchased over the telephone via telephone reservations centers or at airline ticket offices, and surcharges that be listed separately in fare advertisements.

FOR FURTHER INFORMATION CONTACT: Nicholas Lowry, Attorney, Office of Aviation Enforcement and Proceedings (C–70), 400 7th Street, SW., Washington, DC 20590 (202) 366–9349.

This notice is intended to provide guidance on two matters related to compliance with 14 CFR 399.84, the Department's rule on full fare advertising, and the underlying statutory proscription in 49 U.S.C. 41712 against unfair and deceptive trade practices. First, we address the disclosure in fare advertisements of higher prices, recently introduced by several air carriers, for tickets purchased at ticket counters or by telephone.[1] Second, by this notice, we are advising carriers of the current policy of the Office of Aviation Enforcement and Proceedings (Aviation Enforcement Office) with regard to the disclosure of ''government-approved'' surcharges.

A number of air carriers and foreign air carriers have recently started charging higher prices for tickets purchased by telephone or at ticket offices. Such airlines advertise base fares on the Internet or in print or other media, make the advertised fares available for purchase via the Internet only, and charge higher prices if customers purchase their tickets via an airline's telephone reservation system or at its airport or city ticket counter. Section 399.84 mandates that the advertised fare be the full fare to be paid by the customer. Any practice of excluding from advertised fares extra ''fees'' charged to customers that purchase tickets over the telephone through airline reservation centers, or at airport or city ticket counters, therefore, would violate 14 CFR 399.84, and constitute an unfair and deceptive trade practice and an unfair method of competition in violation of 49 U.S.C. 41712.

In order to avoid enforcement action, carriers and their agents who charge more for tickets not purchased over the Internet (*e.g.* by telephone or at ticket offices) must prominently disclose to customers that specific fares advertised are available only for tickets purchased via the Internet. In addition, we believe that 49 U.S.C. 41712 and 14 CFR 399.84 require carriers to state in such advertising that tickets cost more than the advertised price if purchased over the telephone or at an airport or city ticket office. Moreover, we believe it would be informative and beneficial for consumers if carriers also state the amount of the increased price in the advertisements, for example, by stating that tickets cost $5 more if purchased by telephone or at an airport or city ticket office. However, this increase in price may not be characterized as a carrier-imposed ''fee'' lest the advertisement run afoul of the full fare advertising rule.[2] Accordingly, the Aviation Enforcement Office will pursue enforcement action with regard to the advertisements in question if the increased fare is merely described in terms of a service, processing, administrative, ticketing center, call center, or similar carrier-imposed ''fee.''

Carriers, however, may use the aforementioned ''fee'' terms when describing the additional charge for telephone and/or ticket counter purchases in contexts that do not list specific fares and are thus not subject to 14 CFR 399.84. Carriers may disclose such charges and refer to them as ''fees,'' for example, in an audio introduction on an airline telephone reservation system, stating that tickets purchased over the telephone via the airline telephone reservation system, and/or at airline ticket counters, are subject to an additional carrier-imposed ''fee,'' so long as the total fares eventually quoted to consumers include the ''fee.''

A second topic we wish to address relates to ''government-approved surcharges.'' In the past, we have not pursued enforcement action against carriers that listed in fare advertisements ''government-imposed and government-approved'' surcharges separately from the base fare quotations, so long as the existence of these

[1] Some carriers have referred to this increase in the price for tickets bought from them over the telephone or at a ticket counter as a ''service fee'' or by a similar phrase. However, in the context of the full fare advertising rule, such carrier-imposed ''fees'' are a part of the fare and must be treated as such in airfare advertising.

[2] The full-fare advertising rule was adopted in large part to eliminate the prior practice where sellers of air transportation hid the true price of tickets by listing ''service fees'' in the fine print of advertisements. The Aviation Enforcement Office, therefore, does not believe the increased price of tickets purchased at ticket counters or by telephone should be referred to in terms of a ''service fee'' in fare advertisement because this could lead to significant confusion and a return to the prior unacceptable advertising practice.

surcharges and their amounts were stated elsewhere in the advertisement. The ''government-approved'' surcharges were limited to security surcharges approved in the mid-1980's that affected foreign air transportation only and were approved by both the foreign government involved and the U.S. government. Recently, tariff regulation, owing to expanded open-skies agreements and other factors, has been revised to the extent that there is no longer a consistent practice of joint approvals of surcharges, in many instances resulting in the filing of tariffs that may include surcharges that are approved by only one government. In addition, the desire of carriers to pass on the higher costs of certain expenses discretely, such as insurance and fuel, has led to such expenses being filed separately from the ''base'' fare in tariffs, a situation that the Department cannot effectively monitor.[3] In view of these developments, the Enforcement Office will no longer allow the separate listing of ''government-approved'' surcharges in fare advertising. We will consider the separate listing of such charges in fare advertisements an unfair and deceptive trade practice and unfair method of competition in violation of 14 CFR 399.84 and 49 U.S.C. 41712 and will pursue enforcement action where such violations are found. With respect to ''government-imposed'' surcharges, for example PFCs and foreign airport charges, however, our policy remains that such charges may be omitted from the fare quotations provided that they are not *ad valorem* in nature, that they are collected on a per-passenger basis, and that their existence and amount are clearly indicated in the advertisement so that the consumer can determine the full fare to be paid.

Questions concerning this notice or the applicability of the Department's fare advertising rules may be addressed to the Office of Aviation Enforcement and Proceedings.

Dated: November 5, 2004.

Samuel Podberesky,

Assistant General Counsel for Aviation Enforcement and Proceedings.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Summary Notice No. PE–2004–79]

Petitions for Exemption; Summary of Petitions Received

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petition for exemption received.

SUMMARY: Pursuant to FAA's rulemaking provisions governing the application, processing, and disposition of petitions for exemption, part 11 of Title 14, Code of Federal Regulations (14 CFR), this notice contains a summary of certain petitions seeking relief from specified requirements of 14 CFR. The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of FAA's regulatory activities. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of any petition or its final disposition.

DATES: Comments on petitions received must identify the petition docket number involved and must be received on or before December 6, 2004.

ADDRESSES: You may submit comments identified by DOT DMS Docket Number FAA–2004–18751 by any of the following methods:

- *Web Site: http://dms.dot.gov.* Follow the instructions for submitting comments on the DOT electronic docket site.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Management Facility; U.S. Department of Transportation, 400 Seventh Street, SW., Nassif Building, Room PL–401, Washington, DC 20590–0001.
- *Hand Delivery:* Room PL–401 on the plaza level of the Nassif Building, 400 Seventh Street, SW., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Docket: For access to the docket to read background documents or comments received, go to *http://dms.dot.gov* at any time or to Room PL–401 on the plaza level of the Nassif Building, 400 Seventh Street, SW., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: John Linsenmeyer (202) 267–5174 or Susan Lender (202) 267–8029, Office of Rulemaking (ARM–1), Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591.

This notice is published pursuant to 14 CFR 11.85 and 11.91.

Issued in Washington, DC, on November 5, 2004.

Anthony F. Fazio,

Director, Office of Rulemaking.

Petitions for Exemption

Docket No.: FAA–2004–18751.

Petitioner: Vaughn College of Aeronautics & Technology.

Sections of 14 CFR Affected: 14 CFR 147, Appendix C

Description of Relief Sought: To allow the petitioner to teach certain welding, soldering, and brazing curriculum in the Airframe Structures section of Appendix C to Teaching level 1 instead of Teaching level 2.

DEPARTMENT OF THE TREASURY

Fiscal Service

Surety Companies Acceptable on Federal Bonds; Roche Surety and Casualty Company, Inc.

AGENCY: Financial Management Service, Fiscal Service, Department of the Treasury.

ACTION: Notice.

SUMMARY: This is Supplement No. 3 to the Treasury Department Circular 570; 2004 Revision, published July 1, 2004, at 69 FR 40224.

FOR FURTHER INFORMATION CONTACT: Surety Bond Branch at (202) 874–1033.

SUPPLEMENTARY INFORMATION: A Certificate of Authority as an acceptable surety on Federal bonds is hereby issued to the following Company under 31 U.S.C. 9304 to 9308. Federal bond-approving officers should annotate their reference copies of the Treasury Circular 570, 2004 Revision, on page 40254 to reflect this addition.

Company Name: Roche Surety and Casualty Company, Inc.

Business Address: 1910 Orient Road, Tampa, Florida 33619.

Phone: (813) 623–5042.

UNDERWRITING LIMITATION b/: $450,000.

Surety Licenses c/: AR, FL, GA, IN, KS, LA, MD, MO, NE, NV, NJ, OK, SC, TN, TX. Incorporated in: Florida.

Certificates of Authority expire on June 30 each year, unless revoked prior

to that date. The Certificates are subject to subsequent annual renewal as long as the companies remain qualified (31 CFR Part 223). A list of qualified companies is published annually as of July 1 in Treasury Department Circular 570, with details as to underwriting limitations, areas in which licensed to transact surety business and other information.

The Circular may be viewed and downloaded through the Internet at *http://www.fms.treas.gov/c570.* A hard copy may be purchased from the Government Printing Office (GPO) Subscription Service, Washington, DC, Telephone (202) 512–1800. When ordering the Circular from GPO, use the following stock number: 769–004–04926–1.

Questions concerning this Notice may be directed to the U.S. Department of the Treasury, Financial Management Service, Financial Accounting and Services Division, Surety Bond Branch, 3700 East-West Highway, Room 6F07, Hyattsville, MD 20782.

Dated: November 4, 2004.

Vivian L. Cooper,

Director, Financial Accounting and Services Division, Financial Management Service.

Correction

In notice document 04–23771 beginning on page 62748 in the issue of Wednesday, October 27, 2004 make the following correction:

On page 62774, after the heading *Example 3b: Portfolio Growth and the Timing of Default Measurements*, the table is corrected to read as set forth below.

Annual portfolio growth rate	Total portfolio accounts		Accounts defaulted by end of year	PD from start of year portfolio	PD from end of year portfolio
	Start of year	End of year			
−5%	1,000,000	950,000	20,000	2.0%	2.1%
−10%	1,000,000	900,000	20,000	2.0%	2.2%
5%	1,000,000	1,050,000	20,000	2.0%	1.9%
10%	1,000,000	1,100,000	20,000	2.0%	1.8%

Note: It is assumed that all 20,000 defaults that occurred during the year were accounts that were part of the portfolio on January 1. The Other Retail risk weight curve was used for this example, and LGD is assumed to be 90% in all four cases.

Medicare Program; Changes to the Hospital Outpatient Prospective Payment System and Calendar Year 2005 Payment Rates

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule with comment period.

SUMMARY: This final rule with comment period revises the Medicare hospital outpatient prospective payment system to implement applicable statutory requirements and changes arising from our continuing experience with this system and to implement certain related provisions of the Medicare Prescription Drug, Improvement, and Modernization Act (MMA) of 2003. In addition, the final rule with comment period describes final changes to the amounts and factors used to determine the payment rates for Medicare hospital outpatient services paid under the prospective payment system. These changes are applicable to services furnished on or after January 1, 2005.

In this final rule with comment period, we are responding to public comments received on the January 6, 2004 interim final rule with comment period relating to MMA provisions that were effective January 1, 2004, and finalizing those policies. Further, we are responding to public comments received on the November 7, 2003 final rule with comment period pertaining to the ambulatory payment classification assignment of Healthcare Common Procedure Coding System (HCPCS) codes identified in Addendum B of that rule with the new interim (NI) comment indicators (formerly referred to as condition codes).

DATES: *Effective Date:* This final rule with comment period is effective on January 1, 2005.

Comment Date: We will consider comments on the ambulatory payment classification assignments of HCPCS codes identified in Addendum B with new interim comment codes and other areas specified throughout this preamble, if we receive them at the appropriate address, as provided below no later than 5 p.m. on January 14, 2005.

ADDRESSES: In commenting, please refer to file code CMS–1427–FC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of three ways (no duplicates, please):

1. Electronically

You may submit electronic comments to *http://www.cms.hhs.gov/regulations/ecomments* (Attachments should be in Microsoft Word, WordPerfect, or Excel; however, we prefer Microsoft Word).

2. By Mail

You may mail written comments (one original and two copies) to the following address only: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1427–FC, P.O. Box 8010, Baltimore, MD 21244–8018.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. By Hand or Courier

If you prefer, you may deliver (by hand or courier) your written comments (one original and two copies) before the close of the comment period to one of the following addresses. If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–7195 in advance to schedule your arrival with one of our staff members. Room 445–G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201, or 7500 Security Boulevard, Baltimore, MD 21244–1850.

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain proof of filing by stamping in and retaining an extra copy of the comments being filed.)

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. After the close of the comment period, CMS posts all electronic comments received before the close of the comment period on its public website. Written comments received timely will be available for public inspection as they are received, generally beginning approximately 4 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone (410) 786–7195.

FOR FURTHER INFORMATION CONTACT: Dana Burley, (410) 786–0378, Outpatient prospective payment issues and Suzanne Asplen, (410) 786–4558, Partial hospitalization and community mental health center issues.

SUPPLEMENTARY INFORMATION:

Availability of Copies and Electronic Access

Copies: To order copies of the **Federal Register** containing this document, send your request to: New Orders, Superintendent of Documents, PO Box 371954, Pittsburgh, PA 15250–7954. Specify the date of the issue requested and enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512–1800 (or toll-free at 1–888–293–6498) or by faxing to (202) 512–2250. The cost for each copy is $10. As an alternative, you can view and photocopy the **Federal Register** document at most libraries designated as Federal Depository Libraries and at many other public and academic libraries throughout the country that receive the **Federal Register**.

This **Federal Register** document is also available from the **Federal Register** online database through *GPO Access,* a service of the U.S. Government Printing Office. The Web site address is: *http://www.gpoaccess.gov/fr/index.html.*

Alphabetical List of Acronyms Appearing in the Final Rule With Comment Period

ACEP—American College of Emergency Physicians
AHA—American Hospital Association
AHIMA—American Health Information Management Association
AMA—American Medical Association
APC—Ambulatory payment classification
AMP—Average manufacturer price
ASP—Average sales price
ASC—Ambulatory surgical center
AWP—Average wholesale price
BBA—Balanced Budget Act of 1997, Public Law 105–33
BIPA—Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000, Public Law 106–554
BBRA—Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999, Public Law 106–113
CAH—Critical access hospital
CCR—(Cost center specific) cost-to-charge ratio
CMHC—Community mental health center

CMS—Centers for Medicare & Medicaid Services (formerly known as the Health Care Financing Administration)
CORF—Comprehensive outpatient rehabilitation facility
CPT—[Physicians'] Current Procedural Terminology, Fourth Edition, 2004, copyrighted by the American Medical Association
CRNA—Certified registered nurse anesthetist
CY—Calendar year
DMEPOS—Durable medical equipment, prosthetics, orthotics, and supplies
DMERC—Durable medical equipment regional carrier
DRG—Diagnosis-related group
DSH—Disproportionate share hospital
EACH—Essential Access Community Hospital
E/M—Evaluation and management
EPO—Erythropoietin
ESRD—End-stage renal disease
FACA—Federal Advisory Committee Act, Public Law 92–463
FDA—Food and Drug Administration
FI—Fiscal intermediary
FSS—Federal Supply Schedule
FY—Federal fiscal year
HCPCS—Healthcare Common Procedure Coding System
HCRIS—Hospital Cost Report Information System
HHA—Home health agency
HIPAA—Health Insurance Portability and Accountability Act of 1996, Public Law 104–191
ICD–9–CM—International Classification of Diseases, Ninth Edition, Clinical Modification
IME—Indirect medical education
IPPS—(Hospital) inpatient prospective payment system
IVIG—Intravenous immune globulin
LTC—Long-term care
MedPAC—Medicare Payment Advisory Commission
MDH—Medicare-dependent hospital
MMA—Medicare Prescription Drug, Improvement, and Modernization Act of 2003, Public Law 108–173
MSA—Metropolitan Statistical Area
NCCI—National Correct Coding Initiative
NCD—National Coverage Determination
OCE—Outpatient code editor
OMB—Office of Management and Budget
OPD—(Hospital) outpatient department
OPPS—(Hospital) outpatient prospective payment system
PET—Positron Emission Tomography
PHP—Partial hospitalization program
PM—Program memorandum
PPI—Producer Price Index
PPS—Prospective payment system
PPV—Pneumococcal pneumonia (virus)
PRA—Paperwork Reduction Act
QIO—Quality Improvement Organization
RFA—Regulatory Flexibility Act
RRC—Rural referral center
SBA—Small Business Administration
SCH—Sole community hospital
SDP—Single drug pricer
SI—Status indicator
TEFRA—Tax Equity and Fiscal Responsibility Act of 1982, Public Law 97–248
TOPS—Transitional outpatient payments
USPDI—United States Pharmacopoeia Drug Information

To assist readers in referencing sections contained in this document, we are providing the following outline of contents:

Outline of Contents

I. Background

A. Legislative and Regulatory Authority for the Outpatient Prospective Payment System

When the Medicare statute was originally enacted, Medicare payment for hospital outpatient services was based on hospital-specific costs. In an effort to ensure that Medicare and its beneficiaries pay appropriately for services and to encourage more efficient delivery of care, the Congress mandated replacement of the cost-based payment methodology with a prospective payment system (PPS). The Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), enacted on August 5, 1997, added section 1833(t) to the Social Security Act (the Act) authorizing implementation of a PPS for hospital outpatient services. The Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113), enacted on November 29, 1999, made major changes that affected the hospital outpatient PPS (OPPS). The Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554), enacted on December 21, 2000, made further changes in the OPPS. Section 1833(t) of the Act was also recently amended by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA), Public Law 108–173, enacted on December 8, 2003 (these amendments are discussed later under section I.E. of this final rule with comment period). The OPPS was first

implemented for services furnished on or after August 1, 2000. Implementing regulations for the OPPS are located at 42 CFR Part 419.

Under the OPPS, we pay for hospital outpatient services on a rate-per-service basis that varies according to the ambulatory payment classification (APC) group to which the service is assigned. We use Healthcare Common Procedure Coding System (HCPCS) codes (which include certain Current Procedural Terminology (CPT) codes) and descriptors to identify and group the services within each APC group. The OPPS includes payment for most hospital outpatient services, except those identified in section I.B. of this final rule with comment period. Section 1833(t)(1)(B)(ii) of the Act provides for Medicare payment under the OPPS for certain services designated by the Secretary that are furnished to inpatients who have exhausted their Part A benefits or who are otherwise not in a covered Part A stay. In addition, the OPPS includes payment for partial hospitalization services furnished by community mental health centers (CMHCs).

The OPPS rate is an unadjusted national payment amount that includes the Medicare payment and the beneficiary copayment. This rate is divided into a labor-related amount and a nonlabor-related amount. The labor-related amount is adjusted for area wage differences using the inpatient hospital wage index value for the locality in which the hospital or CMHC is located.

All services and items within an APC group are comparable clinically and with respect to resource use (section 1833(t)(2)(B) of the Act). In accordance with section 1833(t)(2) of the Act, subject to certain exceptions, services and items within an APC group cannot be considered comparable with respect to the use of resources if the highest median (or mean cost, if elected by the Secretary) for an item or service in the APC group is more than 2 times greater than the lowest median cost for an item or service within the same APC group (referred to as the ''2 times rule''). In implementing this provision, we use the median cost of the item or service assigned to an APC group.

Special payments under the OPPS may be made for new technology items and services in one of two ways. Section 1833(t)(6) of the Act provides for temporary additional payments or ''transitional pass-through payments'' for certain drugs, biological agents, brachytherapy devices used for the treatment of cancer, and categories of medical devices for at least 2 but not more than 3 years. For new technology services that are not eligible for pass-through payments and for which we lack sufficient data to appropriately assign them to a clinical APC group, we have established special APC groups based on costs, which we refer to as APC cost bands. These cost bands allow us to price these new procedures more appropriately and consistently. Similar to pass-through payments, these special payments for new technology services are also temporary; that is, we retain a service within a new technology APC group until we acquire adequate data to assign it to a clinically appropriate APC group.

B. Excluded OPPS Services and Hospitals

Section 1833(t)(1)(B)(i) of the Act authorizes the Secretary to designate the hospital outpatient services that are paid under the OPPS. While most hospital outpatient services are payable under the OPPS, section 1833(t)(1)(B)(iv) of the Act excluded payment for ambulance, physical and occupational therapy, and speech-language pathology services, for which payment is made under a fee schedule. The Secretary exercised the broad authority granted under the statute to exclude from the OPPS those services that are paid under fee schedules or other payment systems. Such excluded services include, for example, the professional services of physicians and nonphysician practitioners paid under the Medicare Physician Fee Schedule; laboratory services paid under the clinical diagnostic laboratory fee schedule; services for beneficiaries with end-stage renal disease (ESRD) that are paid under the ESRD composite rate; and services and procedures that require an inpatient stay that are paid under the hospital inpatient prospective payment system (IPPS). We set forth the services that are excluded from payment under the OPPS in § 419.22 of the regulations.

Under § 419.20 of the regulations, we specify the types of hospitals and entities that are excluded from payment under the OPPS. These excluded entities include Maryland hospitals, but only for services that are paid under a cost containment waiver in accordance with section 1814(b)(3) of the Act; critical access hospitals (CAHs); hospitals located outside of the 50 States, the District of Columbia, and Puerto Rico; and Indian Health Service hospitals.

C. Prior Rulemaking

On April 7, 2000, we published in the **Federal Register** a final rule with comment period (65 FR 18434) to implement a prospective payment system for hospital outpatient services. The hospital OPPS was first implemented for services furnished on or after August 1, 2000. Section 1833(t)(9) of the Act requires the Secretary to review certain components of the OPPS not less often than annually and to revise the groups, relative payment weights, and other adjustments to take into account changes in medical practice, changes in technology, and the addition of new services, new cost data, and other relevant information and factors. Since implementing the OPPS, we have published final rules in the **Federal Register** annually to implement statutory requirements and changes arising from our experience with this system. For a full discussion of the changes to the OPPS, we refer readers to these **Federal Register** final rules.[1]

On November 7, 2003, we published a final rule with comment period in the **Federal Register** (68 FR 63398) that revised the OPPS to update the payment weights and conversion factor for services payable under the calendar year (CY) 2004 OPPS on the basis of claims data from April 1, 2002 through December 31, 2002. In this final rule with comment period, we are finalizing the APC assignments and addressing public comments received pertaining to the new interim HCPCS codes listed in Addendum B of the November 7, 2003 final rule with comment period identified by new interim (NI) comment indicators (formerly referred to as condition codes). Subsequent to publishing the November 7, 2003 final rule with comment period, we published a correction of the final rule with comment period on December 31, 2003 (68 FR 75442). That December 31, 2003 document corrected technical errors in the November 7, 2003 final rule with comment period and included responses to a number of public comments that were inadvertently omitted from the November 2003 final rule with comment period.

On January 6, 2004, we published in the **Federal Register** an interim final rule with comment period (69 FR 820) that implemented provisions of Public Law 108–173 that affected payments made under the OPPS, effective January 1, 2004. We are finalizing this interim

[1] Interim final rule with comment period, August 3, 2000 (65 FR 47670); interim final rule with comment period, November 13, 2000 (65 FR 67798); final rule and interim final rule with comment period, November 2, 2001 (66 FR 55850 and 55857); final rule, November 30, 2001 (66 FR 59856); final rule, December 31, 2001 (66 FR 67494); final rule, March 1, 2002 (67 FR 9556); final rule, November 1, 2002 (67 FR 66718); final rule with comment period, November 7, 2003 (68 FR 63398); and interim final rule with comment period, January 6, 2004 (69 FR 820).

final rule and addressing public comments associated with that rule in this final rule with comment period.

D. APC Advisory Panel

1. Authority of the APC Panel

Section 1833(t)(9)(A) of the Act, as amended by section 201(h) of the BBRA of 1999, requires that we consult with an outside panel of experts to review the clinical integrity of the payment groups and weights under the OPPS. The Advisory Panel on APC Groups (the APC Panel), discussed under section I.D.2. of this preamble, fulfills this requirement. The Act further specifies that the Panel will act in an advisory capacity. This expert panel, which is to be composed of 15 representatives of providers subject to the OPPS (currently employed full-time, not consultants, in their respective areas of expertise), reviews and advises us about the clinical integrity of the APC groups and their weights. The APC Panel is not restricted to using our data and may use data collected or developed by organizations outside the Department in conducting its review.

2. Establishment of the APC Panel

On November 21, 2000, the Secretary signed the charter establishing the Advisory Panel on APC Groups. The APC Panel is technical in nature and is governed by the provisions of the Federal Advisory Committee Act (FACA), as amended (Public Law 92–463). On November 1, 2002, the Secretary renewed the charter. The renewed charter indicates that the APC Panel continues to be technical in nature, is governed by the provisions of the FACA, may convene up to three meetings per year, and is chaired by a Federal official.

Originally, in establishing the APC Panel, we solicited members in a notice published in the **Federal Register** on December 5, 2000 (65 FR 75943). We received applications from more than 115 individuals who nominated either colleagues or themselves. After carefully reviewing the applications, we chose 15 highly qualified individuals to serve on the APC Panel. Because of the loss of four APC Panel members due to the expiration of terms of office on March 31, 2004, we published a **Federal Register** notice on January 23, 2004 (69 FR 3370) that solicited nominations for APC Panel membership. From the 24 nominations that we received, we chose four new members. The entire APC Panel membership is identified on the CMS Web site at *http://www.cms.hhs.gov/faca/apc/apcmem.asp.*

3. APC Panel Meetings and Organizational Structure

The APC Panel first met on February 27, February 28, and March 1, 2001. Since that initial meeting, the APC Panel has held five subsequent meetings, with the last meeting taking place on September 1, 2, and 3, 2004. Prior to each of these biennial meetings, we published a notice in the **Federal Register** to announce each meeting and, when necessary, to solicit nominations for APC Panel membership. For a more detailed discussion about these announcements, refer to the following **Federal Register** notices: December 5, 2000 (65 FR 75943), December 14, 2001 (66 FR 64838), December 27, 2002 (67 FR 79107), July 25, 2003 (68 FR 44089), and December 24, 2003 (68 FR 74621), and August 5, 2004 (69 FR 47446).

During these meetings, the APC Panel established its operational structure that, in part, includes the use of three subcommittees to facilitate its required APC review process. Currently, the three subcommittees are the Data Subcommittee, the Observation Subcommittee, and the Packaging Subcommittee. The Data Subcommittee is responsible for studying the data issues confronting the APC Panel and for recommending viable options for resolving them. This subcommittee was initially established on April 23, 2001, as the Research Subcommittee and reestablished as the Data Subcommittee on April 13, 2004. The Observation Subcommittee, which was established on June 24, 2003, and reestablished with new members on March 8, 2004, reviews and makes recommendations to the APC Panel on all issues pertaining to observation services paid under the OPPS, such as coding and operational issues. The Packaging Subcommittee, which was established on March 8, 2004, studies and makes recommendations on issues pertaining to services that are not separately payable under the OPPS but are bundled or packaged APC payments. Each of these subcommittees was established by a majority vote of the APC Panel during a scheduled APC Panel meeting. All subcommittee recommendations are discussed and voted upon by the full APC Panel.

For a detailed discussion of the APC Panel meetings, refer to the hospital OPPS final rules cited in section I.C. of this preamble. Full discussions of the APC Panel's February 2004 and September 2004 meetings and the resulting recommendations are included in sections II., III., IV., V., and VI. of this preamble under the appropriate subject headings.

E. Provisions of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003

On December 8, 2003, the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA), Public Law 108–173, was enacted. Public Law 108–173 made changes to the Act relating to the Medicare OPPS. In a January 6, 2004 interim final rule with comment period, we implemented provisions of Public Law 108–173 relating to the OPPS that were effective for CY 2004. In this final rule with comment period, we are responding to public comments received on the January 6, 2004 interim final rule and finalizing that rule. In addition, in this final rule with comment period, we are implementing the following sections of Public Law 108–173 that are effective for CY 2005:

- Section 611, which provides for Medicare coverage of an initial preventive physical examination under Part B, subject to the applicable deductible and coinsurance, as an outpatient department (OPD) service payable under the OPPS. The provisions of section 611 apply to services furnished on or after January 1, 2005, but only for individuals whose coverage period under Medicare Part B begins on or after that date.
- Section 614, which provides that screening mammography and diagnostic mammography services are excluded from payment under the OPPS. This amendment applies to screening mammography services furnished on or after the date of enactment of Public Law 108–173 (that is, December 8, 2003), and in the case of diagnostic mammography, to services furnished on or after January 1, 2005.
- Section 621(a)(1), which requires special classification of certain separately paid radiopharmaceutical agents and drugs or biologicals, and specifies the pass-through payment percentages, effective for services furnished on or after January 1, 2005, for the three categories of ''specified covered OPD drugs'' defined in the statute: sole source drug; innovator multiple source drug; and noninnovator multiple source drug. In addition, payment for these drugs for CYs 2004 and 2005 does not have to be made in a budget neutral manner.
- Section 621(a)(2), which specifies the reduced threshold for the establishment of separate APCs with respect to drugs or biologicals from $150 to $50 per administration for drugs and biologicals furnished in CYs 2005 and 2006.

• Section 621(a)(3), which excludes separate drug APCs from outlier payments. Specifically, no additional payment will be made in the case of APC groups established separately for drugs and biologicals.

• Section 621(b), which requires that all devices of brachytherapy consisting of a seed or seeds (or radioactive source) furnished on or after January 1, 2004, and before January 1, 2007, be paid based on the hospital's charges for each device, adjusted to cost. This provision also requires that these brachytherapy services be excluded from outlier payments.

F. Summary of the Provisions of the August 16, 2004 Proposed Rule

On August 16, 2004, we published a proposed rule in the **Federal Register** (69 FR 50447) that set forth proposed changes to the Medicare hospital OPPS and to implement provisions of Public Law 108–173 specified in section I.E. of this preamble that would be effective for services furnished on or after January 1, 2005. The following is a summary of the major changes that we proposed to make:

1. Changes to the APC Groups

As required by section 1833(t)(9)(A) of the Act, we proposed the annual update of the APC groups and the relative payment weights. This section also requires that we consult with an outside panel of experts, the Advisory Panel on APC Groups, to review the clinical integrity of the groups and weights under the OPPS. Based on analyses of Medicare claims data and recommendations of the APC Panel, we proposed to establish a number of new APCs and to make changes to the assignment of HCPCS codes under a number of existing APCs.

We also discussed the application of the 2 times rule and proposed exceptions to it; coding for stereotactic radiosurgery services; the proposed movement of procedures from the new technology APCs; the proposed changes to the list of procedures that will be paid as inpatient services; and the proposed addition of new procedure codes to the APCs.

2. Recalibrations of APC Relative Payment Weights

In the proposed rule, we discussed the methodology used to recalibrate the proposed APC relative payment weights and set forth the proposed recalibration of the relative weights for CY 2005.

3. Payment Changes for Devices

In the proposed rule, we discussed proposed changes to the pass-through payment for devices and the methodology used to reduce, if applicable, transitional pass-through payments to offset costs packaged into APC groups.

4. Payment Changes for Drugs, Biologicals, Radiopharmaceutical Agents, and Blood and Blood Products

In the proposed rule, we discussed our proposed payment changes for drugs, biologicals, radiopharmaceutical agents, and blood and blood products.

5. Estimated Transitional Pass-Through Spending in CY 2005 for Drugs, Biologicals, and Devices

In the proposed rule, we discussed the proposed methodology for measuring whether there should be an estimated pro rata reduction for transitional pass-through drugs, biologicals, and devices for CY 2005.

6. Other Policy Decisions and Proposed Policy Changes

In the proposed rule, we presented our proposals for CY 2005 regarding the following:

• Update of statewide default cost-to-charge ratios (CCRs).

• A conforming change to the regulation relating to the use of the first available cost reporting period ending after 1996 and before 2001 for determining a provider's payment-to-cost ratio to calculate transitional corridor payments for hospitals paid under the OPPS that did not have a 1996 cost report.

• Changes in the status indicators and comment indicators assigned to APCs for CY 2005.

• Elimination of the diagnostic tests criteria as a requirement for hospitals to qualify for separate payment of observation services under APC 0339 (Observation) and changes to the guidelines to hospitals for counting patients' time spent in observation care.

• Payment under the OPPS for certain procedures currently assigned to the inpatient list.

• Strategy for giving the public notice of new implementation guidelines for new evaluation and management codes.

• Addition of three new HCPCS codes and descriptors for brachytherapy sources that would be paid separately, pursuant to Public Law 108–173.

• Modification of the HCPCS code descriptors for brachytherapy source descriptors for which units of payment are not already delineated.

• Payment for services furnished emergently to an outpatient who dies before admission to a hospital as an inpatient.

7. Conversion Factor Update for CY 2005

As required by section 1833(5)(3)(C)(ii) of the Act, in the proposed rule, we proposed to update the conversion factor used to determine payment rates under the OPPS for CY 2005.

8. Wage Index Changes for CY 2005

In the proposed rule, we discussed the proposed retention of our current policy to apply the IPPS wage indices to wage adjust the APC median costs in determining the OPPS payment rate and the copayment standardized amount. These indices reflect major changes for CY 2005 relating to hospital labor market areas as a result of OMB revised definitions of geographical statistical areas; hospital reclassifications and redesignations, including the one-time reclassifications under section 508 of Public Law 108–173; and the wage index adjustment based on commuting patterns of hospital employees under section 505 of Public Law 108–173.

9. Determination of Payment Rates and Outlier Payments for CY 2005

In the proposed rule, we discussed how APC payment rates are calculated and how the payment rates are adjusted to reflect geographic differences in labor-related costs. We also discussed proposed changes in the way we would calculate outlier payments for CY 2005.

10. Regulatory Impact Analysis

In the proposed rule, we set forth our analysis of the impact that the proposed changes would have on affected hospitals and CMHCs.

G. Public Comments Received on the August 16, 2004 Proposed Rule

We received over 550 timely pieces of correspondence containing multiple comments on the August 16, 2004 proposed rule. Summaries of the public comments and our responses to those comments are set forth in the various sections of this preamble under the appropriate heading.

We received a number of general public comments on our proposed changes to the OPPS for CY 2005.

Comment: Some commenters were concerned about the extent to which OPPS payment rates have fluctuated from year to year. Because Medicare payment is a very significant portion of income for most hospitals, they stated that the instability in the OPPS payment rates makes it difficult for hospitals to plan and budget. They indicated that there is a tremendous degree of variation across APCs in terms of payment to cost ratios and that they

would expect that after three years of operating the OPPS, the payment to cost ratios would be much more stable. One commenter offered to share analysis of payment to cost ratios with CMS. Commenters stated that such variation in payments compared to costs puts full-service hospitals and their communities at risk because limited-service, or ''niche'' providers can easily identify and redirect patients with more lucrative APCs to their facilities, leaving full-service hospitals with a disproportionate share of patients who receive services that are assigned to the underpaid APCs.

Response: We recognize hospitals' need for stability in payments for hospital outpatient services. We would appreciate receiving studies of the extent to which there is variation across APCS in terms of payment to cost ratios across the multiple years of the OPPS to aid us in assessing factors that might contribute to instability in the payment rates.

Comment: One commenter indicated that the entire OPPS is underfunded, as it pays only 87 cents of every dollar of hospital outpatient care provided to Medicare beneficiaries. The commenter stated that it will continue to work with Congress to address inadequate payment rates and updates in order to ensure access to hospital-based outpatient services for Medicare beneficiaries.

Response: Our early analyses indicated that the OPPS was, in its inception, based on payment that was less than cost due to statutory reductions in payment for hospital outpatient costs prior to the enactment of the Balanced Budget Act of 1997, which authorized the current OPPS. We agree that the commenter will need to work with Congress to change certain fundamental features of the OPPS. For example, the base amounts upon which the OPPS was established, the rules concerning budget neutrality, and subsequent out-year adjustments such as annual reductions in coinsurance and adjustments to outlier and pass-through payment allocations are established in statute and, as such, would require legislation to amend.

Comment: One commenter objected to the use of the display date to start the 60-day comment period for the proposed rule. The commenter stated that the display copy did not contain all of the information included in the proposed rule, such as the comment due date, and did not satisfy the statute's requirement that the notice of proposed rulemaking be published in the **Federal Register**, with provision for a 60-day comment period. The commenter indicated that the use of the display date to start the comment period gives reviewers too short a period of time to comment properly and also, in this case, gives CMS an inadequate period of time to review the comments and prepare the final rule. The commenter urged CMS to publish a proposed rule no later than late July to provide more time for CMS to consider public comments.

Response: While the law requires that we provide a 60-day public comment period and that the notice of proposed rulemaking be published in the **Federal Register**, it does not require that the date of **Federal Register** publication be the first day of the comment period. The two requirements are independent. We post the proposed rule on the CMS Web site on the date of display of the proposed rule at the **Federal Register**, thereby making the proposed rule far more easily available to the public than was the case when the only public dissemination was publication in the **Federal Register**, and satisfying the requirement for a 60-day comment period. By making the proposed rule available on the CMS Web site (as well as at the **Federal Register**), we provided the public with access to not only the proposed rule but also to all of the supporting files and documents cited in the proposed rule in a manner that can be used for analysis. We note that the computer files posted on the Web site can be manipulated for independent analysis. Therefore, we believe that beginning the comment period for the proposed rule with the display date at the **Federal Register**, and posting the proposed rule and data files on the CMS Web site on the display date, fully complies with the statute and provides a far better opportunity for the public to have meaningful input than the past practice under which the comment period began with the publication date in the **Federal Register** a week or longer after the display date and no other data in any other form was furnished.

With respect to the publication date of the proposed rule, we publish the proposed rule as soon as it is practicable for us to do so. Our process for development of the proposed rule begins with a winter meeting of the APC Panel based on the earliest possible data analysis for the forthcoming year. We then pull claims for the period ending December of the data year and also pull cost report data for development of CCRs to apply to the claims data. This step cannot be started until approximately March 1 of the year and the development of the proposed rule data takes considerable time as there are many analyses to be performed and decisions to be made before each stage of data development can be undertaken. We have to balance the need to improve the process and to deal with each year's special issues with the need to issue a proposed rule in sufficient time to permit the public to comment and to permit us sufficient time to review the comments and develop the final rule. Each year we review the timeline and process to determine how we can best achieve that balance, while ensuring that we issue the best possible proposed rule for public comment.

H. Public Comments Received on the January 6, 2004 Interim Final Rule With Comment Period

We received approximately 40 timely pieces of correspondence containing multiple comments on the MMA provisions relating to payment for drugs and brachytherapy under the OPPS that were included in the January 6, 2004 interim final rule with comment period. Summaries of the public comments and our responses to those comments are set forth in sections V. and VII.G. of this preamble under the appropriate heading.

I. Public Comments Received on the November 7, 2003 Final Rule With Comment Period

We received 25 timely pieces of correspondence on the November 7, 2003 final rule with comment period, some of which contained multiple comments on the APC assignment of HCPCS codes identified with the new interim condition indicators (now referred to as condition codes) in Addendum B of that final rule with comment period. Summaries of the public comments and our responses to those comments are set forth in various sections of this preamble under the appropriate subject areas.

II. Changes Related to Ambulatory Payment Classifications (APCs)

Section 1833(t)(2)(A) of the Act requires the Secretary to develop a classification system for covered hospital outpatient services. Section 1833(t)(2)(B) provides that this classification system may be composed of groups of services, so that services within each group are comparable clinically and with respect to the use of resources. In accordance with these provisions, we developed a grouping classification system, referred to as the Ambulatory Payment Classification Groups (or APCs), as set forth in § 419.31 of the regulations. We use Level I and Level II Healthcare Common Procedure Coding System (HCPCS) codes and descriptors to identify and group the services within each APC. The APCs are organized such that each

group is homogeneous both clinically and in terms of resource use. (However, new technology APCs that are temporary groups for certain approved services are structured based on cost rather than clinical homogeneity.) Using this classification system, we have established distinct groups of surgical, diagnostic, and partial hospitalization services, and medical visits. Because of the transitional pass-through provisions, we also have developed separate APC groups for certain medical devices, drugs, biologicals, radiopharmaceuticals, and devices of brachytherapy.

We have packaged into each procedure or service within an APC group the cost associated with those items or services that are directly related and integral to performing a procedure or furnishing a service. Therefore, we would not make separate payment for packaged items or services. For example, packaged items and services include: Use of an operating, treatment, or procedure room; use of a recovery room; use of an observation bed; anesthesia; medical/surgical supplies; pharmaceuticals (other than those for which separate payment may be allowed under the provisions discussed in section V. of this preamble); and incidental services such as venipuncture. Our packaging methodology is discussed in section IV.B.3. of this final rule with comment period.

A. APC Changes: General

Under the OPPS, we pay for hospital outpatient services on a rate-per-service basis that varies according to the APC group to which the service is assigned. Each APC weight represents the median hospital cost of the services included in that APC relative to the median hospital cost of the services included in APC 0601, Mid-Level Clinic Visits. The APC weights are scaled to APC 0601 because a mid-level clinic visit is one of the most frequently performed services in the outpatient setting.

Section 1833(t)(9)(A) of the Act requires the Secretary to review the components of the OPPS not less than annually and to revise the groups and relative payment weights and make other adjustments to take into account changes in medical practice, changes in technology, and the addition of new services, new cost data, and other relevant information and factors. Section 1833(t)(9)(A) of the Act, as amended by section 201(h) of the BBRA of 1999, also requires the Secretary, beginning in CY 2001, to consult with an outside panel of experts to review the APC groups and the relative payment weights.

Finally, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median (or mean cost, if elected by the Secretary) for an item or service in the group is more than 2 times greater than the lowest median cost for an item or service within the same group (referred to as the ''2 times rule''). We use the median cost of the item or service in implementing this provision. The statute authorizes the Secretary to make exceptions to the 2 times rule in unusual cases, such as low volume items and services.

Section 419.31 of the regulations sets forth the requirements for the APC system and the determination of the payment weights. In this section, we discuss the changes that we proposed to the APC groups; the APC Panel's review and recommendations from the February 2004 meeting and our proposals in response to those recommendations; the application of the 2 times rule and proposed exceptions to it; coding for stereotactic radiosurgery services; the proposed movement of procedures from the new technology APCs; the proposed changes to the inpatient list; and the proposed additions of new procedures codes to the APCs. In addition, in this section under the appropriate subject heading, we present the APC Panel's review and recommendations of items discussed at the September 1, 2, and 3, 2004 meeting held after publication of the proposed rule and our final decisions on these recommendations. We then present our final policies that are effective for CY 2005.

B. APC Panel Review and Recommendations

1. February 2004 Panel Meeting

As stated above, the APC Panel held its first 2004 meeting on February 18, 19, and 20, 2004, to discuss the revised APCs for the CY 2005 OPPS. In preparation for that meeting, we published a notice in the **Federal Register** on December 24, 2003 (68 FR 74621), to announce the location, date, and time of the meeting; the agenda items; and the fact that the meeting was open to the public. In that notice, we solicited public comment specifically on the items included on the agenda for that meeting. We also provided information about the APC Panel meeting on the CMS Web site: *http://www.cms.hhs.gov/faca/apc/panel.*

Oral presentations and written comments submitted for the February 2004 APC Panel meeting met, at a minimum, the adopted guidelines for presentations set forth in the **Federal Register** document (68 FR 74621). In conducting its APC review, the APC Panel heard testimony and received evidence in support of the testimonies from a number of interested parties. For the February 2004 deliberations, the APC Panel used hospital outpatient claims data for the period January 1, 2003, through September 30, 2003, that provided, at a minimum, median costs for the APC structure in place in CY 2004 and that was based on CCRs used for setting the CY 2004 payment rates. The data set presented to the APC Panel represented 9 months of the CY 2003 data that we proposed to use to recalibrate the APC relative weights and to calculate the proposed APC payment rates for CY 2005. In sections II.B.4. through 7. and sections II.C. through I. of this preamble, we summarize the APC issues discussed during the APC Panel's February 2004 meeting, the Panel's recommendations, the proposals that we included in the August 16, 2004 proposed rule, our proposals with respect to those recommendations, and the policies that we are finalizing for CY 2005 in this final rule with comment period.

2. September 2004 Panel Meeting

As stated earlier, the APC Panel held its second 2004 meeting on September 1–3, 2004. In preparation for that meeting, we published a notice in the **Federal Register** on August 5, 2004 (69 FR 47446) to announce the location, date, and time of the meeting, the agenda items, and the fact that the meeting was open to the public. In that notice, we solicited public comments specifically on the items included on the agenda for that meeting. During the September 2004 APC Panel meeting, the APC Panel heard testimony on a number of the proposed changes in APCs included in the August 16, 2004 proposed rule. We are summarizing the topics that were discussed at the September 2004 Panel meeting and the APC Panel's recommendations on each topic in the chart below. We have included references to the appropriate section of this preamble for the more detailed discussion of each recommendation.

For the September 2004 deliberations, the APC Panel used the hospital outpatient claims data that we used in developing the proposed rule; that is, data for the period of January 1, 2003,

through December 31, 2003, including updated CCRs.

BILLING CODE 4120–01–P

Summary of APC Panel Recommendations from September 2004 Meeting

Recommendation	For Discussion, see Preamble Section
The APC Panel recommended that CMS should--	Section II.B.6
1. Continue its exploration of ways to increase the number of multiple procedure claims that can be used for OPPS ratesetting.	Section III.A.1
2. Post the crosswalk of revenue codes to cost centers on the OPPS website.	Section V.H
3. Assign a modifier to CPT codes 36540, 36600, 51701, and 97602 to facilitate identification of claims on which any of those is the only payable code on the date of service.	Section II.B.7
4. Not change the status indicator for CPT code 76937.	Section II.B.7
5. Allow separate payment for observation services even when cardiac catheterization is performed on the same day.	Section VII.D
6. Expand the list of diagnoses eligible for observation services.	Section VII. D
7. Solicit input on the inpatient list from professional organizations.	Section II.G
8. Maintain payment for low-volume blood products for CY 2005 at the CY 2004 level.	Section V.I
9. Use external data as a basis for setting payment rates for low-volume blood products.	Section V.I
10. Evaluate whether or not current statutes allow the extension of pass-through status for embolization protective system (HCPCS code C1884).	Section IV.A.2
11. Require that C-codes be reported for all devices associated with a C-code.	Section III.C.4
12. Retain the CY 2004 configuration of APCs 0385 and 0386.	Section III.C.1
13. Except for APCs 0418 and 0425, make adjustments to the medians for the device-dependent APCs listed in Table 19 of the August 16, 2004 proposed rule that increase or decrease by 5 percent for CY 2005 compared to CY 2004.	Section III.C.4
14. Assign CPT code 58563 and HCPCS code 0009T to APC 0387.	Section II.C.13
15. Evaluate the APC assignments for CPT codes 36555 through 36597 for discussion at the first CY 2005 (winter) meeting of the APC Panel.	Section II.C.13
16. Maintain CPT codes 77523 and 77525 in the new technology APC for CY 2005.	Section II. F.3
17. Assign status indicator K to HCPCS code J2790	Section V.B.2

3. Contents of This Section of the Preamble

The discussion in this section II.B. of this final rule with comment period is limited to APC changes regarding APCs other than those that violate the 2 times rule and those that represent drugs, biologicals, and transitional pass-through devices, or those that are new technology APCs. The specific APC Panel review and recommendations applicable to those APCs are discussed in sections II.C., IV., III., and II.F., respectively, of the preamble to this final rule with comment period.

4. APC 0018: Biopsy of Skin/Puncture of Lesion

During the February 2004 APC Panel meeting, one presenter recommended moving CPT tracking codes 0046T (Catheter lavage, mammary duct(s)) and 0047T (Each additional duct) from APC 0018 and placing them in an APC that more accurately reflects each of the procedures. The APC Panel recommended that we reassign CPT codes 0046T and 0047T to APC 0021, Level III Excision/Biopsy.

In the August 16, 2004 proposed rule, we proposed to accept the APC Panel's recommendation. We did not receive any public comments on our proposal. Therefore, we are adopting as final, without modification, our proposal to reassign CPT codes 0046T and 0047T to APC 0021.

5. Level I and II Arthroscopy

APC 0041: Level I Arthroscopy

APC 0042: Level II Arthroscopy

We testified before the APC Panel at its February 2004 meeting regarding a comment that we received in 2003 requesting that we reassign CPT code 29827 (Arthroscopy, shoulder with rotator cuff repair) from APC 0041 to APC 0042, based on its similarity to CPT 29826 (Arthroscopy, shoulder decompression of subacromial space with partial acromioplasty without coracoacromial release). Our clinical staff considered the request and determined that APCs 0041 and 0042 should be reconfigured to improve clinical homogeneity. An APC Panel presenter provided evidence to support moving CPT code 29827 to an APC that would more accurately recognize the complexity of that procedure. We requested the APC Panel's recommendation regarding a total revision of these two APCs.

The APC Panel recommended that we reevaluate the codes in APCs 0041 and 0042 and propose restructuring that would improve the clinical homogeneity in the two APCs.

In the August 16, 2004 proposed rule, we proposed to accept the APC Panel's recommendation and to revise APCs 0041 and 0042 as presented in Tables 1 and 2 of that proposed rule. We received one public comment on our proposed restructuring.

Comment: One commenter requested that we move code 0014T from APC 0041 to APC 0042. The commenter provided information in support of its belief that the procedure more accurately matches the clinical work and resource inputs of APC 0042 than of APC 0041.

Response: We agree with the commenter and are assigning the procedure to APC 0042. The tracking code 0014T is being retired and the successor code is CPT code 29868 (Arthroscopy, knee, surgical, osteochondral autograft(s) meniscal transplantation (including arthrotomy for meniscal insertion, medial or lateral). Placement of this code in APC 0042 is subject to comment in response to this final rule with comment period because the code is a new code for CY 2005.

Accordingly, restructured APCs 0041 and 0042 for CY 2005, as modified based on the public comment received, are shown in Tables 1 and 2 below.

Table 1.--Reconstructed APC 0041: Level I Arthroscopy

CPT/HCPCS Code	Description
29850	Knee arthroscopy/surgery
29870	Knee arthroscopy/diagnostic

6. Angiography and Venography Except Extremity

APC 0279: Level II Angiography and Venography Except Extremity

APC 0280: Level III Angiography and Venography Except Extremity

APC 0668: Level I Angiography and Venography Except Extremity

a. February 2004 Panel Meeting

As requested by the APC Panel, at the February 2004 Panel meeting, we presented our proposal for reconfiguring APCs 0279, 0280, and 0668 that reflected changes based on prior input with outside clinical experts. The APC Panel had previously reviewed these APCs during its January 2003 meeting and had recommended that we not restructure these three APCs until we received input from clinical experts in the field. When we updated the APC groups in CY 2003, we accepted the APC Panel's recommendation and made no changes to APCs 0279, 0280, and 0668.

A review of these APCs was prompted by a commenter who requested that we move CPT code 75978 (Repair venous blockage) from APC 0668 to APC 0280 and that we move CPT code 75774 (Artery x-ray, each vessel) from APC 0668 to APC 0279. The commenter submitted evidence in support of these requests and testified before the APC Panel regarding the common use of CPT code 75978 for treating dialysis patients and the often required multiple intraoperative attempts to succeed with this procedure for such patients.

After receiving input from the clinical experts, we determined that these three APCs should be revised to improve their clinical homogeneity. At the February 2004 meeting, we presented our proposed restructuring of APCs 0279, 0280, and 0668 to the APC Panel. The APC Panel concurred with our proposal.

In addition, subsequent to the APC Panel meeting, we discovered several procedures in these APCs that were more appropriately placed in other APCs in order to remedy any 2 times rule violations. We included those modifications in our proposed restructured APCs published in Table 3 in the August 16, 2004 proposed rule.

b. Public Comments Received

Comment: Several commenters requested that CMS postpone or cancel the proposed plans for moving angiography codes 75960 (Transcatheter introduction of intravascular stent(s), (non-coronary vessel) percutaneous and/or open, radiological supervision and interpretation, each vessel), 75962 (Transluminal balloon angioplasty, peripheral artery, radiological supervision and interpretation), 75964 (Transluminal balloon angioplasty, each additional peripheral artery, radiological supervision and interpretation), 75966 (Transluminal balloon angioplasty, renal or other visceral artery, radiological supervision and interpretation), and 75968 (Transluminal balloon angioplasty, each additional visceral artery, radiological supervision and interpretation), which are integral to a number of angioplasty and stent placement procedures, from APC 0280 to APC 0668. One commenter indicated that the proposed decreases in payments for these services that would result from their APC reassignment were inconsistent with CMS' proposal to limit payment decreases for device-dependent APCs. Another commenter was particularly concerned that code 75962, which is used for angioplasty of arterial blockages, may have a wide range of associated procedure costs. The commenters stated that aggregate payment for all services billed for many high volume procedures such as peripheral transluminal angioplasty and single stent placement will decrease by 16 to 21 percent, in large part due to the reassignment of codes 75960, 75962, 75964, 75966, and 75968 to the lower level APC 0668 in the angiography and venography except extremity series and

to their placement on the bypass list. Two commenters were concerned that supervision and interpretation services as part of peripheral atherectomy procedures were assigned to higher paying APC 0279, potentially providing hospitals with an incentive to perform atherectomy instead of angioplasty or stent procedures, or both. Further, the commenters suggested that the lower payment for the supervision and interpretation services moved to APC 0668 for CY 2005 provides an incentive for hospitals to treat patients on an inpatient basis or may limit beneficiaries' access to the outpatient procedures. One commenter indicated that the cost and complexity of performing angiographic procedures for angioplasty are similar, if not more complex, than those of performing angiographic procedures for atheretomy.

The commenters did not understand why CMS reassigned the supervision and interpretation codes from a Level III to a Level I APC and believed that CMS did not take into account the higher level of hospital resources and staffing required for certain therapeutic radiology supervision and interpretation services. Further, they questioned the assumptions CMS adopted in the creation of the bypass list to develop ''pseudo''single claims. They suggested that there might be significant differences between the multiple procedure claims that CMS converts to ''pseudo'' single claims and those that CMS is unable to use. Thus, the commenters questioned the reliability of the claims data and encouraged CMS to use external data as the basis for the decisionmaking. One commenter noted that, of a large number of claims for APC 0668, 79 percent accounted for device costs and 81 percent accounted for room charges, but CMS' single claim methodology had only 4 percent of claims accounting for device costs or room charges.

Finally, one commenter, a group of providers, stated that they expected substantial payment decreases to result from the proposed restructuring of APCs 0279, 0280, and 0668. The commenter suggested that CMS should establish a mechanism (such as dampening) to offset large payment swings similar to those anticipated as a result of the CMS proposal.

Response: Our analyses of claims data used for the CY 2004 OPPS and several past comments led us to recognize the need to restructure APCs 0279, 0280, and 0668 for the CY 2005 OPPS. There were only two services in APC 0668 for CY 2004, APC 0279 was excepted from the 2 times rule in CY 2004, and the median costs for individual services in APCs 0668, 0279, and 0280 showed significant overlap. The APC Panel also acknowledged the need to reconfigure these APCs. In our proposed rule, we presented the restructured APCs in which the procedures within each APC demonstrated both clinical and resource homogeneity, and our final data confirmed the appropriate assignment of the services. For instance, the peripheral atherectomy supervision and interpretation codes (75992 through 75996) assigned to the Level II APC (0279) consistently had higher median costs than the supervision and interpretation codes for intravascular stent placement or peripheral or visceral artery balloon angioplasty, which are assigned to the Level I APC (0668). For CY 2005, the median costs for the supervision and interpretation codes for stent placement and angioplasty were much lower than the median cost of their prior APC 0280 ($1,181) and were within the range of median costs ($239–$444) for other procedures assigned to APC 0668. As APCs 0668, 0279, and 0280 are not device-dependent APCs because we expect the devices to be reported with the interventional procedures provided (that are in device-dependent APCs), it would be inappropriate to apply the device-dependent APC policy to APCs 0668, 0279, and 0280. In addition, there were no violations of the 2 times rule in the restructured APCs 0668, 0279, or 0280 based on full year 2003 hospital claims data.

The supervision and interpretation codes 75960, 75962, 75964, 75966, and 75968, along with peripheral atherectomy supervision and interpretation CPT codes, were proposed for the bypass list for CY 2005. As the commenters noted, we recognized that angiography and venography services generally involve multiple procedure claims, and less than 10 percent of bills for APCs 0668, 0279, and 0280 were available for ratesetting for CY 2004. We proposed to place a number of radiological supervision and interpretation codes on the bypass list for CY 2005 because we believed that these codes should have little packaging associated with them and we recognized that their addition to the bypass list might enable us to use significantly more data from multiple procedure claims for APCs 0668, 0279, 0280, and others. We did not expect that devices and room charges would generally be packaged with the supervision and interpretation services, but rather would be packaged with the interventional procedures they accompanied. This accounts for the low percentage of device and room costs on the single bills in APC 0668 used for the median calculation. None of the commenters provided any information about why it would be inappropriate to include these codes on the bypass list, other than to point out the decline in proposed payment rates for the services. If packaging appropriately attributable to the supervision and interpretation services through the bypass procedure had been assigned to the interventional procedures that the supervision and interpretation services accompanied (such as angioplasty or stent placement), there should have been increases in the median costs for the interventional procedures. We did not see any such significant increases, and believe that our data do not indicate any specific packaging allocation problems with respect to the supervision and interpretation services. We have no evidence of underreporting of costs used to calculate the median costs for APC 0668.

For CY 2005, we had a significantly greater number of single claims available for use in median calculation for APCs 0668, 0279, and 0280. For example, for CY 2005, the median costs for the two supervision and interpretation codes with the highest volume that were of concern to the commenters (codes 75960 and 75962) were based on 20 percent of claims in contrast to only 1 percent used last year. While it is possible, as suggested by the commenters, that there may be differences between the packaging in multiple procedure claims that we were able to convert to ''pseudo'' single claims and those that we were unable to use, we have no reason to believe that these issues are unique to these APCs or especially problematic for these supervision and interpretation services. Our goal continues to be to use as much of our historical hospital claims data to set payment rates as possible. As we have consistently stated, we are pursuing strategies to improve our ability to utilize multiple procedure claims for median calculation, including discussions with the APC Panel Data Subcommittee.

With regard to the commenter's suggestion that we establish a mechanism to offset payment changes from one year to the next, we understand the commenter's desire for a stable system. However, while we are not convinced that an overall dampening policy is required, we continue to work toward improving the hospital claims data through education, data management, and data analyses. We believe that we have achieved significant improvements so far.

c. Final Policy for CY 2005

After consideration of the APC Panel's recommendations and the public comments we received on the August 16, 2004 proposal, we are finalizing our proposal for the restructuring of APCs 0668, 0279, and 0280.

Tables 3, 4, and 5 reflect the final restructuring of APCs 0668, 0279, and 0280.

BILLING CODE 4120–01–C

7. Packaged Codes in APCs

As a result of requests from the public, the Packaging Subcommittee of the APC Panel was established to review all the CPT codes with a status indicator of ''N.'' Status indicator ''N'' indicates that payment for packaged codes is bundled into the payment that providers receive for separately payable codes for items or services provided on the same day. Providers have often suggested that many codes could be billed alone, without any separately payable service on the claim, and requested that these codes not be assigned status indicator ''N.'' The Packaging Subcommittee identified areas for change of some packaged CPT codes for items or services that could be provided as the sole service on a given date. During the September 2004 meeting, the APC Panel accepted the report of the Packaging Subcommittee and made the following recommendations:

- The Panel recommended that the Packaging Subcommittee review packaged codes individually instead of making a global decision for all packaged codes.
- The Panel recommended that CMS assign a modifier to CPT codes 36540 (Collect blood venous device), 36600 (Withdrawal of arterial blood), 51701 (Insert bladder catheter), and 97602 (Wound[s] care, non-selective) to be used when these codes are the only code on that particular claim for the same date of service. The APC Panel indicated that it would revise this subset of codes once data become available.
- The Panel recommended that CMS educate providers and intermediaries on the correct billing procedures for the packaged CPT codes 36540, 36600, 51701, and 97602.
- The Panel recommended that CMS not change the status indicator for CPT 76397 (Ultrasound guidance for vascular access). The Panel indicated that it would review the data on this code as they become available.
- The Panel recommended that the Packaging Subcommittee continue to meet throughout the year to discuss other problematic packaged codes.

CMS is considering the recommendation that a modifier be used when certain codes are the only codes on a particular claim for the same date of service. We note that code 97602 is assigned a status indicator of ''A'' in this final rule with comment period, and is no longer payable under OPPS. Therefore, a modifier, if applicable, would not be assigned for this code.

Comment: One commenter asked CMS to review all the packaged codes to determine which codes should become separately payable. Several commenters also requested that codes 36540 (Collect blood venous device), 36600 (Withdrawal of arterial blood), and 97602 (Wound[s] care, nonselective) become separately payable because they are often the only procedure on a bill. In cases where there is no separately payable code on a claim, providers do not receive payment for these packaged services.

Response: We appreciate the commenters' suggestions. As stated above, the APC Panel Packaging Subcommittee recently reviewed all the packaged codes. We are currently

considering whether to create a modifier to be used for CPT codes 36540, 36600, and 51701 when these codes appear on a claim without any separately payable code on the same date of service. As stated above, code 97602 will not be payable under OPPS for CY 2005 and, therefore, is excluded from this discussion. Additional detailed suggestions for the Packaging Subcommittee should be submitted to *APCPanel@cms.hhs.gov* with ''Packaging Subcommittee'' in the subject line.

Comment: Two commenters requested that code 76937 (Ultrasound guidance for vascular access) be assigned to APC 0268 (Ultrasound Guidance Procedures), with status indicator ''S'' instead of the proposed status indicator ''N.''

Response: We are accepting the APC Panel's recommendations that code 76937 remain packaged for CY 2005. We are concerned that there will be unnecessary utilization of this procedure if it is separately payable. In addition, because code 76937 only became effective on January 1, 2004, there are currently no claims data for this code. When we review the CY 2004 claims data for the CY 2006 payment rates, we will reexamine the status of code 76937. We also note that the APC Panel Packaging Subcommittee remains active, and additional issues and new data concerning the packaging status of codes will be shared for their consideration as information becomes available.

Comment: Several commenters requested that the following CPT codes become unpackaged: 42550 (Injection for salivary x-ray) and other x-ray injection codes; 75998 (Fluoroscopic guidance for central venous access device placement); 74328 (Endoscopic catheterization of the biliary ductal system, S&I); 74329 (Endoscopic catheterization of the pancreatic ductal system, S&I); 74330 (Combined endoscopic catheterization of the biliary and pancreatic ductal systems, S&I); 36500 (Insert of catheter, vein); 75893 (venous sampling by catheter); 75989 (abscess drainage under x-ray); 76001 (Fluoroscope exam); 76003 (Needle localization by x-ray); 76005 (Fluoroguide for spine inject); 90471 and 90472 (Immunization administration); 94760, 94761, and 94762 (Pulse oximetry); and G0269 (Occlusive device in vein art). The commenters were concerned that the OPPS has denied hospitals reimbursement for these services.

Response: Hospitals include charges for packaged services on their claims, and the costs associated with these packaged services are then bundled into the costs for separately payable procedures on the claims. Hospitals may use CPT codes to report any packaged services that were performed, consistent with CPT coding guidelines. Because these imaging codes are packaged, their presence on a claim that includes a code for another separately payable service does not necessarily result in the claim being a multiprocedure claim. Payment for these imaging services is packaged in this way into payment for the separately payable services with which the imaging services are billed.

The Packaging Subcommittee reviewed every code that was packaged in CY 2004. The Committee narrowed the list of packaged codes to a list of potentially problematic codes and subsequently reviewed utilization and median cost data for these codes. One of the main criteria evaluated by the Packaging Subcommittee to determine whether a code should become unpackaged was how likely it was for the code to be billed without any other code for separately payable services on the claim. We encourage submission of clinical scenarios involving currently packaged codes to the Packaging Subcommittee for review at future meetings. Submissions should be sent to the *APCPanel@cms.hhs.gov* with ''Packaging Subcommittee'' in the subject line.

We will continue to package CPT codes 42550 and other x-ray injection codes, 75998, 73428, 74329, 74330, 36500, 75893, 75989, 76001, 76003, 76005, 90471, 94472, 94760, 94761, 94762, and G0269 for CY 2005 and will discuss these codes with the APC Panel Packaging Subcommittee.

Comment: One commenter requested that the status indicator for code G0102 (Prostate cancer screening; digital rectal examination) be changed from packaged to separately payable. The commenter indicated that the screening is administered as part of the initial preventive physical examination. The commenter stated, ''The payment for G0102 will be zero because it is identified with status indicator 'N' which means it is packaged and not paid for separately.''

Response: Currently, under the OPPS, we do not make separate payment for code G0102. Its costs are bundled into the costs of other separately payable services furnished by the hospital on the same day. For example, a digital rectal examination is usually furnished as part of an evaluation and management service, so its payment would generally be bundled into payment for the evaluation and management service when a covered evaluation and management service is furnished on the same day as the digital rectal examination. It is a relatively quick and simple procedure. Likewise, when the examination is performed during the same visit as the initial preventive examination, we would expect that costs associated with the examination would be bundled into the costs for the initial preventive examination. Accordingly, we are continuing to package code G0102.

Comment: One commenter requested that we map code G0168 (Wound closure by adhesive) to an APC instead of assigning status indicator ''N'' to the code. The commenter was concerned that access to wound adhesives would be reduced if this code is not separately payable.

Response: Wound adhesives are considered supplies used to repair lacerations and surgical incisions. These products are used instead of sutures to close wounds. We do not make separate payments for sutures under the OPPS. Providers are paid when they use wound adhesives in the same manner as they are paid for other ''packaged'' procedures. The charges for code G0168 should be packaged into whichever procedure(s) is billed on the same date of service. Payment to the provider reflects the cost of performing the procedure and the related supplies.

C. Limits on Variations Within APCs: Application of the 2 Times Rule

Section 1833(t)(2) of the Act provides that the items and services within an APC group cannot be considered comparable with respect to the use of resources if the median (or mean) of the highest cost item or service within an APC group is more than 2 times greater than the median of the lowest cost item or service within that same group. However, the statute authorizes the Secretary to make exceptions to this limit on the variation of costs within each APC group in unusual cases such as low volume items and services. No exception may be made in the case of a drug or biological that has been designated as an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act. We implemented this statutory provision in § 419.31 of the regulations. Under this regulation, we elected to use the highest median cost and lowest median cost to determine comparability.

During the APC Panel's February 2004 meeting, we presented data and information concerning a number of APCs that violate the 2 times rule and asked the APC Panel for its recommendation. We discuss below the APC Panel's recommendations specific to each of these APCs, our proposals in

response to the APC Panel's recommendations that were discussed in the August 2004 proposed rule, and our final policies.

1. Cardiac and Ambulatory Blood Pressure Monitoring

APC 0097: Cardiac and Ambulatory Blood Pressure Monitoring

We expressed concern to the APC Panel that APC 0097 appears to violate the 2 times rule. We sought the APC Panel's recommendation on revising the APC to address the violation. Based on clinical homogeneity considerations, the APC Panel recommended that we not restructure APC 0097 for CY 2005.

We proposed to accept the APC Panel's recommendation that we make no changes to APC 0097 for CY 2005. We did not receive any public comments on our proposal. Accordingly, in this final rule, we are not making any changes to APC 0097 for CY 2005.

2. Electrocardiograms

APC 0099: Electrocardiograms

We expressed concern to the APC Panel at its February 2004 meeting that APC 0099 appears to violate the 2 times rule. We asked the APC Panel to recommend options for resolving this violation. Based on clinical homogeneity considerations, the APC Panel recommended that we not alter the structure of APC 0099 for CY 2005.

We proposed to accept the APC Panel's recommendation that we make no changes to APC 0099 for CY 2005. We did not receive any public comments on our proposal. Accordingly, in this final rule with comment period, we are not making any changes to APC 0099 for CY 2005.

3. Excision/Biopsy

APC 0019: Level I Excision/Biopsy

APC 0020: Level II Excision/Biopsy

APC 0021: Level III Excision/Biopsy

We expressed concern to the APC Panel at its February 2004 meeting that APC 0019 appears to violate the 2 times rule. We advised the APC Panel that this violation was not evident in CY 2004 because the CY 2002 median cost data used in calculating the CY 2004 APC updates supported moving CPT codes 11404 (Removal of skin lesion) and 11623 (Removal of skin lesion) from APC 0020 and APC 0021. However, based on the CY 2003 data reviewed by the APC Panel, APC 0019 would violate the 2 times rule. Therefore, we asked the APC Panel to recommend an approach to resolve the violation. We asked the APC Panel if we should leave this APC as is; divide APC 0019 into two separate APCs; or move some codes in APC 0019 to higher level excision/biopsy APCs. In making its recommendation, the APC Panel noted that the 2 times violation in APC 0019 was minor, and recommended that we not modify APC 0019.

We proposed to accept the APC Panel's recommendation to not make any modifications to APC 0019 for CY 2005. We did not receive any public comments on our proposal. Accordingly, in this final rule with comment period, we are not making any changes to APC 0019 for CY 2005.

4. Posterior Segment Eye Procedures

APC 0235: Level I Posterior Segment Eye Procedures

We expressed concern to the APC Panel at its February 2004 meeting that APC 0235 appears to violate the 2 times rule. At the August 2003 APC Panel meeting, the APC Panel recommended that we monitor the data for APC 0235 for review at its February 2004 meeting. In order to address the apparent violation, we asked the APC Panel to consider moving a few CPT codes from APC 0235 into a higher level posterior segment eye procedure APC. The APC Panel noted that the 2 times violation in APC 0235 was minor, and recommended that we not change APC 0235.

We proposed to accept the APC Panel's recommendation that we make no changes to the structure of APC 0235 for CY 2005. We receive one public comment regarding this proposal.

Comment: One commenter urged CMS not to finalize the proposal to keep the CY 2004 structure of APC 0235 for CY 2005. The commenter asked CMS to consider moving codes 67220 (Treatment of choroids lesion), 67221 (Ocular photodynamic therapy), 67225 (Eye photodynamic therapy, add-on), 67101 (Repair detached retina), and 67141 (Treatment of retina) to a higher level Posterior Segment Eye Procedure APC.

Response: After further analysis, we continue to believe that the resources and clinical characteristics of these codes are most compatible and homogeneous with those services in Level I Posterior Segment Eye Procedures, APC 0235. We plan to discuss the possible restructuring of APCs 0235, 0236, and 0237 (Level I, Level II, and Level III Posterior Segment Eye Procedures, respectively) at the next APC Panel meeting. We invite comments on these APCs.

In this final rule with comment period, we are adopting as final the proposal not to make any changes to APC 0235 for CY 2005.

5. Laparoscopy

APC 0130: Level I Laparoscopy

APC 0131: Level II Laparoscopy

We expressed concern to the APC Panel at its February 2004 meeting that APC 0130 appears to violate the 2 times rule. We suggested moving CPT code 44970 (Laparoscopy, appendectomy) from APC 0130 to APC 0131. The APC Panel recommended that we make this change.

We proposed to accept the APC Panel's recommendation to move CPT code 44970 from APC 0130 to APC 0131. We did not receive any public comments on our proposal. Accordingly, in this final rule with comment period, we are adopting as final without modification our proposal to move CPT code 44970 from APC 0130 to APC 0131.

6. Anal/Rectal Procedures

APC 0148: Level I Anal/Rectal Procedure

APC 0155: Level II Anal/Rectal Procedure

APC 0149: Level III Anal/Rectal Procedure

APC 0150: Level IV Anal/Rectal Procedure

We expressed concern to the APC Panel at its February 2004 meeting that APC 0148 appears to violate the 2 times rule. We suggested moving CPT code 46020 (Placement of seton) from APC 0148 to a higher level anal/rectal procedure APC. The APC Panel reviewed the four anal/rectal APCs (APC 0148, 0149, 0150, and 0155) and recommended moving CPT codes 46020 and 46706 (Repair of anal fistula with glue) from APC 0148 to APC 0150. The APC Panel also recommended moving CPT codes 45005 (Drainage of rectal abscess) and 45020 (Drainage of rectal abscess) from APC 0148 to APC 0155.

We proposed to accept the APC Panel's recommendations specific to APC 0148. We received one favorable public comment on our proposal. Accordingly, in this final rule with comment period, we are adopting as final without modification our proposal and are moving CPT codes from APC 0148 to APCs 0150 and 0155 as shown in the Table 6 below.

Table 6.—Movement of Anal/Rectal Procedures from APC 0148 to APC 0150 and APC 0155

CPT/HCPCS	Description	CY 2004 APC	CY 2005 APC
46020	Placement of seton	0148	0150
46706	Repair anal fistula with glue	0148	0150
45005	Drainage of rectal abscess	0148	0155
45020	Drainage of rectal abscess	0148	0155

7. Nerve Injections

APC 0204: Level I Nerve Injections

APC 0206: Level II Nerve Injections

APC 0207: Level III Nerve Injections

APC 0203: Level IV Nerve Injections

We expressed concern to the APC Panel that APC 0203 and APC 0207 appear to violate the 2 times rule. After careful consideration of new data presented during the February 2004 meeting, the APC Panel recommended moving CPTs 64420 (Nerve block injection, intercostal nerve), 64630 (Injection treatment of nerve), 64640 (Injection treatment of nerve), and 62280 (Treatment of a spinal cord lesion) from APC 0207 to APC 0206. The APC Panel also recommended moving CPT code 62282 (Treatment of a spinal canal lesion) from APC 0207 to APC 0203.

After reviewing more recent, complete calendar year data that was not available in February 2004, we proposed to accept only the APC Panel's recommendation to move CPTs 64630 and 64640 from APC 0207 to APC 0206 and to make some other changes that we believed were appropriate to improve the nerve injection APCs' clinical and resource homogeneity, as shown in Tables 7, 8, and 9 of the proposed rule.

We received two comments regarding our proposed reassignment of four CPT codes from APC 0203 to APC 0207 to address an apparent violation of the 2 times rule.

Comment: Commenters urged CMS not to finalize the proposed changes to CPT codes 64620 (Injection treatment of nerve), 64680 (Injection treatment of nerve), 62263 (Lysis epidural adhesions) and 62264 (Epidural lysis on single day), which we proposed to move from APC 0203 to APC 0207. The commenters stated that the proposed payment for these services was well below the cost of the resources required to provide the services at an acceptable standard of care. The commenters requested that we not move these four codes from APC 0203.

Response: After further analysis, we agree with the commenters that CPT codes 64620, 62263, and 62264 should remain in APC 0203 based on clinical and resource homogeneity with the services in APC 0203. Therefore, in this final rule with comment period, we are not moving these three codes from APC 0203, as displayed in Table 9B below.

However, based on our final CY 2003 hospital data for CPT code 64680, utilizing over half of the several hundred total bills for this service for calculation of median hospital costs, we continue to believe that the resources and clinical characteristics of destruction of the celiac plexus by neurolytic nerve agent are most compatible and homogeneous with those services in Level III Nerve Injections, APC 0207. Therefore, in this final rule with comment period, we are adopting as final the proposed movement of CPT code 64680 from APC 0203 to APC 0207, as displayed in Table 9B below.

Accordingly, all of the final APC reassignments of nerve injections codes in this final rule with comment period are displayed below in Tables 7, 8, 9A, and 9B.

Table 7.—Movement of Level III: Nerve Injections CPT Codes from APC 0207 to APC 0204 and APC 0206

CPT/HCPCS	Description	CY 2004 APC	CY 2005 APC
64420	Nerve block injection, intercostal nerve	0207	0204
64421	Nerve block injection, intercostals, multiple	0207	0206
64472	Injection paravertebral cervical/thoracic, add-on	0207	0206
64476	Injection paravertebral lumbosacral, add-on	0207	0206
64630	Injection treatment of nerve	0207	0206
64640	Injection treatment of nerve	0207	0206

Table 8.—Movement of Level I: Nerve Injections CPT Codes from APC 0204 to APC 0206

CPT/HCPCS	Description	CY 2004 APC	CY 2005 APC
61791	Treatment of a trigeminal tract	0204	0206
64410	Nerve block injection, phrenic	0204	0206
64412	Nerve block injection, spinal accessory	0204	0206
64446	Nerve block injection, sciatic, continuous infusion	0204	0206
G0260	Injection for sacroiliac joint anesthesia	0204	0206

Table 9A.—Movement of Level II: Nerve Injections CPT Codes from APC 0206 to APC 0204 and APC 0207

CPT/HCPCS	Description	CY 2004 APC	CY 2005 APC
62270	Spinal fluid tap, diagnostic	0206	0204
62272	Drainage of cerebrospinal fluid	0206	0204
62310	Injection of spine cervical/thoracic	0206	0207
62311	Injection of spine lumbar/sacral (cd)	0206	0207
62318	Injection of spine with catheter, cervical/thoracic	0206	0207
62319	Injection of spine with catheter Lumbar/sacral (cd)	0206	0207

Table 9B.—Movement of Level III and Level IV Nerve Injections CPT Codes Between APC 0203 and APC 0207

CPT/HCPCS	Description	CY 2004 APC	CY 2005 Proposed APC	CY 2005 Final APC
62263	Lysis epidural adhesions	0203	0207	0203
62264	Epidural lysis on single day	0203	0207	0203
64620	Injection treatment of nerve	0203	0207	0203
64680	Injection treatment of nerve	0203	0207	0207

8. Anterior Segment Eye Procedures

APC 0232: Level I Anterior Segment Eye Procedures

APC 0233: Level II Anterior Segment Eye Procedures

We expressed concern to the APC Panel at its February 2004 meeting that APC 0233 appears to violate the 2 times rule. We suggested moving CPT codes 65286 (Repair of eye wound), 66030 (Injection treatment of eye), and 66625 (Removal of iris) from APC 0233 to APC 0232. The APC Panel agreed and recommended that we move CPT codes 65286, 66030, and 66625 from APC 0233 to APC 0232.

We proposed to accept the APC Panel's recommendation and to reassign these three codes. We received one public comment on our proposal.

Comment: One commenter asserted that the costs for performing the procedures under CPT codes 65286 and 66625 are similar to the costs for performing procedures in APC 0233 and requested that these codes not be moved to APC 0232.

Response: After further analysis, we continue to believe that the resources and clinical characteristics of codes 62586 and 66625 are most compatible and homogeneous with those services in Level I Anterior Segment Eye Procedures, APC 0232.

Therefore, in this final rule with comment period, we are adopting as final without modification our proposal and are moving CPT codes 65286, 66030, and 66625 from APC 0233 to APC 0232 as shown in the Table 10 below.

Table 10.--Reassignment of Anterior Segment Eye Procedures Codes From APC 0233 to APC 0232

CPT/HCPCS	Description	CY 2004 APC	CY 2005 APC
65286	Repair of eye wound	0233	0232
66030	Injection treatment of eye	0233	0232
66625	Removal of iris	0233	0232

9. Pathology

APC 0343: Level II Pathology

APC 0344: Level III Pathology

We expressed concern to the APC Panel at its February 2004 meeting that APC 0343 appears to violate the 2 times rule. We suggested moving CPT code 88346 (Immunoflourescent study) from APC 0343 to APC 0344. The APC Panel concurred with our proposal.

We proposed to accept the APC Panel's recommendation and to move CPT code 88346 from APC 0343 to APC 0344. We received one public comment on our proposal.

Comment: One commenter requested that CMS split APC 0344 into two APCs to create another level for the pathology procedures. The commenter stated that creation of another level would lead to more economically homogenous APCs to provide payment that more closely covers the costs of the procedures. The commenter pointed out that APC 0344, as currently configured, violates the 2 times rule and recommended that CMS split APC 0344 into two APCs and that CMS should assign them to a newly created APC rather than finalize its proposal to assign the new computer-assisted image analysis procedures to APC 0344.

Response: We believe that our proposed reassignment of CPT code 88346 from APC 0343 to 0344, as recommended by the APC Panel, will improve the resource and clinical homogeneity of the APCs. We are reluctant to make further reassignments without hospital cost data to support changes. Several of the codes that the commenter is concerned about, including APC codes 88360 (Morphometric analysis, tumor immunohistochemistry, quantitative or semiquantitative, each antibody; manual), 88368 (Morphometric analysis, in situ hybridization, each probe; manual), and 88367 (Morphometric analysis, in situ hybridization, each probe; using computer assisted technology) were new in CY 2004 and CY 2005 and, as such, we do not have available claims data for analysis.

Given the new codes mentioned by the commenter and the 2 times rule violations in APC 0342 and 0344, we expect that we will want to solicit the advice of the APC Panel regarding the configuration of all the pathology APCs: 0342, 0343, 0344, and 0661, at their next meeting. We will reexamine the APCs for future updates to the OPPS, but will not make other changes to the APCs at this time.

In this final rule with comment period, we are adopting as final without modification our proposal and are moving CPT code 88346 from APC 0343 to APC 0344.

10. Immunizations

APC 0355: Level III Immunizations (for CY 2005: Level I Immunizations)

APC 0356: Level IV Immunizations (for CY 2005: Level II Immunizations)

We expressed concern to the APC Panel at its February meeting that APCs 0355 and 0356 appear to violate the 2 times rule. In order to eliminate this violation, we suggested moving CPT 90636 (Hepatitis A/Hepatitis B vaccine, adult dose, intramuscular use) from APC 0355 to APC 0356. We also suggested moving CPT codes 90375 (Rabies immune globulin, intramuscular or subcutaneous), 90740 (Hepatitis B vaccine, dialysis or immunosuppressed patient, intramuscular), 90723 (Diphtheria-pertussis-tetanus, Hepatitis B, Polio vaccine, intramuscular), and 90693 (Typhoid vaccine, AKD, subcutaneous) from APC 0356 to APC 0355.

The APC Panel recommended moving CPT 90636 from APC 0355 to APC 0356 and CPT codes 90740, 90723, and 90693 from APC 0356 to APC 0355. The APC Panel delayed making a recommendation on CPT 90375 and requested that we collect additional cost data on this procedure for discussion at the next scheduled APC Panel meeting.

In the August 16, 2004 proposed rule, we proposed to accept the APC Panel's recommended changes to move CPT code 90740 from APC 0356 to 0355, and to move CPT code 90636 from 0355 to 0356. Based on our review of more recent claims data than were available to the APC Panel, we also determined that the medians for CPT codes 90693 and 90375 are below the $50 drug packaging threshold. Therefore, we also proposed to package both CPT codes 90693 and 90375 and to change the status indicator for CPT code 90723 to ''E'' because it is not payable by Medicare.

We received one public comment relating to CPT code 90740.

Comment: One commenter requested that CMS not reassign CPT code 90740 Recombivax 40mcg/mL (a brand name for Hepatitis B vaccine), from APC 0356 (Level II Immunizations) to APC 0355 (Level I Immunizations), as proposed. The commenter stated that the CMS median cost of $5.55 is erroneous and that the lowest published price for Recombivax 40mcg/mL in the Federal Supply Schedule is $79.33. Therefore, the commenter believed that code 90740 does not violate the 2 times rule when assigned to APC 0356.

Response: We are using the CY 2003 hospital claims as the basis for payment and we believe we have adequate claims on which to base payment for CPT code 90740 for CY 2005. We were able to use 99 percent of the claims for CPT code 90740 for median calculation and believe that our assignment of CPT code 90740 for CY 2005 is appropriate.

In this final rule with comment period, we are adopting as final without modification our proposal and are moving CPT code 90740 from APC 0356 to APC 0355 and CPT code 90636 from APC 0355 to APC 0356, as shown in Table 11, and packaging both CPT codes 90693 and 90375.

Table 11.—Movement of Immunization CPT Codes Between APC 0355 and APC 0356

CPT/HCPCS	Description	CY 2004 APC	CY 2005 APC
90636	Hepatitis A/Hepatitis B vaccine, adult dose, intramuscular use	0355	0356
90740	Hepatitis B vaccine, dialysis or immunosuppressed patient	0356	0355

11. Pulmonary Tests

APC 0367: Level I Pulmonary Tests

APC 0368: Level II Pulmonary Tests

APC 0369: Level III Pulmonary Tests

We expressed concern to the APC Panel at its February 2004 meeting that APC 0369 appears to violate the 2 times rule. We suggested moving CPT code 94015 (Patient recorded spirometry) from APC 0369 to APC 0367. The APC Panel concurred with our proposal.

In the August 16, 2004 proposed rule, we proposed to accept the APC Panel's recommendation and to move CPT code 94015 from APC 0369 to APC 0367. In addition, during our analysis of more recent claims data following the APC Panel meeting, we noted that APC 0367 violated the 2 times rule. Therefore, we proposed to reassign CPT codes 94375, 94750, 94450, 94014, 94690, and 93740 to APC 0368.

We did not receive any public comments on our proposal. Accordingly, in this final rule with comment period, we are adopting as final without modification our proposal and are moving CPT code 94015 from APC 0369 to APC 0367 and reassigning CPT codes 93740, 94014, 94375, 94450, 94690, and 94750 to APC 0368, as shown in Table 12A.

Table 12A.—Reassignment of Certain CPT Codes Among APCs 0367, 0368 and 0369

HCPCS	Description	CY 2004 APC	CY 2005 APC
93740	Temperature gradient studies	0367	0368
94014	Patient recorded spirometry	0367	0368
94015	Patient recorded spirometry	0369	0367
94375	Respiratory flow volume loop	0367	0368
94450	Hypoxia response curve	0367	0368
94690	Exhaled air analysis	0367	0368
94750	Pulmonary compliance study	0367	0368

12. Clinic Visits

APC 0600: Low Level Clinic Visits

We expressed concern to the APC Panel at its February 2004 meeting that APC 0600 appears to violate the 2 times rule. We suggested moving HCPS code G0264 (Assessment other than CHF, chest pain, asthma) to a higher level clinic visit. The APC Panel recommended that we not make any changes to APC 0600.

We proposed to accept this recommendation and not make any changes to APC 0600 for CY 2005. We received one public comment on our proposal from a provider group.

Comment: One comment recommended that CMS investigate further the apparent two times violation in APC 0600. The commenter believed that, although the APC Panel did not recommend reassignment of HCPCS code G0264 (Initial nursing assessment of patient directly admitted to observation with diagnosis other than CHF, chest pain or asthma or patient directly admitted to observation with diagnosis of CHF, chest pain or asthma when the observation stay does not qualify for G0244), in order to remedy the apparent violation, CMS should make the reassignment of G0264 to a much higher level clinic visit (APC 0602, High Level Clinic Visit) due to the resources involved in directly admitting a patient to observation. The commenter provided examples of services that the commenter believed are part of the initial observation nursing assessment provided by a hospital, including patient registration, comprehensive nursing clinical admission assessment, initiation of physician orders, coordination and scheduling of ancillary services, administration of medications, and assessment of discharge planning needs.

Response: We do not agree with the commenter's assertion that the services coded using G0264 are necessarily more resource intensive than a low-level clinic visit. The beneficiary whose observation stay would be coded using G0264 presents to the hospital following a physician visit. The beneficiary has already been assessed by the physician who, as a result of the assessment, has decided that observation care is warranted. We are concerned that hospitals may be attributing costs to the initial nursing assessment that are more appropriately attributable to observation services themselves, such as administration of medications, scheduling of tests to be conducted during the period of observation, and discharge planning. It is not apparent why the services provided in the hospital associated with admission to observation care (including some of those listed by the commenter) should require the resources of a High Level Clinic Visit (APC 0602) as the commenter suggested. Thus, we agree with the APC Panel's recommendation to leave G0264 in APC 0600.

Accordingly, in this final rule with comment period, we are adopting as final our proposal not to make any changes to APC 0600 for CY 2005.

13. Other APC Assignment Issues

We received a number of comments about specific APC assignments and payment amounts that were generated by our proposed rates or proposed changes to HCPCS code APC assignments resulting from our revisions to address violations of the 2 times rule. Those changes were not all specifically discussed in the proposed rule, but were open to comment. We respond to these comments in this section of the final rule.

a. Catheters for Brachytherapy Services

Comment: One commenter asked that CMS consider carefully in which APCs to place new CPT codes 19296, 19297, and 19298 (for placement of catheters into the breast for brachytherapy) because the services have, heretofore, been coded under unlisted code 19499, which is assigned to APC 0028 (Level I Breast Surgery) and with a proposed payment amount of $1,081 for CY 2005. The commenter believed that this

proposed amount is too low to appropriately reflect the costs of these services.

Response: We have assigned new CPT codes 19296 and 19298 in New Technology APC 1524 (New Technology-Level XIV ($3,000–$3,500)) with a payment amount of $3,250 and CPT code 19297 in APC 1523 (New Technology-Level XXIII ($2,500–$3,000)) with a payment amount of $2,750 for CY 2005 OPPS. These are new codes and the APC assignments were not included in the proposed rule. Therefore, the APC assignments are subject to comment.

b. Peripherally Inserted Central Catheters (PICC)

We received one comment regarding our proposed APC reassignment of CPT codes 36568 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; under 5 years of age) and 36569 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; age 5 years or older to APC 0187 (Miscellaneous placement/repositioning). We made the proposal based on a recommendation by the APC Panel during its February 2004 meeting.

Comment: One commenter requested that we not reassign CPT codes 36568 and 36569 from APC 0032 to APC 0187 as proposed.

Response: We proposed to reassign the PICC lines to APC 0187 based on our agreement with the APC Panel that there are significant differences in the clinical complexity and resource use associated with the procedures assigned to APC 0032 compared to PICC line insertion. We will reevaluate the APC assignment of the PICC line insertion once we have sufficient data to evaluate the assignment.

c. External Fixation Devices

Comment: One commenter indicated that APC 0046 (Open/Percutaneous Treatment Fracture) contains violations of the two times rules and should be broken into multiple APCs so that CPT codes 20690 (Apply bone fixation device) and 20692 (Apply bone fixation device), which are for application of external fixation devices, could be paid appropriate amounts. Other commenters asked that CMS require that claims for these codes must contain codes for the devices and asked that we revise the definition of C1713 (Anchor/screw for opposing bone to bone or soft tissue to bone (implantable)) to also apply to external fixation devices and to remove the requirement that the device be implantable. One commenter also asked that we instruct providers to bill code 20690 or 20692 when external fixation is provided with the reduction of a fracture and asked that we create a new APC to contain CPT codes 20690 and 20692.

Response: CPT codes 20690 and 20692 are currently in APC 0050 and no changes were proposed for 2005 OPPS. There are no 2 times violations in the APC in which they are located and each of these codes represents approximately one percent of the volume in the APC. Therefore we see no reason to create a new APC for these codes. The CPT codes for treatment of a fracture often include with or without fixation in the definition of the code. Where fixation is included in the definition of the code, it would be miscoding to also report 20690 or 20692; these codes should be reported if, and only if, fixation is not included in the definition of the CPT code for treatment of the fracture. Providers should review the CPT instructions and look to the AMA's guidance on coding if they have questions about when these codes should be reported.

d. Apheresis

Comment: Two commenters disagreed with our proposed reassignment of CPT code 36515 (Apheresis, adsorp/reinfuse) to APC 0111 (Blood Product Exchange) and recommended that the code be reassigned to APC 0112 (Apheresis, Photopheresis and Plasmapheresis). One of the commenters, a medical specialty society, indicated that the procedure involves an expensive disposable supply item that costs more than the proposed payment rate for APC 0111. In addition, this commenter stated that the proposed payment rate would be significantly less than the physician's office payment, which the commenter concluded indicated that the charge data used to establish the median cost of the procedure may be incorrect.

Response: APC assignments are based on clinical homogeneity and comparable resource utilization for all CPT and HCPCS codes within an APC. After careful review, we disagree with the commenters that CPT code 36515 should be reassigned to APC 0112. We believe that the resources required for CPT code 36515 are more similar to the other CPT codes in APC 0111. Thus, for CY 2005, we are adopting as final our proposal to assign CPT code 36515 to APC 0111, effective January 1, 2005.

e. Imaging for Intravenous Cholangiogram (IVC) Filter Placement and Breast Biopsy

Comment: One commenter requested that we move CPT code 75940 (Percutaneous placement of IVC filter, radiological supervision and interpretation) from APC 0187 (Miscellaneous Placement/Repositioning) to APC 0280 (Level III Angiography and Venography Except Extremity) and CPT code 76095 (Stereotactic localization guidance for breast biopsy or needle placement, each lesion, radiological supervision and interpretation) from APC 0187 (Miscellaneous Placement/Repositioning) to APC 0289 (Needle Localization for Breast Biopsy). The commenter believed that imaging for IVC filter placement and breast biopsy are entirely unrelated services to the central venous access surgical procedures comprising the majority of the codes in APC 0187.

Response: We understand the commenter's concern regarding the clinical inconsistency between the services described by CPT codes 75940 and 76095, which are assigned to APC 0187, and the central venous access (CVA) procedures that are also assigned to APC 0187. However, we disagree with the commenter's recommendation that CPT codes 75940 and 76095 be reassigned. First, if we were to accept the commenter's recommendation to reassign CPT code 75940 to APC 0280 and CPT code 76095 to APC 0289, the resource homogeneity of those two APCs would be compromised, and we would be significantly overpaying CPT code 75940 and underpaying CPT code 76095 based on the median costs of those two codes relative to the median costs of the procedures currently assigned to APCs 0280 and 0289, respectively. Further, we lack data for a number of the CVA codes in APC 0187 because they are new codes that were established in CY 2004. We believe that these new CVA codes are clinically similar to the codes that comprise APC 0187, and we estimate that they are also similar in terms of resource costs, which is why we assigned them to APC 0187. Once we have accumulated data for these new codes, we will review the configuration of APC 0187, and make whatever changes are appropriate in future updates. Therefore, we are maintaining CPT codes 75940 and 76095 in APC 0187 for CY 2005.

f. Hysteroscopic Endometrial Ablation Procedures

Comment: Some commenters opposed the APC Panel recommendation that both CPT codes 0009T (Endometrial cryoablation) and 58563 (Hysteroscopic endometrial ablation) be assigned to APC 0387 (Level II Hysteroscopy) in CY 2005. The commenters were concerned that adding endometrial cryoablation

(CPT 0009T) to APC 0387 would seriously weaken the clinical homogeneity of APC 0387 because CPT 0009T (Endometrial ablation with ultrasonic guidance) does not use hysteroscopy, and it requires an ultrasound machine and a separate capital unit, or compressor console, to provide cryotherapeutic energy. Instead, the commenters urged CMS not to keep CPT code 58563 in APC 0387, but rather, to assign it to APC 0202, in addition to assigning code 0009T to APC 0202, as we had proposed. One commenter argued that the clinical homogeneity of APC 0202 would be enhanced by grouping the two endometrial ablation procedures that use visualization to monitor and confirm the destruction of the endometrium in the same APC. Moreover, moving both CPT codes 58563 and 0009T to APC 0202 would highlight APC 0202's clinical homogeneity as a more device-intensive family of new technology procedures while better organizing APC 0387 as the group of non-device hysteroscopic procedures involving surgical removal or resection of intrauterine tissue for reasons other than abnormal uterine bleeding (AUB). The same commenter also believed that assigning both codes to APC 0202 would negate any inappropriate incentives to use either treatment because of payment. Other commenters asked that CMS create a new APC for endometrial cryoablation and place that APC on the device-dependent list as it did for cryoablation of the prostate because they have found that the device is 70 percent of the total cost of endometrial cryoablation. The commenters asked that the new APC be paid at least $3,448 to appropriately reflect the hospital's cost of the service.

Response: After careful consideration of the comments, we have decided to make final for CY 2005 our proposal to retain hysteroscopic endometrial ablation (CPT code 58563) in APC 0387. In addition, we are making final for CY 2005 our proposal to assign endometrial cryoablation with ultrasonic guidance to APC 0202. (We note that CPT code 0009T for endometrial cryoablation with ultrasonic guidance is replaced by new CPT code 58356 for CY 2005.). We believe that the need for a hysteroscope to perform hysteroscopic endometrial ablation makes it similar to the other services in APC 0387. On the other hand, Endometrial cryoablation uses a device but not a hysteroscope and, therefore, is more clinically compatible with APC 0202, which contains other resource intensive gynecologic services that also use a device but not a hysteroscope. Moreover, APC 0202 is a device-dependent APC and, therefore, a more appropriate placement for a procedure that uses a device.

g. Hysteroscopic Female Sterilization

Comment: One commenter indicated that the AMA intended create a new CPT level III tracking code for hysteroscopic female sterilization for CY 2005 and urged CMS to assign it to APC 0202. The commenter indicated that this new service places implants through a hysteroscope to occlude the fallopian tubes and that, therefore, it should be assigned to APC 0202, which would provide appropriate payment for this new service for which the implants cost $1,000 to $1,500.

Response: This service is represented by new CPT code 58565 (Hysteroscopic fallopian tube cannulation and micro insert placement), which was created after the issuance of the proposed rule. We are placing this new code to APC 0202 for CY 2005 for the OPPS. The placements of new codes in APCs, such as this code, are subject to comment during the comment period of this final rule with comment period.

h. Urinary Bladder Residual Study

Comment: One commenter asked us to keep CPT code 78730 (Urinary bladder residual study) in APC 0404 (Renal and Genitourinary Studies Level I) instead of moving it to APC 0340 (Minor Ancillary Procedures). The commenter noted that this code is being misused to report other than urinary bladder residual imaging.

Response: CPT code 78730 was created and originally valued for the Medicare Physician Fee Schedule as a procedure that required the services of a nuclear medicine technician. Subsequently, the use of the code has changed so that it is now used primarily by urologists. We do not believe that urologists perform services requiring nuclear medicine technicians and so, as the commenter pointed out, it appears that the code may now be utilized for coding a service that is different from that for which it was created.

However, we are not reassigning the code at this time, as requested by the commenter, pending further review. To that end, we would appreciate submission of resource data from other physician specialties that use CPT code 78730 for us to review in the context of our hospital data so that we can examine this issue further.

i. Intracranial Studies, Electrodiagnostic Testing, Autonomic Testing, and EEG

We received one comment relating to the APC assignments for several electrodiagnostic testing, autonomic testing, and EEG codes.

Comment: One commenter requested that CPT code 93888 (Intracranial study) be moved from APC 0266 (Level II Diagnostic Ultrasound Except Vascular) and assigned to APC 0267 (Level III Diagnostic Ultrasound Except Vascular) as it was in CY 2002; that CPT codes 95870 (Muscle test, nonparaspinal), 95900 (Motor nerve conduction test), and 95904 (Sensory NCV) be assigned to APC 0218 (Level II Nerve Muscle Tests); that CPT codes 95921, 95922, and 95923 (Autonomic nerve function tests) be assigned to APC 216 (Level III Nerve and Muscle Tests); and that CPT codes 95953 and 95956 (EEG monitoring) be assigned to APC 209 (Extended EEG Studies and Sleep Studies, Level II).

Response: Based on our final CY 2003 hospital data for CPT codes 93888, 95870, 95900, 95904, 95921, and 95922, we continue to believe that the resources and clinical characteristics of those codes are most compatible with other services in the APCs to which they are assigned. We made no proposal to change any of those APC assignments. Therefore, in this final rule with comment period, we are finalizing our continued placement of CPT code 93888 in APC 0266; CPT codes 95870, 95900, and 95904 in APC 0215; and CPT codes 95921 and 95922 in APC 0218. We are moving CPT code 95923 from APC 0215 to APC 0218 because the resources for this code are most compatible and homogenous with those services in Level II Nerve and Muscle Tests.

Based on our further review of CPT codes 95953 and 95956, we are moving these two CPT codes, as well as code 95950, to APC 0209 (Extended EEG Studies and Sleep Studies, Level II). Based on our review of clinical and resource use characteristics of these CPT codes, we discovered that 95953, 95956 and 95950 all are more homogenous with procedures assigned to APC 0209 than in their current APCs. Although we did not propose to make these reassignments in the proposed rule, based in part on the comment received and our further review, we are making these reassignments in this final rule with comment period in the interest of clinical and resource use homogeneity.

Accordingly, we are reassigning the CPT codes relating to intracranial studies, electrodiagnostics testing, autonomic testing, and EEG to APCs, as displayed below in Table 12B.

Table 12B.—Reassignment of CPT Codes Relating to Intracranial Studies, Electrodiagnostic Testing, Autonomic Testing, and EEG

CPT/HCPCS	Description	CY 2004 Final APC	CY 2005 Final APC
95923	Autonomic nerve function test	0215	0218
95950	Ambulatory EEG monitoring	0213	0209
95953	EEG monitoring/computer	0209	0209
95956	EEG monitoring, cable/radio	0214	0209

j. Therapeutic Radiation Treatment

Comment: Some commenters objected to the proposed movement of CPT code 77370 (Radiation physics consult) from APC 0305 (Level II Therapeutic Radiation Treatment Preparation) to APC 0304 (Level I Therapeutic Radiation Treatment Preparation), with a proposed reduction in the payment rate by 51 percent from the CY 2004 payment rate of $200.60. The commenters indicated that the current CY 2004 payment rate is already inadequate. The commenters expressed concern that the proposed payment of $98.27 would not compensate for the costs incurred to deliver this service and urged that CPT code 77370 remain in APC 0305.

Response: The median of $134.22 for CPT code 77370 was based on 95 percent of the total CY 2003 claims (33,070 single procedure claims out of 34,792 total claims). Based on these claims data, we believe that the movement of CPT code 77370 from APC 0305 (with a proposed median of $229.92) to APC 0304 (with a proposed median of $99.92) is appropriate. Therefore, we are finalizing our movement of CPT code 77370 from APC 0305 to APC 0304 for CY 2005.

k. Hyperthermia Procedures

Comment: One commenter expressed concern about the 9-percent decrease in the proposed payment rate for hyperthermia procedures (CPT codes 77600 through 77605) assigned to APC 0314 (Hyperthermic Therapies). The commenter asserted that the hospital charges do not reflect the tremendous capital costs associated with hyperthermia procedures. The commenter suspected that the questionably high utilization for these procedures may be a result of miscoding. The commenter requested that CMS consider the hyperthermia practice expense data submitted through the Practice Expense Advisory Council (PEAC) and Medicare Physician Fee Schedule (MPFS) processes. The commenter urged CMS to maintain the CY 2004 payment rates for hyperthermia through CY 2005 to allow additional time for the commenter to educate providers on the proper coding and cost reporting for hyperthermia.

Response: We believe the data do not support the commenter's concern that a high utilization for these codes is indicative of miscoding, as we do not consider 552 total claims to reflect a high utilization that gives rise to question. The payment rate for APC 0314 for CY 2005 noted in the proposed rule was set using 86 percent of the total claims (that is, 452 single procedure claims out of 522 total claims), which we consider to be sufficiently robust for ratesetting purposes. Therefore, we will not consider practice expense data submitted through the PEAC or MPFS processes.

l. Physician Blood Bank Services

Comment: One commenter asked that CMS place CPT codes 86077, 86078 and 86079 (Physician blood bank services) into an APC and make payment for them under the OPPS. The commenter indicated that the current assignment of status indicator ''A'' is assigned to HCPCS codes that are paid under another fee schedule but that these services are not paid under any other fee schedule or payment system and, therefore, the hospital is not being paid for these services. The commenter noted that the services had status indicator ''X'' for minor services and had APC assignments in the CY 2003 OPPS.

Response: We agree and have assigned these CPT codes to APC 343 with status indicator ''X.'' These services consist mainly of physician professional services, which are paid through the Medicare Physician Fee Schedule, but we expect there may also be some hospital resources utilized. We have given these codes a condition code of ''NI'' (new interim) in this interim final rule with comment because they were not paid under the OPPS in CY 2004 and because we were not able to use the data for these codes in the calculation of the median cost for APC 343.

m. Caloric Vestibular Test

Comment: One commenter requested an explanation for the proposed movement of CPT code 92543 (Caloric vestibular test) from APC 0363 (Level I Otorhinolaryngologic Function Tests) to APC 0660 (Level 2 Otohinplaryngologic Function Tests), and CPT codes 92553 (Audiometry, air and bone) and 92575 (Sensorineural acuity test) from APC 0365 (Level II Audiometry) to APC 0364 ((Level I Audiometry).

Response: We regularly review CPT codes to ensure that they are in appropriate clinical APCs, based on resource use and clinical homogeneity. Upon review, we have found that code 92543 fits more appropriately in a higher-paying APC in the same family of otorhinolaryngologic function test APCs, while codes 92553 and 92575 fit in a lower-paying APC in the same family of audiometry APCs.

n. APC 0365—Level II Audiometry

Comment: One commenter stated that the services in APC 0365 (Level II Audiometry) are not clinically homogeneous and also violate the 2 times rule, sometimes by a spread of 300 percent. The commenter asked that CMS split the APC into two APCs: one containing CPT codes 92604, 92602, 92603, 92601 and 92561 and a second new APC containing CPT codes 92577, 92579, 92582, 92557.

Response: We agree that revision of this APC would result in improved clinical homogeneity and better grouping of services with similar resources. Therefore, we are establishing a new APC 0366 (Level III Audiometry), and are placing in the new APC those

services that are specific to aural rehabilitation after cochlear implantation: CPT codes 92601, 92602, 92603, and 92604.

o. Noncoronary Intravascular Ultrasound (IVUS)

Comment: One commenter requested that CMS keep CPT code 37250 (Intravascular ultrasound (non-coronary vessel) during diagnostic evaluation and/or therapeutic intervention; initial vessel) in APC 0670 (Level II Intravascular and Intracardiac Ultrasound and Flow Reserve) and to use only those claims that capture intravascular ultrasound (IVUS) device-related costs to calculate the median cost for this procedure.

Response: We assigned CPT 37250 to APC 0416 (Level I Intravascular and Intracardiac Ultrasound and Flow Reserve) in the proposed rule. We created two levels for IVUS by creating APC 0416 in order to recognize both the clinical and resource use differences between the coronary and noncoronary vessel procedures, as well as the initial vessel and each additional vessel procedures. Prior to creation of APC 0416, all IVUS procedures, coronary and noncoronary, as well as initial vessel and each additional vessel, were assigned to APC 0670. Based on analysis of our CY 2003 hospital claims data, we concluded that the services in APC 0670 had widely varying median costs, with lower median costs for both the each additional vessel (noncoronary and coronary) and initial noncoronary vessel services in APC 0670, as compared with the initial coronary vessel IVUS. We recognized that the additional vessel services would not require a second costly device in most cases. We also noted that the initial vessel coronary IVUS code, CPT 92978, includes imaging supervision and the interpretation and report, while the initial vessel noncoronary IVUS code, CPT 37250, does not include the radiological supervision and interpretation, which is billed using another CPT code. Thus, we believe that the hospital resources utilized to perform initial vessel noncoronary and coronary IVUS are likely to be different because the service elements in the CPT codes vary. Based on this review, we believe CPT 37250, a noncoronary vessel procedure with a median cost of $361, is appropriately assigned to APC 0416 and would be significantly overpaid if assigned to APC 0670.

For CY 2005, we did not have the ''C'' coded claims to use to identify device-related costs with the level of specificity that was possible for CY 2004. However, we had significantly more claims available for CPT 37250 for ratesetting this year than for CY 2004. We believe that the data on which the assignment to APC 0416 was based were reflective of hospital claims data regarding the resources utilized for the service. As we note elsewhere in this preamble, we will be requiring the use of device codes to report all devices utilized, beginning January 1, 2005.

Accordingly, in this final rule we are finalizing the assignment of CPT 37250 to APC 0416 for CY 2005.

p. Electronic Analysis of Neurostimulator Pulse Generators

Comment: One commenter stated that the services in APC 0692 (Electronic Analysis of Neurostimulator Pulse Generators) are not clinically homogeneous and also violate the 2 times rule. The commenter asked that CMS split the APC into two APCs: one containing CPT codes 95972 and 95975, and a second new APC containing CPT codes 95970, 95971, and 95974.

Response: We recognize that there is a violation of the two times rule in APC 0692. Therefore, we are moving CPT code 95970 to APC 0218 (Level II Nerve and Muscle Tests), which places it in a clinical APC that is suitable in terms of resource use for the service and results in APC 0692 conforming to the 2 times rule.

q. Endoscopic Ultrasound Services

Comment: One commenter asked that CMS create a separate APC for endoscopic ultrasound services because the commenter believed that there are unique costs associated with them. The commenter also believed that ultrasound costs were not packaged into the median for endoscopic ultrasound services because of correct coding edits that define endoscopic ultrasound services as including ultrasound.

Response: We have no reason to believe that the costs for endoscopic ultrasound services do not contain the costs for the ultrasound component of the service. Ultrasound services are included in the definition of the endoscopy CPT codes, and the hospital would include charges for the ultrasound in the charge for endoscopy that uses ultrasound services. We believe that the current APC placement of the codes for endoscopic ultrasound services in APC 0141 (Level I Upper GI Procedures) is valid, both with regard to clinical homogeneity and resource use.

r. External Counterpulsation (ECP)

Comment: Several commenters requested that G0166 (External Counterpulsation) in APC 0678 (External Counterpulsation) be assigned status indicator ''S'' rather than ''T'' and that CMS maintain the payment rate for external counterpulsation at the CY 2004 level. The commenters asserted that external counterpulsation is a stand-alone procedure and that assigning it a status indicator ''T'' has contributed to declining and inadequate payment rates for the services. The commenters argued that the proposed payment rate for CY 2005 is not reflective of the costs of the service and that the rate should be consistent with other cardiovascular equipment trends such as echocardiography. They contended that the claims data CMS used are erroneous and pointed out that the payment rate has decreased every year since CY 2000, from $112.72 in CY 2004 to a proposed rate of $105.38 for CY 2005. The commenter also speculated that ''batching'' or ''misreporting'' of claims also may be contributing to the rate decline trend for external counterpulsation.

Response: We do not believe that the rate decrease for these procedures has anything to do with the ''T'' status indicator. The rate for external counterpulsation proposed in the August 16, 2004 proposed rule was based on virtually all (35,764) of the 37,565 hospital claims submitted and the APC is comprised of only this one procedure. We are confident that the claims data are representative of actual costs and as such, that the proposed decreased rate is appropriate.

The status indicator only affects the payment rate when external counterpulsation is billed with another procedure that has a status indicator ''T.'' There are few multiple procedure claims for this procedure in the CY 2003 claims data and, thus, only a very small effect of multiple procedure discounting was possible.

In the absence of supporting information from the commenters, it is not clear what the commenters mean by considering the batching of claims as contributing to the payment decrease. It is also not clear whether or not the commenters' belief that misreporting may be contributing to the rate decline trend for external counterpulsation is justified. However, we encourage hospitals to code accurately.

D. Exceptions to the 2 Times Rule

As discussed earlier, the Secretary is authorized to make exceptions to the 2 times limit on the variation of costs within each APC group in unusual cases such as low volume items and services.

Taking into account the APC changes that we proposed for CY 2005 based on the APC Panel recommendations discussed in section II.C. of this

preamble and the use of CY 2003 claims data to calculate the median cost of procedures classified in the APCs in the August 16, 2004 proposed rule, we discussed our review of all the APCs to determine which APCs would not meet the 2 times limit. We used the following criteria to decide whether to propose exceptions to the 2 times rule for affected APCs:

- Resource homogeneity.
- Clinical homogeneity.
- Hospital concentration.
- Frequency of service (volume).
- Opportunity for upcoding and code fragments.

For a detailed discussion of these criteria, refer to the April 7, 2000 OPPS final rule with comment period (65 FR 18457).

In the August 16, 2004 proposed rule, we proposed to exempt 54 APCs from the 2 times rule based on the criteria cited above. In cases in which a recommendation of the APC Panel appeared to result in or allow a violation of the 2 times rule, we generally accepted the APC Panel's recommendation because these recommendations were based on explicit consideration of resource use, clinical homogeneity, hospital specialization, and the quality of the data used to determine the APC payment rates that we proposed for CY 2005. The median cost for hospital outpatient services for these and all other APCs can be found at Web site: *http//www.cms.hhs.gov.*

We received one public comment on our proposal.

Comment: One commenter recommended that we use statistical methods to determine variations in the medians of services mapped to an APC. Specifically, the commenter suggested the cost data for an APC should include the standard deviation and the coefficient of variation using the geometric mean as the basis for the measure of dispersion. The commenter recommended that very few APCs be allowed to violate the 2 times rule.

Response: We appreciate the commenter's recommendations. We will consider these recommendations for future recalibrations. We do currently review the range of standard descriptive statistics for all APCs, including, but not limited to, the standard deviation and coefficient of variation. As we stated in the proposed rule, we used multiple criteria to assess whether to propose exceptions to the 2 times rule for affected APCs, including resource and clinical homogeneity, hospital concentration, frequency of services, and opportunities for upcoding and code fragments. Despite an increase in the number of clinical APCs in the OPPS over the last several years, the number of APCs excepted from the 2 times rule has remained relatively stable.

The proposed rule listed exceptions from the 2 times rule based on data from January 1, 2004 through September 30, 2004. For this final rule with comment period, we used data from January 1, 2003 through December 31, 2003. As a result of the additional data, the list of APCs that we are excepting from the 2 times rule has been updated. In this final rule with comment period, we are adopting 57 APCs as excepted from the 2 times rule, as shown in Table 13 below.

BILLING CODE 4120–01–P

Table 13.--APCs Exceptions to the 2 Times Rule

APC	APC Description
0019	Level I Excision/ Biopsy
0024	Level I Skin Repair
0025	Level II Skin Repair
0032	Insertion of Central Venous/Arterial Catheter
0043	Closed Treatment Fracture Finger/Toe/Trunk
0046	Open/Percutaneous Treatment Fracture or Dislocation
0060	Manipulation Therapy
0080	Diagnostic Cardiac Catheterization
0081	Non-Coronary Angioplasty or Atherectomy
0087	Cardiac Electrophysiologic Recording/Mapping
0093	Vascular Reconstruction/Fistula Repair without Device
0099	Electrocardiograms
0105	Revision/Removal of Pacemakers, AICD, or Vascular
0121	Level I Tube changes and Repositioning
0122	Level II Tube changes and Repositioning
0140	Esophageal Dilation without Endoscopy
0146	Level I Sigmoidoscopy
0147	Level II Sigmoidoscopy
0148	Level I Anal/Rectal Procedure
0164	Level I Urinary and Anal Procedures
0183	Testes/Epididymis Procedures
0187	Miscellaneous Placement/Repositioning
0193	Level V Female Reproductive Proc
0203	Level IV Nerve Injections
0204	Level I Nerve Injections
0209	Extended EEG Studies and Sleep Studies, Level II
0213	Extended EEG Studies and Sleep Studies, Level I
0214	Electroencephalogram
0235	Level I Posterior Segment Eye Procedures
0236	Level II Posterior Segment Eye Procedures
0252	Level II ENT Procedures
0262	Plain Film of Teeth
0268	Ultrasound Guidance Procedures
0274	Myelography
0281	Venography of Extremity
0285	Myocardial Positron Emission Tomography (PET)
0297	Level II Therapeutic Radiologic Procedures
0303	Treatment Device Construction
0314	Hyperthermic Therapies
0322	Brief Individual Psychotherapy
0335	Magnetic Resonance Imaging, Miscellaneous
0340	Minor Ancillary Procedures
0341	Skin Tests
0342	Level I Pathology
0344	Level III Pathology
0355	Level I Immunizations
0356	Level II Immunizations
0364	Level I Audiometry

0688	Revision/Removal of Neurostimulator Pulse Generator Receiver
0699	Level IV Eye Tests & Treatments

BILLING CODE 4120–01–C

E. Coding for Stereotactic Radiosurgery Services

1. Background

In the November 7, 2003 final rule with comment period (68 FR 63403), we discussed the APC Panel's consideration of HCPCS codes G0242 (Cobalt 60-based stereotactic radiosurgery plan) and G0243 (Cobalt 60-based stereotactic radiosurgery delivery). At its August 22, 2003 meeting, the APC Panel discussed combining the coding for these procedures under one code, with the payment for the new code derived by adding together the payments for HCPCS codes G0242 and G0243. The APC Panel recommended that we solicit additional input from professional societies representing neurosurgeons, radiation oncologists, and other experts in the field before recommending changes to the coding configuration for Cobalt 60-based stereotactic radiosurgery planning and delivery.

In a correction to the November 7, 2003 final rule with comment period, issued on December 31, 2003 (68 FR 75442), we considered a commenter's request to combine HCPCS codes G0242 and G0243 into a single procedure code in order to capture the costs of this treatment in a single procedure claim because the majority of patients receive the planning and delivery of this treatment on the same day. We responded to the commenter's request by explaining that several other commenters stated that HCPCS code G0242 was being misused to code for the planning phase of linear accelerator-based stereotactic radiosurgery planning. Because the claims data for HCPCS code G0242 represent costs for linear accelerator-based stereotactic radiosurgery planning (due to misuse of the code), in addition to Cobalt 60-based stereotactic radiosurgery planning, we were uncertain of how to combine these data with HCPCS code G0243 to determine an accurate payment rate for a combined code for planning and delivery of Cobalt 60-based stereotactic radiosurgery.

In consideration of the misuse of HCPCS code G0242 and the potential for causing greater confusion by combining HCPCS codes G0242 and G0243, we created a planning code for linear accelerator-based stereotactic radiosurgery (HCPCS code G0338) to distinguish this procedure from Cobalt 60-based stereotactic radiosurgery planning. We maintained both HCPCS codes G0242 and G0243 for the planning and delivery of Cobalt 60-based stereotactic radiosurgery treatment, consistent with the use of two G-codes for planning (HCPCS code G0338) and delivery (HCPCS codes G0173, G0251, G0339, G0340, as applicable) of each type of linear accelerator-based treatment. We indicated that we intend to maintain these new codes in their current new technology APCs until the payment rates could be set using medians from this expanded set of codes. We also stated that we would solicit input from the APC Panel at its February 2004 meeting.

During the February 2004 APC Panel meeting, several presenters discussed with the APC Panel their rationale for requesting that HCPCS codes G0242 and G0243 be combined into a single procedure code. One presenter explained that the request to combine the codes was made because certain fiscal intermediaries were rejecting claims in which HCPCS codes G0242 and G0243 were reported with a surgery revenue code. Although we have not issued any national instructions to fiscal intermediaries to deny claims for these services if they are billed with a surgery revenue code, the presenter stated that we may have indirectly led some fiscal intermediaries to believe that Cobalt 60-based stereotactic radiosurgery should be reported with a radiation therapy revenue code because the procedure is separated into a planning code and a delivery code, which reflect the coding pattern of a radiation therapy procedure rather than a single code for a surgical procedure. The presenter stated that because of the way that CMS has coded this procedure, some fiscal intermediaries have established local edits to deny claims in which HCPCS codes G0242 and G0243 are reported on a claim with a surgery revenue code.

The APC Panel recommended that CMS work with the presenters to determine if any fiscal intermediaries have established local edits to reject claims in which HCPCS codes G0242 and G0243 are reported on a claim, and to determine specific reasons for any such local edits. The APC Panel also recommended that CMS take necessary action to ensure that any such claims are not being denied payment due to local edits. The APC Panel did not agree that the solution to ensuring payment was to combine HCPCS codes G0242 and G0243 into a single code, but rather recommended that CMS educate fiscal intermediaries as to the appropriate procedures for submission of these claims for Medicare payment.

2. Proposal for CY 2005

In the August 16, 2004 proposed rule, for CY 2005, we proposed to accept the APC Panel's recommendation to work with the presenters to ensure that claims in which HCPCS codes G0242 and G0243 are reported are not being inappropriately denied payment due to local edits established by fiscal intermediaries. In the meantime, for CY 2005, we proposed to maintain HCPCS code G0242 in New Technology APC 1516 (New Technology, Level XVI) at a payment rate of $1,450, and HCPCS code G0243 in New Technology APC 1528 (New Technology, Level XXVIII) at a payment rate of $5,250. These payment rates are the same as those established for CY 2004.

3. Public Comments Received and Departmental Responses

Comment: Numerous comments urged CMS to replace HCPCS codes G0242 (Cobalt 60-based multisource photon SRS, planning) and G0243 (Cobalt 60-based multisource photon SRS, delivery) with one surgical code (that is, CPT code 61793, Stereotactic radiosurgery, one or more lesions) for billing Cobalt 60-based multisource photon stereotactic radiosurgery. These commenters explained that Cobalt 60-based multisource photon SRS is considered to be a one session, neurosurgical procedure and is not separated into planning and delivery sessions. One commenter contended that this procedure is managed and performed exclusively by neurosurgeons.

In response to the OPPS final rule with comment period published on November 7, 2003, one commenter suggested that a combined surgical code representing Cobalt 60-based stereotactic radiosurgery could be appropriately assigned to APC 0222 (Implantation of Neurological Device), APC 0226 (Implantation of Drug Infusion Reservoir), or APC 0227 (Implantation of Drug Infusion Device) to reflect the device costs, the neurosurgical nature of the procedure, and the clinical homogeneity of the other CPT codes that currently reside in these APCs.

In response to the OPPS final rule with comment period published on November 7, 2003, and the OPPS proposed rule published on August 16, 2004, several commenters indicated that the current coding structure has resulted in a low volume of single procedure claims for these codes, reflecting the fact that single procedure claims are billed in error for this procedure due to the necessity of billing both HCPCS codes G0242 and G0243 to capture the planning and delivery costs of this procedure. These commenters explained that the concept of planning and delivery is representative of radiation

therapy and, therefore, does not accurately describe Cobalt 60-based multisource photon SRS. The commenters believed that the creation of HCPCS codes G0242 and G0243 has created an unnecessary burden on hospitals because commercial payors do not recognize these codes. One commenter described the burden of reporting the same service using two different coding systems as the costs associated with hiring and training additional staff, preparing individual negotiations with insurers, and addressing the rejection of claims and the delay of treatments.

In contrast, three commenters objected to the use of the term ''radiosurgery'' to describe Cobalt 60-based multisource photon SRS planning and delivery. One of these commenters indicated that Cobalt 60-based multisource photon SRS is a radiation therapy procedure. This commenter contended that the indirect costs of operating a radiation therapy department are considerably higher than that of a surgery department, when factoring in the cost of a radiation physicist and therapist. The commenter further indicated that the cost-to-charge ratio (CCR) for the radiation therapy cost center more accurately reflects the costs of providing this service relative to a surgical designation. Another commenter objected to our use of the term ''radiosurgery'' and asserted that this term is a misleading nomenclature because surgery is not involved, except for the placement of an externally attached coordinate reference frame. The commenter explained that this treatment usually consists of one or more high dose radiation treatments delivered by either a linear accelerator or a cobalt 60-based unit and, therefore, should be referred to as ''stereotactic radiation therapy.''

In response to the OPPS final rule with comment period published on November 7, 2003, one commenter urged that CMS not attempt to label stereotactic radiosurgery as either neurosurgery or external beam radiotherapy, and explained that stereotactic radiosurgery is a unique procedure that combines elements of both neurosurgery and external beam radiotherapy. This commenter recommended that we recognize CPT codes specifically designed for stereotactic radiosurgery.

Response: Considering the wide range of conflicting recommendations we received from commenters, we believe that appropriate coding for Cobalt 60-based multisource photon SRS remains a highly contentious and unsettled area of interest among hospitals, neurosurgeons, radiation oncologists, and non-Medicare payors. Based upon our reading of the comments and the observations of CMS staff, we do not believe that Cobalt 60-based multisource photon SRS can be easily classified as either a neurosurgical or radiation therapy procedure specifically. Rather, for the safe and effective delivery of Cobalt 60-based multisource photon SRS to typical patients with brain lesions, the contributions of hospital physician and nonphysician staff with expertise in neurosurgery and radiation therapy are essential for both the planning of the treatment and its delivery.

In the OPPS November 30, 2001 final rule in which we first established payment rates for stereotactic radiosurgery planning and treatment using G-codes in lieu of CPT codes, we noted that, for historical hospital claims for CPT code 61793 (Stereotactic radiosurgery), other combinations of codes from the radiation oncology CPT code section were billed most of the time as well. This confirmed our recognition of the multidisciplinary nature of the service. However, we note that the classification of stereotactic radiosurgery as either neurosurgery or radiation therapy is not relevant to payment for the service under the OPPS. Therefore, for purposes of the OPPS, we have not attributed the service to one specialty or the other.

While we consider the adoption of CPT codes that describe this service, we will continue to maintain HCPCS codes G0242 and G0243 as separate codes in their respective new technology APCs 1516 and 1528 for CY 2005. Although we recognize that the single claims data we collect from these codes may include aberrant claims due to the necessity of billing both HCPCS codes G0242 and G0243 on the same date of service for a correctly coded claim, the adoption of CPT code 61793 to replace HCPCS codes G0242 and G0243, as recommended by some commenters, would not resolve the multiple procedure claims dilemma due to the fact that typically hospitals would need to bill additional CPT codes along with CPT code 61793 to report the full range of services that are currently bundled into HCPCS codes G0242 and G0243. For example, in our November 30, 2001 final rule in which we described our determination of the total cost for stereotactic radiosurgery, to model costs for planning, we added the median costs of CPT codes 77295 (the most typical simulation code billed with CPT code 61793), 77300, 77370 (the most common physics consult billed with CPT code 61793), and 77315 (the most common dose plan billed with CPT code 61793). Furthermore, the descriptor for CPT code 61793 describes multiple forms of stereotactic radiosurgery (that is, stereotactic radiosurgery, one or more lesions; particle beam, gamma ray or linear accelerator), rather than Cobalt 60-based multisource photon SRS alone. The adoption of CPT code 61793 under the OPPS would have the effect of nullifying all of the stereotactic radiosurgery G–codes, which we are unwilling to do without cost data supporting an equal payment for all forms of stereotactic radiosurgery. In light of all the above-mentioned reasons, we believe that any stereotactic radiosurgery code changes for CY 2005 would be premature without cost data to support a code restructuring. In the meantime, we will continue to pay HCPCS codes G0242 and G0243 under their current respective new technology APCs 1516 and 1528 for CY 2005, as we continue to analyze new methods for resolving the issue of multiple procedure claims.

Comment: In response to the OPPS final rule with comment period published on November 7, 2003, and the OPPS proposed rule published on August 16, 2004, several commenters urged CMS to recognize the surgical nature of Cobalt 60-based multisource photon SRS by mapping the procedure to a surgical revenue code. The commenters claimed that some Medicare fiscal intermediaries continue to reject claims in which HCPCS codes G0242 and G0243 are reported with a surgery revenue code, and encouraged CMS to issue national instructions on the correct billing for stereotactic radiosurgery procedures. The commenters believed that revenue codes are established by the general APC in which the procedure resides. Another commenter stated that the placement of HCPCS codes G0242 and G0243 in new technology APCs labeled as radiation therapy has misled Medicare fiscal intermediaries to assume that a radiation revenue code must be reported with these claims. This commenter indicated that, as a result of providers reporting a radiation revenue code when billing HCPCS codes G0242 and G0243 and Medicare applying a radiation CCR ratio to these codes, the median costs for HCPCS codes G0242 and G0243 were understated, as the CCR for radiation is around 33 percent compared to a 45-percent to 55-percent CCR for surgery cost centers.

In response to the OPPS final rule with comment period published on November 7, 2003, and the OPPS proposed rule published on August 16, 2004, two commenters objected to the

assignment of HCPCS codes G0243 and G0173 to the same new technology APC 1528. The commenters argued that these two procedures should not be grouped into the same APC because they are clinically dissimilar and do not share the same level of resource intensity. The commenter believed that an APC grouping should be determined by the clinical nature of the procedure, its resource cost, the type of physician necessary to perform the procedure, the clinical setting in which the procedure is performed, and the clinical outcomes of the procedure. Another commenter indicated that the cost of Cobalt 60-based SRS multisource photon SRS delivery is 2.45 times the cost of linear accelerator-based SRS delivery, which the commenter believed to be an unacceptable violation of the 2 times rule. In contrast, one commenter reported that its facility has experienced no delays or claims rejections as a result of the current coding structure for stereotactic radiosurgery. The commenter urged CMS to maintain the current coding structure for Cobalt 60-based multi-source photon SRS planning and delivery, asserting that providers who carefully review the code descriptors should experience no delays or claims rejections.

Response: We believe the commenter's concerns regarding the clinical similarity and the application of the 2 times rule to a new technology APC reflect a misunderstanding of the purpose of the new technology APCS. We assign procedures to a new technology APC when we do not have adequate claims data upon which to determine the relative median cost of performing a procedure, and must rely on other sources of information (that is, external data that have been made publicly available) to determine its appropriate payment. New technology APCs do not carry clinical descriptors, such as radiation therapy; rather, the descriptor for each new technology APC represents a particular cost band (for example, $1,400 to $1,500). Payment for items assigned to a new technology APC is the mid-point of the band (for example, $1,450). As we stated in our proposed rule, we have worked together with some of the commenters to identify specific fiscal intermediaries who may be rejecting claims in which HCPCS codes G0242 and G0243 are reported. However, to date, we have been unable to identify any such local edits. Nor have we received examples of rejected claims from providers to enable us to determine why payment was not made for the claims. CMS will continue to work with providers and contractors to clarify coding and billing for all stereotactic radiosurgery procedures through program instructions, Medlearn Matters articles, and other outreach activities.

Comment: One commenter understood that the Advisory Panel on APC Groups is invested with the responsibility of providing correct coding for hospitals, and contended that the Panel should address in more detail the coding issues for stereotactic radiosurgery procedures. This commenter further indicated that the Panel is composed almost entirely of physicians rather than hospital financial personnel or hospital coders, to which the commenter objected as creating a direct conflict with hospital interests.

Response: We do not agree with the commenter's concerns regarding the Advisory Panel on APC Groups. The Panel is governed by the provisions of Pub. L. 92–463, which set forth standards for the formation and use of advisory panels (42 U.S.C. 13951 (t); section 1833(t) of the Act). According to the Charter, the function of the Panel is to review the APC groups and their associated weights and advise the Secretary of Health and Human Services and the Administrator of CMS concerning the clinical integrity of the APC groups and their weights. The subject-matter of the Panel includes to the following issues and related topics: addressing whether procedures are similar both clinically and in terms of resource use; assigning new CPT codes to APCs; reassigning codes to different APCs; and reconfiguring the APCs into new APCs. Responsibility for providing correct coding for hospitals does not fall within the purview of the Panel. Furthermore, we wish to reassure the commenter about the makeup of the Panel. The commenter's understanding that the Panel is almost entirely composed of physicians and lacks representation from hospital financial personnel or hospital coders is not accurate. As required by the Charter, all of the Panel members are currently employed in a full-time status by a hospital and serve as representatives of their hospital employer. Furthermore, only approximately half of the Panel members hold a medical degree, while the other half of the Panel members hold a hospital coding certification or nursing, pharmacy, or business degree(s), or both, or serve as hospital reimbursement officers, or both.

Comment: We received numerous comments suggesting various simplifications of the coding structure for SRS planning and delivery. Some commenters urged that CMS develop one uniform series of treatment codes for the various types of stereotactic radiation therapy, based on the process of care rather than a vendor-specific technology. One commenter suggested that CMS eliminate HCPCS codes G0338 (Linear accelerator-based SRS planning) and G0242 (Multi-source Cobalt 60-based photon SRS planning) and recognize existing CPT codes 77295 or 77301 to describe stereotactic radiation therapy planning, which the commenter believed would more accurately describe the process of care and reduce duplication in codes. Another commenter recommended that CMS eliminate HCPCS code G0242, and recognize HCPCS code G0338 for describing all forms of stereotactic radiosurgery planning by deleting the phrase that restricts the code to linear accelerator-based stereotactic radiosurgery planning.

In contrast, a commenter responding to the OPPS final rule with comment period published on November 7, 2003, suggested that CMS eliminate HCPCS code G0338, and recognize HCPCS code G0242 for all stereotactic radiosurgery planning by deleting the phrase that restricts the code to multisource Cobalt 60-based photon SRS planning. Other commenters recommended that CMS simplify the stereotactic radiosurgery delivery codes as well by eliminating HCPCS codes G0173 (SRS delivery, complete session) and G0251 (Linear accelerator-based SRS delivery, fractionated sessions), and recognizing HCPCS codes G0339 (Image guided, robotic linear accelerator-based SRS, complete or first session) and G0340 (Image guided, robotic linear accelerator-based SRS, second through fifth sessions) for all forms of stereotactic radiosurgery delivery by removing the word ''robotic'' from their descriptors. Another commenter suggested an alternative option for simplifying the stereotactic radiosurgery delivery codes by eliminating HCPCS codes G0339 and G0340, and recognizing HCPCS codes G0173 and G0251. This commenter recommended that CMS modify the descriptors for HCPCS codes G0173 and G0251 by deleting the linear accelerator specification so the codes apply to all forms of stereotactic radiosurgery delivery and deleting the maximum number of five sessions per course of treatment from the descriptor of HCPCS code G0251. One commenter suggested that CMS eliminate HCPCS codes G0173, G0251, G0339, and G0340 and recognize HCPCS code G0243 as including all stereostactic radiosurgery delivery procedures by deleting the phrase that restricts its use to

multisource Cobalt 60-based photon stereotactic radiosurgery delivery.

In response to the OPPS final rule with comment period published on November 7, 2003, one commenter indicated that HCPCS code G0340 (Image guided, robotic linear accelerator-based SRS, second through fifth sessions) should not be described by radiosurgery, contending that radiosurgery is defined by a single session treatment. The commenter recommended that the descriptor for HCPCS code G0340 be changed to ''image-guided, robotic, linear accelerator-based radiation therapy-hypofractionated delivery.'' One commenter responded to the OPPS proposed rule by applauding CMS for placing the first fraction of a multiple session treatment delivery of image-guided robotic linear accelerator-based stereotactic radiosurgery (described by HCPCS code G0339) in the same APC as a complete single session treatment delivery of image-guided robotic linear accelerator-based stereotactic radiosurgery, and stated that the resources consumed are identical, regardless of whether additional treatment sessions are delivered. This commenter agreed with CMS' placement of subsequent fractionated sessions in a lower paying APC to reflect the fewer resources consumed during the delivery of subsequent sessions.

In response to the OPPS final rule with comment period published November 7, 2003, several commenters supported CMS' decision to assign HCPCS codes G0338 (Linear accelerator-based stereotactic radiosurgery planning) and G0242 (Cobalt 60-based, multi-source photon stereotactic radiosurgery planning) to the same APC, and stated that the resource costs of both types of stereotactic radiosurgery planning are comparable. Another commenter applauded CMS' creation of HCPCS code G0338 to differentiate linear accelerator stereotactic radiosurgery planning from multisource photon stereotactic radiosurgery planning (HCPCS code G0242), due to the differences in their clinical uses and cost resources.

In response to the OPPS final rule with comment period published on November 7, 2003, one commenter supported the creation of HCPCS codes G0339 and G0340, as long as these codes are used exclusively for extracranial stereotactic radiosurgery treatments, such as those of the spine, lung, and pancreas. Due to limited cost data and clinical efficacy published on image-guided, robotic stereotactic radiosurgery used to treat extracranial indications, the commenter believed that the costs for this new and emerging technology would be more accurately captured by limiting the use of HCPCS codes G0339 and G0340 to extracranial stereotactic radiosurgery treatments.

Several commenters requested that CMS present their recommendations to the Advisory Panel on APC Groups during its next meeting in the event that the stereotactic radiosurgery code descriptors cannot be modified in time for the CY 2005 final rule.

Response: For reasons stated in a previous response, we believe that any stereotactic radiosurgery code changes for CY 2005 would be premature without cost data to support a code restructuring. For instance, in preparation of the CY 2006 OPPS Update, we intend to conduct data analysis for the first time for HCPCS codes G0338, G0339, and G0340, which were newly created G-codes for CY 2004. Therefore, until we have completed any such analysis, we will continue to maintain HCPCS codes G0173, G0251, G0338, G0339, G0242, and G0243 in their respective new technology APCs for CY 2005 as we consider the adoption of CPT codes to describe all stereotactic radiosurgery procedures for CY 2006, including the new CPT tracking codes 0082T (Stereotactic body radiation therapy, treatment delivery, one or more treatment areas, per day) and 0083T (Stereotactic body radiation therapy, treatment management, per day) that the AMA intends to make effective January 1, 2005. For CY 2005, we will assign a status indicator of ''E'' for CPT code 0082T to reflect the fact that the current G-codes for stereotactic radiosurgery treatment delivery include this service, and a status indicator of ''N'' for CPT code 0083T because we consider the treatment management per session bundled into the current stereotactic radiosurgery treatment delivery G-codes.

In reference to commenters' request that CMS present their recommendations for stereotactic radiosurgery code restructuring to the Advisory Panel on APC Groups, we refer the readers to the discussion above in an earlier response concerning the purview of the Panel's responsibilities. To the extent that the APC assignments for stereotactic radiosurgery codes are an issue, we may bring those to the attention of the Panel.

Comment: In response to the OPPS final rule with comment period published on November 7, 2003, several commenters expressed concern that the placement of HCPCS code G0340 (Image-guided robotic linear accelerator-based SRS delivery, fractionated treatment) in a higher paying new technology APC than G0251 (Non-robotic linear accelerator-based SRS delivery, fractionated treatment) creates a financial incentive to use robotic SRS technology over non-robotic stereotactic radiosurgery technology. The commenters urged that HCPCS codes G0251 and G0340 be placed in the same APC until clinical evidence supports an improved clinical outcome using robotic stereotactic radiosrugery as compared to non-robotic stereotactic radiosurgery and sound financial data supports payment differentiation. In addition to placing G0251 and G0340 in the same APC, one commenter urged that CMS remove the language ''or first session of fractionated treatment'' from the descriptor for G0339 and remove the language ''second through fifth sessions'' from the descriptor for G0340, so that placement of HCPCS codes G0251 and G0340 in the same APC will result in equal payments for the first session of fractionated therapy, regardless of the type of technology used to deliver fractionated stereotactic radiosurgery.

In response to the OPPS final rule with comment published on November 7, 2003, and the OPPS proposed rule published on August 16, 2004, several commenters asserted that the creation of HCPCS codes G0339 and G0340 was unnecessary, on the premise that all stereotactic radiosurgery and radiotherapy equipment is image guided and robotic. One commenter expressed concern that the creation of HCPCS codes G0339 and G0340, the limitation of HCPCS code G0340 to five fractionated sessions, and the placement of HCPCS code G0340 in a higher paying APC than other SRS modalities inadvertently amount to an endorsement by CMS of the CyberKnife technology. The commenter believed that the current payment rate for CyberKnife therapy results in excessive copayments for beneficiaries and unfairly advantages a technology that has provided insufficient clinical evidence of an improved outcome above existing stereotactic radiosurgery and radiotherapy modalities, and has provided CMS with no convincing cost data to support such an excessive return on investment. The commenter believed that if CMS had consulted the Medicare Coverage Advisory Committee (MCAC) or the Medical Technology Council (MTC), which advise CMS on whether specific medical treatments and technology should receive coverage, neither the MCAC nor the MTC would have recommended coverage for the CyberKnife technology. Other

commenters urged that CMS eliminate what they believe to be an unfair advantage given to HCPCS code G0339 by modifying the descriptor for HCPCS code G0173 (SRS delivery, complete session) to describe a complete session or first session of linear accelerator-based stereotactic radiosurgery delivery, and modifying the descriptor for HCPCS code G0251 to describe second through fifth sessions of linear accelerator-based stereotactic radiosurgery delivery, so that the first session of a multiple session treatment will be paid equal to that of a complete session, regardless of the type of stereotactic radiosurgery technology used.

Response: We disagree with commenters who believe that the creation of HCPCS codes G0339 and G0340, the limitation of HCPCS code G0340 to five fractionated sessions, and the placement of HCPCS code G0340 in a higher paying APC than other stereotactic radiosurgery modalities amount to an endorsement by CMS of a particular technology. We also note that the code descriptors for HCPCS codes G0339 and G0340 do not limit themselves to the CyberKnife technology. As other commenters indicated, the term ''image-guided robotic'' applies to other types of stereotactic radiosurgery besides CyberKnife. The OPPS payment system establishes payment rates for services based on relative resources utilized by hospitals to provide such services, based primarily on historical claims data if data are available. If hospital claims data are unavailable, we may consider external data to assist us. From 2000 through 2002, the manufacturer of one type of image-guided robotic stereotactic radiosurgery technology (that is, CyberKnife), along with several hospitals, provided CMS with cost data indicating the level of resources utilized in the provision of this form of stereotactic radiosurgery. We believe these data support the current placement of HCPCS codes G0339 and G0340 in their respective new technology APCs 1528 and 1525 for CY 2005.

To date, we have not received such cost data on non-robotic linear accelerator-based stereotactic radoisurgery (that is, on HCPCS codes G0173 and G0251) to aid us in determining if the current payment differentiation is appropriate. Therefore, we will maintain HCPCS codes G0339 and G0340 in APCs 1528 and 1525, respectively, and make no changes to their descriptors for CY 2005. In reference to CMS consulting a medical technology council for advice on new technology coverage, we refer the readers to section II.F.4.,''Public Comments Received Relating to Other New Technology APC Issues,'' of this final rule with comment period for a discussion of the recently established Council on Technology and Innovation.

Comment: A number of commenters, mostly providers of radiation oncology centers or departments, pointed out that stereoscopic kV x-ray guidance using infrared and/or camera technology is a new and important technology that allows for improved precision in radiation therapy targeting. These commenters indicated that kV x-ray guidance is not described by any current HCPCS or CPT code and requested that CMS create a new HCPCS G-code for payment under the OPPS. In addition, one commenter requested that CMS establish a new HCPCS code necessary for target localization in conjunction with intensity modulated radiation therapy, stereotactic radiotherapy, and stereotactic radiosurgery.

Response: The kV x-ray guidance using infrared technology came to our attention by means of an application to be considered for assignment to a new technology APC. We have recently concluded that the kV x-ray guidance should receive a temporary ''C'' code for OPPS payment under certain circumstances described below, and that it should be placed into a new technology APC. Therefore, we are creating the following HCPCS code to describe kV x-ray guidance using infrared technology:

HCPCS code C9722 (Stereoscopic kV x-ray imaging with infrared tracking for localization of target volume)

We are assigning the new HCPCS code C9722 to New Technology APC 1502 at a payment of $75, effective on January 1, 2005.

While we are assigning a C-code and payment for hospital costs, we are not assigning a G-code because we believe that the interested party should seek a CPT code from the AMA. We believe that the CPT Editorial Panel needs to assess the need for a code for the service, and, if a code is granted, evaluate the resources necessary to provide this service. This technology has been available for more than 2 years. We consider this time period to be sufficient for the interested party to request a CPT code from the AMA.

In addition, in our definition and payment instructions for this service, we are limiting additional payment for this service to occasions when kV x-ray is not billed with stereotactic radiosurgery delivery G-codes. As all stereotactic radiosurgery delivery services require guidance, the current payments for the stereotactic radiosurgery delivery G-codes (HCPCS codes G0173, G0243, G0251, G0339, and G0340) bundle payment for guidance services with stereotactic radiosurgery delivery.

4. Final Policy for CY 2005

We are adopting our proposal to maintain HCPCS codes G0173, G0242, G0243, G0251, G0338, and G0339 in their respective new technology APCs for CY 2005. We will consider the adoption of CPT codes to describe all stereotactic radiosurgery procedures in the future.

F. Movement of Procedures From New Technology APCs to Clinically Appropriate APCs

1. Background

In the November 30, 2001 final rule (66 FR 59903), we made final our proposal to change the period of time during which a service may be paid under a new technology APC. Beginning in CY 2002, we retained services within new technology APC groups until we acquired adequate data to enable us to assign the service to a clinically appropriate APC. This policy allows us to move a service from a new technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a new technology APC for more than 3 years if sufficient data upon which to base a decision for reassignment have not been collected.

In the November 7, 2003 final rule with comment period, we implemented a comprehensive restructuring of the new technology APCs to make the payment levels more consistent (68 FR 63416). We established payment levels in $50, $100, and $500 intervals and expanded the number of new technology payment levels.

2. APC Panel Review and Recommendation

During the APC Panel's February 2004 meeting, the APC Panel heard testimony from several interested parties who requested specific modifications to the APCs for the radiation oncology APC. They asked the APC Panel to make several recommendations: (1) That we move CPT code 77418 (Radiation treatment delivery, Intensity-modulated radiation therapy (IMRT)) from APC 0412 (IMR Treatment Delivery) back into a new technology APC; (2) that we dampen, or limit, any possible payment reductions to APC 0301 (Level II Radiation Therapy); (3) that we accept more external data to evaluate costs; and (4) that we identify more claims that are useful for ratesetting.

In response to the testimony presented, the APC Panel recommended that we reassign CPT code 77418 to the new technology APC 1510 for CY 2005 and that we explain to providers any steps we take to limit payment reductions to APC 0301 so that they can better plan for future years during which we may decide not to apply a dampening, or payment reduction limitation, to the rates for APC 0301.

In the August 16, 2004 proposed rule, we did not propose to accept the APC Panel's recommendations because we believe that we have ample claims data for use in determining an appropriate APC payment rate for CPT code 77418. Moreover, we believe that the development of median cost for CPT code 77418 based on those data is representative of hospital bills.

We have over 255,000 claims for this service, and over 95 percent were single claims that we could use for ratesetting. Moreover, the APC medians have been stable for the last 2 years of data. As indicated by our claims data, returning code 77418 to new technology APC 1510 would result in a payment for the service that is significantly higher than the resources utilized to provide it.

We refer the readers to section II.F.4., ''Public Comments Received Relating to Other New Technology APC Issues,'' of this final rule with comment period for a discussion of the public comments and our final policy regarding the APC placement of CPT code 77418 for CY 2005.

Comment: Several commenters objected to the proposed assignment of CPT code 77418 to APC 0412 at a payment rate of $307.78. These commenters disagreed with CMS' conclusion that the significant volume of single claims used to set the payment rate accurately reflects the costs hospitals incur to provide this service, and argued that hospitals are inaccurately coding this service and submitting insufficient charges for delivering this therapy. One commenter raised concerns that some providers are incorrectly billing procedures other than IMRT under CPT code 77418. Commenters urged CMS to accept the recommendation of the Advisory Panel on APC Groups to return CPT code 77418 to a new technology APC with a payment rate comparable to the CY 2003 payment rate of $400.

Response: As we noted previously, we do not accept the Panel's recommendation to move CPT code 77418 back to a new technology APC. We believe the 2 years (that is, CYs 2002 and 2003) that CPT code 77418 was in new technology APC 0710 allowed ample opportunity for providers to receive proper instruction on correctly coding and billing for this service. The proposed payment rate of $307.78 for CY 2005 was set using 96 percent of the total claims (that is, 246,045 single procedure claims out of 255,020 total claims) for CPT code 77418, which deeply supports its current placement in clinical APC 0412. Therefore, we will maintain CPT code 77418 in APC 0412 for CY 2005.

Comment: Several commenters objected to the proposed movement of CPT code 77301 (Radiotherapy dose plan, IMRT) from new technology APC 1510 (New Technology, Level X) with a payment rate of $850 to clinical APC 0310 (Radiation treatment preparation, Level III) with a payment rate of $811.91. The commenters indicated that this procedure is relatively new and that hospitals appear to be inaccurately reporting the costs of providing this service. The commenters recommended that, until more data can be collected and analyzed, CMS retain CPT code 77301 in new technology APC 1510 at a payment rate of $850.

Response: We move a procedure from a new technology APC to a clinical APC when we have adequate claims data for ratesetting. We believe that the proposed movement of CPT code 77301 from new technology APC 1510 to clinical APC 0310 is appropriate, considering that 88 percent of the total claims (66,076 single procedure claims out of 74,911 total claims) were used to set the payment rate of $811.91 for APC 0301. Furthermore, CPT code 77301 has been placed in a new technology APC for the past 3 years (that is, CY 2002 through CY 2004), which we believe to be ample time for providers to receive proper instruction on correctly coding and billing for CPT code 77301. Therefore, as proposed, we are moving CPT code 77301 from new technology APC 1510 to clinical APC 0310 for CY 2005.

Comment: One commenter requested that new CPT 0073T (Compensator-based beam modulation treatment delivery of inverse planned treatment using three or more high resolution (milled or cast) compensator convergent beam modulated fields, per treatment session) be assigned to APC 0412 with an ''S'' status indicator. The commenter believed that the assignment of 0073T should be the same as that for CPT 77418.

Response: We agree with the commenter and are assigning CPT 0073T to APC 0412 with status indicator ''S'' for CY 2005.

3. Proposed and Final Policy for CY 2005

There are 24 procedures currently assigned to new technology APCs for which we have data adequate to support assignment into clinical APCs. Therefore, in the August 16, 2004 proposed rule, we proposed to reassign these procedures to clinically appropriate APCs. We proposed to assign 24 of the procedures that were listed in Table 14 of the proposed rule to clinically appropriate APCs using CY 2003 claims data to set medians on which payments would be based.

As we did in the proposed rule, we present below a further explanation to provide a fuller understanding of the payment rates for several of the procedures that we proposed to move out of new technology APCs and into clinical APCs.

a. Photodynamic Therapy of the Skin

For CPT code 96567 (Photodynamic therapy of the skin), the impact of the payment decrease between CY 2004 and CY 2005 is actually low, as the CY 2004 payment included the topically applied drug required to perform this procedure and the CY 2005 payment does not. We will now pay separately for the drug billed under HCPCS code J7308 in CY 2005. We have adequate claims data on which to base payment for that procedure in a clinically appropriate APC. Payment based on those data in addition to removal of the drug for separate payment resulted in a lower median cost for the APC.

Comment: Several commenters objected to the proposed movement of CPT code 96567 (Photodynamic therapy of the skin) from New Technology APC 1540 (New Technology, Level III) with a payment rate of $150 to clinical APC 0013 (Level II Debridement and Destruction) with a proposed payment rate of $66.15. The commenters recognized that the drug (that is, HCPCS code J7308) used with this procedure is no longer bundled into the payment for CPT code 96567, and agreed that some payment reduction is appropriate. However, the commenters indicated that the proposed payment rate for APC 0013 would not cover the costs of providing this service even after excluding the costs of the drug.

Response: We believe that the resources and the clinical nature of CPT code 96567 are consistent with other codes that are placed in APC 0013. Therefore, in this final rule with comment period, we are finalizing our proposal to move CPT code 96567 from New Technology APC 1540 to clinical APC 0013 for CY 2005.

Comment: One commenter brought to our attention that CPT code 96571 (Photodynamic therapy, additional 15 minutes) may have been moved mistakenly from New Technology APC 1541 to clinical APC 0012 (Level I Debridement and Destruction). The commenter suggested that CPT code 96571 be placed in the same clinical APC 0013 (Level II Debridement and Destruction) as CPT code 96570 (Photodynamic therapy, 30 minutes).

Response: We agree with the commenter that CPT code 96571 was mistakenly moved to APC 0012 in the proposed rule. Because CPT code 96571 is an add-on code for an additional 15 minutes of photodynamic therapy, reported in addition to CPT code 96570, which describes the first 30 minutes of therapy, we believe that both codes, with status indicator ''T,'' should be placed in APC 0015 (Level III Debridement and Destruction). Therefore, in this final rule with comment period, we are moving CPT code 96571 from New Technology APC 1541 to clinical APC 0015 for CY 2005.

b. Left Ventricular Pacing, Lead and Connection

Based on a comparison of payment rates for CY 2004 and CY 2005, it appears that there is a large increase in payment that results from reassigning CPT code 33224 (Insertion of left ventricular pacing, lead and connection) from its new technology APC to a clinical APC. The difference is due to the fact that the CY 2005 APC payment includes the cost of the left ventricular lead that was not included in the CY 2004 new technology APC payment. The left ventricular lead was paid as a pass-through device under HCPCS code C1900 in CY 2004, but is not eligible for pass-through payments in CY 2005, and, as such, is now included in the APC for the procedure.

Similarly, the CY 2005 payment rate for CPT code 33225 (Left ventricular pacing lead add-on) includes the cost of the ventricular lead. However, for code 33225, the data are still somewhat unstable. Therefore, in the proposed rule, we maintained CPT code 33225 in a new technology APC, but at a higher payment level, to reflect the additional cost of the lead.

We received no comments and, therefore, we are reassigning CPT code 33224 to a clinical APC for CY 2005.

c. Positron Emission Tomography (PET) Scans

PET–FDG (Nonmyocardial)

In the proposed rule, we noted that a number of positron emission tomography (PET) scans currently are classified into APC 1516. We recognized that PET is an important technology in many instances and want to ensure that the technology remains available to Medicare beneficiaries when medically necessary. We believe that we have sufficient data to assign PET scans to a clinically appropriate APC. However, we have been told that if the effect of doing so is to reduce payment significantly for the procedure, it may hinder access to this technology. Therefore, as indicated in the August 16, 2004 proposed rule, we considered three options as the proposed payment for these procedures in CY 2005, based on our review of the 2003 claims data for the PET procedures. We specifically invited comments on each of these options.

Option 1: Continue in CY 2005 the current assignment of the scans to New Technology APC 1516 prior to assigning to a clinical APC.

Option 2: Assign the PET scans to a clinically appropriate APC priced according to the median cost of the scans based on CY 2003 claims data. Under this option, we would assign PET scans to APC 0420 (PET Imaging).

Option 3: Transition assignment to a clinical APC in CY 2006 by setting payment in CY 2005 based on a transition payment of a 50–50 blend of the median cost and a New Technology APC payment for CY 2004. We would assign the scans to New Technology APC 1513 for the blended transition payment.

We included the proposed rates for these options in Addendum B of the proposed rule.

Comment: Many commenters supported maintaining a number of PET scans in New Technology APC 1516 for CY 2005, as presented under option 1 of the proposed rule. These commenters expressed concern that options 2 and 3 set forth in the proposed rule would greatly impede patient access to PET technology. They stated that options 2 and 3 fail to account for the significant degree of variation in hospital mark-up practices and capital depreciation methods associated with PET procedures and, therefore, underestimate hospitals' costs for performing PET scans. These commenters further explained that the majority of hospitals report PET procedures under an overall diagnostic radiology revenue code rather than distinguishing PET procedures under a diagnostic nuclear medicine revenue code. The commenters expressed concern that PET claims data, when adjusted using a cost to charge ratio not specific to PET, underestimate the relative costs associated with PET imaging procedures.

Another commenter commissioned a time-and-motion study at nine PET facilities in geographically diverse regions of the United States to estimate hospitals' actual costs for providing PET scans. According to the commenter, this cost study concluded that many hospitals could not afford to provide PET scans at a payment rate below $1,450. In addition, the commenter indicated that the cost study suggested that hospitals need to perform three or more scans per day in order to break even at the current payment rate of $1,450 per scan. The commenter pointed out that using a marketing share-weighted average, the cost study found that PET facilities across the United States are performing an average of 2.63 PET scans per day, translating into a loss of $165.18 per scan for most PET providers at the current payment rate of $1,450 per scan. However, the commenter did not clarify whether this national average of performing 2.63 PET scans per day reflects utilization by both hospitals and freestanding PET centers. The commenter urged that PET remain in new technology APC 1516 for CY 2005, and noted that any reductions in payment, including the proposed blended payment rate of $1,150, would significantly impede patient access to this technology, especially in rural settings where the volume of PET scans tends to be lower. Another commenter that provides FDG to 300 PET imaging centers in geographically diverse regions of the United States reviewed their May, June, and July 2004 data for these PET centers and reported an average number of 1.88 PET scans provided per day and a median of 1.3 PET scans provided per day across the 300 PET centers. Again, the commenter did not clarify whether this national average of performing 1.88 PET scans per day reflects utilization by both hospitals and freestanding PET centers. This commenter expressed concern that any reduction in payment for PET scans, with or without a reduction in payment for FDG, may drive many PET centers into an operating deficit and reduce the availability of PET scans for Medicare beneficiaries.

Response: We appreciate the many comments we received on this topic and the efforts undertaken by several of the commenters to provide us with additional data concerning the costs of providing the scans. We acknowledge variations in hospital markup practices, capital depreciation and other cost allocation methods, although we note that the CCRs in the various reported cost centers (that is, Nuclear Medicine,

Imaging Department, Radiology) for PET procedures are fairly consistent. The median hospital CCR for these cost centers ranges from 0.3118 to 0.3172, and does not vary greatly from the median overall hospital CCR of 0.33. We believe that the robust number of claims (that is, 55,838 single procedure claims out of 61,492 total claims, representing 91 percent of the total claims) provides sufficient data to assign PET scans to a clinically appropriate APC. However, we received numerous comments indicating that any reduction in payment for PET scans would hinder access by Medicare beneficiaries to this technology. Based on our review of the comments, we are setting the CY 2005 payment for PET scans based on a 50–50 blend of the median cost and the CY 2004 new technology APC payment rate, as presented under option 3 in the proposed rule. PET scans will be assigned to new technology APC 1513 for a blended payment rate of $1,150 for CY 2005.

Comment: One commenter pointed out that the CY 2003 hospital claims data may not account for the current shift to PET/CT technology, which the commenter stated has virtually doubled the cost of launching a viable PET operation, from an average cost of $1,200,000 for a dedicated PET scanner to an average cost of $2,400,000 for a PET/CT scanner. The commenter estimated that approximately 90 percent of the PET systems currently being sold are PET/CT scanners and predicted that the current installed base of approximately 35 percent PET/CT and 65 percent dedicated PET will shift to an overwhelming majority of PET/CT scanners within the next 5 years. The commenter argued that investment in a PET/CT scanner is important to be competitive in the marketplace, due to better capability for detecting malignancies. The commenter stated that the higher capital costs of a PET/CT operation require a patient volume of between four and five patients per day to break even compared to a patient volume of between two and three patients for a dedicated PET operation. According to the commenter, the number of claims for PET remains relatively low compared to MRI and CT scans, comprising less than 1 percent of all imaging procedures performed in the United States. Therefore, the commenter argued that providers would be unlikely to recover significant losses through increased patient volume.

Several commenters indicated that the American Medical Association will be creating three new CPT codes 78814, 78815, and 78816 to describe PET with concurrent CT for anatomical localization for CY 2005. One commenter recommended that CMS assign these new CPT codes for PET/CT scans to three different new technology APCs, while another commenter recommended that CMS place these new CPT codes in new technology APC 1516 at a payment rate of $1,450.

Response: The current G code descriptors do not describe PET/CT scan technology, and should not be reported to reflect the costs of a PET/CT scan. At present, we have decided not to recognize the CPT codes for PET/CT scans that the AMA intends to make effective January 1, 2005, because we believe the existing codes for billing a PET scan along with an appropriate CT scan, when provided, preserve the scope of coverage intent of the PET G-codes as well as allow for the continued tracking of the utilization of PET scans for various indications. We plan to issue billing guidance through program instructions and provider education articles for hospitals to use when they provide both a PET and CT scan to patients in their outpatient department. While we acknowledge that PET/CT scanners may be more costly to purchase than dedicated PET scanners, a PET/CT scanner is versatile and may also be used to perform individual CT scans, thereby potentially expanding its use if PET/CT scan demand is limited.

Comment: One commenter supported assigning PET procedures to new technology APC 1513 at a payment rate of $1,150, based on a 50–50 blend of the median cost and the CY 2004 new technology payment, as presented under option 3 of the proposed rule. This commenter stated that option 3 provides the best balance between ensuring continued beneficiary access to this valuable technology and the need for CMS to consistently apply its ratesetting methodology to determine payment rates. Another commenter supported the assignment of PET procedures into a clinically appropriate APC that pays at least $1,200. This commenter believed that a payment of at least $1,200 would compensate adequately for the technology and necessary staffing.

Response: We agree with the commenters that a balance must be reached between ensuring continued beneficiary access to PET scans and the necessity for CMS to apply consistently its rate-setting methodology. Balancing the concern regarding possible adverse effects on patient access that might result from a substantial precipitous reduction in payment with information from thousands of hospital claims and the cost data we received from commenters, we are setting the CY 2005 payment for PET scans based on a 50–50 blend of the median cost and the CY 2004 new technology APC payment rate, as presented under option three in the proposed rule. We believe we have reached this balance for CY 2005 by assigning PET scans to new technology APC 1513 for a blended payment rate of $1,150.

Comment: Another commenter addressed the issue of three new CPT codes 78811, 78812, and 78813 for tumor PET imaging to replace CPT code 78810 (Tumor imaging, positron emission tomography, metabolic evaluation) for CY 2005. The commenter recommended that CMS adopt these new CPT codes in place of the existing G-codes and place them in new clinical APCs, which would result in one level for brain PET scans, two levels for cardiac PET scans, and three levels for tumor PET scans.

Response: At present, we believe that the existing G-codes for PET scans adequately serve the purpose of tracking utilization of PET scans for various indications. Therefore, CMS will continue to recognize the existing G-codes for PET scans.

Comment: One commenter requested that CMS provide the number of single procedure claims that support assigning FDG-PET scans to a clinically appropriate APC according to the median cost of the scans, as presented under option 2 in the proposed rule.

Response: The number of single procedure claims used to create the median of $898.64 discussed in the proposed rule under option 2 for APC 0420 (PET imaging) totaled 55,838 single procedure claims out of 61,492 total claims.

PET (Myocardial)

Comment: One commenter brought to our attention that CPT code 78459 (myocardial imaging, PET, metabolic evaluation) and HCPCS code G0230 (PET imaging; metabolic assessment for myocardial viability following inconclusive SPECT study) are both currently paid under OPPS and describe nearly the same procedure, with the exception that HCPCS code G0230 has a more narrow description. The commenter understood that CMS had intended to replace HCPCS code G0230 with CPT code 78459, but was confused by the payable status indicator for both codes. Two commenters recommended that CMS clarify the proper use of these codes and move CPT code 78459 from APC 0285 (Myocardial Positron Emission Tomography), with a payment rate of $690.61 to APC 1516 with a payment rate of $1,450.

Response: We appreciate the commenter bringing to our attention the

duplication of codes for myocardial PET imaging for metabolic assessment. At present, we will change the status indicator for CPT code 78459 (Myocardial imaging, PET, metabolic evaluation) to ''B,'' not payable under the OPPS, and move HCPCS code G0230 (PET imaging; metabolic assessment for myocardial viability following inconclusive SPECT study), along with the other PET codes currently assigned to APC 1516, from APC 1516 to APC 1513 for CY 2005. We will seek advice on the APC placement of HCPCS code G0230 from the Advisory Panel on APC Groups during their next meeting.

Comment: Several commenters indicated that the resources, other than the radiopharmaceuticals, required to perform the PET myocardial perfusion imaging studies assigned to APC 0285 (Myocardial Positron Emission Tomography) do not differ significantly from many of the PET tumor imaging procedures contained in new technology APC 1516. These commenters requested an explanation for the payment rate decrease from $1,058.87 in the proposed rule for the CY 2004 update to $772.08 in the final rule for the CY 2004 update, and the further decrease to $690.61 in the proposed rule for the CY 2005 update. The commenters objected to CMS creating an exception to the 2 times rule for APC 0285. The commenters believed that the small volume of these procedures and the complexity of multiple G-codes to describe both single and multiple imaging sessions preclude reasonable conclusions about the cost of providing these services. The commenters recommended that CMS move the 18 G-codes from APC 0285 paying $690.61 to APC 1516 with a payment rate of $1,450. The commenters further recommended that we reduce the complexity of billing for these procedures by collapsing these eighteen G-codes into two CPT codes based on resources for single and multiple studies, replacing HCPCS codes G0030–G0047 with CPT code 78491 (Myocardial imaging, PET, perfusion; single study at rest or stress) and CPT code 78492 (Myocardial imaging, PET, perfusion; multiple studies at rest or stress).

Response: The steady decline of the payment rate for APC 0285 since the CY 2004 proposed rule is attributable to the 153-percent increase in the number of single procedure claims used to set the payment rate for APC 0285, which gave rise to better data to more accurately set the payment rate. In the CY 2004 proposed rule, we used 613 single procedure claims out of 1,584 total claims (39 percent of total claims) to set the CY 2004 proposed payment rate of $1,058.87. In the CY 2004 final rule, we used 1,089 single procedure claims out of 1,778 total claims (61 percent of total claims) to set the CY 2004 final payment rate of $772.08. In the CY 2005 proposed rule, we used 1,451 single procedure claims out of 1,946 total claims (75 percent of total claims) to set the CY 2005 proposed payment rate of $690.61. At present, composition of APC 0285 will be maintained for CY 2005 while we collect claims data on HCPCS codes G0030 through G0047. Based on our CY 2003 data for the specific G-codes, we cannot identify a predictable pattern of increased hospital costs associated with multiple studies as compared with single studies. We will present before the Advisory Panel on APC Groups during their next meeting the commenters' recommendation to recognize CPT codes 78491 and 78492 as representing single and multiple myocardial PET studies and movement of these codes from APC 0285 to APC 1516. We note that we will be moving the PET scans currently in APC 1516 to APC 1513 for CY 2005, and will bring that to the Panel's attention as they consider potential APC movement of the myocardial PET studies.

d. Bard Endoscopic Suturing System

For CY 2005, we proposed to create APC 0422 for Level II Upper GI Procedures and to assign HCPCS code C9703 (the Bard Endoscopic Suturing System), as well as other procedures to APC 0422 based on clinical and resource homogeneity. Currently, HCPCS code C9703 is assigned to New Technology APC 1555, with a payment of $1,650. Our examination of CY 2003 claims data for HCPCS code C9703 revealed that 137 of the 171 single claims were from a single institution with an extremely low and consistent cost per claim. We do not believe that those 137 claims represent the service described by HCPCS code C9703, which includes an upper gastrointestinal endoscopy along with suturing of the esophagogastric junction. Therefore, in establishing the median for APC 0422, we did not use the 137 claims, which we believe were incorrectly coded.

Comment: Several commenters opposed the movement of HCPCS code C9703 (Bard Endoscopic Suturing System) from New Technology APC 1555 with a payment rate of $1,650 to clinical APC 0422 (Level II Upper GI Procedures) with a proposed payment rate of $1,274. The commenters indicated that the proposed payment under APC 0422 is inadequate to cover even the equipment costs alone. The commenters contended that the claims data are insufficient to support movement of this procedure out of its new technology APC and into a clinical APC, and urged CMS to maintain HCPCS code C9703 in New Technology APC 1555 with a payment rate of $1,650.

Response: As we stated in the proposed rule, our examination of the CY 2003 claims data for APC 0422 revealed that 137 of the 171 single claims for HCPCS code C9703 were incorrectly coded. Therefore, the remaining single claims were used in establishing the median for APC 0422. Considering that HCPCS code C9703 has remained in a new technology APC for 2 years with a relatively modest volume, we are not convinced that maintaining HCPCS code C9703 in a new technology APC will necessarily result in a high volume for future ratesetting. Furthermore, the median cost as calculated for HCPCS code C9703, using the subset of single claims, has been relatively stable over the past 2 years and consistent with the median for APC 0422. In addition, in keeping with our practice to use CPT codes, if possible, we will discontinue HCPCS code C9703 and instruct providers to report service with this technology under CPT code 0008T (Upper gastrointestinal endoscopy with suture), which will be payable under the OPPS for CY 2005. In this final rule with comment period, we are finalizing our proposal to move HCPCS code C9703, which will be replaced with CPT code 0008T, from New Technology APC 1555 to clinical APC 0422 for CY 2005. Code 0008T is assigned status indicator ''NI'' and, as such, is open for public comment during the 60-day comment period associated with this final rule with comment period.

e. Stretta System

Comment: Several commenters objected to the movement of HCPCS code C9701 (Stretta system) from New Technology APC 1557 with a payment rate of $1,850 to clinical APC 0422 (Level II Upper GI Procedures) with a proposed payment rate of $1,274. The commenters indicated that the proposed payment is inadequate to cover even the equipment costs alone, and urged CMS to maintain HCPCS code C9701 in New Technology APC 1557 with a payment rate of $1,850.

Response: The single claims volume for HCPCS code C9701 has remained modest for the past 2 years of its placement in a new technology APC. Therefore, we do not believe that maintaining HCPCS code C9701 in a new technology APC will necessarily result in a high volume for future

ratesetting. Furthermore, the median cost for HCPCS code C9701 has been stable over the past 2 years and consistent with the median for APC 0422. Moreover, we can now discontinue HCPCS code C9701 and will instruct providers to report service with this technology under CPT code 43257 (Upper gastrointestinal endoscopy with delivery of thermal energy), a new CPT code that will be payable under OPPS for CY 2005. We are finalizing our proposal to move HCPCS code C9701, which will be replaced with CPT code 43257, from New Technology APC 1557 to clinical APC 0422 for CY 2005.

f. Gastrointestinal Tract (GI) Capsule Endoscopy

Comment: Several comments opposed our proposal to move CPT code 91110 (GI Capsule Endoscopy) from New Technology APC 1508 with a payment rate of $650 to clinical APC 0141 (Level I Upper GI Procedures) with a proposed payment rate of $464.52 for CY 2005. (CPT code 91110 (Capsule Endoscopy) replaced HCPCS code G0262 in CY 2004. HCPCS code G0262 was mapped to New Technology APC 1508 in CY 2004.) The commenters explained that the cost data for CPT code 91110 are unreliable due to multiple coding changes over the last 3 years and, therefore, believed that the data should not be used to set the payment rate. The commenters indicated that the device costs are $450, and under the proposed payment rate, only $14 would be available to cover the service portion of the procedure. The commenters expressed concern that patient access to care would be hindered by moving the service into clinical APC 0141. The commenters also contended that the proposed assignment of this procedure to APC 0141 is inappropriate because none of the other services that reside in APC 0141 require a device of significant cost and the codes are not clinically homogeneous with CPT code 91110. The commenters urged CMS to maintain CPT code 91110 in New Technology APC 1508 with a payment rate of $650. One commenter suggested that CMS assign a C code to the capsule and instruct providers to bill this C-code along with HCPCS code G0262. One commenter requested that, if CMS does not maintain CPT code 91110 in new technology APC 1508, CMS consider two additional options: (1) Limiting the rate reduction for CY 2005 to 5 percent of the CY 2004 rate; or (2) assign CPT code 91110 to APC 0142 (Small Intestine Endoscopy), which the commenter stated would be a compromise because the payment of $503.20 would still ''underpay'' the hospital for the costs of providing the procedure.

Response: Generally, we do not establish C-codes for devices outside of the pass-through process, so we will not assign a C-code to the capsule. We remind providers that they should include the charges for device costs associated with this capsule within the charges reported for CPT code 91110. We agree with the commenters that CPT code 91110 may not belong in APC 0141 based on clinical homogeneity and resource consumption. We had almost 4,000 single claims, about 90 percent of all CY 2003 claims for capsule endoscopy, available for use in calculating the median cost of the service. We have confidence that our median reflects hospital resources needed to perform the service. As one commenter recommended, we believe that the resource costs and clinical nature of CPT code 91110 are more consistent with other codes that reside in APC 0142. Therefore, in this final rule with comment period, we are moving CPT code 91110 from New Technology APC 1508 to clinical APC 0142 for CY 2005, as the commenter suggested.

g. Proton Beam Therapy

Comment: Several commenters urged CMS to maintain intermediate (CPT code 77523) and complex (CPT code 77525) proton beam therapies in New Technology APC 1511 at a payment rate of $950 for CY 2005. The commenters indicated that the proposed payment rate of $678.31 for CY 2005 does not capture the significant difference in resource consumption and complexity between the simple and the intermediate/complex procedures. These commenters expressed concern that the low volume of claims submitted by only two facilities provides volatile and insufficient data for movement into the proposed clinical APC 0419 (Proton Beam Radiation Therapy) at a payment rate of $678.31. They pointed out that more than four additional centers are currently under construction or in the planning phases in response to the high demand for this technology. The commenters explained that the extraordinary capital expense of between $70–$125 million and high operating costs of a proton beam necessitate adequate payment for this service to protect the financial viability of this emerging technology. They feared that a payment reduction would halt diffusion of this technology and negatively impact patient access to this cancer treatment.

Two commenters explained that the CY 2005 proposed payment rates for CPT codes 77523 (intermediate proton beam treatment) and 77525 (complex proton beam treatment) were based on costs derived by applying CCRs from the most recent Medicare cost reports to charges reported on CY 2003 claims submitted by two hospitals, which were the only two proton therapy centers in operation in the United States at the time. The commenters further indicated that these two hospitals, from which all of the intermediate and complex proton therapies claims were derived, reported the costs and charges of proton therapy along with the costs and charges for all other radiation therapy services on the radiation therapy department line. One commenter calculated an overall radiation therapy department CCR of 0.2442 using CY 2003 data from one of these hospitals. This commenter then calculated a proton beam therapy CCR of 0.4175 by isolating the costs and charges for proton beam therapy from the costs and charges for the overall radiation therapy department. The commenter applied this proton beam therapy CCR of 0.4175 to calculate the costs based on average CY 2003 charges for intermediate and complex proton beam treatments and reported a cost of $1,105.96 for intermediate proton beam treatment and a cost of $1,216.60 for complex proton beam treatment, significantly above Medicare's proposed payment rate of $678.31 for CY 2005.

Commenters believed that this understatement of costs in the Medicare cost reports from these two hospitals is largely responsible for the inadequacy of the proposed payment rates for intermediate and complex proton beam treatments. The commenters requested that CMS apply the proton beam therapy CCR of 0.4175, based on proton beam specific cost data provided by one of these commenters, for determining the median costs of proton beam therapy. The commenters believed that the revised costs support the maintenance of CPT codes 77523 and 77525 in New Technology APC 1511 at a payment rate of $950 for CY 2005. The commenters also noted the recommendation of the Advisory Panel on APC Groups to maintain intermediate and complex proton beam therapies in New Technology APC 1511 at a payment rate of $950 for CY 2005 and urged CMS to adopt that recommendation.

Response: We will not apply the commenter's calculated CCR to determine the median costs of proton beam therapy because we are unable to replicate the commenter's proton beam therapy CCR calculation of 0.4175 by

isolating the costs and charges for proton beam therapy from the costs and charges for the overall radiation therapy department. However, having considered the concerns of numerous commenters that patient access to proton beam therapy may be impeded by a significant reduction in OPPS payment, we are setting the CY 2005 payment for CPT codes 77523 and 77525 by calculating a 50–50 blend of the median cost of $690.45 derived from 2003 claims and the CY 2004 new technology APC payment rate of $950. We will use the result of that calculation ($820) to assign intermediate and complex proton beam therapies (CPT codes 77523 and 77525) to New Technology APC 1510 for a blended payment rate of $850 for CY 2005.

After consideration of these public comments and based upon our review of the latest claims data available, we are moving the procedures listed in Table 14 from their current new technology APCs to the APCs listed, as we have adequate data on these procedures to enable us to make the necessary APC assignment.

BILLING CODE 4120–01–P

Table 14.--APC Reassignment of New Technology Procedures Into Clinical APCs

HCPCS	Descriptor	CY 2004 APC	CY 2005 APC	CY 2004 Payment Amount	CY 2005 Payment Amount
15860	Test for blood flow in graft	1501	0359	$ 25.00	$49.54
96003	Dynamic fine wire EMG	1503	0215	$150.00	$37.61
96000	Motion analyses, video/3D	1503	0216	$150.00	$150.20
96001	Motion test w/ft pressure measure	1503	0216	$150.00	$150.20
96002	Dynamic surface EMG	1503	0218	$150.00	$65.20
91110	GI tract capsule endoscopy	1508	0142	$650.00	$496.15
G0288	Reconstruction, CTA surgical plan	1506	0417	$450.00	$266.72
77301	Radiotherapy dose plan, IMRT	1510	0310	$850.00	$813.57
77523	Proton treatment, intermediate	1511	1510	$950.00	$850.00
77525	Proton treatment, complex	1511	1510	$950.00	$850.00
95250	Glucose monitoring, continuous	1540	0421	$150.00	$106.51
96567	Photodynamic treatment, skin	1540	0013	$150.00	$64.85

BILLING CODE 4120–01–C

4. Public Comments Received Relating to Other New Technology APC Issues

a. Computerized Reconstruction CT of Aorta

In the August 16, 2004 proposed rule, we proposed to reassign code G0288 (Reconstruction, CTA of aorta for preoperative planning and evaluation post vascular surgery) from New Technology APC 1506 to clinical APC 0417 (Computerized Reconstruction) for CY 2005.

Comment: Several commenters expressed concern about our proposal to move G0288 from New Technology APC 1506 to clinical APC 0417. The commenter asserted that the reassignment results in a decreased payment amount from $450 to approximately $247, a rate that commenters believe is too low to cover the costs of providing the service.

The commenters suggested that CMS use external data to calculate rates rather than relying on hospital claims data, that CMS maintain G0288 in its current new technology APC assignment until hospital claims are more accurate, or that CMS go ahead with the reassignment to a clinical APC but continue to base payment on a rate that is consistent with the CY 2004 rate. One commenter provided invoices from hospitals across the country to support its assertion that our proposed payment will be to low.

One commenter also requested that CMS change the descriptor for code G0288 to read ''Three-dimensional pre-operative and post-operative computer-aided measurement planning and simulation in accordance with measurements and modeling specifications of the Society for Vascular Surgery'' in order to ensure that the code is only used for true three-dimensional preoperative and postoperative computer-aided measurement planning and simulation technologies.

Response: A predecessor C-code to G0288 had a new technology APC assignment in CY 2002, with a payment level of $625. The C-code was deleted for CY 2003, and G0288, a more general treatment planning code, was then assigned to the same new technology APC for CY 2003, with a payment of $625. For CY 2004, we proposed to move G0288 from a new technology APC to a clinical APC based on over 1,000 claims, with a median cost of $272. Based on hospital data provided by a commenter on the CY 2004 proposed rule and our conclusion that there may have been Medicare claims that understated the costs of the treatment planning software, we placed G0288 in a new technology APC with a payment of $450 for CY 2004, consistent with a 50/50 blend of our data with the analysis of a commenter. For CY 2005, we believe we have adequate claims data on which to base payment for G0288 and to reassign the service to its own clinical APC. We had almost 5,000 total claims for code C9703 (first 3 months of CY 2003 when the C-code was still in the grace period) and G0288, and over half of these were single claims available for APC median calculation. We are confident that the median cost for APC 0417 reflects hospital resource costs, and we are reassured by the consistency of our median cost data over the past several years for this service.

Accordingly, we are adopting as final our proposal to assign code G0288 to APC 0417 for CY 2005.

We are not changing the name of G0288 at this time. However, we will take the commenter's suggestion into consideration in the future if the need arises. We revised the descriptor for the code for CY 2004 to clarify that the service can be used for treatment planning prior to surgery and for postsurgical monitoring. We believe that the current G code descriptor appropriately describes the service.

b. Kyphoplasty

Comment: One commenter, a manufacturer of medical devices used to restore spinal function and treat vertebral compression fractures, suggested that CMS should place kyphoplasty, a new procedure to treat vertebral compression fractures, into New Technology APC 1535. The commenter stated that kyphoplasty is currently billed using code 22899 (Unlisted procedure of the spine). The commenter claimed that, according to our policy, because CMS received its application before June 2004, the procedure is eligible for new technology APC payments in October 2004. The commenter was surprised that it did not see a proposal to place kyphoplasty into a new technology APC in our proposed rule or in the October 2004 OPPS update. The commenter stated that using an unlisted code creates problems concerning billing and payment for hospitals.

Response: We have completed our evaluation of the new technology application for kyphoplasty and have assigned new C-codes that describe the procedure. We have assigned these codes to existing clinical APC 0051 rather than to a new technology APC. We believe that APC 0051 is appropriate for kyphoplasty in terms of clinical characteristics and resource costs. Reasonable placement into an existing APC that is appropriate in terms of clinical characteristics and resource costs is one of our criteria in deciding whether a service should be placed into a new technology APC (66 FR 59900, November 30, 2001).

Concerning the commenter's assertion that because CMS received its application before June 2004, the procedure is eligible for payment status as a new technology APC in October 2004, we remind the public that the timing of eligibility for payment, if any, is not bound to when an application is filed with CMS. As we state on the CMS Web site notice at *http://www.cms.gov,* if an application is filed by a certain date (for example, by June 1), the earliest date that such an item or service can be considered for new payment status is the following quarter (for example, October 1). This means that any additional coding and payment, if warranted, could begin later than the following quarter. Because it is important that our payment and coding systems do not impede access by Medicare beneficiaries to the best available medical care, we review all applications as quickly as possible, given the complexity of the issues and the thoroughness we believe such reviews require. The timing of completion of our evaluation of any specific application depends on such factors as the complexity of the application, the completeness of all materials submitted, whether the review team requires additional information and the amount of time before we receive additional materials and information. Of course, the service needs to be otherwise eligible for assignment to a new technology APC (or as a pass-through assignment in the case of a new device, drug, or biological).

We note that while we consider these new codes as final, the codes and the placement of the services are subject to comment within 60 days of the publication of this final rule with comment period, as stated elsewhere in this rule. Moreover, the public may comment on our placement of services to the APC Panel, which often hears comments and testimony concerning the placement of new services brought to us by interested parties.

Accordingly, the codes for kyphoplasty are:

C9718 Kyphoplasty, one vertebral body, unilateral or bilateral injection

C9719 Kyphoplasty, one vertebral body, unilateral or bilateral injection; each additional vertebral body (list separately in addition to code for primary procedure)

c. Laser Treatment of Benign Prostatic Hyperplasia (BPH)

In the August 16, 2004 proposed rule, HCPCS code C9713 (Non-contact laser vaporization of prostate, including coagulation control of intraoperative and postoperative bleeding) was assigned to New Technology APC 1525 for CY 2005. The assignment of this code to New Technology APC 1525 was a continuation of the new technology APC placement established on April 1, 2004.

Comment: One commenter, the manufacturer of medical equipment used in the treatment of benign prostatic hyperplasia (BPH) stated that its product, the GreenLight Laser, was the only technology available that uses a 532nm or ''green'' wavelength as an energy source and that CMS had assigned code C9713 in response to an application for a new technology APC assignment from Laserscope. The commenter indicated that other technologies that do not employ the same energy wavelength and the same noncontact vaporization technique should not be billed with code C9713. The commenter expressed concern that the costs of the other techniques are less than those for GreenLight Laser and thus the other techniques should not be paid under New Technology APC 1525. The commenter requested CMS to revise the descriptor of code C9713 to describe only 532nm laser technologies such as the GreenLight Laser.

Response: We acknowledge that HCPCS code C9713 was established following our review of the new technology application from Laserscope. We also agree that code C9713 may be used by hospitals to report such procedures using the Laserscope product, the GreenLight PVP, described in the application for new technology assignment. We established code C9713 based on our understanding of the information provided to us that the service may be different from other services used to treat BPH. We look forward to receiving and assessing the medical review, analysis, and evaluation of the service and technology through the usual AMA coding and payment processes. In general, we do not tailor temporary procedure codes in the ''C'' series to particular products and have not been persuaded that a redefinition of code C9713 is necessary at this time. With respect to other techniques for treatment of BPH, we would rely on the hospitals to determine which HCPCS code, whether C9713 or one of the CPT codes, most accurately describes the procedure for treatment of BPH for which they are billing. With regards to the commenter's claim that the costs of other techniques described by code C9713 are less than warranted by the New Technology APC 1525, our policy is to review the costs of services assigned to New Technology APCs each year to determine if an alternate placement in another APC is warranted. We continue to believe that placement of code C9713 in a new technology APC is appropriate for CY 2005.

d. Computerized Tomographic Angiography (CTA)

In the August 16, 2004 proposed rule, we included the APC assignment and the payment rate for computed tomographic angiography (CTA). These procedures, coded using one of several CPT codes, depending on the body region under study, involve acquisition of a CT scan with and without contrast material, as well as image post-processing. The assigned CTA CPT codes under APC 0662 had a proposed payment rate of $320.60. That proposed payment rate was slightly lower than that for a CT scan ($323.21) and significantly lower than the sum of the proposed payment for CT scan and image reconstruction, CPT code 76375 ($98), billed separately.

Comment: A number of commenters were concerned about the lower payment rates for the CTA procedures and asked CMS to review and revise the proposed payment rate.

The commenters pointed out that, prior to 2001, two codes were used to code for the procedure: one for the CT scan and another for the 3-D reconstruction. The commenters indicated that, in 2001, CPT codes were created to enable specific coding for CTA procedures, including image post-processing in the CTA codes, but those codes were still assigned to the same APC (0333) as CT procedures that did not include image reconstruction. They added that, in CY 2003, the CTA procedures were assigned to their own APC (0662). The commenters asserted that in spite of the creation of an APC specific to CTA procedures, the OPPS payment amounts have not reflected the additional costs for CTA compared to CT. They believed that the low payment rates are due to continuing confusion and conflicting information among providers concerning appropriate billing and charging practices associated with CTA procedures.

One commenter performed a number of analyses in an attempt to understand and address the apparent billing problems. In its investigation, the commenter discovered that, in 2002, only 40 percent of all hospitals that performed both CT and CTA charged more for CTA than for CT. The commenter also found in its study of hospital charge structures that there is wide variation in methods employed by hospitals and that only 29 percent of hospitals use costs to set charges.

While all commenters recommended that CMS adjust the payment rate for CTA procedures to equal that for APC 0333 plus APC 0282, one commenter recommended that we do this using the adjustment made under the Medicare Physician Fee Schedule for CY 2003 as a model. That commenter suggested that we should ignore CTA claims and instead rely on CT claims (APC 0333) plus reimbursement for image reconstruction (APC 0282) as a basis for setting the rate for CTA services.

Other alternative suggestions provided by the commenter include: use only CTA claims that are ''logical;'' change coding instructions and edits to allow CTA to be billed in addition to image reconstruction; or make an administrative adjustment to increase CTA payment.

Finally, the commenters encouraged CMS to investigate alternative methods for calculating CCRs in order to achieve more accurate costs on which to base our rates.

Response: Although we understand the commenters' points of view and appreciate the comprehensive analyses they shared with us, we cannot identify any action that would be appropriate for us to take. As the commenters are aware, we rely on hospital claims data to set payment rates and have made clear our intent to rely solely on those claims by CY 2007. If the claims data are inaccurate, especially across a broad spectrum of providers as the commenters believe is evidenced in this case, we have no way to determine which claims are more or less accurate than any others.

To implement the commenters' suggestion that we make the payment rate for CTA (APC 0662) equal to the sum of the rates for CT alone (APC 0333) plus image reconstruction (APC 0282) would require that we have accurate cost information about the cost of image reconstruction for CTA specifically and for CT alone, as utilized with CTA. This is not the case. The image reconstruction code CPT 76375 (coronal, sagittal, multiplanar, oblique, 3-dimensional and/or holographic reconstruction of computed tomography, magnetic resonance imaging, or other tomographic modality) is not limited to image reconstruction performed for CTA and may be used in any number of other procedures. Based on the available CPT codes for CTA, we

would not expect any current utilization of CPT code 76375 to be for CTA post-image processing, unless there was no appropriate CTA code to describe the body region imaged. We believe this would be rare. In addition, our current cost data for CT alone do not necessarily reflect the resources utilized for the CT portion of CTA.

We also do not believe that for the last 3 years there has been conflicting information given to providers concerning appropriate billing and charging practices associated with CTA procedures. The CPT code descriptors clearly include image post-processing for CTA procedures. In response to previous comments, we did provide a separate APC for CTA procedures beginning in CY 2003 in recognition that hospital resources might be different for CTA procedures as compared with CT procedures. From the over 100,000 claims for CTA procedures from CY 2003, we were able to use about 50 percent of the claims to determine hospitals' costs for the services. Our number of claims for CTA procedures increased significantly between CY 2002 and CY 2003. From the 2003 full year of data, we have calculated that median hospital costs for the APCs for CT and CTA services were approximately equal, at $329. Because hospitals set their own charges for services, which we then convert to costs, we see no reason why adding the costs for CT alone plus the costs for image reconstruction would necessarily provide a better estimate of costs for CTA than our analysis of our specific CTA claims.

Similarly, in order to make an adjustment akin to that made for the Medicare Physician Fee Schedule for CY 2003, we would need to have accurately coded cost data for the individual components of CTA, performed in the context of CTA, on which to base that change. We do not have that data, and the OPPS system, unlike the Medicare Physician Fee Schedule, relies upon historical hospital claims data to develop relative costs of services.

Lastly, we do not agree that we should provide coding guidance that differs from that embodied in the CPT code descriptors in this case. Our current edits that do not allow CTA to be billed in addition to image reconstruction are consistent with the CPT code descriptors for CTA procedures.

We created a separately paid, specific APC for those procedures in an attempt to provide an accurate payment for CTA. Moreover, by creating a unique APC for the procedures, we provided the means for hospitals to bill for all of the costs associated with CTA, entirely separate from their billing for CT. We cannot now assume that the claims billed for that APC are incorrect and that those billed for CT alone are correct.

We acknowledge the commenters' belief that the claims are flawed and that hospitals' divergent charge structures do not result in consistent charging for CT scans, CTAs or image reconstruction, but note that those claims comprise the data on which the OPPS relies for payment of a wide variety of hospital outpatient services. We must rely on hospitals to manage their charge structures in a manner that accurately and best reflects the services provided.

For the reasons stated above, we will not alter the payment rates for CTA, APC 0662, for CY 2005. Once again, we encourage hospitals to take all actions necessary to assure that they are billing accurately and including all resources utilized to deliver services. As discussed in detail in section III. of this preamble, we are continuing our work to refine the CCRs used for ratesetting.

e. Acoustic Heart Sound Services

Comment: Several commenters addressed the need to assign a recently created code for acoustic heart sound services for recording and computer analysis to an APC. One of the commenters indicated that the acoustic heart sound recording can be performed in the first 5 minutes of an emergency department service, together with an ECG, to enable the earliest possible detection of acute cardiac conditions. The commenter related that AMA's CPT Editorial Panel created three new Category III codes for acoustic heart sound recording that correspond to performing the procedure, physician interpretation of results, and recording and interpretation in combination. The commenter contended that one of these codes, CPT Category III code 0069T (Acoustic heart sound recording and computer analysis only) could be payable under the OPPS. The commenters noted that we did not propose an APC assignment for code 0069T in our proposed rule, and they requested an APC assignment effective January 1, 2005. One of the commenters believed that the most appropriate clinical APC to assign this code is APC 0099 (Electrocardiograms).

Response: One of the commenters, a manufacturer of the acoustic heart sound system, had previously applied for assignment of these codes to new technology APCs and we have previously evaluated the three acoustic heart sound services. We agree that only code 0069T could be payable under the OPPS. The comment that acoustic heart sound recording can be performed in the first 5 minutes of a visit by an ECG technician, together with an ECG, to enable the earliest possible detection of acute cardiac conditions, demonstrates that there are limited additional facility resources associated with the acoustic heart sound recording in conjunction with an ECG. It is also our understanding that the AMA's coding advice indicates that the acoustic heart sound services are to be used in conjunction with electrocardiography services. We believe it is worthwhile to recognize code 0069T under the OPPS to track its utilization and develop cost data. However, because the service may be performed quickly and is always accompanied by an ECG, we are assigning a packaged status to code 0069T for CY 2005. Although not separately payable under the OPPS, charges for the acoustic heart sound service will be packaged with charges for the separately payable services with which it is performed. With regards to the comment that we did not assign an APC in our proposed rule, we note that we do not recognize under the OPPS new CPT codes on a mid-year basis, even though the AMA may assign new tracking codes mid-year, as it did in this case. We assign new CPT codes on an annual basis, effective with our January 1 updates to the OPPS. Because this is a new code assignment that was not proposed in the CY 2005 proposed rule, interested parties will be able to comment on this new payment assignment in response to this final rule with comment period. This code is included in Addendum B.

f. Laparoscopic Ablation Renal Mass

Comment: Commenters asked that we move CPT code 50542 (Laparoscopic ablation renal mass) out of APC 0131 (Level II Laparoscopy) and place it in new technology APC 1574 (New Technology, Level XXXVII ($9,500–$10,000) until meaningful data can be obtained for the procedure. The commenter indicated that the procedure, including required devices, might cost approximately $10,000 because of the cost of the cryosurgery device. The commenter indicated that because they did not find any claims for this code that contained the device code for cryoablation probes (C2618), CMS should discard the data as being valid to set the weight for this code.

Response: Code 50542 represents a service that may or may not be performed with cryoablation equipment. Therefore, the absence of the device code for cryoablation probes on the

claims may be an accurate reflection of the service as it was performed. The median cost for the service appears to be appropriately placed in APC 0131 and the service is clinically coherent with other services in APC 0131. Therefore, we are retaining its placement in APC 0131 for CY 2005.

g. Intrabeam Intra-Operative Therapy

Comment. One commenter, the manufacturer of the Intrabeam Intra-Operative Therapy System, commented that this procedure, a treatment for women diagnosed with early-stage breast cancer, which is currently assigned to APC 0312 (Radioelement Applications) and is billed using CPT code 77776, is currently underpaid in APC 0312. The commenter claimed that there is no current APC mechanism to capture the cost information specific to this technology, and there are insufficient Medicare claims data at this time to make an appropriate clinical APC assignment. The commenter requested that CMS assign the Intrabeam procedure to a new technology APC. In addition, the commenter requested that CMS create two new level II HCPCS codes with the following descriptors: (1) Surgical placement and removal of intra-operative direct application x-ray source using surgical closure techniques; and (2) Administration of radiation therapy by intra-operative direct application of x-ray source.

Response. We recently received from the manufacturer of the Intrabeam Intra-Operative Radiation Therapy procedure an application for assignment of this procedure to a new technology APC. We are currently engaged in review of that application.

h. New Technology Process Issues

Comment: In response to the OPPS final rule with comment period published November 7, 2003, one commenter asserted that CMS had failed to establish an acceptable method for evaluating the costs and clinical efficacy of therapeutic medical technologies before assigning a code and New Technology APC payment under the OPPS. The commenter urged CMS to propose evaluation criteria for determining costs and clinical efficacy. In developing such criteria, the commenter encouraged CMS to require that all filings with the FDA be submitted to CMS for review and for CMS to rely heavily on the predicated device in the FDA application, require all privately held companies to provide CMS with a list of investors/owners, utilize generally accepted accounting principles, seek advice from the Medicare Coverage Advisory Committee (MCAC) or the Medical Technology Council (MTC), consider evaluation methods used by other health insurers, and consider recommendations from experts in the field. The commenter believed that if CMS had consulted the MCAC or the MTC, which advise CMS on whether specific medical treatments and technology should receive coverage, neither the MCAC nor the MTC would have recommended coverage for the CyberKnife technology, as an example.

In response to our August 16, 2004 proposed rule, one commenter, a device manufacturer, urged CMS to make changes to the pass-through and new technology application and evaluation processes to provide disclosure of applications filed with CMS and to create an opportunity for the public to comment on the disposition of proposed or final actions on applications. The commenter believed that public processes can be adopted, while retaining CMS' quarterly update capability for coding and payment.

Response: As required by section 942(a) of Pub. L. 108–173, we recently established the Council on Technology and Innovation (CTI) which brings together CMS senior leadership to better coordinate coverage, coding and payment policy to support the goal of high quality, high value care. The CTI aims to provide CMS with improved methods for developing practical information about the clinical benefits of new medical technologies to aid in achieving more efficient coverage and payment of these medical technologies. The CTI will also help identify and develop study methods for gathering reliable evidence about the risks and benefits of new and existing medical technologies that can be carried out more easily on a regular basis, such as simple protocols, registries, and other study methods.

The CTI will support CMS' efforts to develop better evidence on the safety, effectiveness, and cost of new and approved technologies to help promote their more effective use. As directed in section 942(a) of Pub. L. 108–173, the CMS Council coordinates the activities of Medicare coverage, coding, and payment for new technologies and the exchange of information on new technologies between CMS and other entities charged with making similar considerations and decisions.

G. Changes to the Inpatient List

At the APC Panel's February 2004 meeting, we advised the APC Panel of a request that we had received to move four codes for percutaneous abscess drainage 44901 (Drain append. abscess, percutaneous), 49021 (Drain abdominal abscess), 49041 (Drain percutaneous abdominal abscess), 49061 (Drain, percutaneous, retroper. abscess)) from the inpatient list and to assign them to appropriate APCs. The APC Panel also recommended that we evaluate other codes on the inpatient list for possible APC assignment and that we consider eliminating the inpatient list.

In the August 16, 2004 proposed rule, we proposed to remove the four above-cited codes and assign them to clinically appropriate APCs, as recommended by the APC Panel. We also proposed to assign code 44901 to APC 0037, code 49021 to APC 0037; code 49041 to APC 0037; and code 49061 to APC 0037. We discuss in section VII.E. of this final rule with comment period our response to the APC Panel's recommendation that we either abolish the inpatient list or evaluate it for any appropriate changes, the public comments we received on our proposal, and our responses to those public comments.

H. Assignment of ''Unlisted'' HCPCS Codes

1. Background

Some HCPCS codes are used to report services that do not have descriptors that define the exact service furnished. They are commonly called ''unlisted'' codes. The code descriptors often contain phrases such as: ''unlisted procedure,'' ''not otherwise classified,'' or ''not otherwise specified.'' The unlisted codes typically fall within a clinical or procedural category, but they lack the specificity needed to describe the resources used in the service. For example, CPT code 17999 is defined as ''Unlisted procedure, skin, mucous membrane and subcutaneous tissue.'' The unlisted codes provide a way for providers to report services for which there is no HCPCS code that specifically describes the service furnished. However, the lack of specificity in describing the service prevents us from assigning the code under the Medicare OPPS to an APC group based on clinical homogeneity and median cost.

In the August 16, 2004 proposed rule, we listed in Table 15 our proposed APC reassignments of unlisted HCPCS codes. In most cases, the unlisted codes are assigned to the lowest level, clinically appropriate APC group under the Medicare OPPS. This creates an incentive for providers to select the appropriate, specific HCPCS code to describe the service if one is available. In addition, if there is no HCPCS code that accurately describes the service, placing the unlisted code in the lowest level APC group provides an incentive

for interested parties to secure a code through the AMA's CPT process that will describe the service. Once a code that accurately describes the service is created, we can collect data on the service and place it in the correct APC based on the clinical nature of the service and its median cost.

We do not use the median cost for the unlisted codes in the establishment of the weight for the APC to which the code is assigned because, by definition of the code, we do not know what service or combination of services is reflected in the claims billed using the unlisted code.

Our review of HCPCS code assignments to APCs has revealed that there are a number of unlisted codes that are not assigned to the lowest level APC.

2. Proposed and Final Policy for CY 2005

In the August 16, 2004 proposed rule, we proposed to reassign specified unlisted HCPCS codes for CY 2005 OPPS to the lowest level APC in the clinical grouping in which the unlisted code is located. We displayed a listing of our proposed reassignment of the unlisted HCPCS codes in Table 15 of the proposed rule.

We received a number of public comments on our proposals.

Comment: Some commenters supported placing all unlisted codes in the lowest paid APC and noted that they believed that there are others, such as CPT code 43999 (Unlisted procedure stomach), which is now in APC 0141, that should be added to the list of those to be placed in the lowest APC. They recommended that CMS review the entire list of CPT codes to find others that should be moved to the lowest level APC.

Some commenters opposed placing ''unlisted'' or ''not otherwise classified'' codes in the lowest APC applicable to the category of service. They believed that it is inappropriate for CMS to develop payment policies aimed at forcing stakeholders to seek new HCPCS codes for the services being performed. They indicated that moving these codes to the lowest paying APC would decrease payment for 18 of the 20 procedures by more than 70 percent and would create a barrier to new technology. They indicated that CMS should analyze the costs associated with particular unlisted codes and assign them to APCs that appropriately reflect the cost to perform the services but in the meantime, should retain them in the existing APCs in which they are placed. One commenter urged us to follow the process that is followed for physician payment when unlisted codes are used, with fiscal intermediaries negotiating payment for the unlisted code depending on the actual service provided each time. One commenter indicated that putting the unlisted codes in the lowest level APC provides a disincentive for facilities to adopt new technology because it will not be paid adequately.

Response: We appreciate the support of the commenters who agreed with placing unlisted codes in the lowest APC for the clinical category. With respect to the comment that CPT code 43999 should be moved out of APC 0141 and should be placed in the lowest APC for gastrointestinal procedures, we have not moved it from APC 0141 because we believe that APC 0141 is the lowest APC appropriate to the clinical category of services for CPT code 43999.

We have reviewed again the proposed list of unlisted or ''not otherwise classified'' codes being moved to the lowest APC and based on that re-review have determined that we do not need to make any additional changes to that proposed list in this final rule with comment period.

By definition, ''unlisted'' or ''not otherwise classified'' codes do not describe the services being performed, and the services coded using ''unlisted'' codes vary over time as new CPT and HCPCS codes are developed. Therefore, it is impossible for any level of analysis of past hospital data to result in appropriate placement of the service for the upcoming year in an APC in which there is clinical integrity of the groups and weights. Therefore, we believe that the appropriate default, in the absence of a code that describes the service being furnished, is placement in the lowest level APC within the clinical category in which the unlisted code falls. We see no need to expand the process that is followed for physician payment of unlisted codes to the outpatient hospital setting. The assignment of the unlisted codes to the lowest level APC in the clinical category specified in the code provides a reasonable means for interim payment until such time as there is a code that specifically describes what is being paid. It encourages the creation of codes where appropriate and mitigates against overpayment of services that are not clearly identified on the bill. For new technologies that are complete services but may not have yet been granted a specific CPT code, the new technology payment mechanism is available under OPPS. Outlier payments may also be available under the OPPS in a case of an expensive new technology for which a specific code is not available and for which the costs of the new procedure exceed the outlier threshold.

Comment: One commenter indicated that the principal problem behind the use of unlisted or not otherwise classified codes is the AMA's bias against giving CPT codes for new services and technologies unless a physician group requests the code to provide a mechanism for increased physician payment for the service. The commenter asked that CMS, as the largest and most powerful licensee of CPT, influence the AMA to reduce the amount of time it takes to release new CPT codes for use in the OPPS so that the need for use of unlisted codes will diminish and the new services can be paid appropriately more quickly after they come onto the market. The commenter also asked that CMS reduce its ''barriers'' to placement of new services that require new technologies into new technology APCs or to granting of pass through payment status. The commenter indicated that lowering these ''barriers'' also would eliminate much of the use of the unlisted codes.

Response: An individual, a physician group, or a manufacturer may submit a request for a new CPT code. CMS works collaboratively with the AMA to establish new CPT codes, recognizing that the process is governed and controlled by the AMA. The AMA CPT process involves methodical consideration of new coding proposals, which may be time consuming. In addition, the payment system changes required by new codes take some time to implement. Under the OPPS, we make available the pass-through and new technology payment mechanisms, using C-codes and G-codes to allow new services, devices, and technologies to be available to clinicians and providers to facilitate appropriate payment for such services. The commenter did not indicate what ''barriers'' to placement of new services exist. However, to assist the public, we provide further guidance in section IV.C. of the preamble concerning additional comments on the topic of the surgical insertion or implantation criterion for the pass-through device payment mechanism.

In this final rule with comment period, we are adopting as final, without modification, the proposed reassignment of unlisted HCPCS codes to move all unlisted or ''not otherwise classified'' codes to the lowest level APC that is appropriate to the clinical nature of the service, as displayed in Table 15.

I. Addition of New Procedure Codes

During the first two quarters of CY 2004, we created 85 HCPCS codes that were not addressed in the November 7, 2003 final rule with comment period that updated the CY 2004 OPPS. We have designated the payment status of those codes and added them to the April and July updates of the 2004 OPPS (Transmittals 3144, 3154, 3322, and 3324). We showed these codes in Table 16 of the proposed rule. Thirty of the new codes were created to enable providers to bill for brand name drugs and to receive payments at a rate that differs from that for generic equivalents, as mandated in section 1833(t)(14)(A)(i) of the Act as added by Pub. L. 108–173. In the August 16, 2004 proposed rule, we solicited comment on the APC assignment of these services. Further, consistent with our annual APC updating policy, we proposed to assign the new HCPCS codes for CY 2005 to the appropriate APCs.

We did not receive any public comments on our proposal. Accordingly, in this final rule with comment period, we are adopting as final our proposal to assign the new HCPCS codes for CY 2005 to the appropriate APCs, as shown in Addendum B of this final rule with comment period, without modification.

J. OPPS Changes Relating to Coverage of Initial Preventive Physical Examinations and Mammography Services Under Pub. L. 108–173

1. Payment for Initial Preventive Physical Examinations (Section 611 of Pub. L. 108–173)

a. Background

Section 611 of Pub. L. 108–173 provides for coverage under Medicare Part B of an initial preventive physical examination for new beneficiaries, effective for services furnished on or after January 1, 2005. This provision applies to beneficiaries whose coverage period under Medicare Part B begins on or after January 1, 2005, and only for an initial preventive physical examination performed within 6 months of the beneficiary's initial coverage date.

Current Medicare coverage policy does not allow for payment for routine physical examinations (or checkups) that are furnished to beneficiaries. Before the enactment of Pub. L. 108–173, all preventive physical examinations had been excluded from coverage based on section 1862(a)(7) of the Act, which states that routine physical checkups are excluded services. This exclusion is specified in regulations under § 411.15(a). In addition, preventive physical examinations had been excluded from coverage based on section 1862(a)(1)(A) of the Act. This section of the Act provides that items and services must be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member (as implemented in regulations under § 411.15(k)).

Coverage of initial preventive physical examinations is provided only under Medicare Part B. As provided in the statute, this new coverage allows payment for one initial preventive physical examination within the first 6 months after the beneficiary's first Part B coverage begins, although that coverage period may not begin before

January 1, 2005. We also note that Pub. L. 108–173 did not make any provision for the waiver of the Medicare coinsurance and Part B deductible for the initial preventive physical examination. Payment for this service would be applied to the required Medicare Part B deductible, which is $110 for CY 2005, if the deductible has not been met, and the usual coinsurance provisions would apply.

b. Amendments to Regulations

In the August 16, 2004 proposed rule, we proposed to amend our regulations to add a new § 410.16 that would provide for coverage of initial preventive physical examinations in various settings, including the hospital outpatient department, as specified in the statute, and specify the condition for coverage and limitation on coverage. In addition, we proposed to conform our regulations on exclusions from coverage under § 411.15(a)(1) and § 411.15(k) to the provisions of section 611 of Pub. L. 108–173. Specifically, we proposed to specify an exception to the list of examples of routine physical checkups that are excluded from coverage under § 411.15(a) and to add a new exclusion under § 411.15(k)(11).

We proposed to amend § 419.21 of the OPPS regulations to add a new paragraph (e) to specify payment for an initial preventive physical examination as a Medicare Part B covered service under the OPPS if the examination is furnished within the first 6 months of the beneficiary's first Medicare Part B coverage.

We noted that the initial preventive physical examination was also addressed in detail in our proposed rule to update the Medicare Physician's Fee Schedule for CY 2005 (69 FR 47487, August 5, 2004). However, because we believe the same elements of the initial physical examination furnished in a physician's office would also apply when the examination is performed in a hospital outpatient clinic, we proposed to revise the applicable regulations to reflect this requirement.

Section 611(b) of Pub. L. 108–173 defines an ''initial preventive physical examination'' to mean physicians'' services consisting of—

(1) A physical examination (including measurement of height, weight, blood pressure, and an electrocardiogram (EKG), but excluding clinical laboratory tests) with the goal of health promotion and disease detection; and

(2) Education, counseling, and referral with respect to screening and other preventive coverage benefits separately authorized under Medicare Part B, excluding clinical laboratory tests.

Specifically, section 611(b) of Pub. L. 108–173 provides that the education, counseling, and referral services with respect to the screening and other preventive services authorized under Medicare Part B include the following:

(1) Pneumococcal, influenza, and hepatitis B vaccine and their administration;

(2) Screening mammography;

(3) Screening pap smear and screening pap smear and screening pelvic examination;

(4) Prostate cancer screening tests;

(5) Colorectal cancer screening tests;

(6) Diabetes outpatient self-management training services;

(7) Bone mass measurements;

(8) Screening for glaucoma;

(9) Medical nutrition therapy services for individuals with diabetes and renal disease;

(10) Cardiovascular screening blood tests; and

(11) Diabetes screening tests.

Section 611(d)(2) of Pub. L. 108–173 amended sections 1861(s)(2)(K)(i) and (s)(2)(K)(ii) of the Act to specify that the services identified as physicians' services and referred to in the definition of initial preventive physical examination include services furnished by a physician assistant, a nurse practitioner, or a clinical nurse specialist. We refer to these professionals as ''qualified nonphysician practitioners.''

Based on the language of the statute, our review of the medical literature, current clinical practice guidelines, and United States Preventive Services Task Force recommendations, we proposed (under proposed new § 410.16(a), Definitions) to interpret the term ''initial preventive physical examination'' for purposes of this new benefit to include all of the following services furnished by a doctor of medicine or osteopathy or a qualified nonphysician practitioner:

(1) Review of the beneficiary's comprehensive medical and social history. We proposed to define ''medical history'' to include, as a minimum, past medical and surgical history, including experience with illnesses, hospital stays, operations, allergies, injuries, and treatments; current medications and supplements, including calcium and vitamins; and family history, including a review of medical events in the patient's family, including diseases that may be hereditary or place the individual at risk. We proposed to define ''social history'' to include, at a minimum, history of alcohol, tobacco, and illicit drug use; work and travel history; diet; social activities; and physical activities.

(2) Review of the beneficiary's potential (risk factors) for depression (including past experiences with depression or other mood disorders) based on the use of an appropriate screening instrument that the physician or qualified nonphysician practitioner may select from various available standardized screening tests for this purpose, unless the appropriate screening instrument is defined through the national coverage determination (NCD) process.

(3) Review of the beneficiary's functional ability and level of safety (that is, at a minimum, a review of the following areas: Hearing impairment, activities of daily living, falls risk, and home safety), based on the use of an appropriate screening instrument, which the physician or qualified nonphysician practitioner may select from various available standardized screening tests for this purpose, unless the appropriate screening instrument is further defined through the NCD process.

(4) An examination to include measurement of the beneficiary's height, weight, blood pressure, a visual acuity screen, and other factors as deemed appropriate, based on the beneficiary's comprehensive medical and social history and current clinical standards.

(5) Performance of an electrocardiogram and interpretation.

(6) Education, counseling, and referral, as deemed appropriate, based on the results of elements (1) through (5) of the definition of the initial preventive physical examination.

(7) Education, counseling, and referral, including a written plan for obtaining the appropriate screening and other preventive services, which are also covered as separate Medicare Part B benefits; that is, pnuemococcal, influenza, and hepatitis B vaccines and their administration, screening mammography, screening pap smear and screening pelvic exams, prostate cancer screening tests, diabetes outpatient self-management training services, bone mass measurements, screening for glaucoma, medical nutrition therapy services, cardiovascular screening blood tests, and diabetes screening tests.

As we indicated in the OPPS proposed rule, we are addressing the public comments that we received on our proposal to revise our regulations to include specific coverage of initial preventive physical examinations under Medicare Part B and finalizing our coverage policy for initial preventive physical examinations in the final rule for the CY 2005 Medicare Physician Fee

Schedule published elsewhere in this issue.

c. Assignment of New HCPCS Codes for Payment of Initial Preventive Physical Examinations

There was no CPT code that contained the specific elements included in the initial preventive physical examination. Therefore, in the August 16, 2004 proposed rule, we proposed to establish a new HCPCS code to be used to bill for the new service under both the Medicare Physician Fee Schedule and the OPPS. We proposed a code, GXXXX, for the full service, including an EKG, but not including the other previously mentioned preventive services that are currently separately covered and paid under the Medicare Part B screening benefits. When these other preventive services are performed, they should be billed using the existing appropriate HCPCS and CPT codes.

For payment under the Medicare Physician Fee Schedule, relative value units were proposed for the new HCPCS code for the initial preventive physical based on equivalent resources and work intensity to those contained in CPT evaluation and management code 99203 (New patient, office or other outpatient visit) and CPT 93000 (Electrocardiogram, complete) (69 FR 47487, August 5, 2004). The ''technical component'' of the Medicare Physician Fee Schedule (the costs other than those allocated for the physician's professional services and professional liability insurance which are billed and paid for separately, when appropriate) is the portion of the fee schedule payment that is most comparable to what Medicare pays under the OPPS. The estimated ''technical component'' of the Medicare Physician Fee Schedule payment for GXXXX was between $50 and $100.

d. APC Assignment of Initial Preventive Physical Examination

Given our lack of cost data to guide assignment of the new code to a clinically appropriate APC, in our proposed rule, we proposed assignment of the new code GXXXX (Initial preventive physical examination) to New Technology APC 1539 (New Technology, Level II) with a payment level between $50 and $100. We believed that the proposed temporary assignment to a new technology APC would allow us to pay for the new benefit provided in the OPD while we accrued claims data and experience on which to base a clinically relevant APC assignment in the future.

We received a number of public comments regarding the proposed payment for the initial preventive physical examination and its proposed APC placement.

Comment: A number of commenters highlighted billing and operational concerns with the definition of a single HCPCS code, GXXXX, for the initial preventive physical examination. The commenters explained that, in hospitals where the EKG was performed in a separate department from the location of the physical examination, the technician charging for the service would have no way of distinguishing an EKG related to the initial preventive physical examination from other EKG tracings performed for diagnostic purposes, for which the hospital would bill for that specific service. The commenters noted that physicians often send their patients to hospitals for the EKG tracing, and if hospitals performed the EKG associated with the initial preventive physical examination in this context, they would have no way to bill for the EKG. The commenters presented various alternative coding possibilities for our consideration to address these situations.

Response: Section 611 of Pub. L. 108–173 does require a screening EKG to be performed as part of the initial preventive physical examination visit. In view of the different circumstances that may occur when performing the full initial preventive physical examination, we are establishing four new G codes for the initial preventative physical examination for CY 2005.

- G0344: Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 6 months of Medicare Part B enrollment. This code is assigned a status indicator ''V'' for the OPPS.
- G0366: Electrocardiogram, routine EKG with at least 12 leads; performed as a component of the initial preventive physical examination with interpretation and report. This code is assigned a status indicator ''B'' for the OPPS.
- G0367: Electrocardiogram, tracing only, without interpretation and report, performed as a component of the initial preventive physical examination. This code is assigned status indicator ''S'' for the OPPS.
- G0368: Electrocardiogram, interpretation and report only, performed as a component of the initial preventive physical examination. This code is assigned status indicator ''A'' for the OPPS.

In the hospital, performance of the complete initial preventive physical examination service would be coded using both the G0344 and G0367 codes. As required by the statute, the new codes describe the visit and the EKG, but not the other previously mentioned preventive services that are currently separately covered and paid under the Medicare Part B screening benefits. When these other preventive services are performed, they should be billed using the existing appropriate HCPCS and CPT codes.

To comply with Pub. L. 108–173, the initial preventive physical examination must include the EKG, regardless of whether a diagnostic EKG had previously been performed. Both components of the initial preventive physical examination, the examination and the EKG, must be performed to fulfill the statutory benefit for either of the components to be paid. Billing instructions for providers will be issued.

In addition to our decision to create two codes for hospitals to report for performance of the initial preventive physical examination service, we are assigning the codes to appropriate APCs as follows: G0344 is assigned to APC 0601 (Mid Level Clinic Visits), and G0367 is assigned to APC 0099 (Electrocardiograms). These APC assignments result in a total payment of approximately $78, slightly more than the $75 payment rate proposed for the comprehensive initial preventive physical examination service in the proposed rule.

Comment: A few commenters requested that CMS increase the payment for the initial preventive physical examination benefit and stated that the payment rate set is too low to cover the required clinical resources.

Response: As stated in our proposed rule, the payment rate for the comprehensive initial preventive physical examination service under the OPPS was based on the rate proposed under the Medicare Physician Fee Schedule, which utilized estimates of necessary resources for the initial preventive physical examination benchmarked against the resources required to deliver existing evaluation and management and electrocardiogram services in the physician office. Based on comments concerning the adequacy of our proposed payment for the comprehensive initial preventive physical examination service and our decision to separate the examination service from the EKG for coding and payment purposes, we explicitly compared the resources we anticipated for the examination service delivered in the hospital to the OPPS median cost for the existing new office or other outpatient visit service which was used as a crosswalk. CPT code 99203 (Office

or other outpatient visit for a new patient) is in APC 0601, which has a median cost of $57.66. The AMA/Specialty Society RVS Update Committee survey data for code 99203 showed 51 minutes of staff time, and we believe the initial preventive physical examination will reflect comparable time and consumption of hospital resources. As we expect the hospital resources utilized for code G0344 to be similar to those needed for clinic visits for which we have historical hospital cost data, we will place G0344 in APC 0601 rather than in a new technology APC as we proposed for the initial preventive physical examination comprehensive service. We expect the hospital resources utilized for the screening EKG tracing, code G0367, to be very similar to those necessary for a diagnostic EKG tracing, code 93005 and assigned to APC 0099. Together these APCs (0601 and 0099) will pay approximately $78, several more dollars than we proposed for the comprehensive service. We will monitor our claims data for the initial preventive physical examination services as hospitals gain experience delivering the services. We are finalizing our placement of code G0344 in APC 0601 for CY 2005 and code G0367 in APC 0099 for 2005.

Comment: Several commenters asked that CMS provide explicit instructions and guidelines, respectively, to providers and beneficiaries regarding the details of what will be included in the new initial preventive physical examination benefit, the eligibility requirements, and how providers should bill Medicare for the new service. One commenter asked if the preventive physical examination will be subject to the evaluation and management guidelines.

Response: We will release appropriate manual and transmittal instructions and information from the CMS educational components for the medical community, including a MedLearn Matters article and fact sheets such as the ''2005 Payment Changes for Physicians and Other Providers: News From Medicare for 2005''. The medical community can join this effort in educating physicians and beneficiaries by their own communications, bulletins, or other publications. In addition, we have specifically included information on the new initial preventive physical examination benefit in the 2005 version of the *Medicare and You Handbook* and revised booklet, *Medicare's Preventive Services*. A new 2-page fact sheet on all of the new preventive services, including the initial preventive physical examination benefit, will be available this Fall, and a bilingual brochure for Hispanic beneficiaries will also be available in the near future. Information will be disseminated by CMS regional offices, State Health Insurance Assistance Programs (SHIPs), and various partners at the national, State, and local levels. Information on the new benefit will also be made available to the public through Web site, *http://www.medicare.gov*, the partner Web site to *http://www.cms.hhs.gov*, the toll free number 1–800–MEDICARE, numerous forums hosted by CMS, and conference exhibits and presentations.

The initial preventive physical examination will not be subject to each hospital's internal set of evaluation and management guidelines that hospitals were instructed to develop at the implementation of the OPPS in the August 7, 2000 final rule (65 FR 18451) because we have defined one explicit service, without levels.

Comment: Several commenters asked how providers of initial preventive physical examination services will know if a particular beneficiary is eligible to receive the new benefit due to the statutory time and coverage frequency (one-time benefit) limitations.

Response: The statute provides for coverage of a one-time initial preventive physical examination that must be performed for new beneficiaries by qualified physicians or certain specified nonphysician practitioners within the first 6 month period following the effective date of the beneficiary's first Medicare Part B coverage. Because physicians or qualified nonphysician practitioners may not have the complete medical history for a particular new beneficiary, including information on possible use of the one-time benefit, these clinicians are largely relying on their own medical records and the information the beneficiary provides to them in establishing whether or not the initial preventive physical examination benefit is still available to a particular individual and has not been performed by another qualified practitioner. Because a second initial preventive physical examination will always fall outside the definition of the new Medicare benefit, an advance beneficiary notice (ABN) need not be issued in those instances where there is doubt regarding whether the beneficiary has previously received an initial preventive physical examination. The beneficiary will always be liable for a second initial preventive physical examination, no matter when it is conducted. However, for those instances where there is sufficient doubt as to whether the statutory 6-month period has lapsed, the physician or qualified nonphysician practitioner should issue an ABN to the beneficiary that indicates that Medicare may not cover and pay for the service. If the physician or qualified nonphysician practitioner does not issue an ABN to the beneficiary and Medicare denies payment for the service because the statutory time limitation for conducting the initial preventive physical examination has expired, the physician or qualified nonphysician practitioner may be held financially liable.

Comment: One commenter recommended that CMS compare the requirements of the initial preventive physical examination to the contemplated requirements for similar but not-yet-disclosed facility-specific evaluation and management level definitions. The commenter wanted to ensure that the technical requirements are comparable between the new benefit and similar evaluation and management service definitions being contemplated by CMS.

Response: We will take the commenter's recommendation into consideration in our ongoing work to develop new evaluation and management codes for the OPPS.

2. Payment for Certain Mammography Services (Section 614 of Pub. L. 108–173)

Section 614 of Pub. L. 108–173 amended section 1833(t)(1)(B)(iv) of the Act to provide that screening mammography and diagnostic mammography services are excluded from payment under the OPPS. This amendment applies to screening mammography services furnished on or after December 8, 2003 (the date of the enactment of Pub. L. 108–173), and in the case of diagnostic mammography, to services furnished on or after January 1, 2005. As a result of this amendment, both screening mammography and diagnostic mammography will be paid under the Medicare Physician Fee Schedule.

In the August 16, 2004 proposed rule, we proposed to amend § 419.22 of the regulations by adding a new paragraph(s) to specify that both screening mammography and diagnostic mammography will be excluded from payment under the OPPS, in accordance with section 614 of Pub. L. 108–173. We received a few public comments on our proposal.

Comment: A few commenters expressed support for the movement of payment for diagnostic mammograms from the OPPS to the Medicare Physician Fee Schedule.

Response: We appreciate the commenters' support. Additional

discussion of section 614 of Pub. L. 108–173 can be found in the final rule for the CY 2005 Medicare Physician Fee Schedule published elsewhere in this issue.

Comment: A few commenters recommended that the payment rates for mammography be increased. The commenters stated that beneficiary access to mammography is being limited due to a growing number of radiologists who refuse to read mammograms due to low payment and high malpractice rates and recent closure of a large number of centers across the country.

Response: We set the payment rates for diagnostic mammography based on hospital claims data, consistent with the payment methodology for OPPS services. In fact, in accordance with section 614 of Pub. L. 108–173, which requires that diagnostic mammography be paid now under the Medicare Physician Fee Schedule, payment is set using an entirely different process. This statutory change in the payment process results in a somewhat increased payment for mammography procedures from that under the OPPS.

Comment: One commenter asked CMS to clarify that the increase in payment for diagnostic mammography furnished in the hospital outpatient department does not ''come out of the [Medicare Physician Fee Schedule] budget.''

Response: The increase in payment for diagnostic mammography furnished in the hospital outpatient department has no effect on payment for Medicare Physician Fee Schedule services. We are using the Medicare Physician Fee Schedule rate to set Medicare payment for diagnostic mammography furnished in the hospital outpatient department, as required by statute. Further, we are not including diagnostic mammography in our model for setting the relative weights under the OPPS. Thus, the increase in payment for diagnostic mammography furnished in the hospital outpatient department also has no effect on payment for any other OPPS services.

In this final rule, we are adopting, as final without modification, our proposed revision of § 419.22 to incorporate the provisions of section 614 of Pub. L. 108–173.

III. Recalibration of APC Relative Weights for CY 2005

A. Database Construction

Section 1833(t)(9)(A) of the Act requires that the Secretary review and revise the relative payment weights for APCs at least annually, beginning in CY 2001 for application in CY 2002. In the April 7, 2000 OPPS final rule (65 FR 18482), we explained in detail how we calculated the relative payment weights that were implemented on August 1, 2000, for each APC group. Except for some reweighting due to APC changes, these relative weights continued to be in effect for CY 2001. This policy is discussed in the November 13, 2000 interim final rule (65 FR 67824 through 67827).)

In the August 16, 2004 OPPS proposed rule, we proposed to use the same basic methodology that we described in the April 7, 2000 final rule to recalibrate the relative APC weights for services furnished on or after January 1, 2005, and before January 1, 2006. That is, we proposed to recalibrate the weights based on claims and cost report data for outpatient services. We proposed to use the most recent available data to construct the database for calculating APC group weights. We provide a complete description of the data processes we proposed to use for the creation of the CY 2005 OPPS payment rates in the August 16, 2004 proposed rule (69 FR 50448).

For the purpose of recalibrating APC relative weights for CY 2005 displayed in this final rule with comment period, we used the most recent available claims data, which were the approximately 132 million final action claims for hospital OPD services furnished on or after January 1, 2003, and before January 1, 2004. Of the 132 million final action claims for services provided in hospital outpatient settings, 106 million claims were of the type of bill potentially appropriate for use in setting rates for OPPS services (but did not necessarily contain services payable under the OPPS). Of the 106 million claims, we were able to use 51 million whole claims (from which we created 84 million single procedure claim records) to set the final OPPS CY 2005 APC relative weights. We used claims from this period that had been processed before June 30, 2004, to calculate the APC weights and payments contained in Addenda A and B of this final rule with comment period.

We received one general public comment on our proposed OPPS database construction for CY 2005 discussed in the August 16, 2004 proposed rule.

Comment: One commenter suggested that CMS use a nationally representative sample of hospitals from which cost data could be collected for purposes of setting relative weights. The commenter suggested that such a sample could be used to validate findings from the larger claims data set or to establish median costs that more accurately reflect the costs of providing device-related procedures and other outpatient services, or both. As an alternative, the commenter suggested conducting a demonstration project using a sample of hospitals that would receive small grants for set up and training to test the feasibility of collecting a valid reliable and manageable data set from which to develop payment rates.

Response: We believe that the Medicare hospital outpatient claims and hospital cost reports are the best, nationally representative database of such information at present. Nevertheless, we acknowledge that an approach that would involve the collection of additional hospital data from a representative sample could have some merit. However, in addition to the resources that would be required for us to pursue such an approach, we also are concerned about the costs to hospitals associated with such an additional data collection effort. Nevertheless, we remain interested and invite additional suggestions from hospitals and other stakeholders on ways to enhance the data we now use to set relative weights for services paid under the OPPS.

1. Treatment of Multiple Procedure Claims

For CY 2005, we proposed to continue to use single procedure claims to set the medians on which the weights would be based (69 FR 50474). As indicated in the August 16, 2004 proposed rule, we received many requests that we ensure that the data from claims that contain charges for multiple procedures were included in the data from which we calculate the CY 2005 relative payment weights (69 FR 50474). Requesters believe that relying solely on single procedure claims to recalibrate APC relative weights fails to take into account data for many frequently performed procedures, particularly those commonly performed in combination with other procedures. They believe that, by depending upon single procedure claims, we base relative payment weights on the least costly services, thereby introducing downward bias to the medians on which the weights are based.

We agree that, optimally, it is desirable to use the data from as many claims as possible to recalibrate the relative payment weights, including those with multiple procedures. As discussed in the explanation of single procedure claims below, we have used the date of service on the claims and a list of codes to be bypassed to create ''pseudo'' single claims from multiple procedure claims. We refer to these newly created single procedure claims

as ''pseudo'' singles because they were submitted by providers as multiple procedure claims.

2. Use of Single Procedure Claims

We use single procedure claims to set the median costs for APCs because we are, so far, unable to ensure that packaged costs can be correctly allocated across multiple procedures performed on the same date of service. However, bypassing specified codes that we believe do not have significant packaged costs enables use of more data from multiple procedure claims. For CY 2003, we created ''pseudo'' single claims by bypassing HCPCS codes 93005 (Electrocardiogram, tracing), 71010 (Chest x-ray), and 71020 (Chest x-ray) on a submitted claim. However, we did not use claims data for the bypassed codes in the creation of the median costs for the APCs to which these three codes were assigned because the level of packaging that would have remained on the claim after we selected the bypass code was not apparent and, therefore, it was difficult to determine if the medians for these codes would be correct.

For CY 2004, we created ''pseudo'' single claims by bypassing these three codes and also by bypassing an additional 269 HCPCS codes in APCs. We selected these codes based on a clinical review of the services and because it was presumed that these codes had only very limited packaging and could appropriately be bypassed for the purpose of creating ''pseudo'' single claims. The APCs to which these codes were assigned were varied and included mammography, cardiac rehabilitation, and level I plain film x-rays. To derive more ''pseudo'' single claims, we also broke claims apart where there were dates of service for revenue code charges on that claim that could be matched to a single procedure code on the claim on the same date.

As in CY 2003, we did not include the claims data for the bypassed codes in the creation of the APCs to which the 269 codes were assigned because, again, we had not established that such an approach was appropriate and would aid in accurately estimating the median cost for that APC. For CY 2004, from about 16.3 million otherwise unusable claims, we used about 9.5 million multiple procedure claims to create about 27 million ''pseudo'' single claims. For the CY 2005 OPPS rates in this final rule with comment period, from about 24 million otherwise unusable claims, we used about 18 million multiple procedure claims to create about 52 million ''pseudo'' single claims.

For CY 2005, we proposed to continue using date of service matching as a tool for creation of ''pseudo'' single claims and take a more empirical approach to creating the list of codes that we would bypass to create ''pseudo'' single claims. The process we proposed for CY 2005 OPPS resulted in our being able to use some part of 89 percent of the total claims eligible for use in OPPS ratesetting and modeling in developing this final rule with comment period. In CY 2004, we used some part of the data from 82 percent of eligible claims. This process enabled us to use, for CY 2005, 84 million single bills for ratesetting: 52 million ''pseudo'' singles and 33 million ''natural'' single bills.

We proposed to bypass the 383 codes, which we published in Table 17 of the proposed rule (69 FR 50476 through 50486), to create new single claims and to use the line-item costs associated with the bypass codes on these claims in the creation of the median costs for the APCs into which they are assigned (69 FR 50474 through 50486). Of the codes on this list, only 123 (32 percent) were used for bypass in CY 2004.

We developed the proposed bypass list using four criteria:

a. We developed the following empirical standards by reviewing the frequency and magnitude of packaging in the single claims for payable codes other than drugs and biologicals. We proposed to use these standards to determine codes that could be bypassed to create ''pseudo'' single claims for median setting. (More explanation regarding the use of these standards is provided in our August 16, 2004 OPPS proposed rule (69 FR 50475).)

- There were 100 or more single claims for the code.
- Five percent or fewer of the single claims for the code had packaged costs on that single claim for the code.
- The median cost of packaging observed in the single claim was equal to or less than $50.
- The code is not a code for an unlisted service.

b. We examined APCs relying on a low volume of single claims, and it became apparent that several radiological supervision and interpretation codes were commonly billed with the procedural codes in the APCs. We then reviewed all radiological supervision and interpretation codes to assess their viability as bypass codes. For the codes included on the proposed list published in Table 17, we determined that, generally, the packaging on claims, including these radiological supervision and interpretation codes, should be associated with the procedure performed.

c. We examined radiation planning and related codes provided by a professional organization. In the organization's opinion, the codes could safely be bypassed and used without packaging to set medians for the APCs into which these codes are assigned. Many of the codes the organization recommended met our criteria under item a., and the remaining codes were close. Therefore, after reviewing such codes, we proposed to adopt as bypass codes all radiation planning and related codes as provided by the organization.

d. We included HCPCS codes 93005 and 71010. These codes have been bypassed for the past 3 years and generate a significant amount of new single claims because they are very commonly done on the same date of surgery. They have low median packaged costs and a low percentage of single claims with any packaged costs, 6 percent and 18 percent, respectively.

In the August 16, 2004 proposed rule, we invited public comment on the ''pseudo'' single process, including the bypass list and the criteria. We received a number of public comments on our proposals.

Comment: Some commenters stated that CMS should provide an impact analysis by medical specialty and APC for the bypass list. Commenters indicated that 26 radiation oncology codes, which represent over 40 percent of the radiation oncology codes, are on the proposed list and that it is not clear what impact the inclusion of these codes will have on payment for radiation oncology procedures.

Response: The OPPS pays hospitals for the hospital services they furnish and, therefore, we focus our impact analysis on the providers who provide services and to whom the payment is made. It is impractical to do an impact analysis by hospital category, much less medical specialty and APC, for each and every step of the process we use to establish medians on which we base our payment rates.

However, to facilitate the public's ability to do specialized detailed analyses beyond what is practical for us to do, we make available the claims we use to set median costs. Specifically, the claims we used to set the payment rates for CY 2004 OPPS and CY 2005 OPPS are available to the public for public use in extended and focused analysis at any level of interest. Moreover, exhaustive discussion of our process is contained in both the CY 2004 and CY 2005 OPPS final rule with comment period claims accounting documents that are available on *www.cms.hhs.gov/providers/*

hopps.asp, to facilitate the use of such claims for further analysis. Therefore, we provide to the public the data needed for a focused exhaustive analysis of impact by medical specialty or on any basis on which any party with a special interest has a particular concern.

The 383 bypass codes presented in Table 17 of the proposed rule represent the result of an empirical and clinical analysis that identified HCPCS codes for which we could not observe significant packaged costs in the CY 2003 claims data and for which there was no clinical reason that a procedure or service should have significant packaged costs. These criteria are detailed in the proposed rule and were carefully chosen to avoid the inaccurate redistribution of packaged costs (69 FR 50474 through 50475). Inclusion of a HCPCS code on the bypass list is not predicated on the median impact, but rather empirical evidence or clinical arguments that these procedures do not contain significant packaged costs that would call into question their appropriateness for inclusion on the bypass list.

Comment: Most commenters supported the use of a bypass list and date of service matching as a way to use more data from multiple claims. One commenter was concerned that the bypass list may inappropriately break multiple claims into single procedure claims by assuming that the amount and frequency of packaging on procedures found on single bills was the same as would exist on multiple procedure claims. The commenter stated that claims involving multiple APCs are by their nature the most complex combinations of services requiring many more resources than if they were performed singly and that, therefore, CMS may be incorrect to generalize that the packaging found on single bills would also be present for the same procedure done as a multiple procedure. Another commenter opposed the use of the bypass list, citing it as a ''bandaid'' and as not a satisfactory way to deal with the presence of multiple procedure claims over the long run. The commenter indicated that, given the OPPS experience gained over the past years, CMS should be able to perform a study of multiple procedure claims that provides a mechanism for using them.

Response: We have retained and used the proposed bypass methodology in creating the median costs used to set the CY 2005 OPPS relative payment weights in this final rule with comment period. We believe that the use of the bypass list gives us considerably more single claims for ratesetting than had we not used it and that it is a valid representation of codes for which there is seldom any packaging and for which the packaging that exist, is minimal. Given the inability of any concrete processes that provide a way to attribute packaging on multiple bill claims, we believe that the best and only alternative available is for us to use the packaging on single bill claims to determine whether a code can be safely bypassed in the creation of ''pseudo single'' claims for median setting. We continue to examine the means by which we could use all multiple procedure claims and to invite additional recommendations from the public on how we might do so.

Comment: One commenter strongly objected to any method of using multiple procedure claims that would rely in any way on payment weights because the commenter believed that any such method would compound problems in the data by carrying them forward into future years.

Response: We expect to examine a number of different ways of using the data from multiple procedure claims and will evaluate each carefully before we discard any particular process. As we have in the past for updating the OPPS, if we decide to pursue any particular process change, we will discuss our findings and any proposed changes to the OPPS median development process in the proposed rule and consider public comments on the proposal before we change the process.

Comment: Some commenters indicated that the use of single procedure claims means that the most typical correctly coded claims are not used for many services. They added that many of the procedures that implant a device are actually replacing an existing device, which means that the removal of the device is billed with one code while the implant is billed with another code on the same claim on the same date of service, thereby creating a multiple procedure claim that will become two ''pseudo'' single claims under the CMS process. The commenters also stated that services that are provided only in addition to other services, such as noncoronary intravascular ultrasound, can never be correctly coded as a single procedure claim. They contended that such correctly coded claims will be multiple major procedure claims and thus will not be used for median cost setting. The commenters stated that the nature of some services being routinely performed in combination with other services means that, under the current CMS methodology, only small percentages of the claims will be used to set the medians and that those claims are likely to be the incorrectly coded claims.

Response: We recognize that there are categories of service that are typically done in combination with other services at such frequency that acquiring valid single procedure claims is very difficult, if not impossible. We are planning to explore these services for which the medians are set based on a small percentage of the claims that are submitted with the APC Panel in the future to determine what methods may be available to deal effectively with these situations.

In the August 16, 2004 proposed rule, we also discussed suggestions that we had received for creating ''pseudo'' single claims, which included recommendations that the costs in packaged revenue codes and packaged HCPCS codes be allocated separately to paid HCPCS codes based on the prior year's payment weights or payment rates for the single procedures. Still other suggestions recommended that we allocate the packaged costs in proportion to the charges or to the costs for the major procedures based on the current year's claims. We are concerned that using a prior year's median costs, relative weights or payment rates as the basis to allocate current year's packaged costs to current year costs for payable HCPCS codes may not be appropriate. For example, if two procedures are performed and one uses an expensive device, this methodology would split the costs of the device between the service that uses the device and a service that does not use the device, thus resulting in an incorrect allocation of the packaged costs. For this reason, we did not propose to incorporate these suggestions in our ratesetting methodology. However, we stated in our proposed rule that we intended to examine them more thoroughly.

We did not propose a methodology beyond use of dates of service and the expanded bypass list. However, we solicited specific proposals that would be provided as comments on how multiple procedure claims can be better used in calculating the relative payment weights.

Comment: One commenter asked that CMS clarify whether the ''pseudo'' single claims data for CPT codes 93307 (Echo exam of heart), 93303 (Echo transthoracic), and 93320 (Doppler echo exam, heart) were used in setting APC relative weights and, if so, the impact of this proposal. Another commenter asked that CMS clarify whether HCPCS codes for drugs, radiopharmaceuticals, and blood products were bypassed to create ''pseudo'' singles. The commenter

believed that packaged costs are never associated with these items; therefore, they should always be bypassed.

Response: The claims data for the three referenced CPT codes were used in setting the APC relative weights for these services. They were included in the list of bypass codes because they met the criteria for inclusion, which focused on selecting only claims that often did not include packaged services and for which packaging on the single bills was very modest.

We agree with the commenter that drugs, radiopharmaceuticals, and blood products would rarely be expected to have associated packaged costs. Presence of codes for these items on a claim does not result in a multiple claim, as we do not consider the items to be major procedures.

Comment: One commenter asked that CMS add CPT codes 76362 (Computed tomography guidance for, and monitoring of, visceral tissue ablation), 76394 (Magnetic resonance guidance for, and monitoring of, visceral tissue ablation), and 76940 (Us guide, tissue ablation) to the bypass list because they are often billed with CPT code 47382 (Radiofrequency ablation procedures of the liver) and CPT code 20982 (Radiofrequency ablation procedures of the bone). The commenter believed that this approach would create more single claims for those codes.

Response: The three CPT codes that the commenter requested we add to the bypass list did not have sufficient claims volume at the time the bypass list was created to meet the criteria for inclusion. When we next review the bypass list, we will examine these codes for inclusion on any future bypass list.

Comment: One commenter objected to use of data-based criteria as the only determinant of whether services are included on the bypass list. Specifically, the commenter objected to the inclusion of CPT evaluation and management codes 99213 and 99214 on the bypass list even though CPT codes 99211, 99212, and 99215 are not included on the list. The commenter believed that CMS should not assume that these codes do not typically have packaged costs associated with them because less than 5 percent of the claims with the code appeared on a claim with packaged charges. The commenter believed that all codes that ''meet the 5 percent data test'' should be qualitatively reviewed to determine whether clinical practice and charging methods support the assertion that packaged dollars are not related to the service proposed for the bypass list. The commenter also recommended that CMS include on the bypass list ''add-on'' CPT codes that have a status indicator of ''N'' so that the remaining packaged services on the claim would be packaged to the main procedure if that were the only other APC reported on the claim. The commenter recommended that ''add-on'' CPT codes with APC payment should be accepted as bypass codes if the only other CPT code on the claim is the main procedure.

Response: The commenter is incorrect in believing that the only criterion used to determine if a code were suitable for inclusion on the bypass list was whether 5 percent of the claims for the code appeared with packaged charges. As we discussed above, there were a number of criteria that had to be met which were focused on ensuring that packaging did not occur often or in significant amounts when it did occur. We reviewed the clinical appropriateness of the codes that were derived from applying the criteria, and did not remove any as a result of the review. Given the large volume of evaluation and management services, we believe that the evaluation and management codes we included on the bypass list were appropriate for inclusion. As we discussed with regard to the radiological supervision and evaluation codes and the simple EKG and chest x-ray codes, clinical practice and charging methods were also factors in determining inclusion on the bypass list.

With respect to the add-on codes, those that have a status indicator of ''N'' would not cause a claim to be a multiple procedure claim (because they are not separately paid). Thus it would not be useful to add them to the bypass list (which is intended to break multiple procedure claims into two single claims). Those add-on codes that are paid separately may or may not have packaging associated with them. Thus, it would be incorrect to assume that all packaging on the claim would be associated with the core procedure to which the add-on code is an appendage. For example, insertion of a left ventricular pacing lead as an add-on procedure to the insertion of a cardioverter-defibrillator carries considerable packaged costs with the add-on service, such as the device, significant additional operating room time, and extra drugs and medical supplies, and, therefore, it would not be suitable for inclusion on the bypass list.

After carefully reviewing all public comments received, we are adopting as final the bypass codes listed in Table 16 below.

BILLING CODE 4120–01–P

Table 16.—HCPCS Bypass Codes for Creating "Pseudo" Single Claims for Calculating Median Costs

HCPCS Code	Short Description
11719	Trim nail(s)
11720	Debride nail, 1-5
11721	Debride nail, 6 or more
31579	Diagnostic laryngoscopy
54240	Penis study
70100	X-ray exam of jaw
70110	X-ray exam of jaw
70130	X-ray exam of mastoids
70140	X-ray exam of facial bones
70150	X-ray exam of facial bones
70160	X-ray exam of nasal bones
70200	X-ray exam of eye sockets
70210	X-ray exam of sinuses
70220	X-ray exam of sinuses
70250	X-ray exam of skull
70260	X-ray exam of skull
70328	X-ray exam of jaw joint
70330	X-ray exam of jaw joints
70355	Panoramic x-ray of jaws
70360	X-ray exam of neck
70371	Speech evaluation, complex
70450	Ct head/brain w/o dye
70480	Ct orbit/ear/fossa w/o dye
70486	Ct maxillofacial w/o dye
70544	Mr angiography head w/o dye
71010	Chest x-ray
71015	Chest x-ray
71020	Chest x-ray
71021	Chest x-ray
71022	Chest x-ray
71030	Chest x-ray
71034	Chest x-ray and fluoroscopy
71090	X-ray & pacemaker insertion
71100	X-ray exam of ribs
71101	X-ray exam of ribs/chest
71110	X-ray exam of ribs
71111	X-ray exam of ribs/ chest
71120	X-ray exam of breastbone
71130	X-ray exam of breastbone
71250	Ct thorax w/o dye
72040	X-ray exam of neck spine
72050	X-ray exam of neck spine
72052	X-ray exam of neck spine
72070	X-ray exam of thoracic spine
72072	X-ray exam of thoracic spine
72074	X-ray exam of thoracic spine

HCPCS Code	Short Description
72080	X-ray exam of trunk spine
72090	X-ray exam of trunk spine
72100	X-ray exam of lower spine
72110	X-ray exam of lower spine
72114	X-ray exam of lower spine
72120	X-ray exam of lower spine
72125	Ct neck spine w/o dye
72141	Mri neck spine w/o dye
72146	Mri chest spine w/o dye
72148	Mri lumbar spine w/o dye
72170	X-ray exam of pelvis
72190	X-ray exam of pelvis
72192	Ct pelvis w/o dye
72220	X-ray exam of tailbone
73000	X-ray exam of collar bone
73010	X-ray exam of shoulder blade
73020	X-ray exam of shoulder
73030	X-ray exam of shoulder
73050	X-ray exam of shoulders
73060	X-ray exam of humerus
73070	X-ray exam of elbow
73080	X-ray exam of elbow
73090	X-ray exam of forearm
73100	X-ray exam of wrist
73110	X-ray exam of wrist
73120	X-ray exam of hand
73130	X-ray exam of hand
73140	X-ray exam of finger(s)
73218	Mri upper extremity w/o dye
73221	Mri joint upr extrem w/o dye
73510	X-ray exam of hip
73520	X-ray exam of hips
73540	X-ray exam of pelvis & hips
73550	X-ray exam of thigh
73560	X-ray exam of knee, 1 or 2
73562	X-ray exam of knee, 3
73564	X-ray exam, knee, 4 or more
73565	X-ray exam of knees

HCPCS Code	Short Description
73590	X-ray exam of lower leg
73600	X-ray exam of ankle
73610	X-ray exam of ankle
73620	X-ray exam of foot
73630	X-ray exam of foot
73650	X-ray exam of heel
73660	X-ray exam of toe(s)
73700	Ct lower extremity w/o dye
73721	Mri jnt of lwr extre w/o dye
74000	X-ray exam of abdomen
74210	Contrst x-ray exam of throat
74220	Contrast x-ray, esophagus
74230	Cine/vid x-ray, throat/esoph
74235	Remove esophagus obstruction
74240	X-ray exam, upper gi tract
74245	X-ray exam, upper gi tract
74246	Contrst x-ray uppr gi tract
74247	Contrst x-ray uppr gi tract
74249	Contrst x-ray uppr gi tract
74250	X-ray exam of small bowel
74235	Remove esophagus obstruction
74300	X-ray bile ducts/pancreas
74301	X-rays at surgery add-on
74305	X-ray bile ducts/pancreas
74327	X-ray bile stone removal
74328	X-ray bile duct endoscopy
74329	X-ray for pancreas endoscopy
74330	X-ray bile/panc endoscopy
74340	X-ray guide for GI tube
74350	X-ray guide, stomach tube
74355	X-ray guide, intestinal tube
74360	X-ray guide, GI dilation
74363	X-ray, bile duct dilation
74475	X-ray control, cath insert
74480	X-ray control, cath insert
74485	X-ray guide, GU dilation
74742	X-ray, fallopian tube
75894	X-rays, transcath therapy

HCPCS Code	Short Description
75898	Followup angiography
75900	Arterial catheter exchange
75901	Remove cva device obstruct
75902	Remove cva lumen obstruct
75945	Intravascular us
75946	Intravascular us add-on
75952	Endovasc repair abdom aorta
75953	Abdom aneurysm endovas rpr
75954	Iliac aneurysm endovas rpr
75960	Transcatheter intro, stent
75961	Retrieval, broken catheter
75962	Repair arterial blockage
75964	Repair artery blockage, each
75966	Repair arterial blockage
75968	Repair artery blockage, each
75970	Vascular biopsy
75978	Repair venous blockage
75980	Contrast x-ray exam bile duct
75982	Contrast x-ray exam bile duct
75984	X-ray control catheter change
75992	Atherectomy, x-ray exam
75993	Atherectomy, x-ray exam
75994	Atherectomy, x-ray exam
75995	Atherectomy, x-ray exam
75996	Atherectomy, x-ray exam
75998	Fluoroguide for vein device
76012	Percut vertebroplasty, fluor
76013	Percut vertebroplasty, ct
76040	X-rays, bone evaluation
76061	X-rays, bone survey
76062	X-rays, bone survey
76066	Joint survey, single view
76075	Dexa, axial skeleton study
76076	Dexa, peripheral study
76078	Radiographic absorptiometry
76090	Mammogram, one breast
76091	Mammogram, both breasts
76095	Stereotactic breast biopsy

HCPCS Code	Short Description
76096	X-ray of needle wire, breast
76100	X-ray exam of body section
76101	Complex body section x-ray
76360	Ct scan for needle biopsy
76380	CAT scan follow-up study
76393	Mr guidance for needle place
76511	Echo exam of eye
76512	Echo exam of eye
76516	Echo exam of eye
76519	Echo exam of eye
76536	Us exam of head and neck
76645	Us exam, breast(s)
76700	Us exam, abdom, complete
76705	Echo exam of abdomen
76770	Us exam abdo back wall, comp
76775	Us exam abdo back wall, lim
76830	Transvaginal us, non-ob
76856	Us exam, pelvic, complete
76857	Us exam, pelvic, limited
76870	Us exam, scrotum
76880	Us exam, extremity
76941	Echo guide for transfusion
76945	Echo guide, villus sampling
76946	Echo guide for amniocentesis
76948	Echo guide, ova aspiration
76977	Us bone density measure
77280	Set radiation therapy field
77285	Set radiation therapy field
77300	Radiation therapy dose plan
77301	Radiotherapy dose plan, imrt
77315	Teletx isodose plan complex
77326	Brachytx isodose calc simp
77327	Brachytx isodose calc interm
77328	Brachytx isodose plan compl
77331	Special radiation dosimetry
77332	Radiation treatment aid(s)
77333	Radiation treatment aid(s)
77334	Radiation treatment aid(s)

HCPCS Code	Short Description
77336	Radiation physics consult
77370	Radiation physics consult
77399	External radiation dosimetry
77403	Radiation treatment delivery
77409	Radiation treatment delivery
77411	Radiation treatment delivery
77412	Radiation treatment delivery
77413	Radiation treatment delivery
77414	Radiation treatment delivery
77416	Radiation treatment delivery
77417	Radiology port film(s)
77418	Radiation tx delivery, imrt
77470	Special radiation treatment
78350	Bone mineral, single photon
78351	Bone mineral, dual photon
80502	Lab pathology consultation
85060	Blood smear interpretation
86585	TB tine test
86850	RBC antibody screen
86870	RBC antibody identification
86880	Coombs test, direct
86885	Coombs test, indirect, qual
86886	Coombs test, indirect, titer
86890	Autologous blood process
86900	Blood typing, ABO
86901	Blood typing, Rh (D)
86905	Blood typing, RBC antigens
86906	Blood typing, Rh phenotype
86930	Frozen blood prep
86970	RBC pretreatment
88104	Cytopathology, fluids
88106	Cytopathology, fluids
88107	Cytopathology, fluids
88108	Cytopath, concentrate tech
88160	Cytopath smear, other source
88161	Cytopath smear, other source
88172	Cytopathology eval of fna
88180	Cell marker study

HCPCS Code	Short Description
88182	Cell marker study
88300	Surgical path, gross
88304	Tissue exam by pathologist
88305	Tissue exam by pathologist
88311	Decalcify tissue
88312	Special stains
88313	Special stains
88321	Microslide consultation
88323	Microslide consultation
88325	Comprehensive review of data
88331	Path consult intraop, 1 bloc
88342	Immunohistochemistry
88346	Immunofluorescent study
88347	Immunofluorescent study
90801	Psy dx interview
90805	Psytx, off, 20-30 min w/e&m
90806	Psytx, off, 45-50 min
90807	Psytx, off, 45-50 min w/e&m
90808	Psytx, office, 75-80 min
90809	Psytx, off, 75-80, w/e&m
90810	Intac psytx, off, 20-30 min
90818	Psytx, hosp, 45-50 min
90826	Intac psytx, hosp, 45-50 min
90845	Psychoanalysis
90846	Family psytx w/o patient
90847	Family psytx w/patient
90853	Group psychotherapy
90857	Intac group psytx
90862	Medication management
92002	Eye exam, new patient
92004	Eye exam, new patient
92012	Eye exam established pat
92014	Eye exam & treatment
92082	Visual field examination(s)
92083	Visual field examination(s)
92135	Opthalmic dx imaging
92136	Ophthalmic biometry
92225	Special eye exam, initial

HCPCS Code	Short Description
92226	Special eye exam, subsequent
92230	Eye exam with photos
92250	Eye exam with photos

BILLING CODE 4120–01–C

B. Calculation of Median Costs for CY 2005

In this section of the preamble, we discuss the use of claims to calculate the OPPS payment rates for CY 2005. (The hospital outpatient prospective payment page on the CMS Web site on which this final rule with comment period is posted provides an accounting of claims used in the development of the final rates: *http://www.cms.hhs.gov/hopps.)* The accounting of claims used in the development of the final rule with comment period is included under supplemental materials for this final rule with comment period. That accounting provides additional detail regarding the number of claims derived at each stage of the process. In addition, we note that below we discuss the files of claims that comprise the data sets that are available for purchase under a CMS data user contract. Our CMS Web site, *http://www.cms.hhs.gov/providers/hopps* includes information about purchasing the following two OPPS data files: ''OPPS limited data set'' and ''OPPS identifiable data set.''

In this final rule with comment period, we are using the same methodology as proposed in the August 16, 2004 proposed rule to establish the relative weights that we used in calculating the OPPS payment rates for CY 2005 shown in Addenda A and B to this final rule with comment period. This methodology is as follows:

We used outpatient claims for full CY 2003 to set the relative weights for CY 2005. To begin the calculation of the relative weights for CY 2005, we pulled all claims for outpatient services furnished in CY 2003 from the national claims history file. This is not the population of claims paid under the OPPS, but all outpatient claims (for example, critical access hospital (CAH) claims, and hospital claims for clinical laboratory services for persons who are neither inpatients nor outpatients of the hospital).

We then excluded claims with condition codes 04, 20, 21, and 77. These are claims that providers submitted to Medicare knowing that no payment will be made. For example, providers submit claims with a condition code 21 to elicit an official denial notice from Medicare and document that a service is not covered. We then excluded claims for services furnished in Maryland, Guam, and the U.S. Virgin Islands because hospitals in those geographic areas are not paid under the OPPS.

We divided the remaining claims into the three groups shown below. Groups

2 and 3 comprise the 106 million claims that contain hospital bill types paid under the OPPS.

1. Claims that were not bill types 12X, 13X, 14X (hospital bill types), or 76X (CMHC bill types). Other bill types, such as ASCs, bill type 83, are not paid under the OPPS and, therefore, these claims were not used to set OPPS payment.

2. Bill types 12X, 13X, or 14X (hospital bill types). These claims are hospital outpatient claims.

3. Bill type 76X (CMHC). (These claims are later combined with any claims in item 2 above with a condition code 41 to set the per diem partial hospitalization rate determined through a separate process.)

In previous years, we have begun the CCR calculation process using the most recent available cost reports for all hospitals, irrespective of whether any or all of the hospitals included actually filed hospital outpatient claims for the data period. However, in developing the proposed rule and this final rule with comment period, we first limited the population of cost reports to only those for hospitals that filed outpatient claims in CY 2003 before determining whether the CCRs for such hospitals were valid. This initial limitation changed the distribution of CCRs used during the trimming process discussed below.

We then calculated the CCRs at a departmental level and overall for each hospital for which we had claims data. We did this using hospital specific data from the Hospital Cost Report Information System (HCRIS). As indicated in the proposed rule, we used the same CCRs as those used in calculating the relative weights that we used in developing the proposed rule. We did not recalculate CCRs to reflect updated cost report data.

We then flagged CAHs, which are not paid under the OPPS, and hospitals with invalid CCRs. These included claims from hospitals without a CCR; those from hospitals paid an all-inclusive rate; those from hospitals with obviously erroneous CCRs (greater than 90 or less than .0001); and those from hospitals with CCRs that were identified as outliers (3 standard deviations from the geometric mean after removing error CCRs). In addition, we trimmed the CCRs at the departmental level by removing the CCRs for each cost center as outliers if they exceeded +/− 3 standard deviations of the geometric mean. In prior years, we did not trim CCRs at the departmental level. However, for CY 2005, as proposed, we trimmed at the departmental CCR level to eliminate aberrant CCRs that, if found in high volume hospitals, could skew the medians. We used a four-tiered hierarchy of cost center CCRs to match a cost center to a revenue code with the top tier being the most common cost center and the last tier being the default CCR. If a hospital's departmental CCR was deleted by trimming, we set the departmental CCR for that cost center to ''missing,'' so that another departmental CCR in the revenue center hierarchy could apply. If no other departmental CCR could apply to the revenue code on the claim, we used the hospital's overall CCR for the revenue code in question.

We then converted the charges on the claim by applying the CCR that we believed was best suited to the revenue code indicated on the line with the charge. (We discussed in greater detail the allowed revenue codes in the proposed rule (69 FR 50487).) If a hospital did not have a CCR that was appropriate to the revenue code reported for a line-item charge (for example, a visit reported under the clinic revenue code but the hospital did not have a clinic cost center), we applied the hospital-specific overall CCR, except as discussed in section V.H. of this final rule with comment period, for calculation of costs for blood.

Thus, we applied CCRs as described above to claims with bill types 12X, 13X, or 14X, excluding all claims from CAHs and hospitals in Maryland, Guam, or the U.S. Virgin Islands, and flagged hospitals with invalid CCRs. We excluded claims from all hospitals for which CCRs were flagged as invalid.

We identified claims with condition code 41 as partial hospitalization services of CMHCs and removed them to another file. These claims were combined with the 76X claims identified previously to calculate the partial hospitalization per diem rate.

We then excluded claims without a HCPCS code. We also removed claims for observation services to another file. We removed to another file claims that contained nothing but flu and pneumococcal pneumonia (''PPV'') vaccine. Influenza and PPV vaccines are paid at reasonable cost and, therefore, these claims are not used to set OPPS rates. We note that the two above mentioned separate files containing partial hospitalization claims and the observation services claims are included in the files that are available for purchase as discussed above.

We next copied line-item costs for drugs, blood, and devices (the lines stay on the claim but are copied off onto another file) to a separate file. No claims were deleted when we copied these lines onto another file. These line-items are used to calculate the per unit median for drugs, radiopharmaceuticals, and blood and blood products. The line-item costs were also used to calculate the per administration cost of drugs, radiopharmaceuticals, and biologicals (other than blood and blood products) for purposes of determining whether the cost of the item would be packaged or paid separately. Section 1833(t)(16)(B) of the Act, as added by section 621(a)(2) of Pub. L. 108–173, requires the Secretary to lower to $50 the threshold for separate payment of drugs and biologicals and the per administration cost derived using these line-item cost data would be used to make that decision for CY 2005. As discussed in the November 7, 2003 OPPS final rule with comment period (68 FR 63398), we had also applied a $50 threshold to these items for the CY 2004 update to the OPPS.

We then divided the remaining claims into five groups.

1. *Single Major Claims:* Claims with a single separately payable procedure, all of which would be used in median setting.

2. *Multiple Major Claims:* Claims with more than one separately payable procedure or multiple units for one payable procedure. As discussed below, some of these can be used in median setting.

3. *Single Minor Claims:* Claims with a single HCPCS code that is not separately payable. These claims may have a single packaged procedure or a drug code.

4. *Multiple Minor Claims:* Claims with multiple HCPCS codes that are not separately payable without examining dates of service. (For example, pathology codes are packaged unless they appear on a single bill by themselves.) The multiple minor file has claims with multiple occurrences of pathology codes, with packaged costs that cannot be appropriately allocated across the multiple pathology codes. However, by matching dates of service for the code and the reported costs through the ''pseudo'' single creation process discussed earlier, a claim with multiple pathology codes may become several ''pseudo'' single claims with a unique pathology code and its associated costs on each day. These ''pseudo'' singles for the pathology codes would then be considered a separately payable code and would be used like claims in the single major claim file.

5. *Non-OPPS Claims:* Claims that contain no services payable under the OPPS are excluded from the files used for the OPPS. Non-OPPS claims have codes paid under other fee schedules, for example, durable medical equipment or clinical laboratory.

We note that the claims listed in numbers 1, 2, and 4 above are included in the data files that can be purchased as described above.

We set aside the single minor claims and the non-OPPS claims (numbers 3 and 5 above) because we did not use either in calculating median cost.

We then examined the multiple major and multiple minor claims (numbers 2 and 4 above) to determine if we could convert any of them to single major claims using the process described previously. We first grouped items on the claims by date of service. If each major procedure on the claim had a different date of service and if the line-items for packaged HCPCS and packaged revenue codes had dates of service, we broke the claim into multiple ''pseudo'' single claims based on the date of service.

After those single claims were created, we used the list of ''bypass codes'' in Table 16 of this final rule with comment period to remove separately payable procedures that we determined contain limited costs or no packaged costs from a multiple procedure bill. A discussion of the creation of the list of bypass codes used for the creation of ''pseudo'' single claims is contained in section III.A.2. of this preamble.

When one of the two separately payable procedures on a multiple procedure claim were on the bypass code list, the claim was split into two single procedure claims records. The single procedure claim record that contained the bypass code did not retain packaged services. The single procedure claim record that contained the other separately payable procedure retained the packaged revenue code charges and the packaged HCPCS charges.

We excluded those claims that we were not able to convert to singles even after applying both of the techniques for creation of ''pseudo'' singles. We then packaged the costs of packaged HCPCS (codes with status indicator ''N'' listed in Addendum B to this final rule with comment period) and packaged revenue codes into the cost of the single major procedure remaining on the claim. The list of packaged revenue codes is shown in Table 17 below.

After removing claims for hospitals with error CCRs, claims without HCPCS codes, claims for immunizations not covered under the OPPS, and claims for services not paid under the OPPS, 56 million claims were left. This subset of claims is roughly one-half of the 106 million claims for bill types paid under the OPPS. Of these 56 million claims, we were able to use some portion of 52 million (91 percent) whole claims to create the 84 million single and ''pseudo'' single claims for use in the CY 2005 median payment ratesetting.

We also excluded claims that either had zero costs after summing all costs on the claim or for which CMS lacked an appropriate provider wage index. For the remaining claims, we then wage adjusted 60 percent of the cost of the claim (which we determined to be the labor-related portion), as has been our policy since initial implementation of the OPPS, to adjust for geographic variation in labor-related costs. We made this adjustment by determining the wage index that applied to the hospital that furnished the service and dividing the cost for the separately paid HCPCS code furnished by the hospital by that wage index. As proposed, we used the final pre-reclassified wage indices for IPPS and any subsequent corrections. We used the pre-reclassified wage indices for standardization because we believe that they better reflect the true costs of items and services in the area in which the hospital is located than the post-reclassification wage indices, and would result in the most accurate adjusted median costs.

We then excluded claims that were outside 3 standard deviations from the geometric mean cost for each HCPCS code. We used the remaining claims to calculate median costs for each separately payable HCPCS code; first, to determine the applicability of the ''2 times'' rule, and second, to determine APC medians as based on the claims containing the HCPCS codes assigned to each APC. As stated previously, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median (or mean cost, if elected by the Secretary) for an item or service in the group is more than 2 times greater than the lowest median cost for an item or service within the same group (''the 2 times rule''). Finally, we reviewed the medians and reassigned HCPCS codes to different APCs as deemed appropriate. Section III.B. of this preamble includes a discussion of the HCPCS code assignment changes that resulted from examination of the medians and for other reasons. The APC medians were recalculated after we reassigned the affected HCPCS codes.

A detailed discussion of the medians for blood and blood products is provided at section V.I. of this preamble. We provide a discussion of the medians for APC 0315 (Level II Implantation of Neurostimulator), and APC 0651 (Complex Interstitial Radiation Application), at sections III.C.2.a. and III.C.2.b., respectively, of this preamble.

A discussion of the medians for APCs that require one or more devices when the service is performed is provided at section III.C. of this preamble. A discussion of the median for observation services is provided at section VII.D. of this preamble and a discussion of the median for partial hospitalization is provided at section X.C. of this preamble.

We received a number of public comments concerning our proposed data processes for calculating the CY 2005 OPPS relative weights and median costs.

Comment: Some commenters requested that CMS provide specialty-specific and APC-specific impact tables that provide additional information and analysis of its proposal to trim CCRs on a departmental basis. The commenters stated that CMS should justify why it trimmed departmental CCRs at ±3 standard deviations from the geometric mean and explain the impact of the change.

Response: We chose to trim at ±3 standard deviations from the geometric mean because cost and charge data are traditionally log normal distributed and because the 3 standard deviations threshold is standard policy for identifying outliers in CMS' payment systems. We do not believe that an impact analysis for the departmental-level CCR trim is necessary because the overall number of cost-centers trimmed were minimal relative to the number of hospitals and because this trim only removed extreme department CCRs, both low and high. We fully expect that, had we chosen not to trim at the department-level, extreme cost estimates would have been removed during our trim at the HCPCS-level performed later in the data development process.

For example, we trimmed the most department CCRs, 68, from cost center 5500, Medical Supplies Charged to Patients. The low CCRs that were trimmed ranged from 0.00008 to 0.0281. The high CCRs that were trimmed ranged from 0.39530 to 6069.17. Even after the department-level trim, only 7 percent of the hospitals in our data set defaulted to the overall CCR for services mapped to this cost center.

Comment: One commenter stated that the CCRs fell between 1996 and 2002 because charges were increasing faster than costs and that this change resulted in a significant payment decrease for hospitals for which we used the default CCR. The commenter urged CMS to instruct fiscal intermediaries to work with these hospitals in determining

CCRs that will provide accurate cost estimates.

Response: The commenter misunderstood the source of the CCRs used to adjust hospital costs to charges for OPPS median setting. We do not use the CCRs that fiscal intermediaries calculate for purposes of outlier payments, and cost reimbursement. Instead, we use hospital specific data from the health care cost reporting information system and independently calculate CCRs for each standard and nonstandard cost center in which the costs of outpatient services are to be found as well as an overall CCRs for the costs of outpatient care. Hence, intermediaries have no role in the calculation of the CCRs used to reduce charges to approximate costs for OPPS median cost setting.

Comment: One commenter asked that CMS justify why did it not use cost-to-charge data from all hospitals for CY 2005 OPPS calculations when, in the past, CMS used cost report data from all hospitals without regard to whether the hospital had filed data during a specified period.

Response: In the past, we first calculated CCRs for all providers, trimmed the overall hospital CCRs, and then compared the providers for which we had valid CCRs to the providers for which we had claims data. For CY 2005 OPPS, we first determined the providers for which we had claims data and we then calculated the CCRs for those hospitals so that the trimming would occur only across the hospitals for which we had claims data because a CCR is of value only if there are claims to which to apply it.

Comment: One commenter urged CMS to greatly expand the outpatient code editor (OCE) edits to return to providers claims that fail edits that are appropriate to the type of service being billed. The commenter cited as examples, the creation of edits that return claims for chemotherapy administration procedures if anti-neoplastics (cancer chemotherapy) are not also billed on the same day and edits that return claims for services that require the use of contrast agents if no contrast agent were billed. The commenter believed that this would greatly improve the data on which median costs are set.

Response: We do not intend, at this time, to greatly expand the OCE edits to force correct coding as the commenter recommends beyond the edits for correct coding of device procedures that are discussed in section III.C.4 of this final rule with comment period. While we recognize that these kinds of edits would likely result in better coding, they would also impose a significant burden on hospitals. We do, however, encourage hospitals to review their claims completion processes carefully and to edit their claims before they are submitted to maximize the likelihood that the claims are correct and complete. Such a practice would both assist us in developing better OPPS rates, but more importantly, ensure that hospitals are being correctly paid for all of the services they furnish to our beneficiaries.

Comment: One commenter noted the prevalence of drug billing and charging errors and recommended that CMS revise its median trimming methodology for drugs from ±3 standard deviations from the geometric mean to a trim by provider by drug based on the correlation of units and charges. This approach assumes that hospitals engaged in accurate and consistent unit coding and billing will demonstrate a strong correlation between units and per unit charges. The commenter noted that CMS' current trim is very conservative, especially for low costs per unit because it will only eliminate negative cost values, which do not exist in the data. The commenter further suggested that CMS' trim of department-level CCR's and the use of C-code only claims to set device medians are comparable to this proposal.

Response: We agree that billing accurate units has proven challenging for some hospitals in light of various differences in packaged versus delivered units, changing drug pricing, and unit changes in HCPCS codes. Clearly, our goal in conducting the current trim at ±3 standard deviations from the geometric mean is to remove aberrant per unit costs, or costs that are so far removed from the geometric mean that the probability of their occurrence is less than 1 percent. However, even after this trim is conducted, we remain concerned about the per unit cost estimates for some drug codes.

We believe, however, that the current trim of drug costs, while conservative, is not as limiting as suggested in the comment. The natural logarithm of costs per unit less than $1 will be negative. The trim compares the natural logarithm of the cost to the geometric mean, ±3 standard deviations and removes low and high cost observations. The low trim threshold may also be negative if costs are less than $1. In addition to using a trim, we also rely on a median cost rather than an average cost. Averages are subject to the influence of extreme outliers. Using a median instead of a mean eliminates this concern. Assuming most line-items for any given drug are coded correctly, using a trim and the median should provide a robust per unit cost estimate. Nonetheless, we do recognize that for selected low-volume or complex products, this approach is still not sufficient to remove all errors.

We are concerned, however, about implementing systematic trimming at the provider-level as suggested by the commenter for several reasons. First, this approach would remove the data for multiple providers from any given median calculation, making the assumption that their data were inaccurate, when, in fact, a few instances of poor coding may adversely impact the provider's correlation coefficient. Thus, a provider may actually be coding and charging accurately in many cases. In rare instances, we have removed a specific provider when it is more than obvious that the data are erroneous, but we only do this after a careful review of the provider's claims data. It is our preference to remove aberrant line-items rather than a provider's entire data for any given drug. Second, correlation coefficients for a provider may fluctuate if they are based on very low-volume, even if the majority of line-items appear accurate. Third, the commenter's proposed correlation coefficient approach lacks a generally accepted threshold when a providers' data should be removed, unlike the widely accepted trim of 3 standard deviations from the mean. Finally, this approach assumes that a negative correlation coefficient implies that a provider erred in setting its charging practices.

While we agree that the proposed trim seeks to improve the accuracy of the claims data, which is the goal of all trimming, we disagree that the commenter's proposed trim is necessarily comparable to the use of a department-level CCR trim and the limitation of claims to those with C-codes for estimating medians for device-dependent APCs. The department-level trim does not eliminate a provider entirely, it eliminates the department-level CCR for a specific hospital and replaces this CCR with the overall CCR for that hospital. Relying on C-coded claims to calculate device-dependent medians assures us that the device was used with the device-dependent procedure. The specific cost associated with the device code is not considered in subsetting claims and the subsetting is done by claim, not by provider. While the commenter's proposed methodology is not appropriate for use at this time, we nonetheless believe that the commenter's suggested approach can serve as a useful tool in helping us begin the process of identifying providers

Comment: One commenter indicated that using the overall CCR where the

departmental CCR cannot be used may skew the costs derived from application of CCRs to charges. The commenter suggested that CMS develop a method for replacing departmental CCRs similar to that used for blood and blood products whereby the CCR that would apply would not be the overall CCR but a national CCR calculated based on the departmental CCRs of hospitals that do report the more pertinent specific cost centers on their cost reports.

Response: We will consider whether doing so is practical and whether it would yield more accurate cost estimates. However, there were very specific characteristics of the reporting of blood such as a very specific cost center and very specific revenue codes that may not exist for other services.

Comment: One commenter asked that CMS undertake a study to improve the reporting of costs in conjunction with the CCR development. The commenter stated that a more timely process should be implemented so that currently accurate CCRs are used to translate hospital charges to costs and that consideration should be given to attaining greater detail from the hospitals to calculate the CCRs to better reflect the full line of services being offered by hospitals.

Response: We study means by which we could improve the development of cost-to-charge ratios annually. We also use the most current cost report data from the HCRIS system to calculate the cost to-charge-ratios and we use charges from the most current claims data. However, hospitals have great latitude in the way they organize their costs and complete their cost reports. We have no plans to alter the existing instructions to require cost report detail that is not currently provided. We will, instead, continue to examine how the data currently submitted by hospitals can be used to secure the most accurate estimates of cost for the full range of services furnished by hospitals.

After carefully reviewing all comments, we are adopting as final, for OPPS services furnished on or after January 1, 2005, the process for calculating median costs that we described in this section and the list of packaged services shown in Table 17 below. This table contains the list of packaged services by revenue code that we used in developing the APC weights and medians listed in Addenda A and B of this final rule with comment period.

C. Adjustment of Median Costs for CY 2005

1. Device-Dependent APCs

Table 19, which we published in the proposed rule (69 FR 50492), contains a list of APCs consisting of HCPCS codes that cannot be provided without one or more devices. For CY 2002 OPPS, we used external data in part to establish the medians used for weight setting. At that time, many devices were eligible for pass-through payment. For that year, we estimated that the total amount of pass-through payments would far exceed the limit imposed by statute. To reduce the amount of a pro rata adjustment to all pass-through items, we packaged 75 percent of the cost of the devices (using external data furnished by commenters on the August 24, 2001 proposed rule) into the median cost for the APCs associated with these pass-through devices. The remaining 25 percent of the cost was considered to be pass-through payment. (Section VI. of this preamble includes a discussion of the pro rata adjustment.)

For CY 2003 OPPS, which was based on CY 2001 claims data, we found that the median costs for certain device-dependent APCs when all claims were used were substantially less than the median costs used for CY 2002. We were concerned that using the medians calculated from all claims would result in payments for some APCs that would not compensate the hospital even for the cost of the device. Therefore, we calculated a median cost using only claims from hospitals that had separately billed the pass-through device in CY 2001 (that is, hospitals whose claims contained the C-code for the pass-through device). Furthermore, for any APC (whether device-dependent or not) where the median cost would have decreased by 15 percent or more from CY 2002 to CY 2003, we limited decreases in median costs to 15 percent plus half of the amount of any reduction beyond 15 percent (68 FR 47984). For a few particular device-dependent APCs for which we believed that access to the service was in jeopardy, we blended external data furnished by commenters on the August 9, 2002 proposed rule (67 FR 57092) with claims data to establish the median cost used to set the payment rate. For CY 2003, we also eliminated the HCPCS C-codes for the devices and returned to providers those claims on which the deleted device codes were used. (The November 1, 2002 OPPS final rule (67 FR 66750) and section III.C.4 of this preamble contain a discussion regarding the required use of C-codes for specific categories of devices.)

For CY 2004 OPPS, which was based on CY 2002 claims data, we used only claims on which hospitals had reported devices to establish the median cost for the device-dependent APCs in Table 18. We did this because we found that the median costs calculated when we used all claims for these services were inadequate to cover the cost of the device if the device was not separately coded on the claim. Using only claims containing the code for the device (a C-code) provided costs that were closer to those used for CY 2002 and CY 2003 for these services. For a few particular APCs in which we believed that access to the service was in jeopardy, we used external data provided by commenters on the August 12, 2003 proposed rule in a 50 percent blend with claims data to establish the device portion of the median cost used to set the payment rate (68 FR 63423). We also reinstated for CY 2004, but on a voluntary basis, the reporting of C-codes for devices.

Thus, in developing the median costs for device-dependent APCs for CYs 2002, 2003, and 2004, we applied certain adjustments to our claims data as provided under the authority of section 1833(t)(9)(A) of the Act to ensure equitable payments to the hospitals for the provision of such services. As stated in the August 16, 2004 proposed rule, we have continued to receive comments from interested parties as part of the APC Panel process urging us to determine whether the claims data that would be used in calculating the median costs for device-dependent APCs for payment in CY 2005 would represent valid relative costs for these services (69 FR 50490). Careful analysis of the CY 2003 data that we used in calculating the median costs for the CY 2005 OPPS payment rates revealed problems similar to those discussed above in calculating device-dependent APC median costs based solely on claims data. Calculation of the CY 2005 median costs for the device-dependent APCs indicated that some of the medians appeared to appropriately reflect the costs of the services, including the cost of the device, and others did not. Of the 41 device-dependent APCs analyzed, 27 have median costs that are lower than the medians on which the OPPS payments were based in CY 2004. In contrast, 14 device-dependent APCs have median costs that are higher than the medians on which OPPS payments were based in CY 2004.

The differences between the CY 2004 payment medians and the proposed CY 2005 median costs using CY 2003 claims data are attributable to several factors. As discussed above, the CY 2004 payment medians were based on a subset of claims that contained the codes for the devices without which the procedures could not be performed, and several APCs were adjusted using external data. The CY 2005 OPPS median costs on which the proposed payment rates in the August 16, 2004 proposed rule were based, were calculated based on all single bills, including ''pseudo'' single bills, for the services in the APCs and (not a subset

of claims containing device codes) and were not adjusted using external data. In fact, as stated previously, we eliminated device coding requirements for hospitals in CY 2003. Consequently, there were no device codes reported for almost all devices in the CY 2003 claims data. Thus, it was not possible to use only the CY 2003 claims data containing device codes to calculate APC device-dependent medians as was done in CY 2004. Similarly, it was not possible to calculate a percentage of the APC cost attributed to device codes based on CY 2003 claims data.

In light of these data issues for CY 2005, we examined several alternatives to using CY 2003 claims data to calculate the proposed median costs for device-dependent APCs. As discussed in the August 16, 2004 proposed rule, we considered using CY 2004 OPPS medians with an inflation factor, as recommended by the APC Panel and by several outside organizations. We rejected this option because it would not recognize any changes in relative costs for these APCs and would not direct us towards our goal of using all single claims data as the basis for payment weights for all OPPS services.

We also considered using the medians we calculated from all single bills with no adjustments. However, the results of using this approach without increasing the payments for some important high cost services for CY 2005 could result in the closing of hospital programs that provide these services thus, jeopardizing access to needed care. Therefore, we did not adopt this approach.

In addition, we considered subsetting claims based on the presence of charges in certain revenue codes. These revenue codes include: 272, sterile supplies; 275, pacemakers; 278, other implants; 279, other supplies/devices; 280, oncology; 289, other oncology; and 624, investigational devices. We determined that the medians increased for some device-dependent APCs when we used only claims with a charge in at least one of these revenue codes, but our analysis provided no reliable evidence that the charges that would be found in these revenue codes were necessarily for the cost of the device.

Further, we considered using CY 2002 claims to calculate a ratio between the median calculated using all single bills and the median calculated using only claims with HCPCS codes for devices on them, and applying that ratio to the median calculated using all single bills from CY 2003 claims data. We rejected this option because it assumes that the relationship between the costs of the claims with and without codes for devices is a valid relationship not only for CY 2002 but CY 2003 as well. It also assumes no changes in billing behavior. We have no reason to believe either of these assumptions is true and, therefore, we did not choose this option.

In summary, we considered and rejected all of the above options. We have given special treatment to the device-dependent APCs for the past 3 years, recognizing that, in a new payment system, hospitals need time to establish correct coding processes and, considering the need to ensure continued access to these important services. After 3 years of such consideration, we believe that it is time to begin a transition to the use of pure claims data for these services (reflected in these APCs) to ensure the appropriate relativity of the median costs for all payable OPPS services. Our goal is to establish payment rates that provide appropriate relative payment for all services paid under the OPPS without creating payment disincentives that may reduce access to care.

Therefore, we proposed to base median costs for device-dependent APCs in CY 2005 on the greater of (1) median costs calculated using CY 2003 claims data, or (2) 90 percent of the APC payment median for CY 2004 for such services. We proposed this adjustment because we believe that some variation in median costs is to be expected from year to year, and we believe that recognizing up to a 10 percent variation in our payment approach is a reasonable limit. In the August 16, 2004 proposed rule, we solicited comments on all aspects of theses issues and particularly on steps that can be taken in the future to transition from the historic payment medians to claims based median costs for OPPS ratesetting for these important services. In addition, we discussed this issue with the APC Panel at its September 1 through 2, 2004 meeting. The Panel recommended that we base median costs for these APCs on no less than 95 percent of the CY 2004 median not to exceed 105 percent of the CY 2004 payment median.

We received numerous public comments on our proposals.

Comment: A number of commenters objected to the proposal to set the payment medians for device APCs at 90 percent of the CY 2004 payment median for the APC. They indicated that many of these APCs had already been reduced substantially over the past few years and that permitting them to be reduced another 10 percent would mean that some hospitals may close their programs and send patients to other hospitals for these services. Some commenters recommended that the median costs for these APCs be set at 100 percent of the CY 2004 payment median. Some commenters recommended that CMS use the CY 2004 payment median plus an update amount as the median cost for the CY 2005 OPPS. Commenters also recommended that instead of using median costs from claims data with any adjustment, that we collect actual hospital acquisition data or use cost data provided by manufacturers and other stakeholders and substitute that data for the device portion of the median costs. They indicated that we used external data in the past and that we should do so this year also. They cited APCs 0081, 0107, 0108, 0225, 0229, 0259, 0385, and 0386 as cases in which the proposed APC payment rates were less than the cost of the devices and as those for which CMS should use external data in setting the payment rates for CY 2005. A commenter supported the proposal to pay the greater of the CY 2005 claims based median or 90 percent of the CY 2004 payment median.

Response: For the reasons discussed below, we set the adjusted CY 2005 OPPS device-dependent median at the greater of the CY 2005 OPPS unadjusted median or 95 percent of the CY 2004 OPPS adjusted final payment median rather than the greater of the CY 2005 unadjusted median or 90 percent of the CY 2004 OPPS adjusted final median as we proposed in the August 16, 2004 proposed rule. We view this as a transition to the full use of claims data to set the medians for these services. The integrity of a prospective payment system lies heavily in its reliance on a standardized process applied to a standardized data source. The use of external data can, as some commenters point out, unfairly unbalance the payments and result in inequities in payment. (Section III.C.5. of this preamble includes a discussion on the use of external data.)

We considered setting the medians at the CY 2004 adjusted final payment medians with and without further inflation, but we think a certain amount of fluctuation in costs from year to year is to be expected as the costs of services decline after they have been on the market for some time. Moreover, we considered our proposal to pay the greater of the CY 2005 unadjusted median or 90 percent of the CY 2004 OPPS adjusted final payment median, but acknowledged the concerns of the commenters who believe that setting the comparison at 95 percent of the CY 2004 OPPS final adjusted payment median was more appropriate and less likely to impede access to these important services. We recognize that adjustments

to median costs derived from claims data may be necessary yet again in the CY 2006 OPPS due to the voluntary nature of the reporting of device codes in CY 2004. However, as discussed further below at section III.C.4. of this preamble in our discussion of mandatory coding for devices, we expect that reporting of device codes in the CY 2005 claims will enable us to rely upon the claims data for setting the median costs without adjustment in CY 2007.

Comment: Some commenters opposed the APC Panel's recommendation to limit increases in median costs for device APCs to 5 percent over the CY 2004 payment median because the commenters believe such a limit would be arbitrary and would be a hindrance to the improvement of cost data.

Response: We agree and we have not limited the extent to which the median costs for device-dependent APCs may increase for the CY 2005 OPPS. We believe that in a number of cases, providers are reporting the charges for the devices and have otherwise greatly improved coding of their services, resulting in increases in median costs that appear to appropriately reflect the costs of the services furnished. We have no indication that the increases do not otherwise properly reflect the costs of services and, therefore, see no reason to constrain the increases that have resulted.

Comment: Some commenters stated that CMS should look long term to determining a factor through regression analysis that enables CMS to adjust the charges for high cost devices so that the methodology will result in more accurate costs for high cost devices.

Response: We will review and consider the results of credible studies of the possible compression of all charges, both for high cost services and low cost services. Studies that focus only on part of the spectrum of hospital charges, for example, those which look at low markup of high cost items but not at high markup of low cost items, would not be useful in a relative weight system.

Comment: Some commenters indicated that hospitals typically markup high cost items and services less than they markup low cost items and services and that CMS' cost finding methodology does not recognize this because it applies a uniform cost-to-charge ratio (for the department or hospital overall) to the charges, which then yields distorted costs. They recommended that CMS resolve this problem using external data from manufacturers and other stakeholders until such time that CMS can comply with the GAO study that recommended that CMS ''analyze variation in hospital charge setting to determine if the OPPS payment rates uniformly reflect hospitals' costs of provided outpatient services and if they do not, to make appropriate changes to the methodology.'' The commenters asked that CMS provide explicit instructions to hospitals regarding how to adequately capture and charge for high cost devices.

Response: As we discussed previously, we have decided not to use external data to adjust the APC payment rates for CY 2005 OPPS. We do, however, reassess our existing methodology each year to determine how we can best create rates that uniformly reflect hospitals' cost of providing outpatient services. We will not provide instructions to hospitals regarding how to capture and charge for high cost devices. As a matter of policy, we do not tell hospitals how to set their charges for their services. However, we will continue to inform hospitals of the importance of their charge data in future ratesetting and encourage them to include all appropriate charges on their Medicare claims.

Comment: One commenter objected to us applying the wage index adjustment to the cost of a device in a device-dependent APC because, as the commenter stated, the wage index is intended to address the identified differential in wages across localities. The commenter contends that there is no demonstration of a similar differential in the costs of devices across localities.

Response: Previous studies have shown that across the entirety of all services paid under OPPS, approximately 60 percent of total cost is labor related. Therefore we believe it is appropriate to apply the wage index to 60 percent of the payment for each service. The application of the wage index to the payment for the device-dependent APC can either inflate the total payment for the device-dependent APC or reduce it depending on whether the hospital is in a high cost or low cost area. In many cases, if we ceased to apply the wage index adjustment to 60 percent of the APC payment, the payment to the hospital for the APC would be significantly reduced. We will, however, consider whether it is appropriate to continue to apply the wage index adjustment as we currently do.

Comment: One commenter asked that we add CPT codes 47382, (Radiofrequency ablation procedures of the liver) and CPT code 20982, (Radiofrequency ablation procedures of the bone) to the list of device-dependent APCs because they require the use of devices.

Response: We will consider whether these services should be added to the list of device-dependent APCs in the future. However, it is unclear to us what proportion of total cost of each of these procedures is the cost of the device because codes are not reported for the devices. We do not agree that the cost of the devices could be derived from charges reported in particular revenue codes because there is no identification of the items charged under any revenue code.

Comment: Some commenters indicated that the reductions in APC payments following termination of pass-through status for devices have resulted in the elimination of programs at hospitals that have chosen to no longer implant prosthetic devices.

Response: We share the concern that beneficiaries should have access to services covered under Medicare and believe that our payment policies under OPPS have consistently taken this concern into account.

Comment: Some commenters indicated that the proposed payment rates for APCs 0081, 0107, 0108, 0222, 0229, 0385, and 0386 are inadequate and do not cover the cost of the device; therefore, they do not provide payment for the facility services. The commenters stated that hospitals have taken a loss on these services for several years and cannot continue to provide the services at a loss. The commenters developed alternative cost estimates using external data and urged CMS to use these data rather than its claims data as the basis for developing median costs.

Response: As stated, for device-dependent APC in general, we have not used external data to adjust any median costs for CY 2005 OPPS. Instead, we set the medians for these APCs at the greater of the median cost for CY 2005 derived using claims data or 95 percent of the CY 2004 OPPS adjusted payment median. Beginning in CY 2005, we will also require that the claims containing codes assigned to these APCs also contain a code for an appropriate device for the claim to be paid, so that in CY 2007 we will have correctly coded claims to help us in setting the payment weights.

Comment: Some commenters stated that the proposed payment for cryoablation of the prostate (CPT code 55873) is insufficient to cover the cost for the procedure. They further stated that CMS should factor in external data that shows hospital costs to exceed $9,000, eliminate or adjust claims for APC 0674 in which the charges for

cryoablation probes are less than $7500, or discard all claims containing CPT code 55873 in the Medicare database for which the total hospital costs are less than $6500. The commenters indicated that access to this care would be impeded if the APC payment is not sufficient to pay the full cost of the service. The commenters believed that APC payment at less than full costs for the service will give rise to the use of alternative means of treating prostate cancer. These commenters indicated that the charges hospitals report on their claims are seldom sufficient to result in the full cost of all of the supplies and equipment needed to furnish the service. The commenters also indicated that when the only claims used to set the median are those for which the code for cryoablation probes is found, the median increases significantly.

Response: The codes for the cryoablation probes used in providing cryoablation of the prostate were billed in CY 2003 because they were paid as pass-through payments in CY 2003. Therefore, they exist in the claims data and we used them to screen for correctly coded claims in setting the median cost for APC 0674. The median derived using the subset of claims is $6,562.69, a decrease of 5.10 percent from the CY 2004 final payment median for APC 0674. Therefore, based on the device-dependent APC policy that we are finalizing for CY 2005, we set the median for APC 0674 at 95 percent of the CY 2004 final payment median, or $6,569.33.

Comment: Some commenters supported the increased payment for cochlear implant services (CPT code 69930 in APC 0259) even though they indicated that they believe that the Medicare payment continues to be insufficient to fully pay for the costs of both the device and the procedure. One commenter provided an independent statistical analysis of the Medicare claims data and invoice data that the commenter indicated revealed hospital costs of $27,954 based on a screen of claims that contained HCPCS code L8614 and asked that CMS set the payment at that amount. Some commenters stated that they believe that some hospitals are using the cochlear implant codes to code implantation of less expensive implantable hearing aid devices. The commenter also asked that CMS provide education and develop a guidance document for hospitals specific to coding and billing for cochlear implant surgery.

Response: The device code for cochlear implants remained active in CY 2003 because Medicare uses it for purposes other than the OPPS. In developing the CY 2005 OPPS medians, we created a subset of claims for implantation of cochlear implants that contained the device code and calculated the median for the CY 2005 OPPS using only those correctly coded claims. This yielded a median cost of $26,006.74, which we used as the basis for the APC 0259 payment weight for the CY 2005 OPPS. While it is certainly possible that some hospitals are misusing the code for cochlear implantation to bill for less costly implanted hearing aid devices, we have no way to make that determination using the claims data. However, we note that hospitals billing in such a manner do so at their own risk of being found to have filed a false claim. We will consider what general education activities we need to undertake with regard to all devices but we are disinclined to focus on specific devices to the exclusion of others.

Comment: One commenter indicated that the proposed decrease in payment rates for APC 0039 (Level I Implantation of Neurostimulator) is not acceptable as it would not enable hospitals to cover the cost of the service. Moreover, the commenter stated that hospitals have failed to code and bill correctly for this service and that there are no disincentives for incorrect coding and billing. The commenter further stated that the only diagnosis on the claims for APC 0039 should be that for epilepsy because that is the fundamental reason for implanting the device. However, according to the commenter, examination of the claims for APC 0039 revealed that only 12 percent of those claims contained an epilespsy diagnosis; therefore, the remaining claims caused the median to incorrectly represent the implantation of the device for treatment of epilepsy. The commenter recommended that CMS use external data to ensure that the costs of the device and procedure are adequate to avoid discouraging hospitals from providing the care.

Response: As with other device-dependent APCs, the absence of device codes on the claims for CY 2003 means that we were unable to screen the claims to positively identify which claims include the neurostimulator device costs and we are not confident that screening only for the diagnosis of epilepsy will resolve the coding problem. Therefore, we have set the median for APC 0039 at 95 percent of the CY 2004 final adjusted payment median.

Comment: Some commenters objected to the assignment of status indicator ''T'' to APC 0229 (Transcatheter Placement of Intravascular Stent) because they believe it should not be subject to the multiple procedure reduction due to its dependence on a device. They believed that the payment for the services is undervalued because it is typically done with other procedures and that it is further underpaid by the application of the multiple procedure reduction.

Response: We have not changed the status indicator for APC 0229 because the cost of the device for services in this APC is less than 50 percent of the total cost of the service. Therefore, the multiple procedure reduction of 50 percent does not result in the APC payment being less than the device cost. Moreover, there are efficiencies when multiple services are performed on the same day that we believe justify applying the multiple procedure reduction to the services in this APC.

Comment: One commenter asked that CMS require hospitals to show the actual acquisition cost for devices on the bill using a UB92 value code and the amount. The commenter recommended that where 50 percent or more of the APC is attributable to packaged device cost, CMS should obtain actual device information and use it to determine if APC cost calculations are reasonable.

Response: We do not believe the imposition of an additional reporting requirement would be effective. Such a requirement would be both burdensome and unlikely to provide the actual hospital acquisition cost because hospitals have the ability to reflect general rebates and discounts on a per device basis.

Comment: One commenter asked that we make separate payments for CRT–Ds (pacemaker-defibrillators) for which there was a new technology add-on payment under the IPPS for FY 2005, so that payment for this service under the IPPS and the OPPS would be better aligned.

Response: CRT–Ds were paid on a pass-through basis under the OPPS in CYs 2001 and 2002. Their OPPS pass-through status expired in CY 2003 and their component services were packaged into clinical APC 0107 (Insertion of Cardioverter-Defibrillator) and APC 0108 (Insertion/Replacement/Repair of Cardioverter-Defibrillator Leads) and. Accordingly, no separate additional payment is appropriate for these devices.

After carefully reviewing the comments, considering the APC Panel recommendations and examining the claims data, we are adjusting the medians for device-dependent APCs based on comparison of the CY 2005 median costs and the CY 2004 final payment median costs. Specifically, we decided to set the median costs for these

APCs at the higher of the CY 2005 median cost from our claims data or 95 percent of the CY 2004 final adjusted median cost used to set the payment in CY 2004 rather than 90 percent of the CY final adjustment median cost as we proposed.

We believe that this adjustment methodology provides an appropriate transition to eventual use of all single bill claims data without adjustment, and that the methodology moves us towards the goal of using all single bill data without adjustment by CY 2007. It is a simple and easily understood methodology for adjusting median costs. Where reductions occur compared to CY 2004 OPPS, we believe that, under this methodology, the reductions will be sufficiently modest that providers will be able to accommodate them without ceasing to furnish services that Medicare beneficiaries need.

In addition, beginning in CY 2005, as proposed, we are requiring hospitals to bill all device-dependent procedures using the appropriate C-codes for the devices. We believe that this approach mitigates against the reduction of access to care while encouraging hospitals to bill correctly for the services they furnish. We intend this requirement to be the first step towards use of all available single bill claims data to establish medians for device-dependent APCs. Our goal is to use all single bills for device-dependent APCs in developing the CY 2007 OPPS, which we expect to base on data from claims for services furnished in CY 2005. We further discuss our coding requirement in section III.C.4. of this preamble.

Table 18 below, which is sorted by APC, contains the CY 2004 OPPS payment medians, the CY 2005 OPPS final adjusted medians using single bill claims from January 1, 2003, through December 31, 2003), and the medians derived from the adjustment processes discussed further below.

BILLING CODE 4120–01–P

Table 18.-- Median Costs for Device-Dependent APCs

APC	Description	SI	Final CY 2004 OPPS APC Median	Unadjusted CY 2005 OPPS APC Median Cost	Percentage Change from CY 2004 to CY 2005	Adjusted Final CY 2005 OPPS Median	CY 2005 Total Frequency
0032	Insertion of Central Venous/Arterial Catheter	T	$662.31	$475.76	-28.17%	$629.19	79,381
0039	Implantation of Neurostimulator (new for 2004 OPPS; breakout of APC 222)	S	$13,555.80	$10,015.34	-26.12%	$12,878.01	1,833
0040	Level II Implantation of Neurostimulator Electrodes (new for 2004 OPPS; breakout of APC 225)	S	$3,002.98	$2,885.37	-3.92%	$2,885.37	10,657
0080	Diagnostic Cardiac Catheterization	T	$2,075.91	$2,123.65	2.30%	$2,123.65	396,154
0081	Non-Coronary Angioplasty or Atherectomy	T	$2,018.99	$1,782.44	-11.72%	$1,918.04	127,156
0082	Coronary Atherectomy	T	$6,352.89	$4,546.84	-28.43%	$6,035.25	632
0083	Coronary Angioplasty and Percutaneous Valvuloplasty	T	$3,412.47	$2,920.81	-14.41%	$3,241.85	8,364
0085	Level II Electrophysiologic Evaluation	T	$2,041.13	$2,034.82	-0.31%	$2,034.82	19,113
0086	Ablate Heart Dysrhythm Focus	T	$2,590.21	$2,637.96	1.84%	$2,637.96	8,792
0087	Cardiac Electrophysiologic Recording/Mapping	T	$2,294.94	$559.11	-75.64%	$2,180.19	11,859
0089	Insertion/Replacement of Permanent Pacemaker and Electrodes	T	$6,754.63	$6,279.62	-7.03%	$6,416.90	5,016
0090	Insertion/Replacement of Pacemaker Pulse Generator	T	$5,581.04	$4,996.52	-10.47%	$5,301.99	8,148
0104	Transcatheter Placement of Intracoronary Stents	T	$4,765.05	$4,750.06	-0.31%	$4,750.06	21,614
0106	Insertion/Replacement/Repair of Pacemaker and/or Electrodes	T	$3,399.05	$1,649.73	-51.46%	$3,229.10	4,355
0107	Insertion of Cardioverter-Defibrillator	T	$19,431.68	$12,119.59	-37.63%	$18,460.10	7,224
0108	Insertion/Replacement/Repair of Cardioverter-Defibrillator Leads	T	$26,092.91	$18,077.80	-30.72%	$24,788.26	5,281
0115	Cannula/Access Device Procedures	T	$1,478.06	$1,502.71	1.67%	$1,502.71	106,398
0119	Implantation of Infusion Pump (we proposed to remove 49419 from APC 119 and place it in 115); the 2005 median was calculated from 25 claims after examination of all single bills and removal of erroneously coded claims	T	$7,765.02	$5,320.82	-31.48%	$7,376.77	385
0122	Level II Tube changes and Repositioning	T	$510.80	$473.64	-7.27%	$485.26	18,775

APC	Description	SI	Final CY 2004 OPPS APC Median	Unadjusted CY 2005 OPPS APC Median Cost	Percentage Change from CY 2004 to CY 2005	Adjusted Final CY 2005 OPPS Median	CY 2005 Total Frequency

BILLING CODE 4120–01–C

We also note that as a result of our initial data analysis for device-dependent APCs, we proposed to make the following additional adjustments to specific device-dependent APCs for the reasons specified:

a. APC 0226: Implantation of Drug Infusion Reservoir

We proposed to remove APC 0226 (Implantation of Drug Infusion Reservoir) from the list of device-dependent APCs and to use its unadjusted single bill median of $2,793.30 as the basis for the payment weight. CPT code 62360 (Implantation or replacement of device for intrathecal or epidural drug infusion, subcutaneous reservoir) is assigned to APC 0226. In CY 2002, when we packaged 75 percent of the cost of the device into the payment for the procedure with which the device was billed to reduce the pro rata adjustment, we inadvertently packaged the cost of an implantable infusion pump (C1336 and C1337) rather than that of a drug reservoir. Our data indicated that the reservoir used in performing CPT code 62360 costs considerably less than an implantable infusion pump, and we believe that the median cost for APC 0226 appropriately reflects the relative cost of the service and the required device.

We did not receive any public comments on this proposal. Accordingly, we have removed APC 0226 from the device-dependent APC list and used its unadjusted single bill median of $2,541.43 as the basis for its CY 2005 relative payment weight.

b. APC 0048: Arthroscopy With Prosthesis

In addition, we proposed to delete APC 0048 (Arthroplasty with Prosthesis) from the list of device-dependent APCs for CY 2005 and to not adjust the median costs for this APC because we believe that the CY 2005 median cost for this APC as restructured is reasonable and appropriate. Based on our careful analysis of the CY 2003 claims data for this APC, we believe the difference between the CY 2004 and CY 2005 median cost is attributable to the migration of certain high cost CPT codes (23470, 24361, 24363, 24366, 25441, 25442, 25446) from APC 0048 to new APC 0425 (Level II Arthroplasty with Prosthesis) and, as such, this change would not adversely limit beneficiary access to this important service. Therefore, we did not propose to apply a device-dependent adjustment to the median cost for APC 0048.

We did not receive any public comments on this proposal. Accordingly, for CY 2005 we are removing APC 0048 from the device-dependent list and are not adjusting the median cost for this APC.

c. APC 0385: Level I Prosthetic Urological Procedures

We proposed to move CPT code 52282 (Cystourethroscopy, insert urethral stent), from APC 0385 (Level I Prosthetic Urological Procedure) and assign it to APC 0163 (Level IV Cystourethoscopy and other Genitourinary Procedures), for clinical homogeneity. As titled, APC 0385 was intended for the assignment of certain urological procedures that require the use of prosthetics. However, CPT code 52282 requires the use of a stent rather than a urological prosthetic. Therefore, we proposed to reassign CPT code 52282 to APC 0163. Recalculation of the median cost for APC 0385 after reassigning CPT code 52282 yielded a median cost for that APC that is consistent with its CY 2004 median payment. Thus, we did not propose a device-dependent adjustment for the median cost for APC 0385.

Comment: Some commenters asked that we keep CPT code 52282 in APC 0385 and not move it to APC 0163. These commenters believed that placement of CPT code 52282 in APC 0385 would maintain clinical coherence and resource similarity. They also supported the APC Panel's recommendation that all three codes, which we proposed to move from APC 0385 to 0386 (CPT codes 53440, 53444, and 54416) should be retained in APC 0385 for CY 2005 OPPS because they are dissimilar in terms of the nature of the surgical procedure and the sophistication of the prosthetic urology device that is implanted.

Response: We have moved CPT code 52282 from APC 0385 to APC 0163 because we believe that this service is more compatible from a clinical and resource perspective with the other cystourethroscopy services assigned to APC 0163 than with services assigned to APC 0385. We have retained CPT codes 53440 and 53444 to APC 0385 because the median costs for these procedures in the CY 2003 data that were used to develop this final rule with comment period indicate that the resources required for them are similar to those for CPT code 54400, which is also assigned to APC 0385. However, we have placed CPT code 54416 in APC 0386 because the median cost shows that the resources are much more like those for services assigned to APC 0386 than the median costs for services in APC 0385. CPT code 54416 requires removal and replacement of a non-inflatable or inflatable prosthesis and our resource data demonstrate relatively high costs for the service, most typically associated with replacement of an inflatable prosthesis. Thus, the nature of the services are sufficiently similar such that CPT code 54416 is clinically coherent with the services in APC 0386.

d. APC 0119: Implantation of Infusion Device and APC 0115: Cannula/Access Device Procedures

We proposed to remove CPT code 49419 (Insert abdom cath for chemo tx), from APC 0119 (Implantation of Infusion Pump) and assign it to APC 0115 (Cannula/Access Device Procedures) to achieve clinical homogeneity within APC 0115. Unlike all the other codes assigned to APC 0115, HCPCS code 49419 does not require the use of an infusion pump. Rather, this code is used when inserting an intraperitoneal cannula or catheter with a subcutaneous reservoir. Thus, we believed it would be more appropriate clinically to reassign HCPCS code 49419 to APC 0115 that includes procedures that require the use of devices similar to that required for CPT code 49419.

Comment: One commenter recommended that we move the CPT code 36260 (Insertion of infusion pump) and CPT code 36563 (Insert tunneled cv catheter) from APC 0119 to APC 0227 (Implantation of Drug Infusion Device), which is also for implantation of infusion pumps. The commenter indicated that all of these services are for implantation of infusion pumps and that the external cost data on the pumps are not dissimilar.

Response: We have not combined the codes in these APCs because they are not clinically homogeneous. Specifically, the services in APC 0227 are for the insertion of spinal infusion pumps and those in APC 0119 are for insertion of vascular infusion pumps. We see no clinical reason to move these codes as suggested by the commenter.

2. Treatment of Specified APCs

a. APC 0315: Level II Implantation of Neurostimulator

As stated in the August 16, 2004 proposed rule, CPT code 61866 (Implant neurostim arrays) was brought to our attention by means of an application for a new device category for transitional pass-through payment for the Kinetra® neurostimulator, a dual channel neurostimulator currently approved and used for Parkinson's disease. We denied approval for a new device category for the Kinetra® neurostimulator because the device is described by a previously

existing category, C1767 (Generator, neurostimulator (implantable)).

The manufacturer of Kinetra® stated that the AMA created CPT 61886 to accommodate implantation of the Kinetra® neurostimulator and that no services other than implantation of the Kinetra® are currently described by that CPT code. Even though the Kinetra® did not receive full FDA pre-market approval until December 2003, hospital outpatient claims were reported in CYs 2002 and 2003 (289 total claims in CY 2003) for this device. The manufacturer asserted that these claims must have been miscoded because the Kinetra® could not have been used in performing CPT code 61886 before obtaining FDA approval in December 2003. Therefore, the manufacturer did not believe that the device cost could be included in the median for CPT code 61886, which has been assigned to APC 0222.

In examining the CY 2003 claims for CPT code 61866, we noted that many of the claims also contained codes for procedures related to treatment with cranial nerve stimulators, including the placement of electrodes for cranial nerve stimulation. The placement of the cranial neurostimulator electrodes used with the Kinetra® is currently an inpatient rather than outpatient procedure. Therefore, we would not expect patients being prepared for cranial nerve stimulation to also have a Kinetra® neurostimulator for deep brain stimulation for Parkinson's disease placed at the same time. Thus, it seems possible that the CY 2003 claims for CPT code 61886, generally, are incorrectly coded and do not include the dual chamber neurostimulator in the reported charges.

Prior to the availability of the dual channel neurostimulator Kinetra® for bilateral deep brain stimulation, it is our understanding that patients diagnosed with Parkinson's disease had two single channel neurostimulator generators implanted in the same operative session. According to the Kinetra® manufacturer, this device will now replace the insertion of two single channel neurostimulators and the cost of the Kinetra® is equivalent to the cost of two single channel neurostimulators. Given this information, we examined our CY 2003 claims data and found that 69 single claims were reported for patients with a diagnosis of Parkinson's disease and that 2 single channel neurostimulator pulse generators (CPT code 61885) were implanted on the same day. The median cost for these claims was $20,631. Other than the device costs, we believe the procedural costs for the insertion of two single channel devices or one dual channel device should be roughly comparable. Therefore, we proposed to establish a new APC 0315, Level II Implantation of Neurostimulator, for CPT code 61886, and assign it a median cost of $20,631. Because of our concern that hospitals correctly code OPPS claims for CPT code 61886, we also proposed to require device coding (C-code) for APC 0315 to improve the coding on all claims for placement of a dual channel cranial neurostimulator pulse generator or receiver, as we proposed for APC 0039, Implantation of Neurostimulator, for placement of a single channel cranial neurostimulator, discussed in section III. C. of this preamble.

Comment: We received one comment in support of our proposed median cost for APC 0315.

Response: We appreciate the commenter's support. Accordingly, we are finalizing our CY 2005 proposal to assign CPT code 61886 to APC 0315 with an assigned median cost of $20,633.70.

b. APC 0651: Complex Interstitial Radiation Application

For CY 2003, APC 0651 included CPT code 77778 (Complex interstitial radiation source application). This code was not to be used for prostate brachytherapy because we created HCPCS codes G0256 (Prostate brachytherapy with palladium sources) and G0261 (Prostate brachytherapy with iodine sources) in which we packaged the cost for placement of needles or catheters and sources into a single APC payment for each G code (67 FR 66779). When we calculated the median from all single bills for CPT code 77778 from CY 2003 data for CY 2005 OPPS, we found that 73 percent of the single bills for this APC were for prostate brachytherapy and, therefore, were miscoded. The median for APC 0651, using all single bills, including those miscoded for prostate brachytherapy, was $2,641.67. When we removed the incorrectly coded claims for prostate brachytherapy, which we believed to contain brachytherapy sources and which are paid separately for CY 2004 and will be paid separately for CY 2005, the median was $1,491.39. This is the amount that we proposed for payment for CY 2005 OPPS for APC 0651. The proposed median was considerably higher than the median cost of $589.72 for CY 2004 OPPS (from CY 2002 claims data).

We believed that this adjusted median was appropriate for APC 0651 when used for prostate brachytherapy because the service described by CPT code 77778 is only one of several components of the payment for the service in its entirety. When it is used for prostate brachytherapy, hospitals should also bill for the placement of the needles and catheters using CPT code 55859 and should also bill the brachytherapy sources separately. Hospitals will be paid for both APCs and for the cost of sources.

Section 621(b)(1) of Pub. L. 108–173 specifically provides separate payment in CY 2005 ''* * * for a device of brachytherapy, consisting of a seed or seeds (or radioactive source) * * *'' at the hospital's charge adjusted to cost. We proposed to package the cost of other services such as the needles or catheters into the payment for the brachytherapy APCs and not to pay on the same basis as the brachytherapy sources because the law does not include needles and catheters in its definition of brachytherapy sources to be paid on charges adjusted to cost.

We also recognized that APC 0651 is used for brachytherapy services other than prostate brachytherapy and that, in some of those cases, there are no other separate procedure codes for placement of the needles or catheters. In those cases, which are represented in the claims we used to calculate the proposed median (once the miscoded claims for prostate brachytherapy were excluded), we believed that the charges for CPT code 77778 may have included the placement of the needles or catheters and, therefore, the median may be somewhat overstated when used as the basis for payment for prostate brachytherapy and the other forms of brachytherapy that have procedure codes for placement of needles and catheters. Similarly, we believed that the median may be understated when used to pay for brachytherapy services for which there are no separate HCPCS codes for needle or catheter placement. We considered whether to create new G codes for the placement of catheters and needles for the brachytherapy services for which such codes do not exist, but we were concerned that doing so might create unneeded complexity and that the existing data may not support establishing medians for the new codes. We requested comments on how to address those services for which there are currently no HCPCS codes for placement of needles and catheters for brachytherapy applications.

Comment: Commenters indicated that the absence of codes for brachytherapy needle/catheter placement is problematic because hospitals are forced to use existing ''not otherwise classified'' codes that makes claims analysis difficult for ratesetting. They asked that we create three ''not otherwise classified'' HCPCS codes for the placement of needles and catheters

for application of brachytherapy sources other than prostate brachytherapy so that they can be billed and paid appropriately. Specifically, they asked (1) that CMS create a code for 1–4 needles/catheters and place it in APC 1507; (2) that CMS create a code for placment of 5–10 catheters and place it in New Technology APC 1513; and (3) that CMS create a new code for more than 10 needles/catheters and place it in New Technology APC 1522.

Response: We have not created HCPCS codes for needle/catheter placement for CY 2005 as suggested by the commenters. We do not believe that the requested new, ''not otherwise classified'' codes would be any more meaningful for OPPS ratesetting than the existing ''not otherwise classified'' codes.

As explained in the November 30, 2001 final rule (66 FR 59897), new Technology APCs are for complete procedures, not devices or drugs or biologicals, but such items may be part of the cost of the complete service. To qualify for OPPS payment under the new technology APCs, a service must meet the following criteria:

- Service must be a complete service.
- Service must not be described by an existing HCPCS code or combination of codes.
- Service could not have been adequately represented in the claims data used for the most current annual OPPS payment update.
- Service does not qualify for additional payment under pass-through payment provisions.
- Service cannot reasonably be placed in an existing APC group that is appropriate in terms of clinical characteristics and resource costs.
- Service is medically reasonable and necessary.
- Service falls within scope of Medicare benefits.

Processes and requirements for pass-through and new technology service APC applications are provided in more detail on the OPPS Web site: *http://www.cms.hhs.gov/poviders/hopps/.*

Implicit in the criteria is that there exists a meaningful description of the services for which new technology status is being requested. We do not believe the ''not otherwise classified'' codes proposed by the commenters are sufficiently specific that they could satisfy the criteria. We believe that CPT already contains sufficient ''not otherwise classified'' codes for the coding of placement of brachytherapy needles and catheters in locations of the body for which specific codes do not now exist. We are unable to specify the ''not otherwise classified'' codes that should be used because the ''not otherwise classified'' codes are generally categorized by body part or function, and, therefore, the code that would apply depends on the location in the body in which the needles and catheters are being placed. For example, placement of needles or catheters in a shoulder muscle would be coded differently from placement of needles or catheters in the pancreas.

Comment: Some commenters supported the proposed payment for APC 0651 (Complex Interstitial Radiation Source Application). They indicated that, together with separate payment for the brachytherapy sources and the placement of needles and catheters, the proposed payment would provide adequate payment for these important services.

Response: We appreciate the commenters' support. Further discussion regarding the payment for APC 0651 is provided at III.C.2.b.

Comment: One commenter indicated that there are many supplies and devices other than needles and catheters that are used in providing brachytherapy and asked that CMS develop codes for them so that they could be billed as coded items because such coding would facilitate capture of all the costs associated with performing the services.

Response: We have not created new device codes for the supplies and equipment that the commenter requested because such items are incidental to the service. We do not believe that such incidental items justify development of new device codes.

In this final rule with comment period, the median cost for APC 0651 is $1,283.44, resulting in a national unadjusted payment rate of $1,248.93. There were fewer CY 2003 final action claims for this service in the database that was constructed from the most current claims data and used to develop the weights and median costs for this final rule with comment period. Twelve hospitals whose claims had appeared in the CY 2003 claims data used to calculate the proposed weights and median costs withdrew their claims before we pulled the data for this final rule with comment period. This may have been because they realized that they had billed incorrectly and withdrew the claims to bill correctly.

Our examination of the claims data set for this final rule with comment period reveals that the claims largely appear to not include charges for brachytherapy sources. The unadjusted median cost that resulted from use of these claims is $1,283.44, a 117 percent increase over the median cost for CY 2004 for this APC. As we noted previously, the median should reflect accurately the appropriate claims for the APC. We have no reason to believe that this median is flawed. Therefore, we have used it as the basis for the CY 2005 OPPS unadjusted payment rate of $1,248.93.

c. APC 0659: Hyperbaric Oxygen Therapy

In the August 16, 2004 proposed rule, we stated that over the past year, we have received a number of questions about billing and payment for HCPCS code C1300 (Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval). In light of these issues, we carefully examined the CY 2003 single procedure claims data that we proposed to use to calculate the CY 2005 median for APC services. Based on our examination of single procedure claims filed for HCPCS code C1300 in CY 2003, we believe that the claims for these services were either miscoded or the therapy was aborted before its completion. The claims that we examined reflected a pattern that is inconsistent with the clinical delivery of this service. Hyperbaric oxygen therapy (HBOT) is prescribed for clinical conditions such as promoting the healing of chronic wounds. It is typically prescribed on average for 90 minutes and, therefore, you would expect hospitals to bill multiple units of HBOT to achieve full body hyperbaric oxygen therapy. In addition to the therapeutic time spent at full hyperbaric oxygen pressure, treatment involves additional time for achieving full pressure (descent), providing air breaks to prevent neurological and other complications from occurring during the course of treatment, and returning the patient to atmospheric pressure (ascent). Our examination of the claims data revealed that providers who billed multiple units of C1300 reported a consistent charge for each ''30 minute'' unit. Conversely, providers who billed only a single unit of C1300, suggesting either a miscoded or aborted service, reported a charge that was 3 to 4 times greater than the per ''30 minute'' unit reported by providers billing multiple units of HCPCS code C1300. While it appears that many of the single procedure HBOT claims that we examined represented billing for a full 90 to 120 minutes of HBOT (including ascent, descent, and air break time), they were improperly billed as 1 unit rather than as 3 or 4 units of HBOT. Consequently, this type of incorrect coding would result in an inappropriately high per 30 minute median cost for HBOT or a median cost

for HBOT of $177.96 derived using single service claims and ''pseudo'' single service claims. This is a significant issue because HBOT is the only procedure assigned to APC 0659.

Our initial analysis of the HBOT claims data further revealed that about 40 percent of all HBOT claims included packaged costs. To confirm our belief that these packaged costs were not associated with HBOT, we examined the other major payable procedures billed in conjunction with HBOT. As a result, we identified billed services such as drug administration and wound debridement that we would typically expect to have associated packaged services. We also looked at the magnitude of packaged costs in our single bills and found the majority of these costs were small, less than $30, and concentrated in revenue codes 25X, Pharmacy, and 27X, Medical/Surgical Supplies.

As a result of these coding anomalies, we proposed to calculate a ''30 minute'' median cost for APC 0659, using a total of 30,736 claims containing multiple units or multiple occurrences of HBOT, about 97 percent of all HBOT claims. Based on our finding, we proposed to exclude claims with only one unit of HBOT. We estimated costs on these claims using the respiratory therapy cost center CCR when one was available. Otherwise we used the hospital's overall CCR. Using this proposed methodology, the proposed median cost per unit of C1300 was $82.91. Based on hospitals' charges on correctly coded claims, we believe this estimate is much more accurate for 30 minutes of HBOT. Thus, we proposed a median cost for APC 0659 of $82.91 for CY 2005.

We received many public comments on this proposal.

Comment: Overall, commenters expressed concern about the proposed reduction in payment for HBOT. There also was great consistency in the comments. Almost all the commenters cited a recent research report by The Lewin Group (Lewin) that examined our methodology for calculating a payment rate for APC 0659 and offered us several alternatives for identifying a median for HBOT. In their evaluation of our proposed change for calculating a median for HBOT, The Lewin Group ultimately concluded that, while our proposed use of claims with multiple units of C1300 in lieu of the clams with a single unit of C1300 was appropriate for calculating the median cost, we used an inappropriate cost-to-charge ratio to estimate costs from charges on those multiple unit claims.

Lewin surveyed the majority of hospitals billing Medicare for HBOT, requesting specific pages from each hospital's cost report to determine where HBOT services are reported and the associated CCR. Lewin received completed responses from 120 hospitals, a 30 percent response rate. The majority of responding hospitals, 63 percent, frequently broke out the costs of hyperbaric/wound care in a subscripted cost center on their cost report. In addition, 24 percent included their costs in the respiratory therapy cost center, and the remainder included their costs in disparate cost centers including emergency room and physical therapy. For those hospitals reporting separate line-items for hyperbaric/wound care, Lewin used CMS claims data to estimate a median CCR of 0.400 as compared with the median CCR for respiratory therapy of 0.248. Lewin also sought to establish the generalizability of their sample findings by demonstrating that responding hospitals were geographically diverse and that the respiratory therapy CCR for the responding hospitals was comparable to that observed in the claims data. Finally, Lewin used their survey findings to estimate a proportional difference in CCRs between respiratory therapy and the observed, hyperbaric-related CCRs of 1.411 and, applying this adjustment to the CMS claims data, they calculated a payment rate of $118.21.

Practically all commenters offered four possible alternatives to our proposed methodology. First, commenters suggested that CMS leave HBOT reimbursement at its CY 2004 level until CMS can accurately estimate costs and charges for HBOT. Second, commenters suggested that CMS apply The Lewin Group methodology in estimating median cost. Third, commenters suggested that CMS adopt The Lewin Group's estimated median of $118.21 per 30 minutes. With regard to this specific recommendation, several commenters stated that they thought that the $118 rate was appropriate, and one commenter believed a rate of $120 or greater would be acceptable. Finally, commenters suggested that CMS default to the overall CCR of 0.47 in lieu of using the respiratory therapy CCR.

Response: We agree with the commenters that The Lewin Group analysis provides sufficient evidence that the CCR for HBOT is not reflected solely in the respiratory therapy cost center. With regard to the first recommended alternative, we do not believe it is appropriate to maintain the CY 2004 HBOT payment rate for CY 2005. We have clearly demonstrated that the single procedure claims are inappropriate for calculating a median cost, and the submitted research did not dispute our median calculation methodology. We cannot undertake the recommended second alternative and replicate The Lewin Group's methodology because the hyperbaric/wound care cost report cost center line-items are neither standard nor non-standard cost centers. We presume that these line-items for hyperbaric/wound care are subscripted cost centers that are ultimately rolled-up in to a standard cost center on the electronic cost report data. Without the specific subscripted information, we cannot calculate a cost-to-charge ratio specific to HBOT.

We also do not believe it is appropriate to adopt the $118.21 estimate made by Lewin using its survey results and our data, the third recommended alternative. The Lewin survey indicates diversity among hospitals in the subscripted location of reported hyperbaric oxygen costs on the cost report. In addition, the $118.21 is based on an adjustment to the CCR that assumes all nonresponding hospitals report their costs in the hospital-specific hyperbaric oxygen-related cost centers, even though roughly one-fourth of hospitals in the Lewin sample were demonstrated to report costs in the respiratory therapy cost center and 13 percent reported costs in other cost centers. The submitted research further indicates fairly substantial variation in the CCRs for the responding hospitals in the HBOT-related cost centers. In light of this, we agree to adopt the last recommended alternative, which is to calculate the median using the overall CCR. As several commenters noted, defaulting to the hospital's overall CCR is standard OPPS policy when an appropriate cost center cannot be assigned to a revenue code. We estimate an overall, hospital-weighted, median CCR for all hospitals of 0.33 and a hospital-weighted, median CCR for respiratory therapy for all hospitals of 0.27. Using the overall CCR to estimate costs from charges associated with HCPCS code C1300, we calculated a median cost of $93.26 using 38,505 claims in the final rule data. We used this median to set the final CY 2005 payment for APC 0659.

Comment: One commenter conducted an internal study of 11 member hospitals and reported a median total cost of $126.42. The study findings acknowledged that we found billing anomalies in the claims with single units, but noted that our proposed approach will have unintended financial consequences. The commenter requested that we review our claims data to ensure HBOT rates that reflect the full cost of providing HBOT services.

Response: As discussed above, we agree that the proposed cost for HBOT was too low because it relied solely on the respiratory therapy CCR. However, based on the volume and consistency of claims for HBOT, we still believe that the claims data are correct. As already discussed, we will base payment for HBOT on a median calculated using the overall hospital CCR. Further, the purpose of OPPS is not to pay the full cost of a service for any given hospital, but rather to proportionally redistribute total OPPS dollars in a manner that reflects relative resource use. APC payment rates are based on the median cost of a group of services, or in this case, one service, to achieve the averaging effect of a prospective payment system and are not intended to reimburse the full cost to a specific hospital. The costs for these 11 member hospitals may fall above the median cost for all hospitals billing HBOT.

Comment: One commenter reviewed CMS claims with multiple units and found an overall average of 15 units of HBOT per claim. This commenter recommended that CMS review a sample of medical records.

Response: We expect that this finding is the result of outlier claims and unit coding errors. In our analyses of HBOT claims for the proposed rule, we found that the vast majority of claims, 93 percent, were for 3 to 5 units of service. Further, The Lewin Group analysis reviewed above did not dispute the appropriateness of using claims with multiple units for calculating a median cost. As discussed above, we believe that the appropriate concern in estimating a median cost for HBOT is the disparity in charging and cost reporting practices among hospitals and not with the claims themselves, a finding that mitigates the need for medical record review.

Comment: One commenter recommended that CMS continue to compile claims data on HBOT and refer this issue to the APC Panel before making changes.

Response: By using claims with multiple units, we believe that we have ample claims data. However, the APC Panel is an official public forum designed to consider and advise us on APC-related issues. If this is a particular concern to the public, the public is invited to present this concern at the next APC Panel meeting.

After carefully reviewing all comments received, we are basing payment for HBOT on a median calculated using the overall hospital CCR rather than the respiratory therapy CCR as proposed. As discussed above, using the overall CCR to estimate costs from charges associated with HCPCS code C1300, we calculated a final CY 2005 payment for APC 0659 of $90.75.

3. Other APC Median Cost Issues

a. APC 0312 Radioelement Applications

Comment: Some commenters stated that the payment rate for APC 0312 (Radioelement Applications) is inadequate to pay for the staff, supplies and appliances that are needed to furnish the service. The commenters further stated that the APC payment should be similar to that for APC 0651.

Response: The median for APC 0312 has increased significantly from the CY 2004 payment median of $199.90 to the CY 2005 OPPS final rule with comment period median of $326.65. Moreover, we were able to use 28 percent of the total claims in CY 2003 for this APC to set the median cost for the CY 2005 OPPS. Therefore, we see no reason to adjust the median for this APC to the level of APC 0651.

b. Percutaneous Radiofrequency Ablation of Liver Tumors

Comment: Some commenters objected to the proposal to move CPT code 47382 (Percutaneous radiofrequency of liver tumors), from a New Technology APC to clinical APC 0423 (Level II Percutaneous Abdominal and Biliary Procedures) because they believe that there is an inadequate number of claims on which to base median costs, and that median costs are inappropriately low because device costs associated with performing this procedure are underreported. They indicated that the proposed reimbursement does not cover the costs of the single use catheters used in performing the service. The commenters stated that revenue codes should be used to screen for appropriately coded claims. They contended that if CMS cannot complete this analysis for this final rule with comment period, CMS should retain CPT code 47382 in a new technology APC at the CY 2004 payment rate until more representative cost data are available. They argued that this latter approach is consistent with how CMS has handled APC payments for PET services since CY 2001. The commenters also recommended that CPT codes 76362 (CT guidance for and monitoring of visceral tissue ablation), 76394 (Magnetic resonance imaging for and monitoring of visceral tissue ablation), and 76940 (Ultrasound guidance for and monitoring of visceral tissue ablation) be added to the bypass list so that more single bills could be used to set the median for CPT code 47382.

Response: We believe that the claims volume is sufficiently adequate to remove CPT code 47382 from New Technology APC 1557 and place it in a clinical APC. Moreover, the median cost, $1,801.84, derived from the CY 2003 claims data for APC 0423, is very close to the payment that was made for New Technology APC 1557 of $1,850. Therefore, as proposed, this service will be placed in clinical APC 0423 and paid based on its historic claims data for services furnished for the CY 2005 OPPS.

In addition, the three CPT codes that the commenter recommended we add to the bypass list do not meet the CY 2005 criteria for inclusion on the list. However, we will consider their inclusion when we next review items for inclusion in CY 2006.

c. Heparin Coated Stents

Comment: One commenter objected to CMS' policy that heparin coated stents should be coded under C1874 (Stent, coated/cov w/del sys) because the commenter believes that to do so will adversely affect the median cost of the stents. The commenter urged us to create a unique C-code if HCPCS codes G0290 and G0291, which are used for placement of drug eluting stents, are retired.

Response: HCPCS codes G0290 and G0291 will remain active codes for CY 2005 and we see no reason to create another C-code at this time. We will determine whether there is a need for another C-code to differentiate between stents if and when HCPCS codes G0290 and G0291 are retired.

d. Aqueous Drainage Assist Device

Comment: One commenter asked that CMS ensure that the costs of code C1783 (Aqueous drainage assist device) are packaged with the costs of the procedures with which the device is most commonly billed. The commenter stated that codes C1783, L8610 and L8612 would usually be billed with procedures that are in APC 0673.

Response: We package the costs of devices that are billed on the same claim with the procedural APCs into the cost of the procedural APC. Thus, the extent to which the costs of these devices are packaged into the median cost for the procedure depends upon the extent to which the hospitals include the charges for the devices on the claim, with or without including the code for the device. To the extent that hospitals included charges for these devices on the claims for the procedures in which they were used, those charges would be converted to costs and packaged into the median cost for the procedure.

4. Required Use of C-Codes for Devices

An important ancillary issue in regard to using hospital outpatient claims data to calculate median costs for a device-dependent APC is whether to require that hospitals bill the HCPCS codes for the devices that are required for use in the provision of the services in these APCs. We deleted HCPCS codes for devices in CY 2003 because hospitals objected to the complexity of this coding, and we believed that hospitals would charge for the devices in appropriate revenue codes. Our review of the claims data does not support this belief. Hospitals do not appear to routinely include the charges for the devices they use when they bill for all of the related services in the device-dependent APCs. Therefore, as discussed in the August 16, 2004 proposed rule, we proposed requiring hospitals to code devices for APCs to improve the quality of the claims data in support of our transition to the use of all single claims to establish payment rates for those APCs. We made this proposal cautiously, as we realize that it imposes a burden on hospitals to code the devices.

For the CY 2005 OPPS, we proposed to require coding of devices required for APCs for which we proposed to adjust the median costs for the CY 2005 OPPS. The APCs and the devices that were proposed for device coding were published in Table 20 of the August 16, 2004 proposed rule (69 FR 50497 through 50499). Specifically, if one device is shown for one APC, that device would have to be billed on the claim for a service in that APC or the claim would be returned to the provider for correction. If more than one device is shown for one APC, the provider would be required to bill one of the device codes shown on the same claim with the service in that APC for the claim to be accepted.

We also proposed to require coding of C1900 (Left ventricular lead) required to perform the service described in APC 0418, Left Ventricular Lead, because the service cannot be done without the lead, and because the device has been billed separately for pass-through payment in CYs 2003 and 2004. We believe that continued coding of the device would not impose a burden on hospitals. Similarly, because of our concerns regarding the correct coding of claims for CPT code 61886 (Implant neurostim arrays), assigned to APC 0315 (discussed in greater detail in section III.C.2.a. of this preamble), we proposed to require device coding for APC 0315 (Level II Implantation of Neurostimulator) to improve the coding on claims for placement of a dual channel cranial neurostimulator pulse generator or receiver, just as we proposed to require device coding for APC 0039 (Implantation of Neurostimulator) for placement of a single channel cranial neurostimulator as noted below.

We solicited comments on the proposed C-code requirements.

In addition, we announced in the proposed rule that we are considering expanding the device coding requirements in the future. We believed that, by requiring device coding for a small subset of device-dependent APCs each year, we would minimize the marginal annual coding burden on hospitals and begin to improve data for these APCs, which have consistently proven to be problematic. We believed coding of devices was essential if we were to improve the accuracy of claims data sufficiently to better calculate the correct relative costs of device-dependent APCs in relation to the other services paid under the OPPS.

We asked that the public inform us of the device codes that are essential to the procedures contained in the device-dependent APCs listed in Table 20 of the proposed rule. The alphanumeric HCPCS codes for devices that were reactivated for CY 2004 OPPS can be found on the CMS Web site at *http://www.cms.hhs.gov/providers* under coding. They are in the section of alphanumeric codes that begin with the initial letter ''C.''

We received a number of comments regarding our request.

Comment: In general, commenters supported a requirement for mandatory device coding for all devices, not only those for which CMS proposed mandatory reporting. However, they had different views regarding what the requirement should contain and how it should be enforced. Some commenters asked that we require that all procedures for device-dependent APCs contain a C-code to identify the device used in the procedure. They indicated that they believed that this requirement is crucial to acquiring valid cost data for these services. Some commenters were concerned about the administrative burden that required C-coding imposes on hospitals and urged CMS to reassess the burden within 2 years if it imposes mandatory C-coding for devices. Other commenters urged CMS to implement a grace period of no less than 90 days after implementation of the CY 2005 OPPS to enable hospitals to be sure that they are prepared for device code edits. During this period, the commenters wanted intermediaries to accept the codes and not return incorrectly coded claims. The commenters indicated that the edits should be included in this final rule with comment period so that hospitals can begin to work on them as soon as possible. Those commenters suggested that the device codes for which edits will not be implemented in CY 2005 should not be required until CY 2006. The commenters indicated that both OCE and intermediary systems must be ready to handle this change, and that no edits should be implemented if they are not and if providers have not had at least 30 days notice. Some commenters urged CMS to base any edits or list of required device codes on CPT codes, not APCs, because in some cases, not all codes in an APC require the same device. One commenter objected to the use of edits to return to providers claims that contain a procedure code that cannot be done without a device but which contain no device code. The commenter indicated that CMS has been inconsistent in its policies governing coding of devices since the inception of the OPPS and should provide some greater period of stability in coding before it edits for the presence of the device codes.

Response: We appreciate the comments, but continue to believe coding of devices is vital to enhancing the device-dependent APC claims data. Therefore, as proposed, effective for services provided on or after January 1, 2005, we will require hospitals to include device category codes on claims when such devices are used in conjunction with procedures billed and paid for under the OPPS. While we are requiring use of these device codes for reporting all such devices effective January 1, 2005, we will not implement the edits contained in Table 19 until April 1, 2005, to provide time for further review and for hospitals to prepare for them. The edits will not apply to claims that contain a procedure code reported with a modifier 73 or 74 to signify an interrupted procedure because we recognize that in those cases, the procedure might have been interrupted before the device was implanted.

We will apply the edits at the CPT/HCPCS code level to be as precise as possible. Table 19 includes the edits that we expect to go into effect April 1, 2005. The table of edits and the definitions of the C-codes (Table 20 of this preamble) will be posted on the CMS Web site on the OPPS page. As noted on Table 19, there are some CPT codes for which edits cannot be established, for example, because of the optional nature of the use of a device when performing the service. Although there is no official comment period

associated with implementation of the edits, we welcome comments on the edits to be implemented on April 1, 2005, particularly from hospitals to whose claims the edits will apply and from medical specialties whose physicians use the devices in the procedures performed in hospital outpatient settings. Comments may be sent to *OutpatientPPS@cms.hhs.gov* if possible, by December 1, 2004.

In the future, we will consider edits for additional procedure codes in other device-dependent APCs. We will post all final edits on the CMS Web site with an announcement of the calendar quarter in which we expect to implement them. We will also provide them in a Medlearn Matters article. Any future edits will be implemented as always as part of the quarterly OCE release. We intend to expand the editing of device-dependent procedure codes for appropriate device C-codes as expeditiously but also as carefully as possible. The next group of device procedures for which we will consider edits will include those procedures in APCs for which we set the median cost at 95 percent of the CY 2004 payment median but for which we did not propose edits in the August 16, 2004 proposed rule.

Comment: One commenter asked that CMS encourage manufacturers to put the applicable HCPCS device C-code on the device package and that CMS work with FDA to expedite placement of C-codes on device packages. The commenter also urged CMS to simplify the C-codes to be consistent with the information routinely reported by physicians in operative reports. The commenter gave, as an example, the seven device codes used with APC 0087 (Noncoronary Angioplasty or Atherectomy), all of which could be reported using only one code for ''transluminal catheter''. The commenter stated that such simplification would greatly improve the likelihood that the device is coded on the claim because the description that distinguishes one of the seven codes from another is typically not documented in the hospital's record and is not information the coder would know. Other commenters asked that CMS actively undertake a program designed to educate providers on how to bill for devices and how to set charges for high cost devices so that future updates to the OPPS will more accurately reflect the costs of these services. Some commenters urged CMS to create and maintain a file on the CMS Web site that contains a complete crosswalk of devices codes to CPT codes in the device APCs. Some commenters asked that CMS provide a detailed revenue code to device code crosswalk so that hospitals will promote more uniformity in billing for devices.

Response: We will carefully examine how we can facilitate correct coding of devices, including possible communication with the FDA. We will also consider the extent to which we can simplify the HCPCS codes for devices to facilitate straightforward coding. Finally, we will determine the extent to which we can improve provider education regarding correct coding for devices. However, we will not undertake any activity designed to advise hospitals on how to set charges for their services or to designate what revenue codes hospitals should use on a device-specific basis.

The edits that we created to ensure the coding of devices for the selected APCs that are listed in Table 19 of this preamble are also available as an Excel file in the supporting documentation of this final rule with comment period that will be posted on the CMS Web site and will also be contained in the transmittals for the January 2005 OPPS update and OCE release. Moreover, as described above, we will post any added edits for device coding on the OPPS page of the CMS Web site so that providers can have ready access to them.

Comment: Some commenters asked that we add particular device and procedure combinations to the table of edits. Specifically, a commenter asked that we add APC 0259 (Cochlear Implant Surgery) as paired with device code L8614 (Cochlear implant), and APC 0040 paired with both device codes C1778 (Lead neurostimulator) and C1883 (Adapter/extension packing lead or neurostimulator lead). Another commenter asked that we add code C1787 (Patient programmer, neurostimulator) to the required devices for APC 0222. Another commenter asked that the same device codes be required for the CPT codes in APC 0087 as we proposed to require for APC 0085 because the commenter believes that the same devices are used in both APCs. Other commenters asked that we include edits for other APCs, for example, APC 0385 (Level I Prosthetic Urological Procedures) and APC 0386 (Level I Prosthetic Urological Procedures).

Response: Except as discussed below, we have not added any APCs to the list that we proposed be edited for device codes at this time. Although our policy to require hospitals to code all devices is effective January 1, 2005, we will not implement edits until April 1, 2005. We will consider the comments regarding additional edits for later implementation. We believe that it is preferable to focus first on the APCs most affected and to add subsequent edits after careful deliberation. In this manner we can minimize the potential for adverse effects on claims processing and hospitals' cash flow.

However, we have added one CPT code to the list of codes that will be edited for device codes. We inadvertently omitted a proposed edit for CPT code 33225 (Left ventricular pacing lead add-on), which we proposed to place in New technology APC 1525. This procedure uses the device code C1900 (Left ventricular lead), whose pass-through status expires in January 2005. We proposed that when the lead is implanted as a stand-alone procedure using CPT code 33224 (Insert pacing lead and connect), we would edit for the presence of the device code for the lead on the claim. However, we believe that it is also appropriate to edit for the presence of the lead on a claim for the add-on code, CPT code 33225, and that it should pose no additional burden on hospitals because hospitals have been required to bill the device code C1900 for pass-through payment since CY 2004.

Summary of provisions related to required use of C-codes for devices that we are making final beginning in CY 2005:

1. Hospitals are required to report device category codes on claims when such devices are used in conjunction with procedure(s) billed and paid for under the OPPS in order to improve the claims data used annually to update the OPPS payment rates.

2. Beginning April 1, 2005, the OCE will include edits to ensure that certain procedure codes are accompanied by an associated device category code.

3. CMS will post the OCE edits that are to be implemented beginning April 1, 2005 on the CMS Web site to give hospitals and the provider community ample opportunity to review them and provide feedback prior to implementation.

4. Edits will apply at the CPT/HCPCS code level rather than the APC level.

5. Edits will not apply when a procedure code is reported with a modifier −73 or −74 to designate an incomplete procedure.

6. CMS will add edits as needed in future quarterly updates of the OCE to ensure that hospitals are reporting device category codes appropriately with associated procedure codes. CMS will post future device category and procedure code edits on the CMS Web site to give hospitals and the provider

community ample opportunity for input prior to implementation.

Table 20.—Device Code Descriptors for Select Device-Dependent APCs

Device code	Descriptor
C1714	Catheter, transluminal atherectomy, directional
C1721	Cardioverter-defibrillator, dual chamber (implantable)
C1722	Cardioverter-defibrillator, single chamber (implantable)
C1724	Catheter, transluminal atherectomy, rotational
C1725	Catheter, transluminal angioplasty, non-laser (may include guidance, infusion/perfusion capability)
C1730	Catheter, electrophysiology, diagnostic, other than 3d mapping (19 or fewer electrodes)
C1731	Catheter, electrophysiology, diagnostic, other than 3d mapping (20 or more electrodes)
C1732	Catheter, electrophysiology, diagnostic/ablation, 3d or vector mapping
C1733	Catheter, electrophysiology, diagnostic/ablation, other than 3d or vector mapping, other than cool-tip
C1751	Catheter, infusion, inserted peripherally, centrally or midline (other than hemodialysis)
C1766	Introducer/sheath, guiding, intracardiac electrophysiological, steerable, other than peel-away
C1767	Generator, neurostimulator (implantable)
C1772	Infusion pump, programmable (implantable)
C1777	Lead, cardioverter-defibrillator, endocardial single coil (implantable)
C1779	Lead, pacemaker, transvenous vdd single pass
C1786	Pacemaker, single chamber, rate-responsive (implantable)
C1788	Port, indwelling (implantable)
C1874	Stent, coated/covered, with delivery system
C1875	Stent, coated/covered, without delivery system
C1876	Stent, non-coated/non-covered, with delivery system
C1877	Stent, non-coated/non-covered, without delivery system
C1882	Cardioverter-defibrillator, other than single or dual chamber (implantable)
C1885	Catheter, transluminal angioplasty, laser
C1887	Catheter, guiding (may include infusion/perfusion capability)
C1891	Infusion pump, non-programmable, permanent (implantable)
C1892	Introducer/sheath, guiding, intracardiac electrophysiological, fixed-curve, peel-away
C1893	Introducer/sheath, guiding, intracardiac electrophysiological, fixed-curve, other than peel-away
C1895	Lead, cardioverter-defibrillator, endocardial dual coil (implantable)
C1896	Lead, cardioverter-defibrillator, other than endocardial single or dual coil (implantable)
C1899	Lead, pacemaker/cardioverter-defibrillator combination (implantable)
C1900	Lead, left ventricular coronary venous system
C2617	Stent, non-coronary, temporary, without delivery system
C2618	Probe, cryoablation
C2620	Pacemaker, single chamber, non rate-responsive (implantabe)
C2625	Stent, non-coronary, temporary, with delivery system
C2626	Infusion pump, non-programmable, temporary (implantable)
C2628	Catheter, occlusion

BILLING CODE 4120–01–C

5. Submission of External Data

In the August 16, 2004 proposed rule, we stated that we would consider external data submitted with respect to any APC to the extent that such data enable us to verify or adjust claims data where we are convinced that such an adjustment to the median cost is appropriate. Further, we stated that all comments and any data we use would be available for public inspection and commenters should not expect that any data furnished as part of the comment

would be withheld from public inspection. We also stated that parties who submit external data for devices should also submit a strategy that can be used to determine what part of the median cost represents the device to which the external data applies. We stated in the proposed rule that external data that are likely to be of optimal use should meet the following criteria:

- Represent a diverse group of hospitals both by location (for example, rural and urban) and by type (for example, community and teaching). We preferred that commenters identify each hospital, including location with city and State, nonprofit vs. for profit status, teaching vs. nonteaching status, and the percent of Medicare vs. non-Medicare patients receiving the service. A pseudo identifier could be used for the hospital identification. Data should be submitted both ''per hospital'' and in the aggregate.
- Identify the number of devices billed to Medicare by each hospital as well as any rebates or reductions for bulk purchase or similar discounts and identify the characteristics of providers to which any such price rebates or reductions apply.
- Identify all HCPCS codes with which each item would be used.
- Identify the source of the data.
- Include both the charges and costs for each hospital for CY 2003.

Meeting the criteria would help enable us to compare our CY 2003 claims data to the submitted external data and help us determine whether the submitted data are representative of hospitals that submit claims under the OPPS.

We noted in the proposed rule that information containing beneficiary-specific information (for example, medical records, and invoices with beneficiary identification on it) must be altered, if necessary, to remove any individually identifiable information, such as information that identifies an individual, diagnoses, addresses, telephone numbers, attending physician, medical record number, and Medicare or other insurance number. Moreover, individually identifiable beneficiary medical records, including progress notes, medical orders, test results, and consultation reports must not be submitted to us. Similarly, photocopies of checks from hospitals or other documents that contain bank routing numbers must not be submitted to us.

We received a number of public comments concerning the submission of external data.

Comment: Some commenters supported use of claims data and strongly opposed use of data from external sources to set the OPPS payment rates. They believed that claims data more accurately reflects the costs hospitals incur to provide outpatient services. They strongly opposed use of external data because they believe that item specific adjustments will make OPPS unduly complex and result in unfair imbalances in payments. They believed that CMS should remain committed to the principles of prospective payment and the use of the averaging process rather than seeking to pay actual cost for one element of costs (for example, new technology) at the expense of all other items, which would result after application of mandated budget neutrality adjustments. Conversely, other commenters indicated that CMS should rely on external data in lieu of claims data for procedures that require high cost devices because the CMS methodology of applying a cost-to-charge ratio to charges to acquire costs will always result in costs that are below the actual acquisition cost of the device and that, barring a significant change in CMS' cost finding process, external data are the only means by which valid cost data for high cost devices can be introduced into the OPPS. Some commenters provided external data on the devices of interest to them and some provided specific amounts calculated using external data, which they asked that we substitute for claims data in setting the weight for the APC of interest to them.

Response: We have not applied numbers from external data in our adjustments of median costs for the CY 2005 OPPS. While recognizing that external data aids in our general analysis of determining payment rates, we believe that generally such use of external data is not the optimal way to set payment rates for services in a relative weight system. As we discussed in section III.C.5. of this preamble, we believe that using external data has a significant potential for creating an unfair imbalance in a prospective payment system. However, we appreciate the efforts of some commenters in providing us with external data.

Comment: Some commenters urged us to use external data in the construction of APC rates and urged us to use confidential data for this purpose. Some commenters are concerned about the criteria CMS proposed for external data and urged us to expand the use of confidential external data to calculate future payment rates whenever such data are indicated and proven reliable based on the data's merits. The commenter did not suggest criteria for determining if confidential proprietary external data are reliable.

Response: As we indicated in the August 16, 2004 proposed rule, all information sent in response to comments will be made available to the public for review. We believe that all parties who are affected by the payment rates set under this system should have access to the information on which the rates are set.

Comment: One commenter indicated that CMS should use external data for all device APCs in which the device cost exceeds 5 percent of the total APC cost because to do otherwise would unfairly benefit some categories of services compared to other categories of services.

Response: We have not used external data to adjust any medians for the CY2005 OPPS. As discussed above, we applied the same adjustment rules to all device medians.

After carefully reviewing all public comments received, we have decided not to use any external data to adjust the median costs for the CY 2005 OPPS for the reasons discussed above.

D. Calculation of Scaled OPPS Payment Weights

Using the median APC costs discussed previously, we calculated the relative payment weights for each APC for CY 2005 shown in Addenda A and B to this final rule with comment period. As in prior years, we scaled all the relative payment weights to APC 0601 (Mid-Level Clinic Visit) because it is one of the most frequently performed services in the hospital outpatient setting. We assigned APC 0601 a relative payment weight of 1.00 and divided the median cost for each APC by the median cost for APC 0601 to derive the relative payment weight for each APC. Using CY 2003 data, the median cost for APC 0601 is $57.32 for CY 2005.

Section 1833(t)(9)(B) of the Act requires that APC reclassification and recalibration changes, wage index changes, and other adjustments be made in a manner that assures that aggregate payments under the OPPS for CY 2005 are neither greater than nor less than the aggregate payments that would have been made without the changes. To comply with this requirement concerning the APC changes, we compared aggregate payments using the CY 2004 relative weights to aggregate payments using the CY 2005 proposed relative weights. Based on this comparison, we proposed to make an adjustment to the weights for purposes of budget neutrality. The unscaled weights were adjusted by 0.984667135 for budget neutrality. The CY 2005

relative weights, which incorporate the recalibration adjustments explained in this section, are listed in Addendum A and Addendum B to this final rule with comment period.

Section 1833(t)(14)(H) of the Act, as added by section 621(a)(1) of Pub. L. 108–173, states that ''Additional expenditures resulting from this paragraph shall not be taken into account in establishing the conversion factor, weighting and other adjustment factors for 2004 and 2005 under paragraph (9) but shall be taken into account for subsequent years.'' Section 1833(t)(14) provides the payment rates for certain specified covered outpatient drugs. Therefore, the incremental cost of those specified covered outpatient drugs (as discussed in section II.J. of this final rule with comment period) is excluded from the budget neutrality calculations but the base median cost of the drugs continues to be a factor in the calculation of budget neutrality. Accordingly, we calculated median costs for the specified covered outpatient drugs to which this section applies and used those medians and the frequencies in the calculation of the scaler for budget neutrality.

Under section 1833(t)(16)(C) of the Act, as added by section 621(b)(1) of Pub. L. 108–173, payment for devices of brachytherapy consisting of a seed or seeds (or radioactive source) is to be made at charges adjusted to cost for services furnished on or after January 1, 2004 and before January 1, 2006. As we stated in our January 6, 2004 interim final rule, charges for the brachytherapy sources will not be used in determining outlier payments and payments for these items will be excluded from budget neutrality calculations, consistent with our practice under the OPPS for items paid at cost. (We provide a discussion of brachytherapy payment issues at section VII.G. of this final rule with comment period.)

IV. Payment Changes for Devices

A. Pass-Through Payments for Devices

1. Expiration of Transitional Pass-Through Payments for Certain Devices

Section 1833(t)(6)(B)(iii) of the Act requires that, under the OPPS, a category of devices be eligible for transitional pass-through payments for at least 2, but not more than 3 years. This period begins with the first date on which a transitional pass-through payment is made for any medical device that is described by the category. In our November 7, 2003 final rule with comment period (68 FR 63437), we specified six device categories currently in effect that would cease to be eligible for pass-through payment effective January 1, 2005.

The device category codes became effective April 1, 2001, under the provisions of the BIPA. Prior to pass-through device categories, we paid for pass-through devices under the OPPS on a brand-specific basis. All of the initial category codes that were established as of April 1, 2001, have expired; 95 categories expired after CY 2002 and 2 categories expired after CY 2003. All of the categories listed in Table 21, along with their expected expiration dates, were created since we published the criteria and process for creating additional device categories for pass-through payment on November 2, 2001 (66 FR 55850 through 55857). We based the expiration dates for the category codes listed in that table on the date on which a category was first eligible for pass-through payment.

There are six categories for devices that would have been eligible for pass-through payments for at least 2 years as of December 31, 2004. In our November 7, 2003 final rule with comment period, we finalized the December 31, 2004 expiration dates for these six categories. (Three other categories listed in Table 21, as proposed, C1814, C1818, and C1819, will expire on December 31, 2005.) As indicated in Table 21, as proposed, the six categories that will expire as of December 31, 2004, are: C1783, C1884, C1888, C1900, C2614, and C2632. Each category includes devices for which pass-through payment was first made under the OPPS in CY 2002 or CY 2003.

In the November 1, 2002 final rule, we established a policy for payment of devices included in pass-through categories that are due to expire (67 FR 66763). For CY 2003, we packaged the costs of the devices no longer eligible for pass-through payments into the costs of the procedures with which the devices were billed in CY 2001. There were few exceptions to this established policy (brachytherapy sources for other than prostate brachytherapy, which is now also separately paid in accordance with section 621(b)(2) of Pub. L. 108–173). For CY 2004, we continued to apply this policy for categories that expired on January 1, 2004.

2. Proposed and Final Policy for CY 2005

In the August 16, 2004 proposed rule, we proposed to continue to base the expiration date for a device category on the earliest effective date of pass-through payment status of the devices that populate the category. This basis for determining the expiration date of a device category is the same as that used in CY 2003 and CY 2004.

We also proposed that payment for the devices that populate the six categories that would cease to be eligible for pass-through payment after December 31, 2004, would be made as part of the payment for the APCs with which they are billed. This methodology for packaging device cost is consistent with the packaging methodology that we describe in section III. of this final rule with comment period. To accomplish this, we proposed to package the costs of devices that would no longer be eligible for pass-through payment in CY 2005 into the HCPCS codes with which the devices are billed.

In the proposed rule, we noted that category C1819 (Tissue localization excision device) was added subsequent to our proposed rule for CY 2004. We first announced the start date and the proposed expiration date for this device category in our November 7, 2003 final rule with comment period. Therefore, we proposed to maintain the category's December 31, 2005 expiration date. We invited specific comments on the proposed expiration date for category C1819.

We received a number of public comments on our proposals relating to the expiration dates for transition pass-through devices.

Comment: One commenter noted that C1884 (Embolization protection system) is used for carotid stenting. The commenter recommended that CMS continue paying pass-through payment for C1884 until carotid stenting APC costs are established.

Response: Carotid stenting procedures are on the inpatient list for the OPPS and, therefore, are not paid by Medicare when performed in the outpatient hospital setting. To the extent that C1884 has been used with other procedures payable under the OPPS, we packaged the costs of C1884 into the APCs that include the procedures with which this device code was billed.

Comment: One commenter objected to our proposal to remove HCPCS code C1884 from pass-through status, effective January 1, 2005. The commenter believed that the service had been unfairly subjected to the device offset because it was totally new and did not replace any existing device. The commenter claimed that, for CY 2003, code C1884 inappropriately received very little pass-through payment when the device was used. The commenter indicated that CMS subsequently recognized its error by changing the offset policy for CY 2004, the second year of the device's pass-through status,

and, therefore should give the device a third year of pass-through payment.

Response: We disagree with the commenter that we inappropriately made little pass-through payments for C1884. The commenter is correct that, for CY 2004, following notice and comment rulemaking, we changed the policy for applying offsets. As of January 1, 2004, we apply offsets, on a device-category-specific basis, when we determine that an APC contains costs associated with the device. Under the policy in effect prior to CY 2004, we applied offsets when a device category was billed with any of the APCs on our device offset list. This policy change affected all the categories in effect in CYs 2003 and 2004, including C1884. Some of these categories went into effect as of January 1, 2003; thus their pass-through status will expire after exactly 2 years. Other categories began receiving pass-through payments in the middle of 2002. Therefore, their categories will have more than 2, but less than 3 years with pass-through payment. We would not be able to extend pass-through payment for the second group of categories for an additional year, because they would then have greater than the statutory maximum of 3 years of pass-through payment.

We see no reason to adopt the commenter's suggestions to only change the status for code C1884. In CY 2003, C1884, like all our other pass-through categories, was subject to the same offset policy. Therefore, we are not changing the expiration date of device category C1884.

This device will cease to be a pass-through device effective January 1, 2005, at which time it will have had 2 years of pass-through payment.

We note that the expiration dates of C1884 and most other categories (the exception being C1819, discussed below) that were in effect at the time of our final rule for CY 2004 (68 FR 63437) were made final in that same rule, having been proposed in the proposed rule for CY 2004. We are now merely reaffirming that policy.

A few commenters supported our proposal to remove the six device categories from further pass-through payments and our proposal to package the costs of these devices into the cost of the APCs with which they are billed. The commenters indicated that incorporating these technologies into the APC system will minimize special payment incentives to use certain devices over others.

Comment: One commenter was concerned that pass-through payment for a brachytherapy-related solution (C2632, Brachytherapy solution, Iodine-125, per mCi) would expire from pass-through payment after December 31, 2004, under our proposal, and requested a third year of pass-through payment, until December 31, 2005, because pass-through payment has been made only since January 1, 2003. The commenter claimed that this category still qualifies for another year of pass-through payment.

Response: Because the brachytherapy solution in question, C2632, is a brachytherapy source separately payable under the OPPS according to section 621(b) of Pub. L. 108–173, it will continue to receive cost-based payment as of January 1, 2005, based on those statutory provisions, rather than on the pass-through payment provisions. Section VII.G. of this final rule with comment period explains those provisions and includes code C2632 for cost-based payment in CY 2005. As indicated, in regard to other comments concerning expired categories, this brachytherapy device will have had 2 years of pass-through status on January 1, 2005. Our policy is that pass-through devices are removed from pass-through status as soon as permitted under the statute. Therefore, this device will cease to be a pass-through device effective January 1, 2005, at which time it will have had 2 years of pass-through payment.

Comment: A few commenters were concerned that pass-through payment for C2614 (Probe, percutaneous lumbar diskectomy) in APC 0220 (Level I Nerve Procedures) would expire from pass-through payment after December 31, 2004, under our proposal, and requested that CMS continue to pay for this device category separately on a pass-through basis. The commenters were under the impression that the methodology used to determine whether or not a device category would continue to be eligible for payment in CY 2005 was if it showed ''that there were no close or identifiable costs associated with the devices relating to the respective APCs that are normally billed with them.''

One commenter indicated that the payment for APC 0220 is not sufficient to cover the cost of the high end disposable RF lumbar probe coded under C2614. The commenter was also concerned that this device, which is used in performing CPT code 62287 (Percutaneous diskectomy), and which costs $1,150, will cease to be eligible for pass-through payments effective January 2005. The commenter stated that the device has increased effectiveness and reduced recovery time for patients but unless CMS increases the payment for APC 0220 for which we proposed to pay $996.69, hospitals will be forced to cease using it in 2005. The commenter urged that CMS continue pass-through payment for C2614 until such time as the payment rate for APC 0220 is adequate to cover the cost of the probe.

Response: The commenters are incorrect in their understanding of our criteria for proposing to expire device categories. We proposed to expire C2614 because it has received pass-through payment for at least 2 years, which is also the basis for our proposal to expire the other five device categories listed for expiration in CY 2005 in our proposed rule. A device with no close or identifiable costs associated with the devices relating to the respective APCs that are normally billed with them is actually a factor in determining whether to apply an offset, which would reduce the pass-through payment amount, as explained in the August 16, 2004 proposed rule (69 FR 50501). As indicated, similar to other responses in regard to other comments concerning other categories due to expire, this disc decompression device will have had 2 years of pass-through status on January 1, 2005. Our policy is that pass-through devices are removed from pass-through status as soon as permitted under the statute. Therefore, this device will cease to be a pass-through device effective January 1, 2005, at which time it will have had 2 years of pass-through payment.

We have considered the commenter's concern regarding placement of code C2614, the code for a device that is used in performing CPT code 62287, in APC 0220 and find that the resource costs for CPT code 62287 may be more appropriate for APC 0221 (Level II Nerve Procedures). Therefore, we have reassigned CPT code 62287 to APC 0221, for which the CY 2005 payment rate is $1,635.87.

Comment: One commenter recommended that CMS continue to pay for C2614 as a pass-through device category until CMS determines how the procedure, percutaneous lumbar diskectomy, is coded for determination of accurate APC cost weighting.

Response: As explained previously, we packaged costs of the C-code devices into the APCs that include the procedures with which the device codes were billed. We are packaging the costs related to code C2614 in this manner.

Comment: One commenter, a device manufacturer, recommended that CMS extend the expiration date for pass-through payment of C1819 (Tissue localization excision device) until December 31, 2006, instead of ending pass-through payment after CY 2005. The commenter claimed that CMS will have only a partial year of data for the

CY 2006 year, unless it extends the date that the category is effective for pass-through payment. This commenter claimed that the proposed payment for APC 0028, in which therapeutic breast cancer procedures, CPT codes 19125 and 19160, are placed, increased by only $100 and does not represent any device codes. The commenter asserted that CMS needs to collect data over 2 years and increase payment for APC 0028 to at least $1,345 starting in CY 2007. The commenter also pointed out that two categories set to expire after December 31, 2005, C1814 (Retinal tamonade device, silicone oil) and C1818 (Integrated keratoprosthesis), would be paid as pass-through devices several months longer than C1819, resulting in a greater amount of data for ratesetting than will be available for C1819.

Response: We believe it is premature to make any conclusions and recommendations concerning the payment rate for APC 0028 for CY 2006 or CY 2007. Presumably, after the pass-through period ends, the device costs of category code C1819 will be included in the median costs of APC 0028 if the device is billed with procedures that are included in that APC. We reiterate that, as with other categories due to expire, this tissue localization device will have had 2 years of pass-through status on January 1, 2006. Our policy is that pass-through devices are removed from pass-through status as soon as permitted under the statute. Therefore, this device will cease to be a pass-through device effective January 1, 2006.

In this final rule with comment period, we are finalizing the proposed expiration dates for device categories as specified in the proposed rule, as indicated in Table 21 below.

Table 21.--List Of Current Pass-Through Device Categories By Expiration Date

HCPCS Codes	Category Long Descriptor	Date(s) Populated	Expiration Date
C1783	Ocular implant, aqueous drainage assist device	7/1/02	12/31/04
C1888	Catheter, ablation, noncardiac, endovascular (implantable)	7/1/02	12/31/04
C1900	Lead, left ventricular coronary venous system	7/1/02	12/31/04
C1884	Embolization protective system	1/1/03	12/31/04
C2614	Probe, percutaneous lumbar discectomy	1/1/03	12/31/04
C2632	Brachytherapy solution, iodine-125, per mCi	1/1/03	12/31/04
C1814	Retinal tamponade device, silicone oil	4/1/03	12/31/05
C1818	Integrated keratoprosthesis	7/1/03	12/31/05
C1819	Tissue localization excision device	1/1/04	12/31/05

B. Provisions for Reducing Transitional Pass-Through Payments to Offset Costs Packaged into APC Groups

1. Background

In the November 30, 2001 final rule, we explained the methodology we used to estimate the portion of each APC rate that could reasonably be attributed to the cost of the associated devices that are eligible for pass-through payments (66 FR 59904). Beginning with the implementation of the CY 2002 OPPS update (April 1, 2002), we deducted from the pass-through payments for the identified devices an amount that reflected the portion of the APC payment amount that we determined was associated with the cost of the device, as required by section 1833(t)(6)(D)(ii) of the Act. In the November 1, 2002 final rule, we published the applicable offset amounts for CY 2003 (67 FR 66801).

For the CY 2002 and CY 2003 OPPS updates, to estimate the portion of each APC rate that could reasonably be attributed to the cost of an associated pass-through device eligible for pass-through payment, we used claims data from the period used for recalibration of the APC rates. Using those claims, we calculated a median cost for every APC without packaging the costs of associated C-codes for device categories that were billed with the APC. We then calculated a median cost for every APC with the costs of the associated device category C-codes that were billed with the APC packaged into the median. Comparing the median APC cost without device packaging to the median APC cost including device packaging enabled us to determine the percentage of the median APC cost that is attributable to the associated pass-through devices. By applying those percentages to the APC payment rates, we determined the applicable amount to be deducted from the pass-through payment, the ''offset'' amount. We created an offset list comprised of any APC for which the device cost was at least 1 percent of the APC's cost.

As first discussed in our November 1, 2002 final rule (67 FR 66801) the offset list that we publish each year is a list of offset amounts associated with those APCs with identified offset amounts developed using the methodology described above. As a rule, we do not know in advance which procedures and APCs may be billed with new categories. Therefore, an offset amount is applied only when a new device category is billed with an APC appearing on the offset list. The list of potential offsets for CY 2004 is currently published on the CMS Web site: *http://www.cms.hhs.gov,* as ''Device-Related Portions of Ambulatory Payment Classification Costs for 2004.''

For CY 2004, we modified our policy for applying offsets to device pass-through payments. Specifically, we indicated that we would apply an offset to a new device category only when we could determine that an APC contains costs associated with the device. We continued our existing methodology for determining the offset amount, described above. We were able to use this methodology to establish the device offset amounts for CY 2004 because providers reported device codes (C-codes) on the CY 2002 claims used for CY 2004 OPPS. However, for the CY 2005 update to the OPPS, we proposed to use CY 2003 claims that do not include device coding. (Section III. of this final rule with comment period contains a fuller discussion of our proposed and final requirement for use

of C-codes for CY 2005.) In the CY 2004 OPPS update, we reviewed the device categories eligible for continuing pass-through payment in CY 2004 to determine whether the costs associated with the device categories are packaged into the existing APCs. Based on our review of the data for the categories existing in CY 2004, we determined that there were no close or identifiable costs associated with the devices relating to the respective APCs that are normally billed with them. Therefore, for those device categories, we set the offset to $0 for CY 2004.

2. Proposed and Final Policy for CY 2005

As we proposed in the August 16, 2004 proposed rule, in this final rule with comment period for CY 2005, we are continuing to review each new device category on a case-by-case basis as we did in CY 2004 to determine whether device costs associated with the new category are packaged into the existing APC structure. We are setting the offsets to $0 for the currently established categories that would continue for pass-through payment into CY 2005. If, during CY 2005, we create a new device category and determine that our data contain identifiable costs associated with the devices in any APC, we will adjust the APC payment if the offset is greater than $0. If we determine that device offsets greater than $0 are appropriate for any new category that we create during CY 2005, we will announce the offset amounts in the program transmittal that announces the new category.

Further, as we proposed, in this final rule with comment period for CY 2005, we are using the device percentages (portion of the APC median cost attributable to the packaged device) that we developed for potential offsets in CY 2004 and apply these percentages to the CY 2005 payment amounts to obtain CY 2005 offset amounts, in cases where we determine that an offset is appropriate. As proposed, we are using the device percentage developed for CY 2004 because, as noted above, for the CY 2005 update to the OPPS, we are using CY 2003 claims that do not include device codes. Therefore, we are not easily able to determine the device portions of APCs for CY 2003 claims data. We have posted the list of device-dependent APCs and their respective device portions on the CMS Web site: *http://www.cms.hhs.gov* for CY 2004 We will update the device portions as a percentage of final CY 2005 APC payments and post these on the CMS Web site.

We did not receive any public comments on our proposed policy for reducing transitional pass-through payments to offset costs packaged into APC groups.

C. Criteria for Establishing New Pass-Through Device Categories

Comment: Several commenters from the medical device community asked that CMS revise the criteria under which it evaluates applications for pass-through status for new device categories. The commenters specifically requested that CMS eliminate the current requirement that items that are included in new pass-through device categories must be surgically inserted or implanted through a surgically created incision. The commenters expressed concern that the current requirement may prevent access to innovative and less invasive technologies, particularly in the areas of gynecologic, urologic, colorectal and gastrointestinal procedures. These commenters asked that CMS change the surgical insertion or implantation criterion to allow pass-through payment for potential new device categories that include items introduced into the human body through a natural orifice, as well as through a surgically created incision.

Several of the commenters recommended that CMS allow the creation of a new pass-through category for items implanted or inserted through a natural orifice, as long as the other existing criteria are met. The commenters do not believe that such an expansion of the criteria would significantly increase the amount spent on pass-through device categories and asked that CMS implement this change in January 2005. A few commenters predicted that this modification would result in expenditures of less than one quarter of the total amount available for pass-through payments. A few commenters further asked that CMS allow new categories, even if the name or terminology associated with the requested category resembles an expired category, even if that entails modifying the description of the expired category. One commenter claimed that manufacturers of technologies that are implanted through a surgically created opening have two options for incremental payment: (1) Pass-through payment; and (2) new technology APC, and that those not requiring a surgical incision have only one option for additional payment (the new technology APC).

Response: We share the views of the commenters about the importance of ensuring access for Medicare beneficiaries to new technologies that offer substantial clinical improvement in the treatment of their medical conditions. We also recognize that, since the initial implementation of the OPPS, there have been beneficial changes in the methods by which some conditions are treated. These are issues that the agency takes very seriously and considers in the context of both pass-through device categories and payment for new, complete procedures through assignment to either a new technology APC or an existing clinical APC.

We note that other payment mechanisms exist within the OPPS for complete procedures that use new technology. These other payment mechanisms (establishment of a new code, where appropriate, and assignment to either a new technology APC or to a clinical APC) are already available, and do not require the implantation of a device through a surgical incision.

We are also interested in hearing the views of other parties and receiving additional information on these issues. While we appreciate and welcome additional comments on these issues from the medical device makers, we are also interested in hearing the views of Medicare beneficiaries, of the hospitals that are paid under the OPPS and of physicians and other practitioners who attend to patients in the hospital outpatient setting. For that reason, we are soliciting additional comments on this topic within the 60-day comment period for this final rule with comment period. (See the **ADDRESSES** section of this preamble for information on submitting comments. When submitting comments on this issue, please include the caption ''Device Categories'' at the beginning of your comment.) In framing their comments, commenters are asked to consider the following questions:

1. The comments discussed above refer to devices introduced into the body through natural orifices. We are seeking comments on whether this includes orifices that are either naturally or surgically created, as in the case of ostomies? If you believe this includes only natural orifices, why do you distinguish between natural and surgically created orifices?

2. How would you define ''new,'' with respect to time and to predecessor technology? What additional criteria or characteristics do you believe distinguish ''new'' devices that are surgically introduced through an existing orifice from older technology that also is inserted through an orifice?

3. What characteristics do you consider to distinguish a device that might be eligible for a pass-through category even if inserted through an

existing orifice from materials and supplies such as sutures, clips or customized surgical kits that are used incident to a service or procedure?

4. Are there differences with respect to instruments that are seen as supplies or equipment for open procedures when those same instruments are passed through an orifice using a scope?

Concerning the request that we allow new categories for new devices by modifying the descriptors of existing categories, we note there are systems difficulties with changing a descriptor of an existing HCPCS code, such as payment considerations of claims prior to when a modification would be made. Moreover, both hospitals and manufacturers have informed us in the past that coding changes have led to confusion on the part of hospital coders. Modifying established device category C-codes would only exacerbate any such coding confusion. Therefore, we note that we are not inclined to change the descriptors of existing C-codes at this time.

Comment: One commenter recommended that CMS revise the cost significant criterion for establishing new device categories for pass-through payment. The commenter stated that medical devices are sometimes used as part of procedures that are secondary to a primary procedure, and in these cases the cost significance threshold of at least 25 percent of the APC rate associated with the services performed with the device should be adjusted downward to reflect the lower APC payment made for the secondary service. The commenter provided as an example those cases when the secondary procedure would be subject to the multiple procedure discount, thus lowering the APC payment associated with the procedure by 50 percent. The commenter indicated that this scenario happens infrequently.

Response: We disagree that our cost significance criterion for a proposed new device category for pass-through payment requires revision or adjustment. The criterion commented on requires that the estimated average reasonable cost of devices in a proposed new device category exceeds 25 percent of the applicable APC payment amount for the service associated with the device category (67 FR 66785). Very few new device category applications are denied for pass-through payment because they do not meet this cost criterion. If the proposed category of devices can be billed with more than one APC, we generally use the lowest APC payment rate applicable for use with the nominated device when we test against this cost criterion, thus increasing the probability the device will pass the cost significance criterion. We do not believe any further adjustment is needed for this cost criterion.

Therefore, we are not making any additional changes to our policy for CY 2005.

V. Payment Changes for Drugs, Biologicals, Radiopharmaceutical Agents, and Blood and Blood Products

A. Transitional Pass-Through Payment for Additional Costs of Drugs and Biologicals

1. Background

Section 1833(t)(6) of the Act provides for temporary additional payments or ''transitional pass-through payments'' for certain drugs and biological agents. As originally enacted by the BBRA, this provision required the Secretary to make additional payments to hospitals for current orphan drugs, as designated under section 526 of the Federal Food, Drug, and Cosmetic Act (Pub. L. 107–186); current drugs and biological agents and brachytherapy used for the treatment of cancer; and current radiopharmaceutical drugs and biological products. For those drugs and biological agents referred to as ''current,'' the transitional pass-through payment began on the first date the hospital OPPS was implemented (before enactment of BIPA (Pub. L. 106–554), on December 21, 2000).

Transitional pass-through payments are also required for certain ''new'' drugs, devices and biological agents that were not being paid for as a hospital OPD service as of December 31, 1996, and whose cost is ''not insignificant'' in relation to the OPPS payment for the procedures or services associated with the new drug, device, or biological. Under the statute, transitional pass-through payments can be made for at least 2 years but not more than 3 years. In Addenda A and B to this final rule with comment period, pass-through drugs and biological agents are identified by status indicator ''G.''

The process to apply for transitional pass-through payment for eligible drugs and biological agents can be found on pages of our CMS Web site: *http://www.cms.hhs.gov.* If we revise the application instructions in any way, we will post the revisions on our Web site and submit the changes to the Office of Management and Budget (OMB) for approval, as required under the Paperwork Reduction Act (PRA). Notification of new drugs and biological application processes is generally posted on the OPPS Web site at: *http://www.cms.hhs.gov/hopps.*

2. Expiration in CY 2004 of Pass-Through Status for Drugs and Biologicals

Section 1833(t)(6)(C)(i) of the Act specifies that the duration of transitional pass-through payments for drugs and biologicals must be no less than 2 years and no longer than 3 years. The drugs whose pass-through status will expire on December 31, 2004, meet that criterion. In the August 16, 2004 proposed rule, Table 22 listed the 13 drugs and biologicals for which we proposed that pass-through status would expire on December 31, 2004.

Comment: One commenter, a national hospital association, supported our proposal to remove these 13 drugs from the pass-through status on December 31, 2004.

Response: We appreciate the commenters' support for our proposal.

For this final rule with comment period, in Table 22 below, we are specifying the drugs and biologicals for which pass-through status will expire on December 31, 2004. This listing is the same as that published in the proposed rule.

Table 22.--List of Drugs and Biologicals for Which Pass-Through Status Expires December 31, 2004

HCPCS	APC	Long Descriptor	Trade Name
J0583	9111	Injection, Bivalirudin, per 1 mg	Angiomax Inj (single source)
C9112	9112	Injection, Perflutren lipid microsphere, per 2 ml	Definity (single source)
C9113	9113	Injection, Pantoprazole sodium, per vial	Protonix (single source)
J1335	9116	Injection, Ertapenem sodium, per 500 mg	Invanz (single source)
J2505	9119	Injection, Pegfilgrastim, per 6 mg single dose vial	Neulasta (single source)
J9395	9120	Injection, Fulvestrant, per 25 mg	Faslodex (single source)
C9121	9121	Injection, Argotroban, per 5 mg	Acova (single source)
C9200	9200	Orcel, per 36 square centimeters	Orcel (single source)
C9201	9201	Dermagraft, per 37.5 square centimeters	Dermagraft (single source)
J2324	9114	Injection, Nesiritide, per 0.5 mg	Natrecor (single source)
J3315	9122	Injection, Triptorelin pamoate, per 3.75 mg	Trelstar depot Trelstar LA (single source)
J3487	9115	Injection, Zoledronic acid, per 1 mg	Zometa (single source)
Q0137	0734	Injection, Darbepoetin Alfa, 1 mcg (non-ESRD use)	Aranesp® (single source)

3. Drugs and Biologicals With Pass-Through Status in CY 2005

As we proposed in the August 16, 2004 proposed rule, we are continuing pass-through status for CY 2005 for 18 drugs and biologicals listed in Table 23 of this final rule with comment period. The APCs and HCPCS codes for drugs and biologicals that will have pass-through status in CY 2005 are assigned status indicator ''G'' in Addendum A and Addendum B, respectively, to this final rule with comment period.

Section 1833(t)(6)(D)(i) of the Act sets the payment rate for pass-through eligible drugs (assuming that no pro rata reduction in pass-through payment is necessary) as the amount determined under section 1842(o) of the Act. Section 303(c) of Pub. L. 108–173 amended Title XVIII of the Act by adding new section 1847A. This new section establishes the use of the average sales price (ASP) methodology for payment for drugs and biologicals described in section 1842(o)(1)(C) of the Act furnished on or after January 1, 2005. Therefore, as we proposed in the August 16, 2004 proposed rule, in CY 2005, we will pay under the OPPS for drugs and biologicals with pass-through status consistent with the provisions of section 1842(o) of the Act as amended by Pub. L. 108–173 at a rate that is equivalent to the payment these drugs and biologicals will receive in the physician office setting, and established in accordance with the methodology described in the CY 2005 Physician Fee Schedule final rule published elsewhere in this issue.

Section 1833(t)(6)(D)(i) of the Act also sets the amount of additional payment for pass-through eligible drugs and biologicals (the pass-through payment amount). The pass-through payment amount is the difference between the amount authorized under section 1842(o) of the Act, and the portion of the otherwise applicable fee schedule amount (that is, the APC payment rate) that the Secretary determines is associated with the drug or biological.

In this final rule with comment period, we are adopting as final our proposal to amend § 419.64 of the regulations to conform this section to these changes. Specifically, we are revising paragraph (d) to provide that, subject to any reduction determined under § 419.62(b), the payment for a drug or biological with pass-through status equals the amount determined under section 1842(o) of the Act, minus the portion of the APC payment amount that we determine is associated with the drug or biological.

As we explained in the August 16, 2004 proposed rule, we will make separate payment, beginning in CY 2005, for new drugs and biologicals with an HCPCS code consistent with the provisions of section 1842(o) of the Act, as amended by Pub. L. 108–173, at a rate that is equivalent to the payment they would receive in a physician office setting, whether or not we have received a pass-through application for the item. Accordingly, beginning in CY 2005, the pass-through payment amount for new drugs and biologicals that we determine have pass-through status equals zero. That is, when we subtract the amount to be paid for pass-through drugs and biologicals under section 1842(o) of the Act, as amended by Pub. L. 108–173, from the portion of the otherwise applicable fee schedule amount, or the APC payment rate associated with the drug or biological that would be the amount paid for drugs and biologicals under section 1842(o) of the Act as

amended by Pub. L. 108–173, the resulting difference is equal to zero.

We have used the second quarter ASP numbers for budget neutrality estimates, impact analysis, and for completing Addenda A and B because those were the most recent numbers available to us in time for publication. Changes in program payments due to quarterly updates of ASP for pass-through drugs are factored into our budget neutrality estimates. To be consistent with the ASP-based payments that will be made when these drugs and biologicals are furnished in physician offices, we plan to make any appropriate adjustments to the amounts shown in Addendum A and B if later quarter ASP submissions indicate that adjustments to the payment rate are necessary. We will announce such changes in our program instructions to implement quarterly releases and post any revisions to the Addenda on the *http://cms.hhs.gov* Web site.

In the proposed rule, we listed in Table 23 the drugs and biologicals for which we proposed pass-through status continuing in CY 2005. We also included in Addendum B to the proposed rule the proposed CY 2005 rates for these pass-through drugs and biologicals based on data reported to CMS as of April 30, 2004. Since publication of the proposed rule on August 16, 2004, we have approved two additional drugs and biologicals for pass-through payment beginning on or after October 1, 2004. These products are Vidaza that has been assigned HCPCS code C9218 (Injection, azacitidine, per 1 mg) and Myfortic that has been assigned HCPCS code J7518 (Mycophenolic acid, oral, per 180 mg). (*See* Change Request 3420, Transmittal 290 issued August 27, 2004.) In addition, three more products have been approved for pass-through status beginning or after January 1, 2005. They are Orthovice (HCPCS code C9220, Sodium Hyaluronate per 30 mg dose, for intra-articular injection), GraftJacket (Repair)(HCPCS code C9221, Acellular dermal tissue, matrix per 16cm2), and GraftJacket (Soft Tissue)(HCPCS code C9222, Decellularized Soft Tissue Scaffold, per 1 cc). These new eligible pass-through items are listed in Table 23 below.

We received several public comments on the proposed listing and payment rates for drugs and biologicals for pass-through status continuing in CY 2005.

Comment: Two commenters stated that the proposed payment rate for HCPCS code C9203 (Injection, Perflexane lipid microsphere, per single use vial) is inappropriate and should be re-examined. They state that the methods used to price the drug are inconsistent with the Pub. L. 108–173, which requires that payments for pass-through drugs be based at either 106 percent of reported average sales price (ASP) or 83 percent of the average wholesale price (AWP). Pricing at 95 percent of AWP for C9203 creates a competitive disadvantage for contrast agents no longer being paid as pass-through drugs.

One commenter suggests that CMS create a class of echocardiography contrast agents similar to the class established for anti-emetic drugs. This allows for a uniform methodology to price drugs and ensures patient access to all drugs in the same therapeutic class. An alternative proposal identified by the commenter, is to base the payment for Imagent on the method applicable to the pricing for all other specified covered outpatient drugs (that is, 83 percent of the AWP). Yet another proposal included either maintaining pass-through status for all contrast agents or removing Imagent from pass-through designation. Another commenter recommended that the payment rate for all contrast agents be based on median costs reflected in hospital outpatient claims data.

Response: Whereas separate payment was already being made for the contrast agents, either as a pass-through item or as a ''specified covered outpatient drug,'' the 5HT3 anti-emetic products varied in their payment status, that is, some were packaged and some were paid separately. Although we are making final our proposal to pay separately for the 5HT3 anti-emetic products in CY 2005 in this final rule with comment period, the intent of this policy discussed in section IV.B.2. of this preamble is not to standardize payment for already separately payable drugs. For this reason, the policy does not apply to the echocardiography contrast agents. Therefore, we are not accepting the commenter's recommendation that we create a class of echocardiography contrast agents similar to the class for anti-emetic drugs.

Other proposals to: (1) Change the pass-through payment status for Imagent to a ''specified covered outpatient drug,'' (2) extend the pass-through payment status for other contrast agents, or (3) use hospital claims data to establish payment for Imagent are not provided for under the statute. Imagent obtained pass-through status effective on April 1, 2003, and will remain a pass-through drug for CY 2005.

Since the ASP for contrast agents was not reported in time for use in developing the APC payments for this final rule with comment period, the CY 2005 first quarter APC payment for Imagent is based on 95 percent of the AWP reported as of May 1, 2003. As previously stated, we plan to update payments for pass-through drugs on a quarterly basis. Beginning in April 2005, payment for Imagent will be based on 106 percent of the reported ASP.

Comment: Several commenters wrote in support of our proposal to remove 13 drugs and biologic agents from the pass-through table as the pass-through period for these items will end on January 1, 2005. Many commenters were very much in favor of our proposal for setting the pass-through payment portion of drugs. They wrote that zero pass-through payments ensures pass-though drugs and biologicals receive the full payment while at the same time eliminates the risk of a pro-rata reduction from occurring. Other commenters urged CMS to update ASP based payment rates for therapies with transitional pass-through status on a quarterly basis as is done for the drugs and biologicals administered in physician offices and paid for in accordance with the same statutory requirements as the drugs and biologicals with pass-through status under the OPPS. Otherwise, they argued, patient access to innovative drug and biological therapies in appropriate outpatient settings could be jeopardized.

Response: We appreciate the comments that support our decision to remove 13 drugs pass-through and biologicals for which pass-through status expires at the end of CY 2004 from the table. With respect to those drugs and biologicals that will continue to be on pass-through status or that may be granted pass-through status in CY 2005, we agree that our payment rules and amounts should be consistent with the ASP-based payments that will be made when these drugs and biologicals are furnished in physician offices since payment for both settings is governed by the same provisions of the Act. Therefore, we plan to make any appropriate adjustments to the amounts shown in Addendum A and B if later quarter ASP submissions indicate that adjustments to the payment rate are necessary. Changes in total payments due to quarterly updates of ASP for pass-through drugs are factored into our budget neutrality estimates.

In this final rule with comment period, we are not making any changes to the listing as a result of public comments. Table 23 below lists the drugs and biologicals that will have pass-through status in CY 2005. Addendum B of this final rule with

comment period lists the final CY 2005 rates for these pass-through drugs and biologicals, which are assigned status indicator "G" based on data reported to CMS as of July 30, 2004.

BILLING CODE 4120–01–P

Table 23.-- List of Drugs and Biologicals With Pass-Through Status in CY 2005

HCPCS Code	APC	Long Descriptor	Trade Name
C9123	9123	TransCyte, per 247 sq. cm	TransCyte
C9205	9205	Injection, Oxaliplatin, per 5 mg	Eloxatin
C9203	9203	Injection, Perflexane lipid microspheres, per single use vial	Imagent
J3486	9204	Injection, Ziprasidone mesylate, per 10 mg	Geodon
C9211	9211	Injection, IV, Alefacept, per 7.5 mg	Amevive
C9212	9212	Injection, IM, Alefacept, per 7.5 mg	Amevive
J9041	9207	Injection, IV, Bortezomib, per 0.1 mg	Velcade
J0180	9208	Injection, IV, Agalsidase beta, per 1 mg	Fabrazyme
J1931	9209	Injection, IV, Laronidase, per 0.1 mg	Aldurazyme
J2469	9210	Injection, IV, Palonosetron HCI per 0.025 mg (25 microgram)	Aloxi
J0878	9124	Injection, daptomycin, per 1 mg	Cubicin
J2794	9125	Injection, risperidone, per 0.5 mg	Risperdal Consta
J2783	0738	Injection, rasburicase, 0.5 mg	Elitek
J9305	9213	Injection, Pemetrexed, per 10 mg	Alimta
J9035	9214	Injection, Bevacizumab, per 10 mg	Avastin
J9055	9215	Injection, Cetuximab, per 10 mg	Erbitux
J0128	9216	Abarelix for Injectable Suspension, per 10 mg	Plenaxis
J2357	9300	Injection, Omalizumab, per 5 mg	Xolair
C9218	9218	Injection, azacitidine, per 1 mg	Vidaza[1]
J7518	9219	Mycophenolic acid, oral, per 180 mg	Myfortic[1]
C9220	9220	Sodium Hyaluronate per 30 mg dose, for intra-articular injection	Orthovisc
C9221	9221	Acellular dermal tissue, matrix, per 16cm2	GraftJacket (Repair)
C9222	9222	Decellularized Soft Tissue Scaffold, per 1 cc	GraftJacket (Soft Tissue)

[1]Approved for pass-through payment beginning on or after October 1, 2004

BILLING CODE 4120–01–C

B. Drugs, Biologicals, and Radiopharmaceuticals Without Pass-Through Status

1. Background

Under the OPPS, we currently pay for drugs, biologicals including blood and blood products, and radiopharmaceuticals that do not have pass-through status in one of two ways: packaged payment and separate payment (individual APCs). We explained in the April 7, 2000 final rule (65 FR 18450) that we generally package the cost of drugs and radiopharmaceuticals into the APC payment rate for the procedure or treatment with which the products are usually furnished. Hospitals do not receive separate payment from Medicare for packaged items and supplies, and hospitals may not bill beneficiaries separately for any packaged items and supplies whose costs are recognized and paid for within the national OPPS payment rate for the associated

procedure or service. (Program Memorandum Transmittal A–01–133, issued on November 20, 2001, explains in greater detail the rules regarding separate payment for packaged services.)

Packaging costs into a single aggregate payment for a service, procedure, or episode of care is a fundamental principle that distinguishes a prospective payment system from a fee schedule. In general, packaging the costs of items and services into the payment for the primary procedure or service with which they are associated encourages hospital efficiencies and also enables hospitals to manage their resources with maximum flexibility. Notwithstanding our commitment to package as many costs as possible, we are aware that packaging payments for certain drugs, biologicals, and radiopharmaceuticals, especially those that are particularly expensive or rarely used, might result in insufficient payments to hospitals, which could adversely affect beneficiary access to medically necessary services. As discussed in the November 7, 2003 OPPS final rule with comment period (68 FR 63445), in CY 2004 we packaged payment for drugs, biologicals, and radiopharmaceuticals into the APCs with which they were billed if the median cost per day for the drug, biological, or radiopharmaceutical was less than $50. We established a separate APC payment for drugs, biologicals, and radiopharmaceuticals for which the median cost per day exceeded $50. Our rationale for establishing a $50 threshold was also discussed in the November 7, 2003 OPPS final rule with comment period (68 FR 63444 through 63447).

2. Criteria for Packaging Payment for Drugs, Biologicals, and Radiopharmaceuticals

Section 621(a)(2) of Pub. L. 108–173 amended section 1833(t)(16) of the Act by adding a new subparagraph (B) to require that the threshold for establishing separate APCs for drugs and biologicals be set at $50 per administration for CYs 2005 and 2006. For CY 2005, we proposed to continue our policy of paying separately for drugs, biologicals, and radiopharmaceuticals whose median cost per day exceeds $50 and packaging the cost of drugs, biologicals, and radiopharmaceuticals whose median cost per day is less than $50 into the procedures with which they are billed.

We calculated the median cost per day using claims data from January 1, 2003, to December 31, 2003, for all drugs, biologicals, and radiopharmaceuticals that had an HCPCS code during this time period and were paid (via packaged or separate payment) under the OPPS. Items such as single indication orphan drugs, certain vaccines, and blood and blood products were excluded from these calculations and our treatment of these is discussed separately in sections V.F., E., and I., respectively, of this preamble. In order to calculate the median cost per day for drugs, biologicals, and radiopharmaceuticals to determine their packaging status in CY 2005, in the August 16, 2004 proposed rule, we proposed to use the methodology that was described in detail in the CY 2004 OPPS proposed rule (68 FR 47996 through 47997) and finalized in the CY 2004 final rule with comment period (68 FR 63444 through 63447). We requested comments on the methodology we proposed to continue to use to determine the median cost per day of these items.

We proposed to apply an exception to our packaging rule to one particular class of drugs, the injectible and oral forms of anti-emetic treatments. The HCPCS codes to which our exception to the packaging rule for CY 2005 would apply were listed in Table 24 of the proposed rule (69 FR 50506). Our calculation of median cost per day for these products showed that, if we were to apply our packaging rule to these items, two of the injectible products would be packaged and one would be separately payable. In addition, two of the oral products would be separately payable and one would be packaged. Chemotherapy is very difficult for many patients to tolerate as the side effects are often debilitating. In order for beneficiaries to achieve the maximum therapeutic benefit from chemotherapy and other therapies with side effects of nausea and vomiting, anti-emetic use is often an integral part of the treatment regimen. We wanted to ensure that our payment rules did not impede a beneficiary's access to the particular anti-emetic that is most effective for him or her as determined by the beneficiary and his or her physician. Therefore, we proposed to pay separately for all six injectible and oral forms of anti-emetic products in CY 2005.

We received several public comments on our proposed criteria for packaging payment for drugs, biologicals, and radiopharmaceuticals.

Comment: Many commenters supported our proposal to continue paying separately for drugs, biologicals, and radiopharmaceuticals whose median costs per day exceed $50. The commenters encouraged CMS to continue to maintain the threshold at $50 after CY 2006 and recommended that any additional packaging threshold be examined carefully prior to future implementation so that beneficiary access to therapies will not be compromised as a result. One of the commenters, however, remained concerned about the packaging of other drugs and biologicals that fell below the $50 threshold and recommended that CMS make separate payments for drugs and biologicals that meet one or both of the following criteria: products with median cost per day of at least $50; or products that are eligible for separate payment in other outpatient sites of care and that received a separate payment previously under the OPPS. Another commenter expressed concern about the site of service incentives presented by some drugs being paid when furnished in the physicians' offices, while being packaged in the hospital setting. The commenter urged CMS to consider several options, including: Making separate payment for all drugs in CY 2005 that were separately paid under a previous OPPS payment rate and are separately paid for in physicians' offices; lowering the packaging threshold, for example, to $10 or $20; paying separately for all drugs for which the 106 percent of ASP payment amount in the physicians' office is at least $10; or establishing procedures to ensure that drugs used for similar indications (including off-label uses) are either all packaged or all paid separately. MedPAC, to the contrary, expressed concern about the use of an arbitrary cut-off of $50 per administration for separate payment of drugs. It stated that separate payment for certain more expensive drugs gave hospitals an incentive to use those drugs rather than those that are packaged, and the threshold also gave manufacturers an incentive to price their drugs to ensure that they are above $50 per administration. MedPAC recommended that CMS should carefully analyze alternative thresholds or the creation of larger bundles to allow for alternative approaches once the MMA provision requiring a $50 threshold expires in CY 2007.

Response: We appreciate the support of many commenters for our packaging policy for CY 2005. Section 621(a)(2) of Pub. L. 108–173 requires that the threshold for establishing separate APCs for drugs and biologicals be set at $50 per administration for CYs 2005 and 2006. Therefore, we cannot change the threshold amount for CY 2005 as some of the commenters have suggested. We will take all of the commenters' recommendations into consideration as

we work on our packaging proposal for the CY 2007 OPPS.

However, in light of the commenters' concerns, we have decided to apply our equitable adjustment authority to establish several exceptions to the packaging threshold. We note that there were seven drugs and biologicals that we proposed to pay separately for in our proposed rule. However, when we recalculated their median costs per day using all of the hospital claims used for this final rule with comment period, their median costs per day were less than $50. We considered several payment options for these drugs and biologicals, such as packaging all of the items in CY 2005 or paying separately for all of them as we had proposed. However, after evaluating these drugs carefully, we decided to finalize the following payment policy for these items:

- Drugs and biologicals that were paid separately in CY 2004 and have median costs per day less than $50 based on the hospital claims data being used for the CY 2005 final rule with comment period would continue to receive separate payment in CY 2005.
- Those drugs and biologicals that are packaged in CY 2004 and that have median costs per day less than $50 based on the hospital claims data being used for the CY 2005 final rule with comment period would remain packaged in CY 2005.

We believe these policies are the most equitable for this particular set of drugs given the fluctuations in median hospital cost relative to the $50 threshold and their status in CY 2004.

Table 24 lists the seven drugs and biologicals to which this policy will apply along with their CYs 2004 and 2005 payment status indicator. The four items that will be separately paid under this policy meet the definition of sole source ''specified covered outpatient drugs'' and will be paid between 83 percent and 95 percent of their AWP in CY 2005.

Table 24.-- Drugs and Biologicals with Median Costs Per Day Less than $50[1] (Proposed for separate payment)

HCPCS	Description	CY 2004 Status Indicator	CY 2005 Status Indicator
J1450	Inj Fluconazole, 200 mg	N	N
J1730	Inj, Diazoxide, up to 300 mg	N	N
J3400	Inj, Trifluprom azine, Hcl, up to 20 mg	N	N
J0350	Inj, Anistreplase, per 30 units	K	K
J1830	Inj, Interferon beta-1B, 0.25 mg	K	K
J8510	Busulfan, oral, 2 mg	K	K
J9151	Daunorubicin citrate, liposomal formulation, 10 mg	K	K

[1]Median costs are based on CY 2003 final rule claims.

Comment: One commenter indicated that CMS was proposing a packaging policy that appeared to be different from the MMA requirement because a particular drug may be administered more than once per day. Therefore, the commenter added, a drug with a cost per administration of less than $50 that is administered more than once per day would qualify for separate payment under CMS' proposed policy, but would not qualify for separate payment under the MMA requirement. The commenter indicated that the overall impact of this discrepancy is that there will be less packaging of drugs under the OPPS than Congress intended. The commenter was unclear as to whether CMS had the authority to deviate from the statute in this way.

Response: We note that the hospital claims data do not indicate whether there were multiple administrations of the same drug on a single day. Accordingly, we must assume that for all cases there was only a single administration of each drug per day. For packaging purposes, the median cost per day for each drug and biological must, therefore, serve as a proxy for its cost per administration. We will, however, continue to explore ways to distinguish single versus multiple drug administrations for future OPPS updates.

Comment: Numerous commenters, including several manufacturers of pharmaceutical products, individual hospitals, and hospital associations, strongly supported CMS' proposed exception to exclude the six injectible and oral forms of 5HT3 anti-emetic products from the packaging threshold and allow separate payment for all of them. One commenter indicated that CMS' claims data used to determine median cost per day may not be a reliable source for accurate median costs for these products and may understate their actual acquisition and related costs. Another commenter stated that if the $50 threshold were applied to this class of drugs, it would have created an incentive for hospitals to choose therapies based on the opportunity for payment and not their appropriateness for each individual patient. The commenters agreed that this policy would help to ensure beneficiary access to the most appropriate anti-emetic drug for cancer care. Several commenters also urged CMS to give careful thought to the effects of packaging on patient access to other types of drugs and biological therapies. However, one commenter indicated that, in recent months, the

wholesale acquisition cost for one of the injectible anti-emetic drugs specified in the proposed exception was reduced by the manufacturer by seventy-three percent. If the proposed exception were applied to this drug, the payment would provide a margin of over one hundred dollars for each dose administered and the outcome would be contrary to the stated intent of the proposal. The commenter believed that CMS could not have anticipated the perverse payment situation that would result under such an exception and recommended that CMS reconsider and withdraw the exception to the packaging rule for this class of drugs.

Response: We appreciate the commenters' support of our proposal to pay for the six 5HT3 products separately. We also recognize the concerns raised by a commenter informing us of the price reduction for one of the injectible products. However, we firmly believe that packaging some of the 5HT3 anti-emetic products and paying separately for others may negatively impact a beneficiary's access to the particular anti-emetic that is most effective for him or her as determined by the beneficiary and his or her physician. Therefore, we are finalizing our policy to pay separately for all six injectible and oral forms of anti-emetic products in CY 2005. We note that this policy only affects drugs of a particular class (in this case, 5HT3 anti-emetic products) that vary in their payment status (that is, packaged or paid separately), and our intent is not to generally standardize payment methodologies for separately payable drugs of the same class.

Comment: One commenter expressed operational concerns about billing for oral anti-emetics associated with chemotherapy. The commenter indicated that it will be extremely difficult to bill for these drugs when the same HCPCS codes are used for the drugs' use in nausea not associated with chemotherapy and requested that CMS consider establishing a separate HCPCS code or an edit that will only allow payment when a cancer diagnosis is on the claim.

Response: The following HCPCS codes are those hospitals use to report the six 5HT3 products irrespective of their use: J1260 (Injection, Dolasetron, Mesylate, 10 mg), Q0180 (Dolasetron Mesylate, 100 mg, oral), J1626 (Injection, Graniestron Hydrochloride, 100 mcg), Q0166 (Granisetron Hydrochloride, 1 mg, oral), J2405 (Injection, Ondansetron Hydrochloride, per 1 mg), and Q0179 (Ondansetron Hydrochloride 8 mg, oral). The policy discussed above applies only to the packaging status of these products, not to their coverage status. Hospitals should continue billing in accordance with existing coverage rules.

Comment: We received comments on the packaging status of several drugs, biologicals, and radiopharmaceutical agents where the commenters indicated that the items were incorrectly packaged and should be paid separately as sole source ''specified covered outpatient drugs.'' Specific items mentioned in the comments were HCPCS codes A9524, Q3010, J2790, and J7525. The commenters asserted that the median cost per day calculations for these products were based on inaccurate and incomplete hospital claims data because the hospitals were not likely to have been charging appropriately for the products or billing the correct number of units. One of the commenters also cited changes in HCPCS code descriptors and the lag time in hospitals updating their charge masters to reflect revised code descriptors as possible reasons for why the hospital claims data may be skewed and may not be reflective of hospitals' actual acquisition costs. Another commenter asserted that since many of these drugs were packaged in CY 2003, the claims data did not capture the drugs' actual costs. Commenters urged CMS to review only the ''correctly coded'' claims when determining median cost per day for these products, use external data to help determine appropriate payment rates, or pay for the drugs separately as sole source ''specified covered outpatient drugs'' since these items meet that definition. Another commenter requested that CMS retain the CY 2004 payments until there is enough data to accurately determine payment rates.

Response: We understand commenters' concerns about the median cost per day for these particular items. To determine which claims for drugs, biologicals and radiopharmaceuticals are ''correctly coded'' would require that we attempt to assess which claims indicate that the number of units billed were or were not clinically reasonable. Given variations among patients with respect to the appropriate doses, the variety of indications with different dosing regimens for some agents, our lack of information about how many doses were administered on a given day, the possibility of off-label uses, and our desire not to question the clinical judgment of the prescribing providers on these issues, we do not believe that an approach that attempts to identify and use only ''correctly coded'' claims is feasible. The hospital claims database is the best and most complete source of data we have for establishing median hospital costs for the services and items paid for under the OPPS.

In section III.B. of this final rule with comment period, we discuss comments concerning our methodology for units trimming. It is possible that some other approaches to units trimming could increase the derived cost per day for some drugs but could also result in decreases for some. For others, it could result in no difference for the drug in relation to the $50 threshold. As a test, we applied several different unit trim approaches to one of the codes for which we received comments and still did not achieve a median cost per day above $50. Nevertheless, we appreciate the thoughtful comments we have received on this topic and will consider the issue of units trimming in later development of our OPPS payment rates. For our final policy for CY 2005, however, we retain the methodology that we proposed. We will also encourage hospitals to carefully consider the descriptions of each HCPCS code when determining the number of units to bill for drugs, biologicals and radiopharmaceuticals. We will consider special efforts related to particular items. We would note, also, that the payment hospitals receive for a particular drug is based on the number of units billed. If a hospital underreports the number of units administered to a patient due to a misunderstanding about the definition of the code, the hospital will not receive the full amount to which it is entitled. Conversely, hospitals should not report more units than appropriate based on the coding description and the amount required to treat the patient.

3. Payment for Drugs, Biologicals, and Radiopharmaceuticals Without Pass-Through Status That Are Not Packaged

a. Payment for Specified Covered Outpatient Drugs

Section 621(a)(1) of Pub. L. 108–173 amended section 1833(t) of the Act by adding a new subparagraph (14) that requires special classification of certain separately paid radiopharmaceutical agents and drugs or biologicals and mandates specific payments for these items. Under section 1833(t)(14)(B)(i), a ''specified covered outpatient drug'' is a covered outpatient drug, as defined in section 1927(k)(2) of the Act, for which a separate APC exists and that either is a radiopharmaceutical agent or is a drug or biological for which payment was made on a pass-through basis on or before December 31, 2002.

Under section 1833(t)(14)(B)(ii) of the Act, certain drugs and biologicals are designated as exceptions and are not

included in the definition of ''specified covered outpatient drugs.'' These exceptions are:

• A drug or biological for which payment is first made on or after January 1, 2003, under the transitional pass-through payment provision in section 1833(t)(6) of the Act.

• A drug or biological for which a temporary HCPCS code has not been assigned.

• During CYs 2004 and 2005, an orphan drug (as designated by the Secretary).

Section 1833(t)(14)(A)(i) of the Act, as added by section 621(a)(1) of Pub. L. 108–173, specifies payment limits for three categories of specified covered outpatient drugs in CY 2004. Section 1833(t)(14)(F) of the Act defines the three categories of specified covered outpatient drugs based on section 1861(t)(1) and sections 1927(k)(7)(A)(ii), (k)(7)(A)(iii), and (k)(7)(A)(iv) of the Act. The categories of drugs are ''sole source drugs,'' ''innovator multiple source drugs,'' and ''noninnovator multiple source drugs.'' The definitions of these specified categories for drugs, biologicals, and radiopharmaceutical agents under Pub. L. 108–173 were discussed in the January 6, 2004 OPPS interim final rule with comment period (69 FR 822), along with our use of the Medicaid average manufacturer price database to determine the appropriate classification of these products. Because of the many comments received on the January 6, 2004 interim final rule with comment period, the classification of many of the drugs, biologicals, and radiopharmaceuticals changed from that initially published. These changes were announced to the public on February 27, 2004, Transmittal 112, Change Request 3144. Additional classification changes were implemented in Transmittals 3154 and 3322.

We received 25 public comments associated with the January 6, 2004 interim final rule with comment period. These public comments are summarized under section V.B.4. of this preamble.

Section 1833(t)(14)(A) of the Act, as added by section 621(a)(1) of Pub. L. 108–173, also provides that payment for these specified covered outpatient drugs is to be based on its ''reference average wholesale price,'' that is, the AWP for the drug, biological, or radiopharmaceutical as determined under section 1842(o) of the Act as of May 1, 2003 (section 1833(t)(14)(G) of the Act). Section 621(a) of Pub. L. 108–173 also amended the Act by adding section 1833(t)(14)(A)(ii), which requires that:

• A sole source drug must, in CY 2005, be paid no less than 83 percent and no more than 95 percent of the reference AWP.

• An innovator multiple source drug must, in CY 2005, be paid no more than 68 percent of the reference AWP.

• A noninnovator multiple source drug must, in CY 2005, be paid no more than 46 percent of the reference AWP.

Section 1833(t)(14)(G) of the Act defines ''reference AWP'' as the AWP determined under section 1842(o) as of May 1, 2003. We interpreted this to mean the AWP set under the CMS single drug pricer (SDP) based on prices published in the Red Book on May 1, 2003.

For CY 2005, we proposed to determine the payment rates for specified covered outpatient drugs under the provisions of Pub. L. 108–173 by comparing the payment amount calculated under the median cost methodology as done for procedural APCs (described previously in the preamble) to the AWP percentages specified in section 1833(t)(14)(A)(ii) of the Act.

Specifically, for sole source drugs, biologicals, and radiopharmaceuticals, we compared the payments established under the median cost methodology to their reference AWP. We proposed to determine payment for sole source items as follows: If the payment falls below 83 percent of the reference AWP, we would increase the payment to 83 percent of the reference AWP. If the payment exceeds 95 percent of the reference AWP, we would reduce the payment to 95 percent of the reference AWP. If the payment is no lower than 83 percent and no higher than 95 percent of the reference AWP, we would make no change.

Comment: A few commenters strongly opposed the decrease in the payment floor for sole source specified covered outpatient drugs from 88 percent of AWP in CY 2004 to 83 percent of AWP in CY 2005. The commenters believed that the decrease was inappropriate and lacked sound policy justification. The commenters recommended that for CY 2005 the payment floor for sole source specified covered outpatient drugs be maintained at 88 percent of AWP. One commenter, however, was concerned about the proposed payment rate for HCPCS code J9395 (Injection, Fulvestrant, 25 mg), which is based on 83 percent of AWP instead of 85 percent of AWP that is the CY 2004 payment level. The commenter asserted that CMS's use of median cost data to establish appropriate payment rates for specified covered outpatient drugs is faulty for this drug because of concerns about the accuracy of the hospital median cost data. The commenter also indicated that several payment changes affecting this drug were likely to have created a significant degree of confusion among hospitals that may have negatively skewed hospital median cost data and led CMS to correlate the data to an AWP-based payment percentage that is too low. Another commenter urged CMS to create an exceptions process that would provide for appropriate adjustments within the MMA-specified payment corridor upon submission of data documenting potential access problems or a payment rate significantly lower than the acquisition cost of the drug. The commenter indicated that creating such an approach would help to minimize disruption to patient access to drugs in the hospital outpatient setting. To the contrary, several commenters were pleased with the payment rates for certain products at 83 percent of their AWPs.

Response: Section 621(a) of Pub. L. 108–173 is very specific in requiring that a sole source drug must be paid no less than 83 percent and no more than 95 percent of the reference AWP in CY 2005. We used the 83 percent of AWP as the payment floor to set payment rates for sole source drugs, unless payments based on median costs were higher, as we lack any data to determine what would be the appropriate payment level between 83 percent and 95 percent of AWP for all sole source drugs. We set up a payment floor to avoid paying for these drugs at different arbitrarily determined payment levels. We note that if data show that the payment rate for a drug falls between the 83 percent floor and 95 percent ceiling, the drug is paid at the payment rate.

We have responded to comments about the relative hospital data from our claims above and in other sections of this preamble. While we certainly share the desire to provide beneficiaries with access to the drugs that are reasonable and necessary for the treatment of their conditions, we do not agree with the comments that we should pay above the 83 percent floor established by the MMA for sole source drugs if the median hospital cost falls below this floor. We believe the intent of the law is to use hospital cost data as the best available information in setting the payment rates for most items paid for under the OPPS. In the case of sole source specified covered outpatient drugs, the MMA provides for a floor of 83 percent of the reference AWP for those items for which the payment based on relative hospital costs would fall below 83 percent of the AWP and a ceiling of 95 percent of the reference AWP for items where the relative

hospital costs from our claims data exceed that amount. We are not convinced that the 83 percent AWP floor is a barrier to appropriate treatment.

Comment: One commenter, the manufacturer of AGGRASTAT®, requested that CMS convert the current temporary outpatient HCPCS code C9109 (Injection, Tirofiban HCl, 6.25 mg) to a permanent national HCPCS code with a base dose of 5 mg and continue to maintain the permanent national HCPCS code J3245 (Injection, Tirofiban HCl, 12.5 mg). The commenter asserted that HCPCS codes with units of 5 mg and 12.5 mg would properly reflect the actual doses of AGGRASTAT® that currently exist in the market.

Response: For 2005, the National HCPCS Panel decided to delete HCPCS codes C9109 and J3245 and create a new HCPCS code J3246 (Injection, Tirofiban HCl, 0.25 mg). We hope that the creation of this new HCPCS code will ameliorate the commenter's concerns about appropriate coding for this product.

Comment: We received a number of comments on the packaging status of HCPCS codes J7505 (Muromonab-CD3, parenteral, 5 mg) and J9266 (Pegaspargase, single dose vial). The commenters stated that these two products were incorrectly packaged because the data used to determine packaging status were flawed and requested that both products be paid separately as sole source drugs at a rate between 83 percent and 95 percent of their AWPs.

Response: There were several drugs and biologicals that we proposed to package in the proposed rule, including the two products mentioned in the comments. However, when we recalculated their median costs per day using all of the hospital claims from CY 2003 used for this final rule with comment period, we determined that their median costs per day were greater than $50. Therefore, for CY 2005, we will pay for these drugs and biologicals separately. Items that meet the definition of ''specified covered outpatient drugs'' (SCOD) will be paid according to the payment methodologies established in the MMA, and payment for items that do not meet the definition will be based on their median unit cost. Table 25 lists the drugs and biologicals that were proposed as packaged drugs and biologicals but will be paid separately in CY 2005. The table also indicates the methodology that will be used to determine their APC payment rates in CY 2005.

Table 25. - Drugs and Biologicals with Packaging above $50 Threshold (Proposed as packaged items but will be paid separately in CY 2005)

HCPCS	Description	CY 2005 Payment Methodology
J0743	INJ, CILASTATIN SODIUM; IMIPENEM, PER 250 MG	Median based
J0900	INJ, TESTOSTERONE ENANTHATE AND ESTRADIOL VALERATE, UP TO 1 CC	Median based
J1455	INJ, FOSCARNET SODIUM, PER 1000 MG	Median based
J2760	INJ, PHENTOLAMINE MESYLATE, UP TO 5 MG	Median based
J1325	INJ, EPOPROSTENOL, 0.5 MG	SCOD
J7505	MUROMONAB-CD3, PARENTERAL, 5 MG	SCOD
J9050	CARMUSTINE, 100 MG	SCOD
J9165	DIETHYLSTILBESTROL DIPHOSPHATE, 250 MG	SCOD
J9266	PEGASPARGASE, PER SINGLE DOSE VIAL	SCOD

Comment: One commenter was concerned about the proposed payment rates for HCPCS codes A9502 (Supply of radiopharmaceutical diagnostic imaging agent, technetium Tc 99m tetrofosmin, per unit dose) and Q3005 (Supply of radiopharmaceutical diagnostic imaging agent, technetium Tc-99m mertiatide, per mci). The commenter indicated that payment corrections made for these two products in the February 27, 2004 CMS Transmittal 113 resulted in significant payment reductions. The commenter was concerned that significant payment fluctuations and reductions were counter-productive to the provision of quality care and will negatively impact the operational viability of nuclear medicine departments. Therefore, the commenter urged CMS to reconsider their proposed payments for these two products.

Response: We understand the commenter's concern about the impact of fluctuations in payment rates for HCPCS codes A9502 and Q3005. However, we note that the payment rates that were listed in the January 6, 2004 interim final rule with comment period for these products were calculated using incorrect reference AWPs as indicated in the February 27, 2004 CMS Transmittal 113. Therefore, we made corrections to the AWPs for these products and recalculated their payment rates according to the payment methodology required by the MMA for sole source ''specified covered outpatient drugs''.

Comment: One commenter requested that CMS support a decision by the HCPCS Alpha-Numeric Editorial Panel to issue separate permanent and universal drug codes for echocardiography contrast agents for which applications have been submitted. Specifically, the commenter recommended that CMS support the application submitted for the creation of a J-code for Definity, which is currently being reported as HCPCS code C9112 (Injection, perflutren lipid microsphere, per 2 ml vial).

Response: Decisions regarding the creation of permanent HCPCS codes are coordinated by the National HCPCS Panel. Comments related to the HCPCS code creation process and decisions made by the National HCPCS Panel are

outside the scope of this rule; therefore, we will not respond to this comment. We note that until a J-code is established for this product, hospitals can continue to bill for this product using the HCPCS code C9112.

Comment: Several commenters expressed concern about the proposed payment for intravenous immune globulin. They were concerned that CMS calculated the reference AWP for this code using AWPs for one or more products that were no longer commercially available. For example, Carimune and Panglobulin were removed from the market and replaced with Carimune NF and Panglobulin NF, respectively. The commenters requested that CMS review the current pricing data on the brand products that are currently in the market place and recalculate payment for IVIG as a sole source specified covered outpatient drug. Another commenter was concerned about the proposed payment rate for HCPCS code J7198 (Anti-inhibitor, per IU). The commenter indicated CMS calculated the reference AWP for this code using an AWP for a product called Autoplex that was discontinued from the market in May 2004 and recommended that CMS calculate payment for this HCPCS code using cost data associated with the product Feiba VH that currently exists in the market.

Response: We agree with the comments and accordingly recalculated the base AWP for HCPCS code J1563 (Immune globulin, intravenous, 1 g) excluding AWPs for the two discontinued products, Panglobulin and Carimune. Similarly, we excluded the AWP for the discontinued product, Autoplex, when redetermining the base AWP for HCPCS code J7198 (Anti-inhibitor, per IU). We then recalculated their payment rates as sole source ''specified covered outpatient drugs.'' We note that these changes resulted in an increase in the base AWPs for both products.

Comment: One commenter, the maker of the product billed under HCPCS code C9201 (Dermagraft, 37.5 cm2), requested that CMS set its CY 2005 payment rate under the OPPS identical to the payment rate in the physician office setting. The commenter anticipated a payment rate of $574.41 (third quarter ASP plus 6 percent) when it is used in the physician office setting during CY 2005; however, the proposed payment rate as a sole source drug under the OPPS was $529.54. The commenter indicated that Dermagraft's cost to all customers is identical regardless of the site of service and establishing a payment rate under the OPPS below the cost of the product to hospitals would hinder their access to medical technologies for which they will not recover their costs. Additionally, we received comments from an association representing a group of specialty hospitals and a professional association expressing concern about the proposed payment level for HCPCS code J3395 (Injection, verteporfin, 15 mg). The commenters indicated that the payment rate for this product is significantly less than the acquisition cost for outpatient facilities and requested that CMS pay for it at a rate that covers the cost of acquiring the drug. The commenter also stated that accurate pricing information for the drug should be available when CMS receives final data from the manufacturer on October 31, 2004 and that the final OPPS payment rate should be reflective of the pricing data.

Response: The products described by HCPCS codes C9201 and J3395 meet the definition of sole source ''specified covered outpatient drugs.'' The MMA specifies the methodology that determines payment for this group of drugs under the OPPS where, for CY 2005, sole source drugs must be paid between 83 percent and 95 percent of their reference AWP. Since payments for these two products based on the median cost methodology were less than 83 percent of their AWPs, their CY 2005 payment levels were established at 83 percent of their AWP. In these cases, we believe the statute specifically addresses the payment methodology for these drugs.

Comment: A few commenters were concerned about the proposed payment rates for some separately payable drugs and biologicals that did not fall under the category of ''specified covered outpatient drugs.'' These products would be either paid as pass-through items or their payment rates were based on median cost data; however, the commenters requested that the products be paid as sole source ''specified covered outpatient drugs.'' One of the commenters requested that external data be used to correct the payment rate for their product. Several rationales were cited for this request to change the payment methodology, such as the use of inaccurate and incomplete hospital claims data to determine payment rates that are lower than actual hospital acquisition costs and eliminating payment differentials between drugs of the same class.

Response: We believe that the MMA defines the items that are to be considered ''specified covered outpatient drugs'' for payment purposes under the OPPS, and these drugs do not meet the definition. We also recognize that classifying these products as sole source ''specified covered outpatient drugs'' would increase their payments; however, we are not convinced that the payment rates for these products calculated under current methodologies are insufficient.

In developing our August 16, 2004 proposed rule, there was one sole source item, Co 57 cobaltous chloride (HCPCS code C9013), for which we could not find a reference AWP amount. However, we had CY 2003 claims data for HCPCS code C9013, and therefore, we proposed to derive its payment rate using its median cost per unit. We requested comments on our proposed methodology for determining the payment rate for HCPCS code C9013. We received a few comments in response to our proposal.

Comment: The manufacturer of the product billed under HCPCS code C9013 (Supply of Co 57 cobaltous chloride, radiopharmaceutical diagnostic imaging agent), Rubatrope, along with other commenters, indicated that Rubatrope is an FDA-approved radiopharmaceutical and a sole source drug that meets the definition of a ''specified covered outpatient drug;'' therefore, it should be paid between 83 percent and 95 percent of AWP. The manufacturer of Rubatrope indicated that it had experienced problems with the production of this product in the past 2 years and thus production was discontinued. However, the product will be commercially available from November 2004. The commenter also indicated that it would send CMS an AWP for this product once it becomes available. Therefore, for CY 2005, the commenters strongly urged CMS to establish payment for C9013 as a sole source drug at 83 percent of AWP.

Response: We understand the commenters' concern about the payment rate for this product and note that HCPCS code C9013 was considered a sole source ''specified covered outpatient drug'' in the proposed rule. However, as we were not able to determine a reference AWP for this product, we based its proposed payment rate on its median cost from the claims data. At the time of the publication of this final rule, we were still unable to find an AWP for this product, and thus, in the absence of an AWP for this product, as proposed we will use the product's median cost to base its CY 2005 payment rate. However, if we determine an AWP for HCPCS code C9013, we will issue a change to its payment accordingly in a quarterly update of the OPPS.

We note that there are three radiopharmaceutical products for which

we proposed a different payment policy in CY 2005. These products are represented by HCPCS codes A9526 (Ammonia N–13, per dose), C1775 (FDG, per dose (4–40 mCi/ml), and Q3000 (Rubidium–Rb–82). Radiopharmaceuticals are classified as a ''specified covered outpatient drug'' according to section 1833(t)(14)(B)(i)(I) of the Act and their payment is dependent on their classification as a single source, innovator multiple source, or noninnovator multiple source product as defined by sections 1927 (k)(7)(A)(iv), (ii), and (iii) of the Act. Upon further analysis of these items, we determined that these three products do not meet the statutory definition of a sole source item or a multiple source item. Pub. L. 108–173 requires us to pay for ''specified covered outpatient drugs'' using specific payment methodologies based on their classification and does not address how payment should be made for items that do not meet the definition of a sole source or multiple source item. Therefore, in the August 16, 2004 proposed rule, we proposed to set the CY 2005 payment rates for these three products based on median costs derived from CY 2003 hospital outpatient claims data, which would reflect hospital costs associated with these products. With regard to HCPCS code A9526, we have no hospital outpatient cost data for this HCPCS code. We received correspondence from an outside source stating that Rubidium–Rb–82 (HCPCS code Q3000) is an alternative product used for procedures for which Ammonia N–13 is also used and these two products are similar in cost. Therefore, we proposed to establish a payment rate for Ammonia N–13 that is equivalent to the payment rate for Rubdium Rb–82.

We listed the proposed CY 2005 payment rates for these three items in Table 25 of the proposed rule (69 FR 50507), requested comments on the proposed payment rates and invited commenters to submit external data if they believe the proposed CY 2005 payment rates for these items do not adequately represent actual hospital costs.

We received many public comments on the proposed payment rates for the three items.

Comment: Many commenters were concerned about the proposed reduction in the payment rate for FDG in CY 2005. They stated that FDG meets the definition of ''specified covered outpatient drugs,'' and the MMA requires that ''specified covered outpatient drugs'' be classified as sole source drugs, innovator multiple source drugs, or noninnovator multiple source drugs, and be reimbursed according to a percentage of the reference AWP during CY 2005. Several commenters understood the difficulty CMS had in classifying FDG into one of the three categories of ''specified covered outpatient drugs.'' However, one of the commenters was concerned that CMS abandoned the methodology prescribed by the MMA and created another payment category for ''specified covered outpatient drugs,'' which the commenter believed is outside the scope of the MMA.

A commenter suggested that CMS assign FDG to the category that most closely reflects the underlying regulatory and economic environment for the production of FDG, which is the innovator multiple source drug category. The commenter explained that the production and sale of FDG is unusual in that the FDA does not yet require an approved New Drug Application (NDA) or Abbreviated New Drug Application (ANDA). The commenter also stated that the FDA is currently drafting special criteria to govern NDAs and ANDAs for the production and marketing of FDG, and eventually, manufacturers will be required to submit either an NDA or ANDA in order to sell FDG. Right now, there are no approved ANDAs or ''generics'' for FDG, and none of the FDA approved products is therapeutically equivalent. The commenter indicated that FDG is sold commercially by at least three manufacturers and is produced by numerous hospitals and academic medical centers for their own use, thus making it a multiple source drug. However, until the FDA finalizes its requirements for NDAs and ANDAs for FDG and all manufacturers have an opportunity to comply with those regulations, all FDG marketed in the United States should be considered a ''brand'' version. Although the different FDG products distributed are not rated as equivalent by the FDA, FDG was originally marketed under an NDA, and currently there are multiple distributors. Thus, although FDG does not meet all aspects of the multiple source innovator drug definition, given the inaccuracies of the hospital outpatient claims data, this commenter, along with several others, recommended that FDG be paid under the MMA at 68 percent of its AWP. Alternatively, some commenters requested that CMS keep the CY 2005 payment for FDG at its CY 2004 level until the completion of the GAO hospital acquisition cost survey, which will allow for a more reliable basis for setting payment based on average acquisition cost. One commenter stated that CMS should use external data submitted by hospitals to determine the true costs of this product. External data from a survey of 2002 nuclear medicine costs reported by hospitals were submitted, and the results indicated that median cost to hospitals for one dose of FDG is $425. Another commenter stated that their current cost for administering one dose of FDG to patients receiving PET scans is $450 and that CMS should research real market costs for this product before reducing payment by $126 from the current CY 2004 payment rate

The commenters all agreed that CMS should not use CY 2003 hospital claims data to calculate payment for FDG in CY 2005 because the reported data fails to accurately capture the actual acquisition cost to hospitals along with all the reasonable costs needed to safely prepare, store, administer, and dispose of the product. Commenters indicated that the HCPCS code descriptor for C1775 is written in a way that requires hospitals to use the same code to report FDG with a concentration of 4mci/ml as they use to report FDG with a concentration of 40 mci/ml, thus making the claims data unreliable, and also, hospitals did not have clear billing and charging guidance. Thus, the commenters claimed that the FDG data from CY 2003 are a flawed basis upon which to make a payment determination and would significantly underpay hospitals. Commenters noted that a reduction in payment for FDG to the proposed payment rate would limit utilization and access to FDG PET because of the financial losses the providers will suffer.

Response: We appreciate these thoughtful comments on our proposed payment rate for FDG. Based on the unique regulatory processes that affect the manufacturing and marketing of FDG, we believe that it is reasonable for us to classify FDG as an innovator multiple source drug. Therefore, we will not reinstate the HCPCS code C9408 (FDG, brand, per dose), which we inadvertently deleted as stated in the October 2004 Update of the OPPS (CMS Transmittal 290). In CY 2005, hospitals should use C1775 to bill for all FDG products.

With respect to calculating payment for FDG in CY 2005, the MMA requires that an innovator multiple source drug must be paid no more than 68 percent of the reference AWP. The MMA sets forth a payment ceiling for the brand innovator multiple source drugs, but does not provide a payment floor for them. We believe that the intent of the statute is to use available hospital

claims to set payment rates for most items paid under OPPS; therefore, we apply the ceiling only when the payment for an item based on the median hospital cost for the drug exceeds the ceiling. As we described in section V.A.3.a. of this final rule with comment period, for innovator multiple source drugs, we set the payment rate at the lower of the payment rate calculated under the standard median cost methodology or 68 percent of the AWP. We have applied this methodology to all of the other innovator multiple source drugs; therefore, we do not believe that it would be appropriate for us to exempt FDG from this methodology and pay for it at 68 percent of AWP, the ceiling for innovator products. We believe that basing payment for this item on relative hospital costs, with the application as appropriate of the previously mentioned ceiling, not only meets the intent but also the requirements of the MMA. The payment rate for C1775 in CY 2005 will be $221.11.

Comment: The manufacturer of CardioGen–82, also known as Rubidium Rb–82, along with other commenters asserted that this product does meet the classification of a sole source drug as defined by the MMA. The commenters indicated that FDA approval for this product was received under an NDA, and there is currently only one manufacturer of the Cardiogen–82 generators used to produce Rubidium Rb–82. Also, there is no FDA-approved generic product for Rubidium Rb–82. One of the commenters indicated that a survey was conducted to obtain data on actual hospital costs for Rubidium Rb–82, which showed that the median per dose cost to hospitals was $244.73. Thus, the commenter believed that CMS hospital cost data were flawed and do not represent true hospital costs; therefore, the hospital claims cost data should not be used to set the payment rate for Rubidium Rb–82 in CY 2005. Other commenters indicated that median cost data used by CMS to calculate the payment rate for Rubidium Rb–82 underreport the actual and reasonable hospital costs needed to safely prepare, store, administer, and dispose of the product. The commenters urged CMS to recognize HCPCS code Q3000 (Supply of radiopharmaceutical diagnostic imaging agent, Rubidium Rb–82, per dose) as a sole source drug and set its payment at 83 percent of its AWP, or at minimum, retain the CY 2004 payment rate.

Response: We appreciate these comments. Based on further evaluation of the appropriate classification for this product, we agree with the commenters that Rubidium Rb–82 should be classified as a sole source product. Therefore, payment for Q3000 will be made at 83 percent of AWP as its payment based on the median cost methodology is less than 83 percent of AWP. The payment rate for Rubidium Rb–82 in CY 2005 will be $153.39 per dose.

Comment: Numerous commenters were concerned about the proposed payment rate for HCPCS code A9526 (Ammonia N–13, per dose). Some of the commenters stated that CMS proposed to treat HCPCS codes Q3000 (Rubidium Rb–82, per dose) and A9526 under a ''presumptive functional equivalence'' in setting the same payment rate for these products when they are not functionally equivalent. It was also stated that Rubidium Rb–82 and Ammonia N–13 are used for similar procedures, but they have different costs, clinical composition, and utilization patterns. Another commenter indicated that Rubidium Rb–82 significantly differs from the other PET radiopharmaceuticals as it is produced by a radionuclide generator system, compared to FDG and Ammonia N–13 that are made in cyclotrons. A commenter also stated that Ammonia N–13 has no commercial vendors; whereas, Rubidium Rb–82 is produced and distributed by one commercial vendor. Some commenters suggested that CMS pay for A9526 separately, similar to other ''specified covered outpatient drugs.'' On the other hand, other commenters recommended that, in the absence of reliable cost data or a published AWP, CMS should use the cost of FDG as a proxy for the cost of Ammonia N–13, since these products have equivalent production costs.

Response: We recognize the concerns raised by commenters about our proposal to pay for Ammonia N–13 at the same payment rate as Rubidium Rb–82. We acknowledge that Ammonia N–13 meets the definition of ''specified covered outpatient drugs;'' however, we have not been able to determine an AWP for this product. Thus, we cannot set a payment rate for this product based on a percentage of its AWP. While some of the commenters recommended that we set the payment rate for Ammonia N–13 at the same level as that for FDG, we are aware this would give rise to the same concerns raised by commenters regarding payment for Ammonia N–13 and Rubidium Rb–82. Therefore, we are not adopting our proposed payment policy for Ammonia N–13. Based on the complete CY 2003 hospital claims data that were used for this final rule with comment period, we were able to identify claims submitted for Ammonia N–13; therefore, for CY 2005, we will use median cost derived from the claims data to set the payment for this product. The CY 2005 payment rate for A9526 will be $109.86 per dose.

Comment: A number of commenters, including several cancer research centers and trade associations representing the radionuclide and radiopharmaceutical industry, biomedical science, and the biotechnology industry, as well as the manufacturers of Bexxar (billed using HCPCS codes C1080, C1081, and G3001) and Zevalin (billed using HCPCS codes C1082 and C1083), expressed concern that 83 percent of AWP is insufficient to reimburse hospitals for the cost of acquiring Zevalin and Bexxar. Several commenters, including the manufacturer of Zevalin, were concerned that the proposed payment rates for Zevalin are inadequate to facilitate patient access to this critical therapy. One commenter stated that, because Zevalin is a radioimmunotherapy, its purchase and use are subject to state regulatory safeguards that limit its availability in the oncology practices; therefore, its access in the hospital outpatient setting is crucial. The commenter urged CMS to maintain the 2004 payment rates for Zevalin, which are at 88 percent of AWP, into CY 2005, and indicated that this stability would make treatment with Zevalin more economically feasible for hospitals.

One commenter, the manufacturer of Bexxar, expressed concern about what they identified as several ''inequities'' in the coding and proposed payments for Bexxar and Zevalin. Specifically, the commenter pointed out that the payment proposed for Bexxar in CY 2005 is more than $1500 less than the payment proposed for Zevalin. This commenter further recommended that payment for Bexxar be set at its wholesale acquisition cost, which is $19,500, or 95 percent of the RAWP, which would be $22,230. Several commenters indicated that CMS has the option to exceed the floor of 83 percent of AWP established under the MMA for sole source specified covered outpatient drugs, which would enable CMS to set a rate for Bexxar and Zevalin commensurate with their cost.

Two commenters recommended that CMS consider external data where available to supplement its payment determinations for Bexxar and Zevalin.

Response: We share the commenters' concerns that Medicare payment rates not be a barrier to beneficiary access to radioimmunotherapy for the treatment of non-Hodgkins lymphoma. However, we do not agree with the comments that we should set the OPPS payment rates

for Zevalin and Bexxar based on their CY 2004 payment levels, on external data, on their WAC, or on any payment amount other than that which is consistent the designation of radiopharmaceuticals in the MMA as specified covered outpatient drugs.

Zevalin and Bexxar are radiopharmaceuticals, and the MMA includes them as ''specified covered outpatient drugs'' for the OPPS payment purposes. Each meets the definition of a sole source drug. We believe the intent of the law is that we set payment rates for most items paid for under the OPPS using hospital cost data from the best and most recent information available, unless the statute directs otherwise, as in the case of drugs with pass-through status or new drugs without HCPCS codes. The MMA provides a floor of 83 percent of the reference AWP in CY 2005 for sole source specified covered outpatient drugs for which payment based on relative hospital costs would be less. Similarly, the MMA provides a cap of 95 percent of the reference AWP in CY 2005 for sole source specified covered outpatient drugs for which payment based on relative hospital costs would be higher. The statute provides a payment floor and ceiling for sole source ''specified covered outpatient drugs,'' at no lower than 83 percent of AWP or higher than 95 percent of AWP; the statute does not require a payment at some intermediate level that falls between 83 percent and 95 percent of AWP.

Payment for Zevalin based on relative hospital costs drawn from CY 2003 claims data would fall below 83 percent of the reference AWP. As we did in the case of other sole source drugs for which payment based on hospital claims would be lower than 83 percent of AWP, we proposed to set payment for Zevalin at 83 percent of the reference AWP. We also proposed to set payment for Bexxar in CY 2005 as a sole source radiopharmaceutical at 83 percent of AWP because, like Zevalin, it is a radiopharmaceutical and, therefore, a sole source specified covered outpatient drug under the MMA. We discuss in section V.G. of this final rule with comment period that we are making final our proposal to treat radiopharmaceuticals the same as we treat drugs and biologicals for purposes of ratesetting, with two exceptions: We will set payment for new radiopharmaceuticals for which we have no claims data, and for new radiopharmaceuticals with pass-through status effective on or after January 1, 2005, based on the MMA CY 2005 payment requirements for specified covered outpatient drugs. We have no ASP for Bexxar because it is a radiopharmaceutical, and manufacturers have not been required to submit ASP for radiopharmaceuticals. We have no claims data from which to calculate relative hospital costs for Bexxar because of the newness of the product. Therefore, we are setting payment for Bexxar in accordance with the MMA requirement that a sole source specified covered outpatient drug be paid no less than 83 percent of AWP in CY 2005.

Comment: A number of commenters, including several cancer centers and a nuclear medicine trade association, asked that CMS provide payment to hospitals for the cost of compounding each patient-specific dose of Bexxar, noting that the compounding costs amount to several thousand dollars in addition to the cost of the drug itself. One of these commenters recommended that the cost of compounding Bexxar be included in the payment for the product and that C1080 and C1081 be assigned to a new technology APC to reflect the total cost of the product plus compounding. One commenter, the manufacturer of Bexxar, is concerned because the payment proposed for Bexxar in CY 2005 does not include payment for the cost of compounding that is required to prepare patient specific doses of diagnostic and therapeutic I–131 tositumomab, whether done by the hospital's own radiopharmacy or by a commercial radiopharmacy. The commenter estimates that hospitals incur a compounding cost of $2,000–$3,000 to furnish Bexxar to a single patient when a commercial radiopharmacy does the compounding. The commenter recommends that CMS either base payment for Bexxar on 95 percent of AWP, continue payment for Bexxar at the CY 2004 level, or establish a new code to enable hospitals to bill separately for Bexxar compounding costs.

Response: Because Zevalin and Bexxar are radiopharmaceuticals that fall under the category of sole source specified covered drugs established by the MMA, the payment rates for these products are based on AWP, as required by the MMA. To the extent that compounding costs are reflected in the AWP, the payment rate includes these costs. If hospitals incur additional compounding costs for the radiolabeled monoclonal antibodies, those costs could be reported as a separate line item charge with an appropriate revenue code or packaged into the charge for CPT codes 78804 and 79403, which could result in an outlier payment if the outlier threshold for those services was exceeded. The MMA requires that MedPAC submit a report to the Secretary by July 1, 2005 on adjustment of payment for ambulatory payment classifications for specified covered outpatient drugs to take into account overhead and related expenses, such as pharmacy services and handling costs. We look forward to receiving this report in anticipation that the data collected by MedPAC will enable us to address drug-related overhead costs in future OPPS updates.

Comment: Several commenters expressed concerns that the payment rates proposed for Bexxar could result in clinicians having to make treatment decisions based upon payment considerations rather than medical considerations, and could result in physicians having to deny patients a potential life-saving therapy. The same commenters were concerned that the payment proposed for Zevalin and Bexxar does not recognize all of the additional costs associated with the provision of radiolabeled antibody therapy or radioimmunotherapy (RIT) for the treatment of non-Hodgkins lymphoma. These commenters urged CMS to consider all of the costs associated with this therapy when setting payment rates for each component of the regimen and recommended that CMS ensure that total payment to hospitals be commensurate with all of the actual costs that hospitals incur to acquire, prepare, and administer radiolabeled antibodies and to perform all of the additional procedures associated with RIT, thereby ensuring that patient access to these vital therapies will not be jeopardized.

Response: We share the commenters' concerns about the extent to which payment considerations influence treatment decisions. However, we believe that to the extent that radioimmunotherapy proves to be an efficacious treatment for patients with certain forms of non-Hodgkins lymphoma, payment in the aggregate for the full array of procedures and services associated with this new form of treatment affords hospitals sufficient flexibility to ensure that payment is not a barrier to beneficiary access when it is deemed reasonable and necessary.

Table 26 below lists the final APC payment rates for sole source drugs, biologicals, and radiopharmaceuticals effective January 1, 2005 to December 31, 2005.

BILLING CODE 4120–01–P

Table 26. – CY 2005 APC Payment Rates for Sole Source Drugs, Biologicals, and Radiopharmaceuticals

HCPCS	Status Indicator	APC	Short Description	CY 2005 Payment Rate
A4642	K	0704	Satumomab pendetide per dose	$1,390.25
A9500	K	1600	Technetium TC 99m sestamibi	$106.32
A9502	K	0705	Technetium TC99M tetrofosmin	$104.58
A9504	K	1602	Technetium tc 99m apcitide	$415.00
A9507	K	1604	Indium/111 capromab pendetid	$1,915.23
A9508	K	1045	Iobenguane sulfate I-131, pe	$996.00
A9511	K	1095	Technetium TC 99m depreotide	$37.79
A9521	K	1096	Technetiumtc-99m exametazine	$778.13
A9605	K	0702	Samarium sm153 lexidronamm	$907.33
C1079	K	1079	CO 57/58 per 0.5 uCi	$221.78
C1080	K	1080	I-131 tositumomab, dx	$2,241.00
C1081	K	1081	I-131 tositumomab, tx	$19,422.00
C1082	K	9118	Indium111ibritumomabtiuxetan	$2,419.78
C1083	K	9117	Yttrium90ibritumomabtiuxetan	$20,948.25
C1091	K	1091	IN111 oxyquinoline,per0.5mCi	$373.50
C1092	K	1092	IN 111 pentetate per 0.5 mCi	$224.10
C1122	K	1122	Tc 99M ARCITUMOMAB PER VIAL	$1,079.00
C1178	K	1178	BUSULFAN IV, 6 Mg	$24.35
C1201	K	1201	TC 99M SUCCIMER, PER Vial	$118.52

HCPCS	Status Indicator	APC	Short Description	CY 2005 Payment Rate
C1305	K	1305	Apligraf	$1,130.88
C9003	K	9003	Palivizumab, per 50 mg	$576.51
C9008	K	9008	Baclofen Refill Kit-500mcg	$10.21
C9009	K	9009	Baclofen Refill Kit-2000mcg	$37.64

[1] Equitable adjustment applied to payment rate

In order to determine the payment amounts for innovator multiple source and noninnovator multiple source forms of the drug, biological, or radiopharmaceutical, we compared the payments established under the median cost methodology to their reference AWP. For innovator multiple source items, we proposed to set payment rates at the lower of the payment rate calculated under our standard median cost methodology or 68 percent of the reference AWP. For noninnovator multiple source items, we proposed to set payment rates at the lower of the

payment rate calculated under our standard median cost methodology or 46 percent of the reference AWP. We followed this same methodology to set payment amounts for innovator multiple source and noninnovator multiple source ''specified covered outpatient drugs'' that were implemented by the January 6, 2004 interim final rule with comment period. We listed the proposed payment amounts in Table 26 of the proposed rule.

Comment: One commenter, an association of cancer centers, indicated that CMS proposed the same payment rate for both the brand name and generic versions of a drug. Given that CMS does not have separate HCPCS code level data for brand versus generic drugs in the CY 2003 claims data, the commenter indicated that it did not understand how CMS could use claims data to justify equivalent payment levels for both brand and generic versions of a drug. The commenter was also concerned about the adequacy of using the CY 2003 claims data to calculate the costs of these products and making comparisons to the payment rate ceilings set forth by the MMA for multi-source drugs, especially for the brand name drugs. Therefore, the commenter requested that CMS pay for all brand name drugs at 68 percent of AWP and pay for generics by comparing the calculated cost using the claims data to the 46 percent of AWP threshold and selecting the lower of the two as the payment rate.

Response: For CY 2005, as for the current year, the MMA sets forth different payment ceilings for the brand and generic versions of the drug. The MMA does not provide a payment floor for either the brand or generic versions of such items. Only sole source drugs have a payment floor and ceiling. As stated elsewhere in this final rule with comment period, the CY 2005 payment rate for innovator multiple source (brand name) drugs may not exceed 68 percent of the reference AWP. The payment for noninnovator multiple source (generic) drugs may not exceed 46 percent of the reference AWP. In determining payment rates, we apply those ceilings only when the payment for an item based on the median hospital cost for the drug exceeds one of these ceilings. In some cases, the payment based on the median hospital cost falls below the 46 percent ceiling for generic drugs. In such cases, the payment rate would be the same for brand and generic versions. However, we believe that basing payment for these items on relative hospital costs, with the application as appropriate of the previously mentioned ceilings not only meets the intent but also the requirements of the MMA.

Comment: A few commenters indicated that the proposed payment rate of $410.45 for HCPCS code A9600 (Supply of therapeutic radiopharmaceutical, Strontium-89, per mci) would underpay hospitals for this product since the payment rate was based on flawed CMS median cost data that do not accurately reflect the real acquisition cost of this drug by hospitals. The commenters believed that hospital costs for A9600 are approximately $800 per mci and requested that CMS adjust the payment accordingly. One commenter, who was the manufacturer of this product, asserted that the product is expensive and difficult to manufacture since it is produced in small quantities. The commenter also indicated that the reduction in the payment rate for this product is driving the underutilization of this product and increasing the use of costly narcotic analgesics, thus resulting in a decrease in quality of life and a rise in the cost of health care. Another commenter stated that the HCPCS codes for diagnostic and therapeutic iodine products (C1064, C1065, C1188, C1348, A9528, A9529, A9530, A9531, A9517 and A9518) all describe in various years and forms diagnostic and therapeutic Iodine 131 and that these codes have had varying descriptions that have resulted in flawed cost data. The commenter submitted data indicating that the cost for I–131 in the capsule form is higher than for solution, and recommended that CMS use external data to restore and correct payment rates for the Iodine 131 product so that the payment more accurately reflects actual hospital costs.

Response: We understand the commenters' concerns about establishing appropriate payment rates for these products. We believe that the intent of the statute is to use available hospital claims to set payment rates for most items paid under the OPPS. In the case of multiple source drugs such as these products, the MMA requires that innovator and noninnovator multiple source drugs be paid no more than 68 percent and 46 percent of their AWP, respectively.

As previously stated, for innovator multiple source drugs, we set the payment rate at the lower of the payment rate calculated under the standard median cost methodology or 68 percent of the AWP; and for noninnovator multiple source drugs, we set the payment rate at the lower of the payment rate calculated under the standard median cost methodology or 46 percent of the AWP. Using the most recent available data, we determined that the payment rates based on median cost for these drugs were lower than both 68 percent and 46 percent of their AWPs; therefore, the payment rates for both the innovator and noninnovator forms of these products were based on their median costs.

Comment: One commenter, the maker of one of the viscosupplement drugs, was concerned that the proposed payment rates for the four competitive products are inequitable and will harm beneficiary access to these therapies. The commenter indicated that currently two of the products, Hyalgan and Supartz, are billed using HCPCS code J7317 (Sodium Hyaluronate, per 20 to 25 mg dose for intra-articular injection), and this HCPCS code has been classified as a multi-source drug. The commenter assumed that another product, Orthovisc, would also be billed under HCPCS code J7317. However, the fourth product, Synvisc, is classified as a sole source drug and billed under HCPCS code J7320 (Hylan G–F20, 16 mg, for intra-articular injection). The commenter strongly believed that classifying these products differently resulted in payment rates that will create significant payment inequities and unjustified market distortions. To correct the payment inequity across the class of viscosupplements, the commenter recommended that CMS create separate HCPCS codes for these products and treat each product as a sole source drug. Another commenter strongly recommended that Orthovisc, a new product, be recognized as a pass-through under the OPPS, and be assigned a separate C-code for payments under that system.

Response: We recognize the commenter's concern about payment for these viscosupplement drugs under the OPPS. The National HCPCS Panel coordinates decisions regarding the creation of permanent HCPCS codes; therefore, comments related to the HCPCS creation process and decisions made by the National HCPCS Panel are outside the scope of this rule. However, we note that the product Orthovisc received approval for pass-through status under the OPPS effective January 1, 2005, and a new temporary C-code has been established to allow hospitals to receive pass-through payments for this product.

Comment: A commenter requested that CMS show three separate tables for the nonpass-through drugs; that is, one for sole source drugs, one for innovator multiple source drugs, and one for noninnovator multiple source drugs.

Response: We have accepted the commenter's suggestion and created three distinct tables listing the sole source drugs, innovator multiple sources drugs, and noninnovator multiple source drugs.

Tables 27 and 28 below list the final payment amounts for innovator and noninnovator multiple source drugs, biologicals, and radiopharmaceuticals, respectively, effective January 1, 2005 to December 31, 2005.

BILLING CODE 4120–01–C

b. Treatment of Three Sunsetting Pass-Through Drugs as Specified Covered Outpatient Drugs

As we discussed in the August 16, 2004 proposed rule, there are 13 drugs and biologicals whose pass-through status will expire on December 31, 2004. Table 29 below lists these drugs and biologicals.

Pass-through payment was made for 10 of these 13 items as of December 31, 2002. Therefore, these 10 items now qualify as specified covered outpatient drugs under section 1833(t)(14) of the Act, as added by section 621(a) of Pub. L. 108–173, as described above. However, pass-through status for three of the pass-through drugs and biologicals that will expire on December 31, 2004 (C9121, Injection, Argatroban; J9395, Fulvestrant; and J3315, Triptorelin pamoate), was first made effective on January 1, 2003. These items are specifically excluded from the definition of ''specified covered outpatient drugs'' in section 1833(t)(14)(B)(ii) of the Act, because they are not drugs or biologicals for which pass-through payment was first made on or before December 31, 2002. Pub. L. 108–173 does not address how

to set payment for items whose pass-through status expires in CY 2004, but for which pass-through payment was not made as of December 31, 2002.

Therefore, we proposed to pay for the three expiring pass-through items for which payment was first made on January 1, 2003, rather than on or before December 31, 2002 using the methodology described under section 1833(t)(14) of the Act for specified covered outpatient drugs. We believed that this methodology would allow us to determine appropriate payment amounts for these products in a manner that is consistent with how we pay for drugs and biologicals whose pass-through status was effective as of December 31, 2002, and that does not penalize those products for receiving pass-through status beginning on or after January 1, 2003 and expiring December 31, 2004. In Table 27 in the proposed rule, we listed the CY 2005 OPPS payment rates that we proposed for these three drugs and biologicals.

Of the 13 products for which we proposed that pass-through status expire on December 31, 2004, we proposed to package two of them (C9113, Inj. Pantoprazole sodium and J1335, Ertapenum sodium) because their median cost per day falls below the $50 packaging threshold. We proposed to pay for the remaining 11 drugs and biologicals as sole source items according to the payment methodology for sole source products described above.

We note that darbepoetin alfa (Q0137) will be considered a ''specified covered outpatient drug'' in CY 2005. Payment for these drugs is governed under section 1833(t)(14) of the Act. Specifically, we proposed that darbepoetin alfa would be paid as a sole source drug at a rate between 83 percent and 95 percent of its reference AWP. Accordingly, we specifically solicited comments on whether we should again apply an equitable adjustment, made pursurant to section 1833(t)(2)(E) of the Act, to the price for this drug.

Comment: Numerous commenters applauded CMS for proposing a fair and consistent payment methodology for drugs and biologicals whose pass-through status expires on December 31, 2004, and supported the proposal to treat these three therapies as specified covered outpatient drugs. They also encouraged CMS to expand this treatment to all separately paid drugs and biologicals in the future. A few commenters, including MedPAC, disagreed with our proposal to pay for the three expiring pass-through items for which payment was first made on January 1, 2003, as ''specified covered outpatient drugs.'' One commenter indicated that because these three drugs were excluded from the statutory definition of ''specified covered outpatient drug,'' it did not believe that CMS had the authority to treat newer drugs expiring out of pass-through status as specified covered outpatient drugs. Therefore, the commenter believed that CMS should pay for newer drugs expiring from pass-through status at 106 percent ASP, the rate applicable to the physician setting. MedPAC expressed concern about treating these 3 expiring pass-through drugs differently from the older, historically packaged drugs that are now eligible for separate payment and whose payments will be based on the median cost from the claims data. MedPAC indicated that the purpose of the pass-through payments is to allow time to accumulate data on costs and that there seemed to be no reason to believe that claims data are more accurate for one category of drugs that the other. Therefore, the drugs coming off pass-through, which do not fall under the SCOD category, and the older drugs should be paid consistently.

Response: We appreciate the commenters' support for our proposal to treat the three items for which pass-through status expires on December 31, 2004, but that were approved for pass-through status effective January 1, 2003, similar to the other drugs and biologicals whose pass-through status expires December 31, 2004, but that were approved for pass-through status on or before December 31, 2002. The statute does not address payment for drugs and biologicals that had pass-through status effective on January 1, 2003, but not on or before December 31, 2002. These items are newer drugs than the older products that never received pass-through status. We have accumulated cost data for these three drugs throughout the same 2-year period during which we accumulated cost data for the other drugs and biologicals whose pass-through status expires on December 31, 2004. Therefore, noting that the statute does not address drugs whose pass-through status likewise expires on December 31, 2004, but was approved on January 1, 2003, we believe it is reasonable to pay for these three drugs in a manner consistent with how we pay for the other drugs whose pass-through status likewise sunsets on December 31, 2004.

Comment: We received a number of comments concerning our proposal to pay for both epoetin alfa (marketed under trade name of Procrit) and darbepoetin alfa (marketed under the trade name of Aranesp®) based on 83 percent of their individual reference AWPs. A number of commenters also wrote in response to our solicitation for comments concerning the application of our equitable adjustment authority in determining the payment rate for darbepoetin alfa. Commenters acknowledged that both biologicals meet the MMA definition of specified covered outpatient drug (SCOD) and that the pass-through status of darbepoetin alfa ends on January 1, 2005. One of the commenters supported the proposal to establish payment for darbepoetin alfa as a SCOD, to base CY 2005 payment on its reference AWP, and to discontinue the application of an equitable adjustment to reduce the statutorily mandated payment for any product paid under the OPPS in CY 2005. This commenter stated the proposed payment for darbepoetin alfa as a sole source SCOD is fully consistent with section 621 of the MMA and that this is consistent with the method of payment for all other sole source SCODs. The commenter further stated that when drafting the language for section 622 of the MMA, Congress intended to ensure that considerations of functional equivalence were not applied to darbepoetin alfa after its pass-through status expired. This commenter acknowledges that section 1833(t)(2)(E) of the Act permits CMS to make ''adjustments as determined to be necessary to ensure equitable payments.'' However, this commenter stated that payments for the two products are already inherently equitable at the proposed rates because they are comparably priced and because CMS proposed to set the payment rates for the two products using the same methodology. The commenter noted that when CMS first applied the equitable adjustment for darbepoetin alfa, in CY 2003, CMS had only three choices for establishing drug payments under the OPPS: (1) Packing payment with related services; (2) using charges from outpatient claims to derive median cost; and (3) paying separately under the pass-through provisions, at 95 percent of AWP. The commenter notes the new payment methodology for all sole source ''specified covered outpatient drugs'' and argues that by applying this methodology to both of these biologicals, CMS would establish a level playing field and assure that market-based forces remain operable. This commenter also provided data concerning the clinical efficacy of darbepoetin alfa.

Many of the other commenters stated that CMS' application of its equitable adjustment authority deviated from the MMA's intent to pay for sole source

products and multi-source products under separate payment methodologies. The commenters were concerned about the significant impact that application of such authority may have on a company's decision to continue developing innovator products. The commenters also argued that applying such a policy could inject CMS into clinical decisions based solely on economic considerations and create payment incentives that distort patient decisions properly entrusted to treating physicians. One commenter recommended that if CMS plans to utilize this authority again, then CMS should hold a public forum and provide interested parties with an opportunity to submit written comments about the standards that will be used to determine equitable adjustment. Other commenters argued that CMS should comply with the MMA and protect patient access to innovative therapies by not applying functional equivalence or a similar standard to any drug in 2005 or future years.

One commenter on this topic also provided detailed results of clinical studies that the commenter believes support the necessity of a continuation of the equitable payment adjustment. This commenter further stated that the clinical data support the use of a particular conversion ratio in making such an adjustment. The commenter noted that without an equitable adjustment policy, both drugs would be paid at 83 percent of each product's AWP. The commenter estimated weekly payments for the two drugs under four scenarios: an equitable adjustment based on three different conversion ratios and the proposed policy of treating each drug independently without application of an equitable adjustment. According to this commenter, overall Medicare expenditures and beneficiary coinsurance payments would increase for the treatment of chemotherapy-induced anemia in the absence of an equitable payment adjustment. The commenter's estimates assume a 50 percent market share for each of the two drugs and estimated 2005 spending based on 2003 OPPS claims data with anemia market unit growth assumptions of 35 percent in 2004 and 22 percent in 2005. The commenter also noted that the MMA did not remove the Secretary's authority to establish adjustments to ensure equitable payments and that the Secretary retains the authority to determine the CY 2005 payment rate for darbepoetin alfa using the equitable payment policy applied in CY 2003 and CY 2004. This commenter also argued that the MMA prohibition on the use of a functional equivalence standard applies only to pass-through drugs and only to future implementation.

A comment from MedPAC on this issue indicated that as costs to the Medicare program continue to grow, the program will need to examine tools for obtaining value in its purchasing. MedPAC believed that, absent evidence that the CMS' use of its equitable adjustment to set equivalent payment rates for Procrit and Aranesp® denied beneficiaries' access to needed treatments, CMS should pursue value-based purchasing where possible.

Response: As the commenters noted, while we proposed a payment rate for darbepoetin alfa as a sole source SCOD based on its reference AWP, we also specifically solicited comments on whether we should again apply an equitable adjustment, made pursuant to section 1833(t)(2)(E) of the Act, to establish the payment for this drug in CY 2005. After careful consideration of the thoughtful and well-documented comments concerning this issue, we have concluded that it is still appropriate to apply an adjustment to the payment for darbepoetin alfa under our authority in section 1833(t)(2)(E) of the Act to ensure that equitable payments for these two products under the OPPS continue in CY 2005. We agree with those commenters that argued that section 1833(t)(2)(E) of the Act was not affected by the provisions of the MMA and that we retain our authority to make such adjustments to payments under the OPPS. As we have done previously, we will reassess the need to exercise our adjustment authority when we next review the payment rates under the OPPS.

To apply an equitable adjustment for CY 2005, we reviewed the analysis we conducted during 2003 and the additional data we received in 2004. As we discussed in further detail in our November 7, 2003 final rule with comment period for the 2004 update to the OPPS (68 FR 63455) and our November 1, 2002 final rule with comment period for the 2003 update (67 FR 66758), because darbepoetin alfa has two additional carbohydrate side-chains, it is not structurally identical to epoetin alfa. The addition of these two carbohydrate chains affects the biologic half-life of the compound. This change in turn affects how often the biological can be administered, which yields a different dosing schedule for darbepoetin alfa by comparison to epoetin alfa. Amgen has FDA approval to market darbepoetin alfa under the trade name ® for treatment of anemia related to chronic renal failure (including patients on and not on dialysis) and for treatment of chemotherapy-related anemia in cancer patients. Epoetin alfa, which is marketed by Ortho Biotech under the trade name Procrit, is approved by FDA for marketing for the following conditions: (1) Treatment of anemia of chronic renal failure (including for patients on and not on dialysis); (2) treatment of Zidovudine-related anemia in HIV patients; (3) treatment of anemia in cancer patients on chemotherapy; and (4) treatment of anemia related to allogenic blood transfusions in surgery patients.

The two biologicals are dosed in different units. Epoetin alfa is dosed in Units per kilogram (U/kg) of patient weight and darbepoetin alfa in micrograms per kilogram (mcg/kg). The difference in dosing metric is due to differences in the accepted convention at the time of each product's development. At the time epoetin alfa was developed, biologicals (such as those like epoetin alfa that are produced by recombinant DNA technology) were typically dosed in International Units (or Units for short), a measure of the product's biologic activity. They were not dosed by weight (for example, micrograms) because of a concern that weight might not accurately reflect their standard biologic activity. The biologic activity of such products can now be accurately predicted by weight, however, and manufacturers have begun specifying the doses of such biologicals by weight. No standard formula exists for converting amounts of a biologic dosed in Units to amounts of drug dosed by weight.

The process that we used in 2003 to define the payment conversion ratio between the two biologicals for CY 2004 is described in the November 7, 2003 final rule with comment period. We refer readers to that discussion, found at 68 FR 63455, for more complete details on that process and the data received and reviewed by CMS during the process. At the conclusion of the 2003 process, we established a conversion ratio of 330 Units of epoetin alfa to 1 microgram of darbepoetin alfa (330:1) for establishing the CY 2004 payment rate for darbepoetin alfa.

During the comment period, each company presented additional data concerning their products. Based upon our analysis to date, we continue to believe that the conversion ratio used for CY 2004 is appropriate for purposes of establishing equitable payment under the OPPS for both epoetin alfa and darbepoetin alfa for CY 2005. Initial review of new information submitted by the commenters provides no compelling

evidence that the conversion ratio of 330:1 is unreasonable. Therefore, for this final rule with comment period, we have established payment for darbepoetin alfa by applying the conversion ratio of 330:1 to 83 percent of the AWP for epoetin alfa. The resulting payment rate for darbepoetin alfa is $3.66 per microgram. We will continue to assess the data we have received thus far and invite the submission of additional information. In order to fully evaluate and assess this issue in determining whether any further adjustment of the conversion ratio is necessary, additional analysis will be required. If, after additional review and analysis, we determine that a different conversion ratio is more appropriate, we will make a change in the payment rate for darbepoetin alfa to reflect the change in ratio as soon as possible.

We do not believe that our application of an equitable adjustment will create a barrier to treatment for the conditions for which these products are prescribed or to the product of choice of the beneficiary and his or her treating physician. According to the most recent average sales price (ASP) information collected by CMS and available in time for this final rule with comment period, 106 percent of ASP for darbepoetin alfa is $3.69 per microgram. This amount would have been the basis for payment under the OPPS on January 1, 2005 if pass-through status did not expire and if we did not apply an equitable adjustment. Furthermore, as we have emphasized in prior rulemaking on this topic, our conversion of amounts of a biologic dosed in Units to amounts of a drug dosed by weight strictly for the purpose of calculating a payment rate should not in any way be viewed as a statement regarding the clinical use of either product. The method we use to convert Units to micrograms in order to establish equitable payments is not intended to serve as a guide for dosing individual patients in clinical practice. By using a conversion ratio solely for the purpose of establishing equitable payments, CMS is not attempting to establish a lower or upper limit on the amount of either biological that a physician should prescribe to a patient. We expect that physicians will continue to prescribe these biologicals based on their own clinical judgment of the needs of individual patients.

Table 29 below lists the final CY 2005 OPPS payment rates for the three sunsetting pass-through drugs and biologicals that will be treated as specified covered outpatient drugs.

Table 29. -- CY 2005 APC Payment Rates for Three Expiring Pass-Through Drugs and Biologicals That Will Be Treated As Specified Covered Outpatient Drugs

HCPCS Code	Status Indicator	Short Description	APC	CY 2005 Payment Rate
J9395	K	Injection, Fulvestrant	9120	$79.65
J3315	K	Triptorelin pamoate	9122	$362.78
C9121	K	Injection, argatroban	9121	$12.45

c. CY 2005 Payment for Nonpass-through Drugs, Biologicals, and Radiopharmaceuticals With HCPCS Codes, But Without the OPPS Hospital Claims Data

Pub. L. 108–173 does not address the OPPS payment in CY 2005 for new drugs and biologicals that have assigned HCPCS codes, but that do not have a reference AWP or approval for payment as pass-through drugs or biologicals. Because there is no statutory provision that dictates payment for such drugs and biologicals in CY 2005, and because we have no hospital claims data to use in establishing a payment rate for them, we investigated other possible options to pay for these items in CY 2005. Clearly, one option is to continue packaging payment for these new drugs and biologicals that have their own HCPCS codes until we accumulate sufficient claims data to calculate median costs for these items. Another option is to pay for them separately using a data source other than our claims data. The first option is consistent with the approach we have taken in prior years when claims data for new services and items have not been available to calculate median costs. However, because these new drugs and biologicals may be expensive, we are concerned that packaging these new drugs and biologicals may jeopardize beneficiary access to them. In addition, we do not want to delay separate payment for a new drug or biological solely because a pass-through application was not submitted.

Therefore, for CY 2005, we proposed to pay for these new drugs and biologicals with HCPCS codes but which do not have pass-through status at a rate that is equivalent to the payment they would receive in the physician office setting, which would be established in accordance with the methodology described in the CY 2005 Medicare Physician Fee Schedule proposed rule (69 FR 47488, 47520 through 47524). We noted that this payment methodology is the same as the methodology that will be used to calculate the OPPS payment amount that pass-through drugs and biologicals will be paid in CY 2005 in accordance with section 1842(o) of the Act, as amended by section 303(b) of Pub. L. 108–173, and section 1847A of the Act. Thus, we proposed to treat new drugs and biologicals with established HCPCS codes the same, irrespective of whether pass-through status has been determined. We also proposed to assign status indicator ''K'' to HCPCS codes for new drugs and biologicals for which we have not received a pass-through application.

In light of our August 16, 2004 proposal, we understood that manufacturers might be hesitant to apply for pass-through status. However, we did not believe there would be many instances in CY 2005 when we would not receive a pass-through application for a new drug or biological that has an HCPCS code. To avoid delays in setting an appropriate payment amount for new drugs and biologicals and to expedite the processing of claims, we strongly encouraged manufacturers to continue submitting pass-through applications for new drugs and biologicals when FDA

approval for a new drug or biological is imminent to give us advance notice to begin working to create an HCPCS code and APC. The preliminary application would have to be augmented by FDA approval documents and final package inserts once such materials become available. However, initiating the pass-through application process as early as possible would enable us to expedite coding and pricing for the new drugs and biologicals and accelerate the process for including them in the next available OPPS quarterly release.

In the August 16, 2004 proposed rule, we discussed how we proposed to pay in CY 2005 for new drugs and biologicals between their FDA approval date and assignment of an HCPCS code and APC. We shared the desire of providers and manufacturers to incorporate payment for new drugs and biologicals into the OPPS as expeditiously as possible to eliminate potential barriers to beneficiary access and to minimize the number of claims that must be processed manually under the OPPS interim process for claims without established HCPCS codes and APCs, and we solicited public comments on our proposal.

Comment: Several commenters commended CMS's proposal to set payment rates for new drugs with HCPCS codes using the same methodology proposed to set payment for drugs with pass-through status, regardless of whether a pass-through application has been submitted for the new drug. They applauded CMS for acknowledging that packaging payment for these new therapies might jeopardize beneficiary access to them. However, a comment from MedPAC indicated that CMS's proposal to pay 106 percent of ASP for this particular group of drugs and biologicals represented a change in policy where drugs of this nature were previously packaged until sufficient claims data were accumulated to calculate payment rates, unless they received pass-through status via an application process. MedPAC was concerned that the newly approved drugs and biologicals that do not go through the pass-through payment mechanism will be added to the OPPS system without any control on spending since this policy does not have a budget neutrality provision, similar to pass-through payments. Given that the pass-through policy existed as a controlled mechanism for introducing new drugs into the OPPS, these drugs should either be treated through the pass-through process or continue to be packaged under the previous policy.

Response: We appreciate the commenters' support for our proposal to pay for new drugs with HCPCS codes, but without pass-through status and hospital claims data under the same methodology that will be used to pay for them in the physician office setting. We also understand MedPAC's concern about budget neutrality associated with this policy. Our intent in paying for new drugs and biologicals with HCPCS codes, but without pass-through status and hospital claims data, separately, was that we recognized that some of these new products would be important new therapies in treatment of such diseases as cancer. We also believe that the MMA provision that requires CMS to pay for new drugs and biologicals before a code is assigned indicates that Congress intended for us to pay separately for new items until we have hospital claims data that would allow us to determine whether the product should be packaged. We are concerned that packaging their payments may prevent hospitals from acquiring these products and in turn harm beneficiaries' access to them. We do not expect the volume of new drugs and biologicals to which we would apply this policy in CY 2005 to be so significant as to have an effect on budget neutrality. Moreover, we would not expect this policy to have a differential impact on budget neutrality any more than payment for the drugs would affect pass-through spending had the drugs been approved for pass-through status. We also believe (and strongly encourage) that stakeholders will continue to apply for pass-through status for new drugs, biologicals and radiopharmaceuticals as a means of ensuring that we have all of the information required to establish accurate payments for these items as quickly as possible. At the same time, if we were to package all such items, we are concerned that it would provide a disincentive for manufacturers to come forward and request codes for new items. Under the MMA provision described above, we are required to pay for new drugs and biologicals without HCPCS code at 95 percent of AWP, which we would expect to generally be higher than 106 percent of ASP. We also believe the MMA provision regarding drugs without HCPCS codes indicates that Congress clearly intended that we pay separately for new drugs and biologicals. Therefore, for CY 2005 we will finalize the policy that we proposed to pay separately for new drugs and biologicals with HCPCS codes but without pass-through status and hospital claims data based on the payment for the same new products in a physician office.

We will, however, monitor this carefully during the course of CY 2005 and reassess the policy for CY 2006. In CY 2005, payment for these new drugs and biologicals will be based on 106 percent of ASP. In the absence of ASP data, we will use wholesale acquisition cost (WAC) for the product to establish the initial payment rate. If WAC is also unavailable, then we will calculate payment at 95 percent of the May 1, 2003 AWP or the first reported AWP for the product. We have used the second quarter ASP data from CY 2004 because those were the most recent numbers available to us in time for the publication for this rule. To be consistent with the ASP-based payments that will be made when these drugs and biologicals are furnished in the physician offices, we plan to make any appropriate adjustments to the amounts shown in Addendum A and B if later quarter ASP submissions indicate that adjustments to the payment rates are necessary. We will announce such changes in our program instructions to implement quarterly releases and post any revisions to the addenda on the *www.cms.hhs.gov* Web site. We will similarly adjust payment for items for which we used AWP or WAC because ASP was not available if ASP becomes available from later quarter submissions.

For CY 2005, we will apply this policy to three drugs and biologicals that are new effective January 1, 2005 and do not have pass-through status and hospital claims data. These drugs will be separately payable under the OPPS, and thus, we have assigned them to status indicator ''K''. Table 30 below lists these drugs and biologicals and the payment methodologies used to calculate their APC payments listed in Addendum A and B of this rule.

Table 30. -- New CY 2005 HCPCS Codes for Drugs and Biologicals without Pass-Through Status and Hospital Claims Data

HCPCS Code	APC	Short Descriptor	CY 2005 Payment Methodology
J0135	1083	Injection, Adalimumab, 20 mg	95% AWP
J1457	1085	Injection, Gallium nitrate, 1 mg	WAC
J7674	0867	Methacholine Chloride, neb	95% AWP

We have also identified several drugs and biologicals with new HCPCS codes created effective January 1, 2004, that do not meet the definition of ''specified covered outpatient drugs'' and for which we would not have CY 2003 hospital claims data. These items are packaged in CY 2004, and we also proposed to package them for CY 2005 in the proposed rule. To avoid negatively impacting beneficiary access to these new products by packaging them, we will be paying for these drugs in CY 2005 under the same methodology that will be used to pay for them in the physician office setting. The rules for determining payment for these drugs will be the same as the rules for new drugs with HCPCS codes but without pass-through status in CY 2005. In CY 2005, these drugs will be separately payable under the OPPS, and thus, we have assigned status indicator ''K'' to these drugs. Table 31 below lists these drugs and biologicals and the payment methodologies used to calculate their APC payments listed in Addendum A and B of this rule.

We note that CPT 90715 (Tdap vaccine > 7 im) was newly created in 2004; however, we will not apply this payment policy to this code because all of the vaccines similar to this product are packaged in CY 2004 and will remain packaged in CY 2005. This payment policy also will not apply to new radiopharmaceuticals since all radiopharmaceuticals meet the definition of ''specified covered outpatient drugs''. Therefore, payment for new radiopharmaceuticals will be made according to the payment methodologies established for ''specified covered outpatient drugs'' under section 1833(t)(14)(A)(ii) of the Act.

Table 31. - New 2004 HCPCS Codes for Drugs and Biologicals without Pass-Through Status and Hospital Claims Data

HCPCS	APC	Description	CY 2005 Payment Methodology
J0595	0703	Butorphanol tartrate 1 mg	106 % ASP
J2185	0729	Meropenem	106% ASP
J2280	1046	Inj, moxifloxacin 100 mg	WAC
J3411	1049	Thiamine hcl 100 mg	WAC
J3415	1050	Pyridoxine hcl 100 mg	WAC
J3465	1052	Injection, voriconazole	106% ASP
Q4075	1062	Acyclovir, 5 mg	106% ASP
Q4076	1070	Dopamine hcl, 40 mg	106% ASP
Q4077	1082	Treprostinil, 1 mg	106% ASP

Comment: One commenter noted that CMS historically had declined to process pass-through applications prior to FDA approval, consequently many manufacturers have ceased submitting early applications. The commenter stated that manufacturers may be uncomfortable submitting the detailed information required for the pass-through application prior to securing FDA approval. The commenter suggested that a more realistic expectation of the timeframe for pass-through application would be at or subsequent to FDA approval, when the product launch is imminent.

Response: We recognize that some manufacturers may be concerned about submitting detailed information for pass-through application in advance of FDA's approval for their product. However, we reiterate that we strongly encourage manufacturers to continue submitting pass-through applications when FDA approval for a new drug or biological is imminent to give us advance notice to begin working to create a HCPCS code and an APC for their product. While we will not be able to give final approval to the pass-through application prior to FDA approval, early notification about the product prior to FDA approval can expedite the granting of a new product-specific code and implementation of

that code and appropriate payment rate within our system.

d. Payment for Separately Payable NonPass-Through Drugs and Biologicals

As discussed in section V.B.2. of the August 16, 2004 proposed rule, for CY 2005, we used CY 2003 claims data to calculate the proposed median cost per day for drugs, biologicals, and radiopharmaceuticals that have an assigned HCPCS code and are paid either as a packaged or separately payable item under the OPPS. Section 1833(t)(14) of the Act, as added by section 621(a) of Pub. L. 108–173, specified payment methodologies for most of these drugs, biologicals, and radiopharmaceuticals. However, this provision did not specify how payment was to be made for separately payable drugs and biologicals that never received pass-through status and that are not otherwise addressed in section 1833(t)(14) of the Act. Some of the items for which such payment is not specified are (1) those that have been paid separately since implementation of the OPPS on August 1, 2000, but are not eligible for pass-through status, and (2) those that have historically been packaged with the procedure with which they are billed but, based on the CY 2003 claims data, their median cost per day is above the legislated $50 packaging threshold. Because Pub. L. 108–173 does not address how we are to pay for such drugs and biologicals (any drug or biological that falls into one or the other category and that has a per day cost greater than $50), we proposed to set payment based on median costs derived from the CY 2003 claims data. Because these products are generally older or low-cost items, or both, we believe that the payments will allow us to provide adequate payment to hospitals for furnishing these items. In the proposed rule, we listed in Table 28 the drugs and biologicals to which the proposed payment policy would apply.

We received numerous public comments on our proposal.

Comment: A commenter expressed concern about the proposed payment rate for HCPCS code J7342 (Dermal tissue, of human origin, with or without other bio-engineered or processed elements, with metabolically active elements, per square centimeter) when billed by Maryland-based hospitals and comprehensive outpatient rehabilitation facilities (CORFs).

Response: We understand the commenter's concern; however, Maryland-based hospitals and CORFs are excluded from payment under the OPPS and the OPPS payment rates do not apply to them. This final rule with comment period addresses only the providers that are paid under the OPPS. Therefore, this comment is outside the scope of this rule.

Comment: An association for manufacturers of contrast agents supported CMS' proposal to pay separately for certain MRI contrast agents (for example, HCPCS codes A4643 and A4647). However, the commenter was concerned that the payment rates for these products were based on CY 2003 hospital claims data and that the overall accuracy of the hospital median cost data is questionable; therefore, the commenter recommended that CMS review the proposed payment rates for MRI contrast agents and requested that such review include a confirmation that the median cost data used as the basis for calculating the payment rates are correct. The commenter also indicated that the proposed rule did not have unit descriptors for the HCPCS codes A4643 and A4647 and requested that CMS add the unit descriptor, ''up to 20 ml'' to HCPCS codes A4643 and A4647 in order to provide further clarity and facilitate more accurate coding and billing by hospitals.

Response: We understand the commenter's concern about setting appropriate payment rates for these products. These products do not meet the definition of ''specified covered outpatient drugs'' as defined in the MMA; however, we do have a significant number of CY 2003 hospital claims data for these products. It is our general policy under the OPPS to use the most recent available hospital claims data in setting the OPPS payment rates. For CY 2005, both of these products will be separately payable items. The payment rate for A4643 will be based on approximately 14,200 claims for approximately 27,000 services, and payment for A4647 will be based on approximately 87,600 claims for approximately 155,000 services.

We believe that the CY 2003 claims data contain a sufficiently robust set of claims for both products on which to base the payment rates for these items using the methodology that will be used for other separately payable non-pass-through drugs and biologicals. With respect to adding unit descriptors to A4643 and A4647, we suggest that the commenter pursue these changes through the process set up by the National HCPCS Panel.

Comment: A commenter expressed concern that CMS may have inappropriately packaged low osmolar contrast material (LOCM) drugs into APCs based on a determination that the drugs do not meet CMS's packaging rule because they are below the $50 threshold required for separate payment. The commenter questioned the accuracy of the median cost data used as the basis for CMS's decision as CMS' paid claims files for LOCM do not include unit descriptors for the HCPCS codes A4644, A4645, and A4646. The commenter is concerned that this makes it difficult to interpret the data in any meaningful way for purposes of determining what the payment rates for these drugs should be and whether they should be paid separately, in particular, because the dose administered per procedure can range from 10 ml to 200 ml. The commenter also believed that CMS should pay for LOCM drugs separately in the hospital outpatient setting because they are paid as such in the physician office setting. Therefore, the commenter recommended that CMS exercise its discretion to apply an exception to the packaging rule to LOCM as it did with the anti-emetics and allow separate payment for LOCM drugs in CY 2005. The commenter also suggested that CMS assign the unit descriptor ''per 10 ml'' to HCPCS codes A4644, A4645, and A4646.

Response: We recognize that the commenter is concerned about the packaging of the three LOCM products. Based on the methodology used to calculate median cost per day for drugs and biologicals, as explained in section V.B.2. of the preamble, we determined that the per day costs of these products were below $50. Therefore, these items were packaged. We note that the LOCM products are a unique class of drugs that have always been packaged from the beginning of the OPPS in August 1, 2000, and this is the first year that we looked into the cost data for these drugs to determine whether they should be paid separately. We realize that for CY 2005 these drugs will be packaged under the OPPS, but will receive separate payment in the physician office setting. However, based upon the statutory packaging threshold for drugs and biologicals as per administration cost less than $50, we believe that it is appropriate for us to package the LOCM drugs under the OPPS. With respect to adding unit descriptors to HCPCS code A4644, A4645, and A4646, we suggest that the commenter pursue these changes through the process set up by the National HCPCS Panel.

Comment: We received comments concerning the new Part D prescription drug benefit mandated by the MMA and the intersection between drugs covered by Part D and Part B.

Response: Because such issues are not within the scope of this CY 2005 OPPS

final rule with comment period, we will not respond to those comments in this document.

Comment: We received many comments from makers of drug and biological products, national trade associations, and an association for cancer centers suggesting that CMS should expand the future rate-setting methodology for ''specified covered outpatient drugs'' to include all drugs and biologicals that either are or were previously paid separately under the OPPS, regardless of whether the drugs meet or exceed the $50 threshold. The commenters also recommended that CMS also work with GAO and MedPAC to ensure that their respective studies of the acquisition costs and pharmacy service and overhead costs include all of these drugs and biologicals and that the studies are thorough and will contain all the information CMS needs to set proper payment rates in the future. Many of these commenters were concerned about CMS' use of claims, other data, and the methodologies used to establish the OPPS payments for drugs and biologicals that do not meet the definition of ''specified covered outpatient drugs'' and therefore, are not statutorily required to be included in these studies. The commenters suggested that CMS should not implement different methodologies for ''specified covered outpatient drugs'' and other separately paid drugs in CY 2006; instead, CMS should ensure appropriate payment for all Medicare covered drugs by applying the acquisition cost-based payment methodology to all separately paid drugs. One commenter believed that Congress fully intended for all separately paid drugs and biologicals to be paid based on hospital acquisition costs, as informed by these studies. Another commenter recommended that CMS continue to accept external cost data that may be submitted by knowledgeable stakeholders, such as manufacturers, providers, or patients to provide verification of hospital acquisition costs for specific drugs and biologicals. One commenter indicated that it would like to work with CMS as it prepares the hospital acquisition cost survey for the CY 2006 rates.

Response: We appreciate the interest expressed by many of the commenters regarding the MMA-mandated surveys that will be conducted by the GAO and MedPAC of hospital acquisition cost for drugs and biologicals and their overhead and related costs, respectively. However, we note that these provisions of the MMA affect payment for drugs and biologicals in CY 2006, and thus, these comments fall outside the scope of this rule. Therefore, we will not be responding to these comments at this time.

Comment: A commenter requested that CMS examine every HCPCS J-code for drugs to ensure that the dosage definitions for the HCPCS codes are set at the lowest available manufacturers' dosage and match the customary dispensing packaging.

Response: Changes to the HCPCS J-codes are made by the National HCPCS Panel; therefore, this comment is outside the scope of this OPPS final rule. We suggest that the commenter pursue these changes through the process established by the National HCPCS Panel.

BILLING CODE 4120–01–P

Table 32. – CY 2005 APC Payment Rates for Drugs, Biologicals, and Radiopharmaceuticals (Based on Median Cost)

HCPCS	Status Indicator	APC	Short Description	CY 2005 Payment Rate
A4643	K	9026	High dose contrast MRI	$26.24
A4647	K	9027	Supp- paramagnetic contr mat	$35.59
J0120	K	9028	Tetracyclin injection	$99.99
J0150	K	0379	Injection adenosine 6 MG	$12.33
J0152	K	0917	Adenosine injection	$8.71
J0282	K	9029	Amiodarone HCl	$11.00
J0285	K	9030	Amphotericin B	$20.64
J0395	K	9031	Arbutamine HCl injection	$68.08
J0475	K	9032	Baclofen 10 MG injection	$10.68
J0740	K	9033	Cidofovir injection	$407.58
J0743	K	0846	Cilastatin sodium injection	$11.37
J0900	K	0848	Testosterone enanthate inj	$38.27
J0945	K	9034	Brompheniramine maleate inj	$59.01
J1051	K	9035	Medroxyprogesterone inj	$17.56
J1212	K	9036	Dimethyl sulfoxide 50% 50 ML	$53.34
J1230	K	9037	Methadone injection	$13.32
J1245	K	0380	Dipyridamole injection	$11.70
J1410	K	9038	Inj estrogen conjugate 25 MG	$45.51
J1452	K	9040	Intraocular Fomivirsen na	$939.79
J1455	K	0866	Foscarnet sodium injection	$11.80
J1460	K	9041	Gamma globulin 1 CC inj	$31.63
J1610	K	9042	Glucagon hydrochloride/1 MG	$46.16
J1742	K	9044	Ibutilide fumarate injection	$123.79
J1750	K	9045	Iron dextran	$14.78
J1756	K	9046	Iron sucrose injection	$0.53
J1835	K	9047	Itraconazole injection	$42.10
J2260	K	7007	Inj milrinone lactate / 5 MG	$8.22
J2597	K	9048	Inj desmopressin acetate	$4.52
J2725	K	9049	Inj protirelin per 250 mcg	$40.81
J2760	K	0845	Phentolaine mesylate inj	$20.82
J2916	K	9050	Na ferric gluconate complex	$6.03

BILLING CODE 4120–01–C

e. CY 2005 Change in Payment Status for HCPCS Code J7308

Since implementation of the OPPS on August 1, 2000, HCPCS code J7308 (Aminolevulinic acid HCI for topical administration, 20 percent single unit dosage form) has been treated as a packaged item and denoted as such using status indicator ''N''. Thus, historically we have not allowed separate payment for this drug under the OPPS and it does not meet the statutory definition of a specified covered outpatient drug. For CY 2005, we proposed to allow separate payment for this drug at 106 percent of ASP, which is equivalent to the payment rate that it would receive under the Medicare Physician Fee Schedule. We proposed a CY 2005 ASP and payment under the OPPS for HCPCS code J7308 of $88.86. We solicited comments on our proposed payment methodology for HCPCS code J7308 for CY 2005.

We did not receive any comments on our proposed policy. However, we did receive a comment on this policy in response to the January 6, 2004 interim final rule with comment period, which we discuss below.

Comment: One commenter requested that HCPCS code J7308 be paid separately under the OPPS because its cost is in excess of the $50 median cost per day threshold, and the drug is also paid separately under the Medicare Physician Fee Schedule in CY 2004.

Response: We agree with the commenter and will finalize our policy to pay separately for J7308 at the payment rate that it would receive under the Medicare Physician Fee Schedule. The payment rate listed in Addenda A and B of the August 16, 2005 proposed rule was based on the second quarter ASP submission for CY 2004. As stated in section V.A. 3. of this final rule with comment period, we plan to make any appropriate adjustments to the amount shown in Addenda A and B if later quarter ASP submissions indicate that adjustments to the payment rate for this drug is necessary.

4. Public Comments Received on the January 6, 2004 Interim Final Rule With Comment Period and Departmental Responses

As discussed in section V.B.3. of this final rule with comment period, on January 6, 2004, we published in the **Federal Register** an interim final rule with comment period (69 FR 822) that implemented section 621(a)(1) of Pub. L. 108–173. Section 621(a)(1) specified payment limits on three categories of specific covered outpatient drugs and defined these three categories of drugs.

We received many pieces of correspondence that contained public comments associated with the January 6, 2004 interim final rule with comment period. Many of the comments expressed concerns about the following issues: treating radiopharmaceuticals as ''drugs;'' establishing mechanisms to pay for drugs without HCPCS codes at 95 percent of AWP; correcting the classification of specific items to sole source ''specified covered outpatient drugs;'' eliminating the use of ''equitable adjustments'' to the OPPS payment for drugs and biologicals or applying any functional equivalence standards; paying separately for drugs that are either packaged or whose payment is based on median cost as ''specified covered outpatient drugs''; expanding the list of items that will be studied in the MMA-mandated GAO and MedPAC surveys of certain OPD services; using the cost-to-charge methodology and the hospital outpatient claims data to set payment rates for certain drugs and biologicals; identifying and establishing appropriate payment rates for innovator and noninnovator multiple source drugs; and changing HCPCS code descriptors for radiopharmaceuticals to reflect the products as administered to patients.

We will not address these comments separately in this section because these issues are discussed in detail throughout this entire section (section V.) of this final rule with comment period. However, for those public comments that are not specifically addressed in section V., a summary of them and our responses to those comments follow:

Comment: A commenter suggested that CMS create separate HCPCS codes for Neoral, Sandimmune, and the other cyclosporine products. The commenter indicated that currently all of these products are being billed using HCPCS code J7502 (Cyclosporine, oral, 100 mg). The commenter stated that the payment rates for the brand name products should not be linked to the payment rates for the non-innovator products because this situation creates access issues to the branded products, and CMS should not limit patient access to the specific formulation deemed medically appropriate for the individual needs of the specific patients.

Response: We note that for both CYs 2004 and 2005, hospitals can use HCPCS code C9438 to bill for the brand name forms of oral cyclosporine. As stated V.A.3.a. of this final rule with comment period, the MMA set forth different payment ceilings for the brand and generic versions of a drug where the CY 2005 payment rate for innovator multiple source (brand name) drugs may not exceed 68 percent of the reference AWP and the payment for generic versions may not exceed 46 percent of the reference AWP. We explained previously that we apply those ceilings only where the payment for an item based on the median hospital cost for the drug exceeds one of these ceilings. In some cases, the payment based on the median hospital cost falls below the 46 percent ceiling for generic drugs. In such cases, the payment rate would be the same for brand and generic versions. We believe that basing payment for these items on relative hospital costs, with the application as appropriate of the previously mentioned ceilings not only meets the intent but also the requirements of the MMA.

Comment: A commenter recommended that CMS consider pricing information from several authoritative sources when determining the reference AWP, including Red Book and First Data Bank, on a case-by-case basis since such pricing information can be used to resolve outstanding payment issues and ensure greater accuracy in calculating the OPPS payment rates.

Response: We appreciate this comment and will consider this recommendation when we reassess the OPPS payment rates.

Comment: Several commenters noted that CMS changed the classification for many of the biologicals products to sole source ''specified covered outpatient drugs'' in the February 27, 2004 CMS Transmittal 113 without discussing why the changes were made. One of the commenters indicated that the definition for sole source ''specified covered outpatient drugs'' in the MMA is different from the Medicaid rebate definition. The commenter stated that the MMA defined sole source drugs as: (1) A biological product (as defined under section 1861(t)(1) of the Act); or (2) a single source drug (as defined in section 1927(k)(7)(A)(iv) of the Act). The commenters requested that CMS clarify that it intends to treat all biological products as sole source drugs in the future as the law requires.

Response: We agree with the commenters that biologicals products are defined as sole source ''specified covered drugs'' in the MMA, and we will determine payment rates for these products accordingly.

Comment: We received several comments on the mechanism for establishing payment rates for innovator and noninnovator multiple source drugs. One commenter urged CMS to set the payment rates closer to the actual

costs for all products and services and provide differential reimbursement for innovator multiple source products only if their actual acquisition costs were markedly higher than that for the noninnovator multiple source products. Another commenter indicated that innovator and noninnovator multiple source drugs were discounted very similarly, and therefore, differential payments were not necessary. A commenter also requested that CMS obtain legislative approval to price these innovator and noninnovator multiple source drugs using a blended payment rate set halfway between 46 percent and 68 percent of their reference AWPs.

Response: We appreciate these suggestions and note that the methodology that will be used to determine payment rates for innovator and noninnovator multiple source drugs in CY 2005 is described in detail in section V.A.3.a. of this final rule with comment period.

C. Coding and Billing for Specified Outpatient Drugs

As discussed in the January 6, 2004 interim final rule with comment period (69 FR 826), hospitals were instructed to bill for sole source drugs using the existing HCPCS code, which were priced in accordance with the provisions of newly added section 1833(t)(14)(A)(i) of the Act, as added by Pub. L. 108–173. However, at that time, the existing HCPCS codes did not allow us to differentiate payment amounts for innovator multiple source and noninnovator multiple source forms of the drug. Therefore, effective April 1, 2004, we implemented new HCPCS codes via Program Transmittal 112 (Change Request 3144, February 27, 2004) and Program Transmittal 132 (Change Request 3154, March 30, 2004) that providers were instructed to use to bill for innovator multiple source drugs in order to receive appropriate payment in accordance with section 1833(t)(14)(A)(i)(II) of the Act. Providers were also instructed to continue to use the current HCPCS codes to bill for noninnovator multiple source drugs to receive payment in accordance with section 1833(t)(14)(A)(i)(III). In this manner, drugs, biologicals, and radiopharmaceuticals will be appropriately coded to reflect their classification and be paid accordingly. In the August 16, 2004 proposed rule, we proposed to continue this coding practice in CY 2005 with payment made in accordance with section 1833(t)(14)(A)(ii) of the Act.

We received a few public comments on our proposal.

Comment: Several commenters urged that CMS delete certain newly created C codes (C9400,Thallous Chloride, brand; C9401 Strontium–89 chloride, brand; C9402 Th I131 so iodide cap, brand; C9403 Dx I131 so iodide cap, brand; C9404 Dx So iodide sol, brand; C9405 Th I131 so iodide, sol. brand) because radiopharmaceuticals are better characterized as either sole source or innovator multiple source drugs. The commenters indicated that the creation of the new codes implied that some radiopharmaceuticals are generic products and others are brand, but there was no identification of which product falls within which code. Further, there was no payment difference between some of the radiopharmaceutical brand products versus generics. The commenters believed these products did not fit the conventional brand versus generic distinctions, and should all be recognized as brand drugs until the GAO report provides additional data. Also, the commenters recommended that the current A-codes be retained at the payment levels CMS proposes for ''brand'' drugs and believed that deletion of these codes should result in payment for the corresponding radiopharmaceuticals based on their status as a sole source or innovator multi-source drug and would significantly lessen hospital administrative burden and confusion. Another commenter indicated that hospitals needed further clarification on which manufacturers' products can be billed under the HCPCS codes created for the brand and generic forms of a product.

Response: As stated in section V.A.3.a. of this final rule with comment period, section 621(a) of Pub. L. 108–173 sets forth different payment ceilings for the brand and generic versions of a drug where the CY 2005 payment rate for innovator multiple source (brand name) drugs may not exceed 68 percent of the reference AWP and the payment for generic versions may not exceed 46 percent of the reference AWP. We explained previously that we apply those ceilings only where the payment for an item based on the median hospital cost for the drug exceeds one of these ceilings. In some cases, the payment based on the median hospital cost falls below the 46 percent ceiling for generic drugs. In such cases, as the commenters indicate, the payment rate would be the same for brand and generic versions.

We will not be providing a list of brand name and generic products for hospitals to use in determining whether their product is a brand name or generic product. We believe that hospitals are in the best position to correctly determine which type of products they are using. We refer the commenter to the definitions of innovator and noninnovator multiple source drugs stated in the January 6, 2004 interim final rule with comment period (69 FR 822). Hospitals can also use the FDA's Orange Book in determining whether an item they use is a brand name product.

D. Payment for New Drugs, Biologicals and Radiopharmaceuticals Before HCPCS Codes Are Assigned

1. Background

Historically, hospitals have used a code for an unlisted or unclassified drug, biological, or radiopharmaceutical or used an appropriate revenue code to bill for drugs, biologicals, and radiopharmaceuticals furnished in the outpatient department that do not have an assigned HCPCS code. The codes for not otherwise classified drugs, biologicals, and radiopharmaceuticals are assigned packaged status under the OPPS. That is, separate payment is not made for the code, but charges for the code would be eligible for an outlier payment and, in future updates, the charges for the code are packaged with the separately payable service with which the code is reported for the same date of service.

Drugs and biologicals that are newly approved by the FDA and for which an HCPCS code has not yet been assigned by the National HCPCS Alpha-Numeric Workgroup could qualify for pass-through payment under the OPPS. An application must be submitted to CMS in order for a drug or biological to be assigned pass-through status, along with a temporary C-code for billing purposes, and an APC payment amount. Pass-through applications are reviewed on a flow basis, and payment for drugs and biologicals approved for pass-through status is implemented throughout the year as part of the quarterly updates of the OPPS.

In the November 7, 2003 final rule with comment period (68 FR 63440), we explained how CMS generally pays under the OPPS for new drugs and biologicals that are assigned HCPCS codes, but that are not approved for pass-through payment, and for which CMS had no data upon which to base a payment rate. These codes do not receive separate payment, but are assigned packaged status. Hospitals were urged to report charges for the new codes even though separate payment is not provided. Charges reported for the new codes are used to determine hospital costs and payment rates in future updates. For CY 2004, we again

noted that drugs that were assigned an HCPCS code effective January 1, 2004, and that were assigned packaged status, remain packaged unless pass-through status is approved for the drug. If pass-through status is approved for these drugs, pass-through payments are implemented prospectively in the next available quarterly release.

2. Provisions of Pub. L. 108–173

Section 621(a)(1) of Pub. L. 108–173 amended section 1833(t) of the Act by adding paragraph (15) to provide for payment for new drugs and biologicals until HCPCS codes are assigned under the OPPS. Under this provision, we are required to make payment for an outpatient drug or biological that is furnished as part of covered OPD services for which a HCPCS code has not been assigned in an amount equal to 95 percent of AWP. This provision applies only to payments under the OPPS, effective January 1, 2004. However, we did not implement this provision in the January 6, 2004 interim final rule with comment period because we had not determined at that time how hospitals would be able to bill Medicare and receive payment for a drug or biological that did not have an identifying HCPCS code.

As stated earlier, at its February 2004 meeting, the APC Panel heard presentations suggesting how to make payment for a drug or biological that did not have a code. The APC Panel recommended that we work swiftly to implement a methodology to enable hospitals to file claims and receive payment for drugs that are newly approved by the FDA. The APC Panel further recommended that we consider using temporary or placeholder codes that could be quickly assigned following FDA approval of a drug or biological to facilitate timely payment for new drugs and biologicals.

We explored a number of options to make operational the provisions of section 1833(t)(15) of the Act, as added by section 621(a)(1) of Pub. L. 108–173, as soon as possible. One of the approaches that we considered was to establish a set of placeholder codes in the Outpatient Code Editor (OCE) and the PPS pricing software for the hospital OPPS (PRICER) that we would instruct hospitals to use when a new drug was approved. Hospitals would be able to submit claims using the new code but would receive no payment until the next quarterly update. By that time, we would have installed an actual payment amount and descriptor for the code into the PRICER, and would mass-adjust claims submitted between the date of FDA approval and the date of installation of the quarterly release. A second option that we considered was to implement an APC, a C-code, and a payment amount as part of the first quarterly update following notice of FDA approval of a drug or biological. Hospitals would hold claims for the new drug or biological until the quarterly release was implemented and then submit all claims for the drug or biological for payment using the new C-code to receive payment on a retroactive basis. We also considered instructing hospitals to bill for a new drug or biological using a ''not otherwise classified'' code for which they would receive an interim payment based on charges converted to cost. Final payment would then be reconciled at cost report settlement. While each of these approaches might enable hospitals to begin billing for a newly approved drug or biological as soon as it received FDA approval, each approach had significant operational disadvantages, such as increased burden on hospitals or payment delays, or the risk of significant overpayments or underpayments that could not be resolved until cost report settlement.

We adopted an interim approach that we believe balances the need for hospitals to receive timely and accurate payment as soon as a drug or biological is approved by the FDA with minimal disruption of the OPPS claims processing modules that support the payment of claims. On May 28, 2004 (Transmittal 188, Change Request 3287), we instructed hospitals to bill for a drug or biological that is newly approved by the FDA by reporting the National Drug Code (NDC) for the product along with a new HCPCS code C9399, Unclassified drug or biological. When C9399 appears on a claim, the OCE suspends the claim for manual pricing by the fiscal intermediary. The fiscal intermediary prices the claim at 95 percent of its AWP using Red Book or an equivalent recognized compendium, and processes the claim for payment. This approach enables hospitals to bill and receive payment for a new drug or biological concurrent with its approval by the FDA. The hospital does not have to wait for the next quarterly release or for approval of a product-specific HCPCS to receive payment for a newly approved drug or biological or to resubmit claims for adjustment. Hospitals would discontinue billing C9399 and the NDC upon implementation of an HCPCS code, status indicator, and appropriate payment amount with the next quarterly update.

In the August 16, 2004 proposed rule, we proposed to formalize this methodology for CY 2005 and to expand it to include payment for new radiopharmaceuticals to which a HCPCS code is not assigned (see section V.G. of this preamble). We solicited comments on the methodology and expressed particular interest in the reaction of hospitals to using this approach to bill and receive timely payment under the OPPS for drugs, biologicals, and radiopharmaceuticals that are newly approved by the FDA, prior to assignment of a product-specific HCPCS code.

We received a number of public comments on our proposal.

Comment: One commenter, a state hospital association, is concerned about the ability of hospitals to correctly code for newly approved drugs and biologicals without HCPCS codes using the NDC codes. The commenter indicates that typically only pharmacy systems within hospitals can properly handle the assignment and reporting of a drug's NDC, not the hospital billing systems. Additionally, the use of the Remarks field to report the NDC creates payment delays as it requires manual review and pricing by the fiscal intermediaries. Several commenters, including a national hospital association and several state hospital associations, recommended that CMS adopt a new revenue code subcategory for hospitals to use when reporting these newly FDA-approved drugs and biologicals on UB–92 paper claims. The hospital could use the new revenue code along with the reported NDC in the revenue-code description field. Establishing a new revenue code field, to be used with the description field, allows clearinghouses to scan the paper UB–92 and then convert the data into the appropriate HIPAA standard for auto adjudication. The FI would then no longer have to suspend these paper claims for manual pricing, because it would build logic into the system to auto-adjudicate these claims. The hospital would then continue to report C9399 (HCPCS code indicating Unclassified drug or biological) in the HCPCS field, the units in the Unit field, the date the drug was administered in the date field, and finally, the price of these drugs in the Total Charges field. These commenters believed that this alternative policy would greatly improve the current process for both hospitals and fiscal intermediaries.

Response: We read the hospital associations' recommendation for an alternative approach to report NDCs on UB–92 paper claims with interest and will explore its feasibility with the different components within CMS that are responsible for claims processing, information technology and systems,

and HIPAA standards. It appears that time-consuming systems changes could be required were we to adopt such an approach, which could delay implementation, but we will consider the proposal carefully.

Comment: A maker of pharmaceuticals commends CMS for implementing the mechanism where hospitals can bill and be paid for new drugs without HCPCS codes. However, the commenter is concerned that the use of a miscellaneous code may result in significant payment delays and potentially prevent patient access to new therapies. The commenter suggests that CMS monitor claims submission, timely processing, and payments more closely so that patient access to new therapies is not impeded. Another commenter suggested that CMS should modify this mechanism if necessary to ensure patients have access to cutting-edge drugs. One commenter suggested that CMS explore with its contractors the feasibility of automating processing of these claims by including the NDC number as a claims processing field when the miscellaneous C code appears on a claim since such a process would eliminate the additional costs of manual claim review and expedite provider payment.

Response: We share the commenters' concerns that claims processing systems not impede beneficiary access to new drug therapies. However, we believe the approach that we implemented in CY 2004 and that we proposed to adopt permanently beginning in CY 2005, which requires the use of HCPCS code C9399 to be reported with an appropriate NDC, will result in hospitals receiving payment for new drugs more quickly compared to the process that we followed previously, even though some manual handling of claims is required. We agree with the commenter who suggested that CMS closely monitor claims submission, timely processing, and payments for new drugs, and we intend to do so.

Comment: One commenter encouraged CMS to reconsider the payment policy that requires the reporting of the NDC for new drugs as ''mandatory'' and consider making the NDC ''optional.'' For providers unable to automate the reporting of the NDC number due to software limitations, it suggested that CMS consider allowing providers the option of listing the NDC number in the detailed drug name as reported on the itemized statement of charges that can be requested along with the UB reporting the C9399 code.

Response: As we have indicated in previous responses to commenters' suggestions regarding ways to implement the payment requirement for new drugs and biologicals that have not been assigned a HCPCS code, we will also consider this commenter's recommendation to determine its feasibility.

Comment: Several commenters urged CMS to reconsider the policy of preloading several new codes into CMS' computer system and assigning them to new drugs and biologicals as the Food and Drug Administration approved them, rather than requiring manual processing of claims using a single miscellaneous code. If CMS determines that the current policy is imposing too great an administrative burden on hospitals and delays in processing claims that harm hospitals' ability to provide new drugs and biologicals to Medicare beneficiaries, the commenters urged CMS to reconsider its proposal and to explore preloading placeholder codes instead.

Response: Preloading placeholder codes was one of the options that we considered before we implemented C9399, but we found that this approach had its disadvantages, most of which stemmed from concerns about delays related to the dissemination of new codes to providers and installing prices into the claims processing modules in a timely manner. We propose to monitor throughout CY 2005 the use of HCPCS code C9399 and NDC codes to evaluate whether this approach is an improvement over how hospitals were previously paid for new drugs to which a HCPCS code had not been assigned and to determine if changes in the process would be beneficial.

Comment: One commenter indicated that requiring hospitals to submit the National Drug Code on claims imposes an enormous administrative burden on hospitals because there is no field for NDCs on the claims form and, therefore, NDCs cannot be entered on the claim automatically. Rather, claims must be flagged and adjusted manually. The commenter suggested that the best solution is to close the lag time between FDA approval and HCPCS assignment of a new drug. By creating a seamless execution of approval and code assignment, CMS can ensure that the MMA mandate is fulfilled in the least burdensome manner and that providers are adequately paid for providing these new drugs.

Response: While the use of NDCs may impose a degree of reporting burden on hospitals, we believe that, in spite of the inconvenience of manual reporting and claims processing, this approach is the most efficient way to expedite payment to hospitals for newly approved drugs to which a HCPCS code has not been assigned.

Comment: One commenter, an association for cancer centers, supported CMS' proposal for reporting new drugs without HCPCS codes using C9399 and any other necessary data. However, the commenter requested clarification from CMS on whether C9399 can only be used for injectible drugs or whether this code can also be used to report all newly approved FDA drugs (including oral drugs). The commenter believed that C9399 can be used for all Medicare-covered drugs, including oral anti-emetics and oral chemotherapeutics with IV equivalents, but requested that CMS clarify this issue to ensure that fiscal intermediaries correctly process this new code.

Response: Our instructions regarding how hospitals may report a new drug using C9399 and NDCs only indicate the method by which hospitals can bill Medicare for payment if the new drug is covered by the Medicare program. These instructions do not represent a determination that the Medicare program covers a new drug for which a hospital submits a bill using C9399. In addition to determining payment, fiscal intermediaries must determine whether a drug billed with C9399 meets all program requirements for coverage. For example, they must assess whether the drug is reasonable and necessary to treat the beneficiary's condition and whether the drug is excluded from payment because it is usually self-administered. The same rules, regulations, and policies that apply to coverage of drugs, biologicals, and radiopharmaceutical agents that already have a HCPCS code also apply to newly approved items for which a HCPCS code has not yet been assigned.

Comment: Two commenters urged CMS to publish the approved drugs and radiopharmaceuticals that may be submitted under HCPCS code C9399, as well as the appropriate units of measure applicable for each drug or biological and the payment amount for the drug based on 95 percent of the AWP. One commenter indicated that hospitals are concerned that they will not identify all of the drugs that are eligible for this payment and are also concerned that they may inappropriately assign the HCPCS code to drugs that are not eligible for this payment. Additionally, there is an administrative burden placed both on providers and the fiscal intermediaries when CMS does not publish the payment rates for these drugs.

Response: We understand that use of C9399 and NDCs is a departure from how hospitals have become accustomed

to preparing Medicare claims for the OPPS services. However, the MMA mandates that hospitals be paid 95 percent of AWP for new drugs until a HCPCS code is assigned to that drug. We believe this MMA provision is intended to ensure that hospitals can receive timely payment for new drugs, biologicals, and radiopharmaceuticals without having to wait for a HCPCS code to be created and disseminated or for an OPPS payment amount to be implemented in a quarterly OPPS update. Generally, CMS learns of FDA approval of a new product at approximately the same time the public learns of the approval. Hospitals may wish to look to their advocacy associations for assistance in monitoring the FDA Web site to identify new products as they are approved, as a supplemental information source. We also intend to explore ways hospitals could systematically receive timely reports of newly approved drugs by means other than checking the FDA Web site. However, how to report a product rests with the hospital, as it does for any drug, biological, radiopharmaceutical agent, procedure, or service, with or without a HCPCS code. Therefore, we are not accepting the commenters' suggestion that we publish the approved drugs and radiopharmaceuticals that may be submitted under HCPCS code C9399, as well as the appropriate units of measure applicable for each drug or biological and the payment amount for the drug based on 95 percent of the AWP. Rather, we prefer to focus our resources on updating the OPPS on a quarterly basis with codes, APC assignments, and payment amounts for drugs, biologicals, and radiopharmaceuticals newly approved by the FDA during the prior quarter.

We have carefully considered commenters' recommendations and concerns, and we believe that our proposed methodology for using C9399 and NDC codes to bill for drugs, biologicals, and radiopharmaceutical agents newly approved by FDA to which a HCPCS code is not assigned is the most efficient and practicable approach at this time to ensure timely, appropriate Medicare payment for these new products. Therefore, we are making final for CY 2005 our proposed methodology, without modification.

E. Payment for Vaccines

Outpatient hospital departments administer large numbers of immunizations for influenza (flu) and pneumococcal pneumonia (PPV), typically by participating in immunization programs. In recent years, the availability and cost of some vaccines (particularly the flu vaccine) have fluctuated considerably. As discussed in the November 1, 2002 final rule (67 FR 66718), we were advised by providers that the OPPS payment was insufficient to cover the costs of the flu vaccine and that access of Medicare beneficiaries to flu vaccines might be limited. They cited the timing of updates to the OPPS rates as a major concern. They indicated that our update methodology, which uses 2-year-old claims data to recalibrate payment rates, would never be able to take into account yearly fluctuations in the cost of the flu vaccine. We agreed with this concern and decided to pay hospitals for influenza and pneumococcal pneumonia vaccines based on a reasonable cost methodology. As a result of this change, hospitals, home health agencies (HHAs), and hospices, which were paid for these vaccines under the OPPS in CY 2002, have been receiving payment at reasonable cost for these vaccines since CY 2003. We are aware that access concerns continue to exist for these vaccines. However, we continue to believe that payment other than on a reasonable cost basis would exacerbate existing access problems. Therefore, in the August 16, 2004 proposed rule, we proposed to continue paying for influenza and pneumococcal pneumonia vaccines under the reasonable cost methodology in CY 2005.

Comment: Several commenters applauded CMS' proposal to continue to pay for vaccines under the reasonable cost methodology. The commenters indicated that payment on a reasonable cost basis helps ensure that the OPPS rates are adequate to cover hospitals' costs of providing vaccines to Medicare beneficiaries, protecting their health, and reducing Medicare's costs of treating influenza and other preventable illnesses.

Response: We appreciate the commenters' continued support of our policy to pay for influenza and pneumococcal pneumonia vaccines at reasonable cost and finalize our proposal in this final rule with comment period. We note that for CY 2005 a new CPT code for an influenza vaccine was created. The new CPT code 90656 (Influenza virus vaccine, split virus, preservative free, for use in individuals 3 years and above, for intramuscular use) will be paid at reasonable cost in CY 2005. We have assigned status indicator ''L'' (Not Paid under OPPS. Paid at reasonable cost) to this new CPT code.

F. Changes in Payment for Single Indication Orphan Drugs

Section 1833(t)(1)(B)(i) of the Act gives the Secretary the authority to designate the hospital outpatient services to be covered. The Secretary has specified coverage for certain drugs as orphan drugs (section 1833(t)(14)(B)(ii)(III) of the Act as added by section 621(a)(1) of Pub. L. 108–173). Section 1833(t)(14)(C) of the Act as added by section 621(a)(1) of Pub. L. 108–173, gives the Secretary the authority in CYs 2004 and 2005 to specify the amount of payment for an orphan drug that has been designated as such by the Secretary.

We recognize that orphan drugs that are used solely for an orphan condition or conditions are generally expensive and, by definition, are rarely used. We believe that if the cost of these drugs were packaged into the payment for an associated procedure or visit, the payment for the procedure might be insufficient to compensate a hospital for the typically high cost of this special type of drug. Therefore, in the August 16, 2004 proposed rule, we proposed to continue making separate payments for orphan drugs based on their currently assigned APCs.

In the November 1, 2002 final rule (67 FR 66772), we identified 11 single indication orphan drugs that are used solely for orphan conditions by applying the following criteria:

- The drug is designated as an orphan drug by the FDA and approved by the FDA for treatment of only one or more orphan conditions(s).
- The current United States Pharmacopoeia Drug Information (USPDI) shows that the drug has neither an approved use nor an off-label use for other than the orphan condition(s).

Eleven single indication orphan drugs were identified as having met these criteria and payments for these drugs were made outside of the OPPS on a reasonable basis.

In the November 7, 2003 final rule with comment period (68 FR 63452), we discontinued payment for orphan drugs on a reasonable cost basis and made separate payments for each single indication orphan drug under its own APC. Payments for the orphan drugs were made at 88 percent of the AWP listed for these drugs in the April 1, 2003 single drug pricer, unless we were presented with verifiable information that showed that our payment rate did not reflect the price that is widely available to the hospital market. For CY 2004, Ceredase (alglucerase) and Cerezyme (imiglucerase) were paid at 94 percent of AWP because external data

submitted by commenters on the August 12, 2003 proposed rule caused us to believe that payment at 88 percent of AWP would be insufficient to ensure beneficiaries' access to these drugs.

In the December 31, 2003 correction of the November 7, 2003 final rule with comment period (68 FR 75442), we added HCPCS code J9017, arsenic trioxide (per unit) to our list of single indication orphan drugs. As of the time of our August 16, 2004 proposed rule, the following were the 12 orphan drugs that we have identified as meeting our criteria: J0205 Injection, alglucerase, per 10 units; J0256 Injection, alpha 1-proteinase inhibitor, 10 mg; J9300 Gemtuzumab ozogamicin, 5 mg; J1785 Injection, imiglucerase, per unit; J2355 Injection, oprelvekin, 5 mg; J3240 Injection, thyrotropin alpha, 0.9 mg; J7513 Daclizumab parenteral, 25 mg; J9015 Aldesleukin, per vial; J9017 Arsenic trioxide, per unit; J9160 Denileukin diftitox, 300 mcg; J9216 Interferon, gamma 1-b, 3 million units and Q2019 Injection, basiliximab, 20 mg. In the August 16, 2004 proposed rule, we did not propose any changes to this list of orphan drugs for CY 2005.

In the proposed rule, we noted that had we not classified these drugs as single indication orphan drugs for payment under the OPPS, they would have met the definition as a single source specified covered outpatient drug and been paid lower payments which could impede beneficiary access to these unique drugs dedicated to the treatment of rare diseases. Instead, for CY 2005, under our authority at section 1833(t)(14)(C) of the Act, we proposed to pay for all 12 single indication orphan drugs, including Ceredase and Cerezyme, at the rate of 88 percent of AWP or 106 percent of the ASP, whichever is higher. However, for drugs where 106 percent of the ASP would exceed 95 percent of AWP, payment would be capped at 95 percent of AWP, which is the upper limit allowed for sole source specific covered outpatient drugs. For example, Ceredase and Cerezyme would each be paid at 95 percent of the AWP because payment at ASP plus 6 percent for these two drugs not only exceeds 88 percent of the AWP but also exceeds 95 percent of the AWP. We proposed to pay the higher of 88 percent of AWP or 106 percent of ASP capped at 95 percent of AWP to ensure that beneficiaries will continue to have access to such important drugs.

We received the following comments to our August 16, 2004 proposed rule on single indication orphan drugs.

Comment: A few commenters recommended that CMS adopt the FDA's definition of an orphan drug as under the Orphan Drug Act. The commenters indicated that CMS should expand the current list of 12 single-indication orphan drugs that receive special treatment to include several other FDA-designated orphan drugs. One commenter requested that CMS adopt a utilization threshold to identify orphan drugs that would receive the special treatment rather than using its current criteria.

Response: Using the statutory authority in section 1833(t)(1)(B)(i) of the Act, which gives the Secretary broad authority to designate covered OPD services under the OPPS, we have established criteria which distinguish single-indication orphan drugs from other drugs designated as orphan drugs by the FDA under the Orphan Drug Act. Our determination to provide special payment for these drugs neither affects nor deviates from FDA's classification of any drugs as orphan drugs. The special treatment given to this subset of FDA-designated orphan drugs is intended to ensure that beneficiaries have continued access to these life-saving therapies given that these drugs have a relatively low volume of patient use, lack any other non-orphan indication and are typically very costly. Although we are not expanding our criteria to identify orphan drugs that will receive special payment for CY 2005, we will consider the commenters' recommendation of a utilization threshold in future changes to the OPPS orphan drug list.

Comment: We received comments from different drug manufacturers separately requesting that Campath (J9010, Alemtuzumab), Elitek (J2783, Rasburicase), Vidaza (C9218, Azacitidine for injectable suspension), and Botox (J0585, Botulinum toxin type A) be included in the list of single-indication orphan drugs that will receive special payment for CY 2005.

Response: After careful review of the requests for these four drugs to be included in the list of single-indication orphan drugs, we have determined that Campath (J9010) and Vidaza (C9218) do meet our criteria for inclusion in the list. Thus, effective for January 1, 2005, J9010 and C9218 will be paid in accordance with the payment policy for single indication orphan drugs for CY 2005. However, we have determined that Elitek (J2783) and Botox (J0585) do not meet the criteria for inclusion in the list because these drugs have an off-label use as indicated by the 2004 United States Pharmacopoeia Drug Information (USPDI).

Comment: Several commenters, including manufacturers of alpha-1 proteinase inhibitor (J0256) sold under the brand names Prolastin, Aralast and Zemaira, submitted comments expressing concern over the decrease in the payment rate for HCPCS J0256 from the CY 2004 level to the CY 2005 proposed rate. The majority of commenters requested that the payment rate for J0256 be frozen at the CY 2004 levels, rather than based on the AWP of Prolastin, the least expensive drug among the three name brands. As some commenters explained, Prolastin has experienced supply shortages in the past and if the payment rate for the alpha-1 therapy did not take into account the higher AWPs of Aralast or Zemaira, it would be inadequate to cover the actual acquisition costs of the drugs to hospitals.

The manufacturer of Aralast requested that CMS exclude pricing information associated with Prolastin when setting the payment rate for J0256. The commenter stated that although Prolastin is currently available and used in greater quantities than either Aralast or Zemaira , it has experienced supply shortages in the past. Therefore, according to the commenter, the payment rate for J0256 needs to be such that patients will have continued access to all three brand names. Alternatively, the commenter recommended that new HCPCS codes could be created so each brand name could be paid appropriately or CMS could freeze the payment rate for J0256 at the CY 2004 levels, as the majority of commenters recommended.

The manufacturer of Zemaira expressed concern that the proposed payment rate does not meet the actual hospital acquisition cost for this brand name, which is the newest of the three brand names to come on the market to be used in alpha-1 therapy.

We received a comment from an organization representing voluntary health organizations and individual patients that stated that the proposed payments for CY 2005 were adequate to avoid problems with access to the orphan drugs that patients with rare diseases need. In addition, the commenter requested that CMS take actions to monitor any changes in beneficiaries' access to orphan drugs as a result of payment changes, to review the claims database for changes in utilization patterns, to seek input from beneficiaries about access problems, and to inform beneficiaries about payment changes and the potential impact of such changes on their access.

We also received recommendations from a patient advocacy organization requesting that CMS work with the manufacturers of the alpha-1 therapy to obtain the data necessary to raise the proposed OPPS rate of $2.46 (per 10 mg) or to establish the ASP rate which may

enhance patient access to care. The commenter also recommended that CMS base the payment rate for J0256 on all available brands.

Response: After careful evaluation of the issues and concerns raised by commenters in response to our proposed rule, we recognize that our proposed payment rate for HCPCS code J0256 may create an unanticipated access problem during periods of short supply. Therefore, in order to ensure continued beneficiaries' access to this important drug, we will base the payment rate for HCPCS code J0256 on all three brands of the alpha-1 proteinase inhibitor currently available on the market. The adjusted AWP of HCPCS code J0256 will be based on the volume-weighted average of the three drugs. The adjusted AWP will be updated each quarter, as necessary, to reflect any changes in the individual AWP or relative weight of each drug in the calculation of the AWP for HCPCS code J0256. We would expect that as the volume and/or individual AWP increases or decreases for a brand, these changes will be captured in its relative weight and will be reflected in the adjusted AWP for HCPCS code J0256.

We share the commenters' concern for protecting beneficiaries' access to these therapies used for rare disease conditions. As part of our process of developing special payment rates for single indication orphan drugs in CY 2005, our analysis of CY 2003 claims data does not indicate a decrease in utilization of any orphan drugs that may signify barriers to beneficiaries' access to these drugs.

Comment: Several commenters recommended that CMS eliminate the 95 percent AWP cap on single-indication orphan drugs whose ASP plus 6 percent would exceed their 88 percent AWP. According to the commenters, these drugs would not be subject to the 95 percent AWP cap when administered in the physician's office. They argued that CMS should pay for these drugs at the same rate, irrespective of the site of service.

We received a request from the drug manufacturer of Ontak to increase the payment rate for the drug from 88 percent of the May 2004 AWP to 92 percent of the current AWP. Alternatively, the commenter requested that CMS remove the 95 percent AWP cap for J9160 (Ontak).

Response: We believe that access to these life-saving therapies is extremely important and after careful consideration, we will not implement the cap of 95 percent of AWP for any of the single-indication orphan drug for those drugs whose 106 percent ASP exceeds 88 percent of AWP. Effective for CY 2005, payment for all single-indication orphan drugs will be set at the higher of 106 percent of the most current ASP or 88 percent of the most current AWP.

Comment: A few commenters recommended that CMS update the payment rates quarterly, based on the latest ASP and AWP data available. They argue that to lock in the rates for a year based on outdated information could impede patient access to these drugs.

Response: We agree with the commenters and will base payments for single-indication orphan drugs on a quarterly comparison of ASP and AWP data. Appropriate adjustments to the payment amounts shown in Addendum A and B will be made if ASP submissions and AWP data in a later quarter indicate that adjustments to the payment rates are necessary. These changes to the Addenda will be announced in our program instructions released on a quarterly basis and posted on our Web site at *http://www.cms.hhs.gov.*

Comment: We also received a comment from the manufacturer of Fabrazyme requesting that CMS consider making payment for Fabrazyme (C9208, agalsidase beta) as a single-indication orphan drug. The commenter believes that by statute, CMS is required to pay for the drug at 106 percent of ASP; however, the commenter stated that if CMS were to somehow reach a different conclusion, it would request to be treated as a single-indication orphan drug.

Response: We agree with the commenter that the statute requires that payment for Fabrazyme (C9208), a drug that currently has pass-through status, be made at 106 percent of ASP for CY 2005.

In summary, we have set payment rates for single-indication orphan drugs according to the following policy, effective January 1, 2005:

- We are using the same criteria that we implemented in CY 2003 to identify single indication orphan drugs used solely for an orphan condition for special payment under the OPPS; and,
- We are setting payment under the CY 2005 OPPS for single indication orphan drugs at the higher of 88 percent of the AWP or the ASP plus 6 percent, updated quarterly to reflect the most current AWP and ASP data.

While we are not implementing the 95 percent AWP cap on single-indication orphan drugs in CY 2005, we will monitor this decision and may apply the cap in future OPPS updates.

G. Change in Payment Policy for Radiopharmaceuticals

In the November 1, 2002 OPPS final rule (67 FR 66757), we determined that we would classify any product containing a therapeutic radioisotope to be in the category of benefits described under section 1861(s)(4) of the Act. We also determined that the appropriate benefit category for diagnostic radiopharmaceuticals is section 1861(s)(3) of the Act. We stated in the November 1, 2002 final rule that we will consider neither diagnostic nor therapeutic radiopharmaceuticals to be drugs as defined in 1861(t) of the Act (67 FR 66757). Therefore, beginning with the CY 2003 OPPS update, and continuing with the CY 2004 OPPS update, we have not qualified diagnostic or therapeutic radiopharmaceuticals as drugs or biologicals.

As we stated in the August 16, 2004 proposed rule, when we analyzed the many changes mandated by Pub. L. 108–173 that affect how we would pay for drugs, biologicals, and radiopharmaceuticals under the OPPS in CY 2005, we revisited the decision that we implemented in CY 2003 not to classify diagnostic and therapeutic radiopharmaceuticals as drugs or biologicals. In our analysis, we noted that although we did not consider radiopharmaceuticals for pass-through payment in CYs 2003 and 2004, we did apply to radiopharmaceuticals the same packaging threshold policy that we applied to other drugs and biologicals, and which we proposed to continue in CY 2005. In addition, for the CY 2004 OPPS update, we applied the same adjustments to median costs for radiopharmaceuticals that we applied to separately payable drugs and biologicals that did not have pass-through status (68 FR 63441).

In our review of this policy, we noted that section 1833(t)(14)(B)(i) of the Act, as amended by section 621(a) of Pub. L. 108–173, does include ''radiopharmaceutical'' within the meaning of the term ''specified covered outpatient drugs,'' although neither section 621(a)(2) nor section 621(a)(3) of Pub. L. 108–173 includes a reference to radiopharmaceuticals.

In an effort to provide a consistent reading and application of the statute, we proposed to apply to radiopharmaceuticals certain provisions in section 621 of Pub. L. 108–173 which affect payment for drugs and biologicals billed by hospitals for payment under the OPPS. We believed it was reasonable to include radiopharmaceuticals in the general category of drugs in light of their

inclusion as specified covered outpatient drugs in section 1833(t)(14)(B) of the Act, as added by section 621(a)(1) of Pub. L. 108–173.

Section 621(a)(1) of Pub. L. 108–173, which amends section 1833(t) of the Act by adding a new subparagraph (14) affecting payment for radiopharmaceuticals under the OPPS, is unambiguous. This provision clearly requires that separately paid radiopharmaceuticals be classified as ''specified covered outpatient drugs.'' Therefore, in CY 2005, we proposed to continue to set payment for radiopharmaceuticals in accordance with these requirements, which are discussed in detail in section V.B.3. of this preamble.

Section 1833(t)(16)(B) of the Act, as added by section 621(a)(2) of Pub. L. 108–173, requires us to reduce the threshold for the establishment of separate APCs with respect to drugs and biologicals to $50 per administration for drugs and biologicals furnished in 2005 and 2006. We proposed to apply the $50 packaging threshold methodology discussed in section V.B.2. of this final rule with comment period to radiopharmaceuticals as well as to drugs and biologicals.

Section 1833(t)(15) of the Act, added by section 621(a)(1) of Pub. L. 108–173, requires us to make payment equal to 95 percent of the AWP for an outpatient drug or biological that is covered and furnished as part of covered OPD services for which a HCPCS code has not been assigned. We proposed, beginning in CY 2005, to extend to radiopharmaceuticals the same payment methodology discussed in section V.D. of this preamble for new drugs and biologicals before HCPCS codes are assigned. That is, we proposed to pay for newly approved radiopharmaceuticals, as well as newly approved drugs and biologicals, at 95 percent of AWP prior to assignment of a HCPCS code.

Section 1833(t)(5)(E) of the Act, as added by section 621(a)(3) of Pub. L. 108–173, excludes separate drug and biological APCs from outlier payments. Beginning in CY 2005, we proposed to apply section 621(a)(3) of Pub. L. 108–173 to APCs for radiopharmaceuticals. That is, beginning in CY 2005, radiopharmaceuticals would be excluded from receiving outlier payments.

Consistent with our proposed policy to apply to radiopharmaceutical agents payment policies that apply to drugs and biologicals, we further proposed, beginning in CY 2005, to accept applications for pass-through status for certain radiopharmaceuticals. That is, we proposed on a prospective basis to consider for pass-through status those radiopharmaceuticals to which a HCPCS code is first assigned on or after January 1, 2005. As we explain in section V.A.3. of this final rule with comment period, section 1833(t)(6)(D)(i) of the Act sets the payment rate for pass-through eligible drugs and biologicals as the amount determined under section 1842(o) of the Act. In the August 16, 2004 proposed rule, we proposed to pay for drugs and biologicals with pass-through status in CY 2005 consistent with the provisions of section 1842(o) of the Act as amended by Pub. L. 108–173, at a rate that is equivalent to the payment these drugs and biologicals would receive in the physician office setting and set in accordance with the methodology described in the Medicare Physician Fee Schedule Proposed Rule for CY 2005 (69 FR 47488, 47520 through 47524).

We issued an interim final rule with comment period entitled ''Medicare Program: Manufacturer Submission of Manufacturer's Average Sales Price (ASP) Data for Medicare Part B Drugs and Biologicals'' in the April 6, 2004 **Federal Register**, related to the calculation and submission of manufacturer's ASP data (69 FR 17935). We need these data in order to determine payment for drugs and biologicals furnished in a physician office setting in accordance with the methodology described in the Medicare Physician Fee Schedule Proposed Rule (69 FR 47488, 47520 through 47524). However, the April 6, 2004 interim final rule with comment period excludes radiopharmaceuticals from the data reporting requirements that apply to Medicare Part B covered drugs and biologicals paid under sections 1842(o)(1)(D), 1847A, or 1881(b)(13)(A)(ii) of the Act (69 FR 17935). As a consequence, we would not have the same type of data available to determine payment for a new radiopharmaceutical approved for pass-through status after January 1, 2005 that would be available to determine payment for a new drug or biological with pass-through status in CY 2005.

Therefore, in order to set payment for a new radiopharmaceutical approved for pass-through status in accordance with 1842(o) of the Act and in a manner that is consistent with how we proposed to set payment for a pass-through drug or biological, we proposed a methodology that would apply solely to new radiopharmaceuticals for which payment would be made under the OPPS and for which an application for pass-through status is submitted after January 1, 2005. That is, in order to receive pass-through payment for a new radiopharmaceutical under the OPPS, a manufacturer would be required to submit data and certification for the radiopharmaceutical in accordance with the requirements that apply to drugs and biologicals under section 303 of Pub. L. 108–173 as set forth in the interim final rule with comment period issued in the April 6, 2004 **Federal Register** (66 FR 17935) and described on the CMS Web site at *http://cms.hhs.gov.* We proposed that payment would be determined in accordance with the methodology applicable to drugs and biologicals that is discussed in the CY 2005 Medicare Physician Fee Schedule proposed rule (69 FR 47488, 47520–47524). In the event the manufacturer seeking pass-through status for a radiopharmaceutical does not submit data in accordance with the requirements specified for new drugs and biologicals, we proposed to set payment for the new radiopharmaceutical as a specified covered outpatient drug, under section 1833(t)(14)(A) as added by section 621(a)(1) of Pub. L. 108–173.

We received many public comments on our proposals.

Comment: Many commenters applauded CMS for proposing to treat radiopharmaceuticals as drugs and encouraged CMS to continue to pay for these products as ''specified covered outpatient drugs'' under the OPPS, consistent with section 621(a) of the MMA. They indicated that this policy ensures consistent treatment of drugs and radiopharmaceuticals, eliminates confusion related to the prior differences in their treatment under the OPPS, and facilitates patient access to these important therapies in clinically appropriate settings. One of the commenters also supported the proposal to exclude radiopharmaceuticals from receiving outlier payments in CY 2005.

Response: We appreciate the commenters' support of our policy to treat radiopharmaceuticals as drugs and will finalize this policy for CY 2005.

Comment: Several commenters opposed our proposal to require manufacturers to submit ASP data for radiopharmaceutical agents with pass-through status. One manufacturer of radiopharmaceuticals stated that there are significant practical problems and legal barriers to reporting ASP for radiopharmaceuticals. The commenter indicated that manufacturers often sell the components of a radiopharmaceutical to independent radiopharmacies. These radiopharmacies then sell unit doses to many hospitals; however, some hospitals also purchase the components

of the radiopharmaceutical and prepare the radiopharmaceutical through in-house radiopharmacies. This commenter asserted that the end result is that there is very often no ASP for the finished radiopharmaceutical product. For example, there may only be manufacturer pricing for the components; however, the price set by the manufacturer for one component of a radiopharmaceutical does not directly translate into the acquisition cost of the ''complete'' radiopharmaceutical, which may result from the combination of several components. This commenter recommended that CMS be consistent and not require ASP in the OPPS, as CMS does not require ASP for radiopharmaceuticals in the Medicare Physician Fee Schedule. The commenter thus urged CMS to determine payment for pass-through radiopharmaceuticals as specified covered outpatient drugs, based on AWP or acquisition costs. Another commenter recommended that CMS set payment for all pass-through radiopharmaceuticals in CY 2005 using the AWP-based ''specified covered outpatient drugs'' payment methodology, regardless of whether ASP data are available for the drug and stated that this methodology is more appropriate for these products, because it will be more likely to ensure adequate payment as use of the product is adopted, and thus will provide for robust cost data for future rate-setting purposes.

Response: We appreciate these comments and understand the concerns commenters stated regarding our proposal to require manufacturers of radiopharmaceutical agents with pass-through status to submit ASP data. We recognize the complexities of determining ASP for radiopharmaceuticals because of their unique preparation processes; therefore, we agree with the commenters' concerns about finalizing the proposed policy. Because radiopharmaceuticals are not paid on ASP in the physician office setting, manufacturers of these agents will not be required to report ASPs for payment purposes under the OPPS. Therefore, payment for radiopharmaceuticals with pass-through status will be made in accordance with their status as sole source ''specified covered outpatient drugs.'' That is, in the absence of both ASP data and hospital claims data, we will set payment for new radiopharmaceuticals approved for pass-through status beginning in CY 2005 at the floor for sole source ''specified coveraged outpatient drugs,'' which is 83 percent of the AWP.

Comment: A few commenters urged CMS to revise the HCPCS code descriptors for radiopharmaceutical products that do not currently have ''per dose'' or ''per study'' descriptors and indicated that ''per dose'' or ''per study'' code descriptors will facilitate the collection of more accurate charge and cost data which are necessary to establish equitable payment for radiopharmaceutical agents.

Response: We recognize the concerns expressed by these commenters. As we have stated in the November 7, 2003 OPPS final rule with comment period (68 FR 63451), we continue to believe that in changing descriptors to ''per dose'' or ''per study'', we will lose specificity with respect to the data we will receive from hospitals. We are not convinced that there is a programmatic need to change the radiopharmaceutical code descriptors to ''per dose'' or that claims data based on the current code descriptors are problematic for setting payment rates for these products. However, we will continue to work with industry representatives to ensure that the current HCPCS descriptors are appropriate and review this issue in the future, if needed. Furthermore, we stress the importance of proper coding by providers so that we can obtain accurate data for future rate setting.

Comment: A commenter strongly supported CMS requiring that hospitals report all HCPCS codes for drugs including those that are packaged and indicated that this will enable CMS to track costs and help to ensure that only correctly coded claims (those with radiopharmaceuticals) are used in setting payment rates for nuclear medicine procedures. Therefore, the commenter recommended that CMS require continued reporting of HCPCS codes for all radiopharmaceuticals (packaged and non-packaged products).

Response: We will continue to strongly encourage hospitals to report charges for all drugs using the correct HCPCS codes for the items used, including the drugs that have packaged status in CY 2005. We agree with the commenter that it is most useful to us when we have a robust set of claims for each item paid for under the OPPS. We would note, however, that with just a very few exceptions, hospitals do appear to be reporting charges for drugs, biologicals and radiopharmaceuticals using the existing HCPCS codes, even when such items have packaged status. At this time, we do not believe it is necessary to institute a requirement for drugs as we are doing for the device category codes. However, we will continue to monitor this through our annual analysis of claims data and will reconsider this in the future, if we determine that it is necessary.

H. Coding and Payment for Drug Administration

Since implementation of the OPPS, Medicare OPPS payment for administration of cancer chemotherapy drugs and infusion of other drugs has been made using the following HCPCS codes:

- Q0081, Infusion therapy other than chemotherapy, per visit
- Q0083, Administration of chemotherapy by any route other than infusion, per visit
- Q0084, Administration of chemotherapy by infusion only, per visit
- Q0085, Administration of chemotherapy by both infusion and another route, per visit

In the CY 2004 proposed rule, we proposed to change coding and payment for these services to enable us to pay more accurately for the wide range of services and the drugs that we package into these per visit codes. (Background discussion on these codes is included in the August 12, 2003 OPPS proposed rule (68 FR 47998). Commenters on the CY 2004 proposed rule recommended that we use the CPT codes for drug administration. One commenter provided a crosswalk from the CPT codes for drug administration to the Q codes that we could use in a transition. We did not implement this in the final rule for CY 2004 OPPS but indicated that we would consider it for CY 2005 and would discuss it with the APC Panel at its February 2004 meeting.

Commenters and the APC Panel recommended that we discontinue use of code Q0085 for CY 2004 because codes Q0083 and Q0084 could be used together to report the services described by code Q0085. We did implement this change for CY 2004 and made code Q0085 nonpayable for CY 2004 OPPS.

At the February 2004 APC Panel meeting, we presented a proposal from an outside organization that matched CPT codes for chemotherapy and nonchemotherapy infusions to the Q codes currently used to pay for these services under the OPPS. We asked the APC Panel for their perspective on the potential benefit of using the proposed coding approach as the basis for billing and determining the OPPS payment for administering these drugs. The APC Panel recommended that CMS continue to review the organization's proposed coding crosswalk with the goal of using it to transition from the use of Q-codes

to that of CPT codes to bill for administration of these drugs.

In the August 16, 2004 proposed rule, for CY 2005, we proposed to use the CPT codes for drug administration but to crosswalk the CPT codes into APCs that reflect how the services would have been paid under the Q codes. Although hospitals would bill the CPT codes and include the charges for each CPT code on the claim, payment would be made on a per visit basis, using the cost data from the per visit Q codes (Q0081, Q0083 and Q0084) to set the payment rate for CY 2005. See Table 29 of the proposed rule for the proposed crosswalk of CPT codes into APCs based on the Q codes (69 FR 50521). The only change from the crosswalk that was submitted by the outside organization is that we proposed a Q code and APC crosswalk for CPT code 96549 (Unlisted chemotherapy procedure), rather than bundling that service. We believe that Q0083 is the code that would have previously been reported by hospitals to describe the unlisted service. In addition, this would place the unlisted service in our lowest resource utilization APC for chemotherapy, consistent with our policy for other unlisted services.

We proposed to establish the Q code and APC crosswalk for CPT code 96549 because there is no CPT specific charge or frequency data on which to set payments. The CY 2005 OPPS is based on CY 2003 claims data which used the Q codes. Therefore, the only cost data available to us for establishment of median costs is the data based on the Q codes for drug administration. Moreover, the only frequency data that are available for use in calculating the scalar for budget neutrality of payment weights are the frequency data for the Q codes. Therefore, the payments set for the CPT codes must use the cost data for the Q codes and must result in the same payments that would have been made had the Q codes been continued.

Under this proposed methodology, hospitals would report the services they furnish with the CPT codes and would show the charges that they assign to the CPT codes on the claim. The Medicare OCE would assign the code to an APC whose payment is based on the per visit Q code that would have been used absent coding under CPT. In most cases, the OCE would collapse multiple codes or multiple units of the same CPT code into a single unit to be paid a single APC amount. This approach is needed because the data for the Q codes is reported on a per visit basis and more than one unit of a CPT code can be provided in a visit.

For example, CPT code 96410 (Chemotherapy administration infusion technique, up to 1 hour) is for infusion of chemotherapy drugs for the first hour, and CPT code 96412 is for chemotherapy infusion up to 8 hours, each additional hour. The claims data used to set the APC payment rate for these codes is for a per visit amount (taken from CY 2003 data for Q0084 a per visit code). The frequency data on the claim are also on a per visit basis. For CY 2005, we proposed that CPT code 96410 would be paid one unit of APC 0117 (to which CPT code 96410 would be crosswalked) and no separate payment would be made for CPT code 96412, regardless of whether one unit or more than one unit is billed. CPT code 96412 would be a packaged code for CY 2005. Under the Q code data on which the payment weight for APC 0117 is based, the per visit amount would represent a payment that is appropriate for all drug administration services in a visit (that is, one unit of CPT code 96410 and as many units of CPT code 96412 as were furnished in the same visit).

Similarly, we proposed that when a hospital bills 3 units of CPT code 96400 (Chemotherapy administration, subcutaneous or intramuscular, with or without local anesthesia), the OCE would assign one unit of APC 0116 for that code. (APC 0116 is the APC to which CPT code 96400 would be crosswalked.) The payment would be based on Q0083, a per visit code, because, absent the ability to be paid based on CPT codes, the hospital would have billed one unit of Q0083 (for the 3 injections) had we not discontinued the Q codes for CY 2005. The OCE would assume that there was one and only one visit in which there were 3 injections and would pay accordingly (that is, one unit of APC 0116).

We noted that if we adopt the CPT codes for drug administration to ensure accurate payment in the future, it would be critical for hospitals to bill the charges for the packaged CPT codes for drug administration for CY 2005 (that is, the CPT codes with SI=N), even though there would be no separate payment for them in CY 2005. For CY 2007 OPPS, CY 2005 claims data would be used as the basis for setting median costs for each CPT code, based on the reported charges reduced to cost, and would determine what APC configuration ensures most appropriate payment for the CPT drug administration codes. If hospitals do not bill charges in CY 2005 for the packaged drug administration CPT codes such as CPT codes 96412, 96423, 96545, or 90781, they would jeopardize our ability to make accurate payments for services billed and paid under these codes in CY 2007 when we use the CY 2005 data to set the payment weights.

Comment: Most commenters supported our proposal to code drug administration using CPT codes instead of the HCPCS codes. They indicated that it would be less burdensome for hospitals to code services using just one method for Medicare and all other payers. Some commenters opposed the use of CPT codes unless CMS pays an amount for each use of the CPT code, as CMS does under the Medicare Physician Fee Schedule.

Response: We cannot pay an amount for each use of each CPT code because all of our drug administration cost data are on a per visit (not a per code) basis as charges for each of the following three HCPCPS codes, Q0081, Q0083, and Q0084, are reported for a visit and not a service.

We agree that billing for drug administration using the CPT codes will be less burdensome to hospitals and will also facilitate development of more accurate payment rates for drug administration services in future years. For CY 2005 OPPS, we will collapse the CPT codes billed for drug administration into a single unit of the applicable APC for payment as we do not have the CPT code specific claims data for use in establishing a CPT code specific payment. However, we anticipate that we would have the necessary claims for CY 2007 OPPS to set an appropriate APC payment rate for the services described by the CPT codes.

Comment: Several commenters asked that we affirm that hospitals may report CPT codes 90780 (intravenous infusion for therapy/diagnosis administered by physician or under direct supervision of physician; up to one hour) and 90781 (each additional hour up to (8) hours), notwithstanding that the administration is not done by a physician or under the direct supervision of a physician. The commenters stated that such services are typically administered in hospitals by nurses without direct physician supervision and that if hospitals report these codes only when the full definition of the code is met, they would not be able to report the infusion services they furnish.

Response: We do not view the language of these CPT codes' definitions as being an obstacle to or inconsistent with the use of the codes by hospitals for billing Medicare. We view our general requirements regarding physician supervision (with respect to payment for services that are incident to a physician's service in the outpatient hospital setting) as meeting the

physician supervision aspect of the codes and thus, do not believe that use of the codes in the hospital outpatient setting would be prevented by the inclusion of the language in the code definition.

Comment: A commenter asked that we change the status indicator for CPT code 90780 and 90781 to ''X'' from ''T'' thereby eliminating the multiple procedure reduction for these codes, which in CY 2005 will replace HCPCS code Q0081 in billing for the administration of infusion therapy. The commenter stated that there is no situation in which the time and resources involved in infusion care should be reduced in the case of an observation patient.

Response: We disagree. The costs of space, utilities and staff attendance are duplicated when the beneficiary is receiving another service at the same time as infusion therapy, in particular when the patient is in observation. Hence it is appropriate to apply a multiple procedure reduction to infusion therapy particularly when the patient is in observation status. We believe it is necessary to understand how the OCE multiple procedure discounting logic functions. Line-items with a service indicator of ''T'' are subject to multiple procedure discounting unless modifiers 76, 77, 78, and/or 79 are present on the claim. The ''T'' line-item with the highest payment amount will not be discounted but all other ''T'' line items will be discounted as multiple procedures. All line-items that do not have a service indicator of ''T'' will be ignored in determining the discount. Therefore, if the only other services reported with infusion therapy are an emergency department or other visit code, or diagnostic tests and services assigned status indicator ''S,'' the infusion therapy code would not be subject to the multiple procedure discounting.

Comment: Several commenters stated that multiple visits per day for antibiotic infusion are common and the drug administration policies should permit such visits to be paid separately. The commenters stated that multiple visits for chemotherapy are possible and that provisions should be made for billing and paying them when they occur.

Response: We agree with the commenters on this issue. The reporting and payment for these multiple visits and services will not be an issue once payment for drug administration under the OPPS is made based on CPT code-specific data. However, until such time, hospitals will need to use modifier 59 (distinct procedure) when billing charges for services furnished during multiple visits that follow the initial visit. For CPT codes 90780 and 90781, where there are multiple visits for infusion on the same day, the hospital should report CPT code 90780 with modifier 59 and CPT code 90781, if appropriate, with modifier 59 for each separate visit for infusion. With modifier 59 appended to CPT codes 90780 and 90781, the OCE will allow up to 4 units of APC 0120 (Infusion of nonchemotherapy drugs) to be paid. Similarly, for the chemotherapy administration codes, where there is no modifier 59 reported, the OCE will collapse all codes that map to a particular APC into one unit of that APC and will pay one unit of each applicable APC. The system will assume that all services were furnished in one single encounter. Where the chemotherapy services are provided in multiple encounters, the hospital will need to show modifier 59 on the service furnished in the second encounter. The OCE will map those services into an additional unit of each applicable APC and will pay for each visit. The OCE will not, for a single date of service, pay more than 4 units of APC 120, nor more than 2 units of APCs 116 and 117 (chemotherapy by route other than infusion and infusion of chemotherapy drugs). We intend to reassess these limits based on provider feedback and our review of later claims data.

Comment: One commenter asked that CMS ensure that the costs for CPT code 90780 (Infusion therapy one hour) are included in payment for CPT codes 67221 (Ocular photodynamic therapy) and 67225 (Eye photodynamic therapy add-on) because CPT code 90780 is bundled into both of these procedure codes.

Response: The procedure code definition for CPT code 67221 specifies that intravenous infusion is included, and CPT code 67225 is to be listed separately in addition to CPT code 67221, if a second eye is treated. Therefore, the National Correct Coding Initiative (NCCI) edits preclude payment for CPT code 90780 with CPT codes 67221 and 67225 because the charges for the procedure CPT codes 67221 and 67225 are presumed to include all costs of administering the drug. Correct coding would not include reporting CPT code 90780 for the same visits when photodynamic therapy was provided. We expect that hospitals will include their charges for the necessary infusion in their charges for the procedure codes when they bill CPT codes 67221 or 67225, so that our claims data reflect the costs of all resources necessary to perform the services.

Comment: Several commenters urged CMS to adopt the new and revised AMA definitions for drug administration, which will be HCPCS G-codes in the CY 2005 Medicare Physician Fee Schedule, because the existing CPT codes do not adequately capture the costs of the range of drug administrations. They also urged CMS to educate providers on the correct use of the new CPT codes. The commenters indicated that implementing the new CPT codes for drug administration will be more difficult in hospitals than in physicians' offices because the services are typically provided in more places in hospitals than in physicians' offices.

Response: For CY 2005 OPPS, we are implementing the existing CPT codes for drug administration rather than the new G-codes that will be used for the Medicare Physician Fee Schedule payments. We do not intend to use the new HCPCS G-codes for the OPPS drug administration services until such time as the new CPT codes for those services are issued in CY 2006. We believe that it would be disruptive to hospitals if we required them to implement the HCPCS alphanumeric codes for drug administration in CY 2005 and then switch to the new CPT codes in CY 2006. While only a subset of the physician community administers anti-neoplastic drugs in their offices, we believe that most hospitals do so on an outpatient basis and hence most hospitals would have to change to the new HCPCS codes for CY 2005, only to change again to new CPT codes for CY 2006. However, we are told that all hospitals use the current CPT codes to bill other payers and crosswalk from the current CPT codes to the Q codes to bill Medicare. Thus, using the current CPT codes should be easier for hospitals than their current method for billing Medicare. This would not be the case if we were to require that they use the new HCPCS codes for drug administration.

Comment: One commenter indicated that CMS should revise the OPPS to mirror the policy under the Medicare Physician Fee Schedule that pays separately for each drug administered to permit the payment of one unit of each APC for each and every drug administered. The commenter stated that since CMS acknowledged that there are additional resources used with each administration of a drug, it should apply the same policy to hospitals since all of these services are furnished by nurses, whether in a physician's office setting or a hospital setting.

Response: We are moving to the use of CPT codes for CY 2005 OPPS. However, we will not be paying an APC amount for each unit of each CPT code.

The APC rate is, by necessity, based on historic data for a code that was billed and reported on a per visit basis. Therefore, to pay each unit of a CPT code an APC amount would not accurately reflect the resources used and would result in an overpayment of the costs of the services provided.

Comment: A commenter asked CMS to permit hospitals to continue billing HCPCS codes Q0081, Q0083 and Q0084 for drug administration until April 1, 2005 so that hospitals that do not currently bill the CPT codes for drug administration may have a transition period to convert to CPT code billing.

Response: The three cited Q-codes will be deactivated for the OPPS effective January 1, 2005 and therefore cannot be used up to April 1, 2005. As discussed in our proposed rule, we are eliminating the 90-day grace period for deleted codes effective January 1, 2005. We are adopting this policy because the Health Insurance Portability and Accountability Act (HIPAA) transaction and code set rules require usage of the medical code that is valid at the time that the service is provided. Details regarding elimination of the 90-day grace period for billing deleted codes were issued to our contractors on February 4, 2004, in Transmittal 89, Change Request 3093. Moreover, we are not aware that there are any hospitals that do not bill the CPT codes for drug administration, as hospitals have told us that all payers other than Medicare require that they use the CPT codes and will not accept the Q-codes.

Comment: A commenter asked that CMS use the first two quarters of the CY 2005 claims to set the median costs for drug administration in CY 2006 OPPS so that the transition to the more accurate payments under the CPT codes could begin earlier than CY 2007.

Response: As the CY 2005 claims data will be the basis for the CY 2007 payment weights, we regret that we are unable to transition to the new payments earlier than CY 2007 because of the time required to access the CY 2005 claims data and to process and construct our database for ratesetting and impact analyses. The second quarter of CY 2005 data will not be available to us until at least August 15, 2005, which is far too late for us to have developed and published any CY 2006 proposed rule.

After carefully reviewing all comments received, we are adopting as final our proposal to use the CPT codes for drug administration, effective January 1, 2005. We will collapse the CPT codes billed into a single unit of the applicable APC for payment. In addition, we are establishing the Q-code and APC crosswalk for CPT code 96549 and will be paying 1 unit of APC 0117 for CPT code 96410 (to which CPT code 96410 will be crosswalked). We will not make a separate payment for CPT code 96412 regardless of whether 1 unit or more units are billed. For CY 2005, CPT code 96412 will be a packaged and not paid separately. Further, when a hospital bills 3 units of CPT code 96400 (Chemotherapy administration, subcutaneous or intramuscular, with or without local anesthesia), the OCE will assign 1 unit of APC 0116 for that code and the payment will be based on HCPCS code Q0083, a per visit code. Modifier 59 may be used with codes in APCs 0116, 0117, and 0120 to signify additional encounters on the same date of service for which additional APC payments may be made.

Table 33 below contains the crosswalk of CPT codes for drug administration to drug administration APCs for CY 2005. The last two columns of this table indicate the maximum number of units of the APC that the OCE will assign without or with modifier 59, respectively.

BILLING CODE 4120–01–P

Table 33.--Crosswalk from CPT Codes for Drug Administration to Drug Administration APCs

CPT Code	Description	SI	APC	Corresponding HCPCS Code	OCE Maximum APC Units without Modifier 59	OCE Maximum APC Units with Modifier 59

BILLING CODE 4120–01–C

I. Payment for Blood and Blood Products

Since the OPPS was first implemented in August 2000, separate payments have been made for blood and blood products in APCs rather than packaging them into payment for the procedures with which they were administered. Administrative costs for processing and storage specific to the transfused blood product are included in the blood product APC payment, which is based on hospitals' charges. Payment for the collection, processing, and storage of autologous blood, as described by CPT code 86890, is made

through APC 0347 (Level III Transfusion Laboratory Procedures).

In CY 2000, payments for bloods were established based on external data provided by commenters due to limited Medicare claims data. From CY 2000 to CY 2002, blood and blood product payment rates were updated for inflation. For CY 2003, as described in the November 1, 2002 final rule (67 FR 66773), we applied a special dampening methodology to blood and blood products that had significant reductions in payment rates from CY 2002 to CY 2003, when median costs were first calculated from hospital claims. Using the dampening methodology, we limited the decrease in payment rates for blood and blood products to approximately 15 percent. For CY 2004, as recommended by the APC Panel, we froze payment rates for blood and blood products at CY 2003 levels. This allowed us to undertake further study of the issues raised by commenters and presenters at the August 2003 and February 2004 APC Panel meetings.

In the August 16, 2004 proposed rule for CY 2005 OPPS, we proposed to continue to pay separately for blood and blood products. We also proposed to establish new APCs that would allow each blood product to be in its own separate APC, as several of the blood product APCs currently contained multiple blood products with no clinical homogeneity or whose product-specific median costs may not have been similar. Thus, we also proposed to reassign some of these HCPCS codes already contained in certain APCs to new APCs. (*See* Table 30 of the proposed rule (69 FR 50523.)

Other than for autologous blood products, hospital reimbursement for the costs of collection, processing, and storage of blood and blood products are made through the OPPS payments for specific blood product APCs. Wastage and other administrative costs for blood are attributable to overhead and distributed across all hospital services linked to cost centers in the Medicare cost report, through the standard process of converting charges to costs using hospitals' CCRs for each cost center on the cost report.

In the August 16, 2004 proposed rule, we noted that comments to previous OPPS rules had stated that the CCRs that we used to adjust claim charges to costs for blood in past years were too low, resulting in underestimation of the true hospital costs for blood and blood products. In response, we conducted a thorough analysis of the OPPS claims to compare CCRs between hospitals with a blood-specific cost center and hospitals defaulting to the overall hospital CCR. Our past methodology for determining CCRs for blood products included a default to the overall CCR when any given provider had chosen not to report costs and charges in a blood-specific cost center on the cost report. After matching the two blood-specific cost centers to the 38X and 39X revenue codes, we observed a significant difference in CCRs utilized for conversion of blood product charges to costs for those hospitals with and without blood-specific cost centers. The median CCR for those hospitals with a blood-specific cost center was 0.66 for revenue code 38X and 0.64 for revenue code 39X, and for those defaulting to the overall hospital CCR, the result was a CCR of 0.34 for revenue code 38X and 0.33 for revenue code 39X. The median overall CCR for all hospitals in the CY 2005 analysis was 0.33.

In light of this information, we applied the methodology described in our August 16, 2004 proposed rule to calculate simulated medians for each blood and blood product based on our CY 2003 claims data. We assumed that those hospitals not reporting costs and charges in a blood-specific cost center on their annual cost report, in general, face similar costs and engage in comparable charging practices for blood as those reporting a blood-specific cost center. For those hospitals not reporting a blood-specific cost center, we simulated a blood-specific CCR, which we then applied to convert charges to costs for blood products. Overall, this methodology increased the estimated median costs of blood and blood products by 25 percent for CY 2005 relative to the median costs used to set CY 2004 APC rates. For example, the estimated median for HCPCS code P9016 (Red blood cells, leukocyte reduced), the most frequently billed blood product, increased by 32 percent relative to the CY 2004 median.

As discussed in the proposed rule, in reviewing the simulated medians calculated using the methodology described above relative to those medians used to set CY 2004 payment rates, we noticed that some low-volume blood products (< 1,000 units) demonstrated significant decreases in median costs utilizing our general methodology. Overall, the simulated median costs for low-volume blood products declined by 14 percent for CY 2005. Because a small sample size can lead to great variability in point estimates, we sought to increase the number of units of low-volume blood products by combining CY 2002 and CY 2003 claims data for the low-volume products. We used the simulated CCRs to calculate costs from charges from CY 2002 and CY 2003 claims data. To ensure that we combined comparable costs, we updated the simulated costs on the CY 2002 claims to the base year of CY 2003 using the Producer Price Index (PPI) for blood and derivatives for human use (Commodity Code #063711). This is the PPI used to update blood and blood product prices in the market basket (67 FR 50039, August 1, 2002). We recognize that not all of the low-volume blood products had claims in CY 2002.

After combining the 2 years of claims data, we were able to raise the volume of blood units billed for several of these products above 1,000 units. Since the publication of the proposed rule, additional claims data from the last quarter of CY 2003 have become available to us. The data showed that a few of the blood products had utilization in CY 2003 that exceeded the 1,000 unit low-volume threshold and will not be subject to the low-volume blood product payment adjustment described below, that we are adopting for CY 2005. The low-volume blood products that we are adopting as final are listed below in Table 31 of this final rule with comment period.

The DHHS Advisory Committee on Blood Safety and Availability has recommended that CMS establish payment rates for blood and blood products based on current year acquisition costs and actual total costs of providing such blood products. At the February 2004 APC Panel meeting, the APC Panel recommended that CMS use external data to derive costs of blood and blood products in order to establish payment rates. At the September 2004 APC Panel meeting, the APC Panel recommended that CMS freeze payment rates for low-volume blood products for CY 2005 at CY 2004 levels. The Panel also recommended that CMS consider using external data for setting payment rates for blood and blood products in the future.

We received the following comments on our August 16, 2004 proposed rule regarding payment for blood and blood products.

Comment: A few commenters expressed strong support for payment rates developed using hospital data rather than blood industry data. The commenters urged CMS to exercise caution in using blood industry data and to consider evaluating the data for their validity, reliability and consistency with geographic variations in costs, in addition to being publicly available and subject to audit.

Response: We agree with the commenters that the OPPS payment rates should be based on the most

recently available and accurate hospital claims data. However, in rare circumstances when accurate hospital claims data capturing the full costs of services may not be available, we evaluate all external data very carefully to make sure that they meet our external data criteria. As discussed above, in setting all blood and blood product payment rates for CY 2005, we have relied upon data from hospital claims submitted to CMS.

Comment: Several commenters expressed concern about the proposed payment rates for blood and blood products. The commenters indicated that despite increases in the CY 2005 proposed payment rates for blood and blood products, the proposed payment rates still do not meet the actual costs to hospitals of acquiring these products. Some commenters stated that, in addition to hospital coding and billing problems, only a small number of hospitals were actually reporting blood costs, and that lack of reporting explains why the payment rates are still significantly below hospital acquisition costs. The commenters expressed concerns that this would create barriers to access to a safe blood supply for Medicare beneficiaries.

The commenters also expressed concerns about reductions in payment rates for low-volume blood products. They recommended that CMS either freeze payment rates at the CY 2004 OPPS levels for low-volume blood products that experienced a decrease in their proposed rates or use external data in setting payment rates for these products.

Response: We appreciate the commenters' concerns and share the same concern for protecting beneficiaries' access to a safe blood supply. As with all of the OPPS services, we prefer to rely on our claims data whenever possible. Comments received for previous rules also suggested that current hospital blood costs are not captured because hospitals underreport blood on their claims because it is too costly to bill for blood. However, our thorough analysis of billing for blood from CY 2003 claims data indicated that 81 percent of all hospitals included in our ratesetting and modeling for CY 2005 billed at least one unit of blood or blood product in CY 2003. Of these hospitals however, only 47 percent reported separate costs and charges in the two cost centers specific to blood on their most recent annual cost reports. It may be that those hospitals billing for blood but not reporting costs and charges on their cost reports for either of the two blood-specific cost centers reported their blood costs and charges under other cost centers, such as operating room. As discussed in the proposed rule, we simulated blood-specific hospital CCRs to account for these reporting differences and used these simulated CCRs to develop proposed median costs for blood products for CY 2005. Our claims data clearly show that the vast majority of hospitals do bill the OPPS for blood and blood products. In addition, the distribution of costs for individual products provides no evidence of significant coding problems.

As explained in the preamble of this section, we estimate that by using our new methodology of simulating medians and implementing the proposed payment rates for blood and blood products, excluding low-volume blood products, there would be a 25 percent increase in payment for blood and blood products overall. This includes a 32 percent increase in payment from CY 2004 for leukocyte reduced red blood cells (HCPCS code P9016), the highest volume blood product in the hospital OPD, and a 25 percent increase in payment for each unit of red blood cells (HCPCS code P9021), the second highest volume blood product.

After carefully reviewing all of the public comments received timely regarding low-volume blood products, we are convinced that due to the low utilization of these products, in addition to possible hospital coding and billing problems for these low-volume products, the claims data may not have captured the complete costs of these products to hospitals as fully as possible. We believe it is imperative that Medicare beneficiaries have full access to all medically necessary blood and blood products, including products that are infrequently utilized. Therefore, for blood products that would have experienced a decrease in median cost from CY 2004 to CY 2005 based on our proposed methodology, we are establishing CY 2005 payment rates that are adjusted to a 50/50 blend of CY 2004 product-specific OPPS median costs and our proposed CY 2005 simulated medians. This adjustment methodology will allow us to undertake further study of the issues raised by commenters and by presenters at the September 2004 APC Panel meeting, without putting beneficiary access to these low-volume blood products at risk.

Comment: One commenter suggested that CMS survey all hospitals across the country to investigate direct and indirect costs for blood. The commenter expressed concern that our proposed rates were insufficient to cover the costs of blood and its testing and storage. The commenter also expressed the need for continued increases in payments for blood products.

Response: We appreciate the commenter's recommendation and will take it into consideration as needed, when we reassess the payment rates for blood and blood products. While we believe our payment rates are appropriate and adequate for the provision of blood and blood product services, we are aware of the increasing number of tests required to ensure the safety of the nation's blood supply, which could possibly add to the costs of processing blood and blood products. The APC payment rates for blood and blood products are intended to cover the costs of medically necessary testing by community blood banks or blood banks operated by hospitals. However, the APC payment rates are not meant to include costs of tests requiring a specific patient's blood, such as cross-matching in preparation for transfusion, because these tests are separately payable under the OPPS.

Comment: Several commenters, including a hospital association, recommended that CMS issue more specific guidance to hospitals for billing of blood-related services in order to improve hospital claims data. Specifically, commenters requested that CMS address issues related to application of the Medicare blood deductible, differences between donor and nondonor states, hospital markups for blood costs, the appropriate use of HCPCS code P9011 (Split blood unit) in billing, blood processing and preparation costs and autologous blood collection. In addition, the same commenter recommended that CMS share its draft guidance for review with the Outpatient Medicare Technical Advisory Group (MTAG) or the National Uniform Billing Committee (NUBC), or both, to ensure it is correct, comprehensive, and reflective of the billing provider's perspective.

Response: We recognize the need for comprehensive billing guidelines for hospitals and other providers to address a variety of blood-related services under the OPPS. In the near future, we intend to provide further billing guidelines to clarify our original Program Transmittal A–01–50 issued on April 12, 2001 (CR Request 1585) regarding correct billing for blood-related services. We agree with the commenters and intend to gather information from all relevant and available resources.

Comment: One commenter, a hospital association, indicated that the revenue code 390 (Blood Storage and Processing) should not have been included in Table 18 (Proposed Packaged Services by

Revenue Codes) of the August 16, 2004 proposed rule. The commenter expressed concern that by including revenue code 390 in this table, hospitals would not be paid for the services because of a line-item claim rejection.

Response: We are clarifying that a HCPCS code billed with revenue codes listed in Table 18 of the proposed rule could be paid separately as long as the HCPCS code is not assigned a status indicator of ''N.'' When a revenue code charge is billed without a HCPCS code, the charge is reduced to cost using the appropriate CCR for the revenue code. This cost is then added to a line item charge (reduced to cost) for a separately payable HCPCS code. This allows costs associated with uncoded revenue code charges to be captured so we can make a more accurate payment for the claim. If we did not add the costs of the line item revenue code charges without HCPCS codes, the full cost data for all resources necessary to deliver a separately payable service might not be captured, possibly resulting in a lesser payment for the claim.

In summary, after carefully reviewing all public comments received timely, we are adopting as final for CY 2005 OPPS the following proposals:

- To continue to pay separately for blood and blood products, to establish new APCs that would place each blood product in its own separate APC, and to implement proposed APC reassignments for such blood and blood products.
- Effective for services furnished on or after January 1, 2005, in this final rule with comment period, we are providing that the payment rates for blood and blood products, excluding low-volume blood products whose CY 2005 simulated medians decreased from the CY 2004 medians, will be determined according to the methodology we described in the August 16, 2004 proposed rule.
- Effective for services furnished on or after January 1, 2005, in this final rule with comment period, we are providing that the CY 2005 payment rates for low-volume blood products that would have experienced a decrease in median costs from CY 2004 to CY 2005 based on our proposed methodology are adjusted to a 50/50 blend of CY 2004 product-specific median costs and our proposed CY 2005 simulated medians.

BILLING CODE 4120–01–C

VI. Estimated Transitional Pass-Through Spending in CY 2005 for Drugs, Biologicals, and Devices

A. Basis for Pro Rata Reduction

Section 1833(t)(6)(E) of the Act limits the total projected amount of transitional pass-through payments for a given year to an ''applicable percentage'' of projected total Medicare and beneficiary payments under the hospital OPPS. For a year before CY 2004, the applicable percentage is 2.5 percent; for CY 2004 and subsequent years, we specify the applicable percentage up to 2.0 percent.

If we estimate before the beginning of the calendar year that the total amount of pass-through payments in that year would exceed the applicable percentage, section 1833(t)(6)(E)(iii) of the Act requires a prospective uniform reduction in the amount of each of the transitional pass-through payments made in that year to ensure that the limit is not exceeded. We make an estimate of pass-through spending to determine not only whether payments exceed the applicable percentage but also to determine the appropriate reduction to the conversion factor.

For devices, making an estimate of pass-through spending in CY 2005 entails estimating spending for two groups of items. The first group consists of those items for which we have claims data for procedures that we believe used devices that were eligible for pass-through status in CY 2003 and CY 2004 and that would continue to be eligible for pass-through payment in CY 2005. The second group consists of those items for which we have no direct claims data, that is, items that became, or would become, eligible in CY 2004 and would retain pass-through status in CY 2005, as well as items that would be newly eligible for pass-through payment beginning in CY 2005.

B. Estimate of Pass-Through Spending for CY 2005

In the August 16, 2004 proposed rule, we proposed to set the applicable percentage cap at 2.0 percent of the total OPPS projected payments for CY 2005. In this final rule with comment period, we are setting the applicable percentage cap at the same 2.0 percent.

We are using the same methodology described in the proposed rule to estimate the pass-through spending for CY 2005. To estimate CY 2005 pass-through spending for device categories in the first group described above, we used volume information from CY 2003 claims data for procedures associated with a pass-through device and manufacturer's price information from applications for pass-through status. This information was projected forward to CY 2005 levels, using inflation and utilization factors based on total growth in Medicare Part B as projected by the CMS Office of the Actuary (OACT).

To estimate CY 2005 pass-through spending for device categories included in the second group, that is, items for which we have no direct claims data, we used the following approach: For categories with no claims data in CY 2003 that would be active in CY 2005, we followed the methodology described in the November 2, 2001 final rule (66 FR 55857). That is, we used price information from manufacturers and volume estimates based on claims for procedures that would most likely use the devices in question. This information was projected forward to CY 2005 using the inflation and utilization factors supplied by the CMS OACT to estimate CY 2005 pass-through spending for this group of device categories. For categories that become eligible in CY 2005, we will use the same methodology. No new device categories for January 1, 2005, were announced after the publication of the proposed rule. Therefore, the estimate of pass-through spending does not incorporate any pass-through spending for categories made effective January 1, 2005.

With respect to CY 2005 pass-through spending for drugs and biologicals, as we explain in section V.A.3. of this final rule with comment period, the pass-through payment amount for new drugs and biologicals that we determine have pass-through status equals zero. Therefore, our estimate of total pass-through spending for drugs and biologicals with pass-through status in CY 2005 equals zero.

Table 36.--Estimates for CY 2005 Transitional Pass-Through Spending for Current Pass-Through Device Categories Continuing Into CY 2005

New HCPCS	APC	Existing Pass-Through Devices	CY 2005 Estimated Utilization	CY 2005 Anticipated Pass-through Payments
C1814	1814	Retinal tamponade device, silicone oil	33,865	$13,166,712
C1818	1818	Integrated keratoprosthesis device	5	$34,750
C1819	1819	Tissue localization excision device	10,979	$2,031,115

In accordance with the methodology described above, we estimate that total pass-through spending for devices in CY 2005 would equal approximately $23.4 million, which represents 0.10 percent of total OPPS projected payments for CY 2005. This figure includes estimates for the current device categories continuing into CY 2005, in addition to projections for categories that first become eligible during CY 2005. This estimate is significantly lower than previous year's estimates because of the method we discuss in section V.A.3. of this preamble for determining the amount of pass-through payment for drugs and biologicals with pass-through status in CY 2005.

Therefore, we will institute no pro rata reduction for CY 2005.

In section V.G. of this final rule with comment period, we indicate that we are accepting pass-through applications for new radiopharmaceuticals that are assigned a HCPCS code on or after January 1, 2005. The pass-through amount for new radiopharmaceuticals approved for pass-through status in CY 2005 would be the difference between the OPPS payment for the radiopharmaceutical, that is, the payment amount determined for the radiopharmaceutical as a sole source specified covered drug, and the payment amount for the radiopharmaceutical under section 1842(o) of the Act. However, we have no information identifying new radiopharmaceuticals to which a HCPCS code might be assigned after January 1, 2005 for which pass-through status would be sought. We also have no data regarding payment for new radiopharmaceuticals with pass-through status under the methodology that we specify in section V.G. However, we do not believe that pass-through spending for new radiopharmaceuticals in CY 2005 will be significant enough to materially affect our estimate of total pass-through spending in CY 2005. Therefore, we are not including radiopharmaceuticals in our estimate of pass-through spending in CY 2005.

Because we estimate pass-through spending in CY 2005 will amount to 0.10 percent of total projected OPPS CY 2005 spending, we are returning 1.90 percent of the pass-through pool to adjust the conversion factor, as we discuss in section VIII. of this preamble.

We received a few public comments on our estimate of CY 2005 pass-through spending for drugs, biologicals, and devices.

Comment: One commenter, a hospital organization, commended CMS for returning a portion of the pass-through pool that exceeds its estimate for pass-through payments for CY 2005, by increasing the conversion factor.

Response: We appreciate the commenter's support.

Comment: One commenter was concerned that CMS did not provide information on the extent to which amounts that are actually spent on pass-through payments and outlier payments compared to the amounts that are carved out of the total amount allowed OPPS payments for these projected payments. The commenter was concerned that the amounts carved out for these purposes may not actually be spent and thus would be lost to hospitals.

Response: We are required by law to estimate the amounts that we expect to spend on pass-through payments and outliers each year before the start of the calendar year. We share the commenter's interest in making those estimates as accurately as possible to ensure that hospitals receive the amount to which they are entitled. We make our final estimate for each calendar year to the best of our ability based on all of the most recently available data when we prepare our final rule, including comments we receive concerning those issues in response to the proposed rule. With respect to the availability of data, we have established limited data sets that include the set of claims we use for, first, the proposed rule and, ultimately, the final rule estimates. For example, the claims for CY 2003 used for the final rule for CY 2005 will be available to the public in a limited data set format. We will continue to assess the means by which we provide such information to determine if there are alternate ways to ensure that our stakeholders obtain the information that is important to them on a timely basis.

VII. Other Policy Decisions and Policy Changes

A. Statewide Average Default Cost-to-Charge Ratios

CMS uses cost-to-charge ratios (CCRs) to determine outlier payments, payments for pass-through devices, and monthly interim transitional corridor payments under the OPPS. Some hospitals do not have a valid CCR. These hospitals include, but are not limited to, hospitals that are new and have not yet submitted a cost report, hospitals that have a CCR that falls outside predetermined floor and ceiling thresholds for a valid CCR, or hospitals that have recently given up their all-inclusive rate status. When OPPS was first implemented in CY 2000, we used CY 1996 and CY 1997 cost reports to calculate default urban and rural CCRs for each State to use in determining the reasonable cost-based payments for those hospitals without a valid CCR (Program Memorandum A–00–63, CR 1310, issued on September 8, 2000). In the August 16, 2004 OPPS proposed rule, we proposed to update the default ratios for CY 2005.

As we proposed, in this final rule, we calculated the statewide default CCRs using the same CCRs that we use to adjust charges to costs on claims data. Table 31 lists the final CY 2005 default urban and rural CCRs by State. These CCRs are the ratio of total costs to total charges from each provider's most recently submitted cost report, for those cost centers relevant to outpatient services. We also adjusted these ratios to reflect final settled status by applying the differential between settled to submitted costs and charges from the most recent pair of settled to submitted cost reports.

The majority of submitted cost reports, 87 percent, were for CY 2002. We only used valid CCRs to calculate these default ratios. That is, we removed the CCRs for all-inclusive hospitals, CAHs, and hospitals in Guam and the U.S. Virgin Islands because these entities are not paid under the OPPS, or in the case of all-inclusive hospitals, because their CCRs are suspect. We further identified and removed any obvious error CCRs and trimmed any outliers. We limited the hospitals used in the calculation of the default CCRs to those hospitals that billed for services under the OPPS during CY 2003.

Finally, we calculated an overall average CCR, weighted by a measure of volume, for each State except Maryland. This measure of volume is the total lines on claims and is the same one that we use in our impact tables. Calculating a rate for Maryland presented a unique challenge. There are only a few providers in Maryland that are eligible to receive payment under the OPPS. However, we had no usable in-house cost report data for these Maryland hospitals, which is why we remove Maryland providers from our claims data for modeling OPPS. Therefore, we obtained data from the fiscal intermediary for Maryland, which we attempted to use in calculating the CCRs for Maryland, but which we ultimately determined could not be used to calculate representative CCRs. The cost data for three Maryland hospitals with very low volumes of services and cost data were so irregular that we lacked confidence that it would result in a valid statewide CCR. Thus, for Maryland, we used an overall weighted average CCR for all hospitals in the nation to calculate the weighted average CCRs appearing in Table 37. The overall decrease in default statewide CCRs can be attributed to the general decline in the ratio between costs and charges widely observed in the cost report data.

BILLING CODE 4120–01–C

Comment: Several commenters recommended that CMS instruct fiscal intermediaries to work with those facilities that have given up their all-inclusive rate status to quickly determine an appropriate CCR that will provide an accurate estimate of costs for each facility.

Response: We have already instructed intermediaries to update CCRs in a timely manner. In Program Memorandum A–03–004 dated January 17, 2003, we instructed fiscal intermediaries to recalculate each provider's CCR on an ongoing basis whenever a more recent full year cost report becomes available, which includes tentatively settled cost reports. Fiscal intermediaries will calculate a hospital-specific CCR for all-inclusive rate hospitals, as with all hospitals relying on default CCRs, when their first tentatively settled cost report becomes available after no longer being considered as all-inclusive rate hospitals.

Comment: A few commenters asserted that the decrease in CCRs between 1996 and 2002 was caused by the fact that charges were increasing faster than costs and that the increase in charges has been much lower since 2003. They requested that CMS take this fact into account in developing default CCRs.

Response: We did not inflate charges when calculating the default CCRs, and therefore, we do not believe that there is a need to adjust for charge inflation since CY 2002.

B. Transitional Corridor Payments: Technical Change

1. Provisions of the August 16, 2004 Proposed Rule

When the OPPS was implemented, every provider was eligible to receive an additional payment adjustment (or transitional corridor payment) if the payments it received under the OPPS were less than the payment it would have received for the same services under the prior reasonable cost-based system (section 1833(t)(7) of the Act). Transitional corridor payments were intended to be temporary payments for most providers but permanent payments for cancer and children's hospitals to ease their transition from the prior reasonable cost-based payment system to the prospective payment system. Section 411 of Pub. L. 108–173 amended section 1833(t)(7)(D)(i) of the Act to extend such payments through December 31, 2005, for rural hospitals with 100 or fewer beds and extended such payments for services furnished during the period that begins with the provider's first cost reporting period beginning on or after January 1, 2004 and ends on December 31, 2005, for sole community hospitals located in rural areas. Accordingly, transitional corridor payments are only available to children's hospitals, cancer hospitals, rural hospitals having 100 or fewer beds, and sole community hospitals located in rural areas.

At the time the OPPS was implemented, section 1833(t)(7)(F)(ii) of the Act defined the payment-to-cost ratio (PCR) used to calculate the ''pre-BBA amount'' [2] for purposes of calculating the transitional corridor

[2] Section 1833(t)(7) of the Act defined the ''pre-BBA'' amount for a period as the amount equal to the product of (1) the payment-to-cost ratio for the hospital based on its *cost reporting period ending in 1996,* and (2) the reasonable cost of the services for the period. (Emphasis added.) In this context, BBA refers to the Balanced Budget Act of 1997, Pub. L. 105–33, enacted on August 5, 1997.

payments to be determined using the payments and reasonable costs of services furnished during the provider's cost reporting period ending in calendar year 1996. The BIPA, Pub. L. 106–554, enacted on December 21, 2000, revised that requirement. Section 403 of BIPA amended section 1833(t)(7)(F)(ii)(I) of the Act to allow transitional corridor payments to hospitals subject to the OPPS that did not have a 1996 cost report by authorizing use of the first available cost reporting period ending after 1996 and before 2001 in calculating a provider's PCR.

Although we discussed the BIPA amendment in the CY 2002 OPPS proposed rule published on August 24, 2001 (66 FR 44674), and implemented the amendment through Program Memorandum No. A–01–51, issued on April 13, 2001, we failed to revise the regulations at § 419.70(f)(2) to reflect the change. In the August 16, 2004 OPPS proposed rule, we proposed a technical correction to § 419.70(f)(2) to conform it to the provision of section 1833(t)(7)(F)(ii)(I) of the Act.

We did not receive any comments on this proposed technical change. Accordingly, in this final rule with comment period, we are adopting as final without modification our proposal and correcting § 419.70(f)(2) to conform it to the provision of section 1833(t)(7)(F)(ii)(I) of the Act.

However, we did receive several comments on the proposed rule related to the transitional corridor payments.

Comment: A few commenters expressed appreciation for the extension of transitional corridor payments for children's hospitals, cancer hospitals, rural hospitals having 100 or fewer beds, and sole community hospitals located in rural areas, but requested that CMS consider extending payment protections to rural hospitals that are not eligible for transitional corridor payments. The commenters noted that rural hospitals that have converted to critical access hospitals are paid at cost and, therefore, have a competitive advantage over rural hospitals that are not eligible for transitional corridor payments and cannot convert to critical access hospital status. One commenter requested protection for rural hospitals that provide emergency services.

A few commenters noted that the transitional corridor payment provision for rural hospitals having 100 or fewer beds and sole community hospitals located in rural areas expires on December 31, 2005, and requested that CMS further extend this payment protection.

Response: We share the concerns of rural hospitals and do not intend to limit access to health care to beneficiaries in rural areas. However, we note that the statute is very specific and does not provide transitional corridor payments for entities other than those listed in the statute, nor extend transitional corridor payments past December 31, 2005, for rural or sole community hospitals.

2. Comments on the Provisions of the January 6, 2004 Interim Final Rule With Comment Period

As discussed in the January 6, 2004 interim final rule with comment period (69 FR 828), section 411(a)(1)(B) of Pub. L. 108–173 provided that hold harmless transitional corridor provisions shall apply to sole community hospitals located in rural areas. Section 411(a)(2) states that the effective date for section 411(a)(1)(B) ''shall apply with respect to cost reporting periods beginning on or after January 1, 2004'' for sole community hospitals located in rural areas. The Conference Agreement for Pub. L. 108–173 states, ''The hold harmless provisions are extended to sole community hospitals located in a rural area starting for services furnished on or after January 1, 2004 * * *''

Comment: Commenters noted that there appears to be a discrepancy between the effective date in section 411 of Pub. L. 108–173 and the Conference Agreement. The commenters noted that, in accordance with section 411, a sole community hospital with a cost reporting period beginning on a date other than January 1 will not receive transitional corridor payments and ''interim'' transitional corridor payments for services furnished after December 31, 2003, and before the beginning of the provider's next cost reporting period.

Response: Section 411(a)(2) of Pub. L. 108–173 provides the effective date with respect to the transitional corridor payments applied to sole community hospitals. Specifically, a sole community hospital with a cost reporting period beginning on or after April 1, 2004, is subject to the hold harmless provisions. We note that if a hospital qualifies as both a rural hospital having 100 or fewer beds and as a sole community hospital located in a rural area, for purposes of receiving transitional corridor payments and interim transitional corridor payments, the hospital will be treated as a rural hospital having 100 or fewer beds. In this case, transitional corridor payments would begin on January 1, 2004, and there would be no gap in transitional corridor payments.

C. Status Indicators and Comment Indicators Assigned in the Outpatient Code Editor (OCE)

1. Payment Status Indicators

The payment status indicators (SIs) that we assign to HCPCS codes and APCs under the OPPS play an important role in determining payment for services under the OPPS because they indicate whether a service represented by a HCPCS code is payable under the OPPS or another payment system and also whether particular OPPS policies apply to the code. As we proposed, for CY 2005, we are providing our status indicator assignments for APCs in Addendum A, for the HCPCS codes in Addendum B, and the definitions of the status indicators in Addendum D1 to this final rule with comment period.

Payment under the OPPS is based on HCPCS codes for medical and other health services. These codes are used for a wide variety of payment systems under Medicare, including, but not limited to, the Medicare fee schedule for physician services, the Medicare fee schedule for durable medical equipment and prosthetic devices, and the Medicare clinical laboratory fee schedule. For purposes of making payment under the OPPS, we must be able to signal the claims processing system through the Outpatient Code Editor (OCE) software, as to HCPCS codes that are paid under the OPPS and those codes to which particular OPPS payment policies apply. We accomplish this identification in the OPPS through the establishment of a system of status indicators with specific meanings. Addendum D1 contains the definitions of each status indicator for purposes of the OPPS for CY 2005.

We assign one and only one status indicator to each APC and to each HCPCS code. Each HCPCS code that is assigned to an APC has the same status indicator as the APC to which it is assigned.

In the August 16, 2004 OPPS proposed rule, for CY 2005, we proposed to use the following status indicators in the specified manner:

- ''A'' to indicate services that are paid under some payment method other than OPPS, such as under the durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS) fee schedule or the Medicare Physician Fee Schedule. Some, but not all, of these other payment systems are identified in Addendum D1 to this final rule with comment period.
- ''B'' to indicate the services that are not payable under the OPPS when submitted on an outpatient hospital Part B bill type, but that may be payable by

fiscal intermediaries to other provider types when submitted on an appropriate bill type.

- ''C'' to indicate inpatient services that are not payable under the OPPS.
- ''D'' to indicate a code that is discontinued, effective January 1, 2005.
- ''E'' to indicate items or services that are not covered by Medicare or codes that are not recognized by Medicare.
- ''F'' to indicate acquisition of corneal tissue, which is paid on a reasonable cost basis and certain CRNA services that are paid on a reasonable cost basis.
- ''G'' to indicate drugs, biologicals, and radiopharmaceutical agents that are paid under the OPPS transitional pass-through rules.
- ''H'' to indicate devices that are paid under the OPPS transitional pass-through rules and brachytherapy sources that are paid on a cost basis.
- ''K'' to indicate drugs, biologicals (including blood and blood products), and radiopharmaceutical agents that are paid in separate APCs under the OPPS, but that are not paid under the OPPS transitional pass-through rules.
- ''L'' to indicate flu and pneumococcal immunizations that are paid at reasonable cost but to which no coinsurance or copayment apply.
- ''N'' to indicate services that are paid under the OPPS, but for which payment is packaged into another service or APC group.
- ''P'' to indicate services that are paid under the OPPS, but only in partial hospitalization programs.
- ''S'' to indicate significant procedures that are paid under the OPPS, but to which the multiple procedure reduction does not apply.
- ''T'' to indicate significant services that are paid under the OPPS and to which the multiple procedure payment discount under the OPPS applies.
- ''V'' to indicate medical visits (including emergency department or clinic visits) that are paid under the OPPS.
- ''X'' to indicate ancillary services that are paid under the OPPS.
- ''Y'' to indicate nonimplantable durable medical equipment that must be billed directly to the durable medical equipment regional carrier rather than to the fiscal intermediary.

We proposed the payment status indicators identified above for each HCPCS code and each APC in Addenda A and B and requested comments on the appropriateness of the indicators we have assigned.

We received several public comments on our proposal relating to status indicators.

Comment: Two commenters, representing radionuclide, radiopharmaceutical, and nuclear medicine interests, expressed concern about assignment of status indicator ''N'' in Transmittal 290, issued August 27, 2004, to the new revenue codes for diagnostic and therapeutic radiopharmaceuticals, revenue codes 0343 and 0344, that were effective October 1, 2004. The commenters recommended changing the status indicators for both 0343 and 0344 to ''K'' for nonpass-through drugs, biologicals, and radiopharmaceutical agents, and asked that CMS clarify and notify hospitals to use these revenue codes when billing and reporting costs for radiopharmaceuticals that can be paid separately. The commenters also stated that clarifying that these are nonpass-through and not packaged will assist CMS in tracking and analyzing costs for the radiopharmaceuticals and contribute to more accurate payment determinations. They recommended that CMS require hospitals to use the new revenue codes to report charges for radiopharmaceuticals.

Response: The assignment of status indicator ''N'' to revenue codes 0343 and 0344 in Transmittal 290 relates to OCE treatment of lines on a claim that report a charge with a revenue code but with no HCPCS code. The assignment of certain status indicators to revenue codes reported in the attachment to quarterly OPPS updates entitled ''Summary of Data Modifications'' is an OCE specification only, and should not be confused with how we use the status indicators listed in Addendum D1 that we assign to HCPCS codes and to APCs.

Additional information related to how revenue codes are used can be found in Pub. 100–04, Medicare Claims Processing, Chapter 4, Section 20, Subsection 5.1.1, entitled ''Packaged Revenue Codes.'' As indicated in that section, certain revenue codes when reported on an OPPS bill *without* a HCPCS code, including revenue codes 0343 and 0344, are considered packaged services that are to be factored into the transitional outpatient payment and outlier calculations.

Although we strongly encourage hospitals to report charges and HCPCS codes for diagnostic and therapeutic radiopharmaceuticals using revenue codes 0343 and 0344, respectively, we generally try to not to impose requirements on the assignment of HCPCS codes to revenue codes for OPPS services because the way hospitals assign costs varies so widely. Nevertheless, we agree with the commenters that, to the extent hospitals report charges for radiopharmaceuticals, both packaged and separately payable, using the new revenue codes 0343 and 0344, our cost data related to radiopharmaceuticals should be more precise.

We will review our manual instructions and previous issuances related to the reporting of revenue codes and make any revisions needed to clarify and update those instructions.

Comment: One commenter asked that CMS change the status indicator for code 90780 and 90781 to ''X'' from ''T'' and thereby cease the application of the multiple procedure reduction to these services, which will be billed for administration of infusion therapy in place of Q0081 for CY 2005. The commenter indicated that there is no situation in which the time and resources involved in infusion care should be reduced in the case of an observation patient.

Response: We disagree. The costs of space, utilities and staff attendance are duplicated when the beneficiary is receiving another service at the same time as infusion therapy, in particular when the patient is in observation. Hence, a multiple procedure reduction to infusion therapy is appropriate, particularly when the patient is in observation status. However, we are noting how the multiple procedure discounting logic in the OCE functions. Line items with a service indicator of ''T'' are subject to multiple procedure discounting unless modifiers 76, 77, 78, or 79, or all, are present. The ''T'' line item with the highest payment amount will not be multiple procedure discounted, and all other ''T'' line items will be multiple procedure discounted. All line items that do not have a service indicator of ''T'' will be ignored in determining the discount. Therefore, if the only other services reported with infusion therapy are an emergency department or other visit code, or diagnostic tests and services assigned status indicator ''S,'' the infusion therapy code would not be subject to the multiple procedure discounting.

2. Comment Indicators

In the November 1, 2002 and the November 7, 2003 final rules with comment period, which implemented changes in the OPPS for CYs 2003 and 2004, respectively, we provided code condition indicators in Addendum B. The code condition indicators and their meaning are as follows:

- ''DG''—Deleted code with a grace period; Payment will be made under the deleted code during the 90-day grace period.

• ''DNG''—Deleted code with no grace period; Payment will not be made under the deleted code.

• ''NF''—New code final APC assignment; Comments were accepted on a proposed APC assignment in the Proposed Rule; APC assignment is no longer open to comment.

• ''NI''—New code interim APC assignment; Comments will be accepted on the interim APC assignment for the new code.

Medicare had permitted a 90-day grace period after implementation of an updated medical code set, such as the HCPCS, to give providers time to incorporate new codes in their coding and billing systems and to remove the discontinued codes. HCPCS codes are updated annually every January 1, so the grace period for billing discontinued HCPCS was implemented every January 1 through March 31.

The Health Insurance Portability and Accountability Act (HIPAA) transaction and code set rules require usage of the medical code set that is valid at the time that the service is provided. Therefore, effective January 1, 2005, CMS is eliminating the 90-day grace period for billing discontinued HCPCS codes. Details about elimination of the 90-day grace period for billing discontinued HCPCS codes were issued to our contractors on February 6, 2004, in Transmittal 89, Change Request 3093.

In order to be consistent with the HIPPA rule that results in the elimination of the 90-day grace period for billing discontinued HCPCS codes, in the August 16, 2004 OPPS proposed rule, we proposed, effective January 1, 2005, to delete code condition indicators ''DNG'' and ''DG''. We proposed to designate codes that are discontinued effective January 1, 2005 with status indicator ''D,'' as described in section VII.C.1. of this preamble.

Further, we proposed to rename ''code condition'' indicators as ''comment indicators.'' In Addendum D2 to this final rule with comment period, we list the following two comment indicators that we had proposed to use to identify HCPCS codes assigned to APCs that are or are not subject to comment:

• ''NF''—New code, final APC assignment; Comments were accepted on a proposed APC assignment in the Proposed Rule; APC assignment is no longer open to comment.

• ''NI''—New code, interim APC assignment; Comments will be accepted on the interim APC assignment for the new code.

We did not receive any public comments on our proposal relating to comment indicators. We are implementing the comment indicators and discontinuing the use of code condition indicators as we proposed, without modification.

D. Observation Services

Frequently, beneficiaries are placed in ''observation status'' in order to receive treatment or to be monitored before making a decision concerning their next placement (that is, admit to the hospital or discharge). This status assignment occurs most frequently after surgery or a visit to the emergency department. For a detailed discussion of the clinical and payment history of observation services, see the November 1, 2002 final rule with comment period (67 FR 66794).

Before the implementation of the OPPS in CY 2000, payment for observation care was made on a reasonable cost basis, which gave hospitals a financial incentive to keep beneficiaries in ''observation status'' even though clinically they were being treated as inpatients. With the initiation of the OPPS, observation services were no longer paid separately; that is, they were not assigned to a separate APC. Instead, costs for observation services were packaged into payments for the services with which the observation care was associated.

Beginning in early 2001, the APC Panel began discussing the topic of separate payment for observation services. In its deliberations, the APC Panel asserted that observation services following clinical and emergency room visits should be paid separately, and that observation following surgery should be packaged into the payment for the surgical procedure. For CY 2002, we implemented separate payment for observation services (APC 0339) under the OPPS for three medical conditions: chest pain, congestive heart failure, and asthma. A number of accompanying requirements were established, including the billing of an evaluation and management visit in conjunction with the presence of certain specified diagnosis codes on the claim, hourly billing of observation care for a minimum of 8 hours up to a maximum of 48 hours, timing of observation beginning with the clock time on the nurse's admission note and ending at the clock time on the physician's discharge orders, a medical record documenting that the beneficiary was under the care of a physician who specifically assessed patient risk to determine that the beneficiary would benefit from observation care, and provision of specific diagnostic tests to beneficiaries based on their diagnoses. In developing this policy for separately payable observation services, we balanced issues of access, medical necessity, potential for abuse, and the need to ensure appropriate payment. We selected the three medical conditions, noted previously, and the accompanying diagnosis codes and diagnostic tests to avoid significant morbidity and mortality from inappropriate discharge while, at the same time, avoiding unnecessary inpatient admissions.

Over the past 2 years, we have continued to review observation care claims data for information on utilization and costs, along with additional information provided to us by physicians and hospitals concerning our current policies regarding separately payable observation services. Our primary goal is to ensure that Medicare beneficiaries have access to medically necessary observation care. We also want to ensure that separate payment is made only for beneficiaries actually receiving clinically appropriate observation care.

In January 2003, the APC Panel established an Observation Subcommittee. Over the last year, this subcommittee has held discussions concerning observation care and reviewed data extracted from claims that reported observation services. The subcommittee presented the results of its deliberations to the full APC Panel at the February 2004 meeting. The APC Panel recommendations regarding observation care provided under the OPPS were broad in scope and included elimination of the diagnosis requirement for separate payment for observation services, elimination of the requirement for the concomitant diagnostic tests for patients receiving observation care, unpackaging of observation services beyond the typical expected recovery time from surgical and interventional procedures, and modification of the method for measuring beneficiaries' time in observation to make it more compatible with routine hospital practices and their associated electronic systems.

In response to the APC Panel recommendations, we undertook a number of studies regarding observation services, while acknowledging data limitations from the brief 2-year experience the OPPS has had with separately payable observation services.

To assess the appropriateness of the APC Panel's recommendation not to pay separately for observation services following surgical or interventional procedures, we analyzed the claims for these procedures to determine the extent to which the claims reported packaged observation services codes. This analysis revealed that while

observation services are being reported on some claims for surgical and interventional procedures, the great majority of claims for these procedures reported no observation services. The packaged status of these observation services codes may result in underreporting their frequency, but the proportion of surgical and interventional procedures reported with the packaged observation services codes was so small that any increase would not change our substantive conclusion. This confirmed our belief that, although an occasional surgical case may require a longer recovery period than expected for the procedure, as a rule, surgical outpatients do not require observation care. Given the rapidly changing nature of outpatient surgical and interventional services, it would be difficult to determine an expected typical recovery time for each procedure. We have concerns about overutilization of observation services in the post-procedural setting as partial replacement for recovery room time. However, we noted that, to the extent observation care or extended recovery services are provided to surgical or interventional patients, the cost of that care is packaged into the payment for the procedural APC which may result in higher median costs for those procedures.

We also analyzed the possibility of expanding the list of medical conditions for separately payable visit-related observation services, altering the requirements for diagnostic tests while in observation, and modifying the rules for counting time in observation care.

We looked at CY 2003 OPPS claims data for all packaged visit-related observation care for all medical conditions in order to determine whether or not there were other diagnoses that would be candidates for separately payable observation services. Our analysis confirmed that the three diagnoses that are currently eligible for separate payment for observation services are appropriate, as those diagnoses are frequently reported in our visit-related claims with packaged observation services. In fact, diagnoses related to chest pain were, by far, the diagnosis most frequently reported for observation care, either separately payable or packaged. Other diagnoses that appeared in the claims data with packaged observation services included syncope and collapse, transient cerebral ischemia, and hypovolemia.

The packaged status of those observation stays means that the data are often incomplete and the frequency of services may be underreported. Generally, information about packaged services is not as reliably reported as is that for separately paid services. However, we are not convinced that, for those other conditions (such as hypovolemia, syncope and collapse, among others), there is a well-defined set of hospital services that are distinct from the services provided during a clinic or emergency room visit. Separately payable observation care must include specific, clinically appropriate services, and we are still accumulating data and experience for the three medical conditions for which we are currently making separate payment. Therefore, we believed it was premature to expand the conditions for which we would separately pay for visit-related observation services.

Hospitals have indicated that, even in the cases where the diagnostic tests have been performed, to assure that billing requirements for separately payable observation services under APC 0339 are met, they must manually review the medical records to prepare the claims. If they do not conduct this manual review, they may not be coding appropriately for separately payable observation services.

As noted in our August 16, 2004 proposed rule, we have also received comments from the community and the APC Panel asserting that the requirements for diagnostic testing are overly prescriptive and administratively burdensome, and that hospitals may perform tests to comply with the CMS requirements, rather than based on clinical need. For example, a patient admitted directly to observation care with a diagnosis of chest pain may have had an electrocardiogram in a physician's office just prior to admission to observation and may only need one additional electrocardiogram while receiving observation care. Thus, two more electrocardiograms performed in the hospital as required under the current OPPS observation policy might not be medically necessary.

We continue to believe that the diagnostic testing criteria we established for the three medical conditions are the minimally appropriate tests for patients receiving a well-defined set of hospital observation services for those conditions. The previous example, notwithstanding, we also continue to believe that the majority of these tests would be performed in the hospital outpatient setting. We define observation care as an active treatment to determine if a patient's condition is going to require that he or she be admitted as an inpatient or if the condition resolves itself and the patient is discharged. The currently required diagnostic tests reflect that an active assessment of the patient was being undertaken, and we believe they are generally medically necessary to determine whether a beneficiary will benefit from being admitted to observation care and aid in determining the appropriate disposition of the patient following observation care.

After careful consideration, we agree that specifying which diagnostic tests must be performed as a prerequisite for payment of APC 0339 may be imposing an unreasonable reporting burden on hospitals and may, in some cases, result in unnecessary tests being performed. Therefore, in the August 16, 2004 proposed rule, we proposed, beginning in CY 2005, to remove the current requirements for specific diagnostic testing, and to rely on clinical judgment in combination with internal and external quality review processes to ensure that appropriate diagnostic testing (which we expect would include some of the currently required diagnostic tests) is provided for patients receiving high quality, medically necessary observation care.

Accordingly, we proposed that, beginning in CY 2005, the following tests would no longer be required to receive payment for APC 0339 (Observation):

- For congestive heart failure, a chest x-ray (71010, 71020, 71030), and electrocardiogram (93005) and pulse oximetry (94760, 94761, 94762)
- For asthma, a breathing capacity test (94010) or pulse oximetry (94760, 94761, 94762)
- For chest pain, two sets of cardiac enzyme tests; either two CPK (82550, 82552, 82553) or two troponins (84484, 84512) and two sequential electrocardiograms (93005)

We believe that this proposed policy change would benefit hospitals because it would reduce administrative burden, allow more flexibility in management of beneficiaries in observation care, provide payment for clinically appropriate care, and remove a requirement that may have resulted in duplicative diagnostic testing.

We received numerous public comments supporting our proposed policy. We did not receive any comments that opposed the proposed policy. Therefore, we are adopting, without modification, our proposal to no longer require specified diagnostic tests to receive payment for APC 0339, beginning in CY 2005.

Hospitals and the APC Panel further suggested that we modify the method for accounting for the beneficiary's time in observation care. Currently, hospitals report the time in observation beginning with the admission of the beneficiary to

observation and ending with the physician's order to discharge the patient from observation. There are two problems related to using the time of the physician discharge order to determine the ending time of observation care. First, providers assert that it is not possible to electronically capture the time of the physician's orders for discharge. As a result, manual medical record review is required in order to bill accurately. Second, the hospital may continue to provide specific discharge-related observation care for a short time after the discharge orders are written and, therefore, may not be allowed to account for the full length of the observation care episode. In an effort to reduce hospitals' administrative burden related to accurate billing, in the proposed rule, we proposed to modify our instructions for counting time in observation care to end at the time the outpatient is actually discharged from the hospital or admitted as an inpatient. Our expectation was that specific, medically necessary observation services were being provided to the patient up until the time of discharge. However, we did not expect reported observation time to include the time patients remain in the observation area after treatment is finished for reasons that include waiting for transportation home.

Although beneficiaries may be in observation care up to 48 hours or longer, we believed that, in general, 24 hours was adequate for the clinical staff to determine what further care the patient needs. In CY 2005, we proposed to continue to make separate payment for observation care based on claims meeting the requirement for payment of HCPCS code G0244 (Observation care provided by a facility to a patient with CHF, chest pain, or asthma, minimum 8 hours, maximum 48 hours). However, we proposed not to include claims reporting more than 48 hours of observation care in calculating the final payment rate for APC 0339.

We received several public comments on our proposal.

Comment: A number of commenters urged that CMS include claims for stays greater than 48 hours in the data used to calculate the payment rate for observation because any such claims in our dataset would have withstood local fiscal intermediary scrutiny for reasonableness and medical necessity and should therefore be regarded as legitimate for pricing calculations. One commenter requested that CMS provide clarification to fiscal intermediaries regarding billing for stays that exceed 48 hours because code G0244 (Observation care provided by a facility to a patient with CHF, chest pain or asthma, minimum 8 hours, maximum 48 hours) would seem to preclude billing G0244 for stays that exceed 48 hours but that otherwise meet all the criteria for payment.

Response: In an effort to clarify the apparent confusion cited by commenters with regard to billing for stays that exceed 48 hours, beginning in CY 2005, we are changing the descriptor for HCPCS code G0244 to read as follows:

G0244, Observation care provided by a facility to a patient with CHF, chest pain or asthma, minimum 8 hours.

We expect that hospitals will report one unit of G0244 for each hour of observation care provided to patients for congestive heart failure, chest pain, or asthma, with a minimum 8 units billed to be eligible for separate observation payment.

We carefully considered the comments that urged us to include reporting more than 48 hours to calculate the median cost of G0244. The final payment rate for APC 0339 listed in Addendum A is based on all CY 2003 claims for G0244 taken from the National Claims History file, without regard to units of service. Prior to implementation of the OPPS, when hospital outpatient services were paid on a reasonable cost basis, Medicare did allow payment for observation services that exceeded 48 hours when medical review determined that a more extended period of observation care was reasonable and necessary. Since implementation of the OPPS, Medicare has ceased paying separately for observation care, with the exception of services reported with G0244, because payment for observation services was packaged into payment for services with which observation services were reported. We believe that, in the overwhelming majority of cases, decisions can be and are routinely made in less than 48 hours whether to release a beneficiary from the hospital following resolution of the reason for the outpatient visit or whether to admit the beneficiary as an inpatient. Therefore, we intend to revisit this issue in future updates.

For the reasons stated above, we are not adopting as final for CY 2005, our proposal to exclude claims for G0244 that reported more than 48 hours of observation from calculation of the median cost for APC 0339.

We also proposed the following requirements to receive separate payment for HCPCS code G0244 in APC 0339 for medically necessary observation services involving specific goals and a plan of care that are distinct from the goals and plan of care for an emergency department, physician office, or clinic visit:

- The beneficiary must have one of three medical conditions: congestive heart failure, chest pain, or asthma. The hospital bill must report as the admitting or principal diagnosis an appropriate ICD–9–CM code to reflect the condition. The eligible ICD–9–CM diagnosis codes for CY 2005 are shown in Table 38 below.
- The hospital must provide and report on the bill an emergency department visit (APC 0610, 0611, or 0612), clinic visit (APC 0600, 0601, or 0602), or critical care (APC 0620) on the same day or the day before the separately payable observation care (G0244) is provided. For direct admissions to observation, in lieu of an emergency department visit, clinic visit, or critical care, G0263 (Adm with CHF, CP, asthma) must be billed on the same day as G0244.
- HCPCS code G0244 must be billed for a minimum of 8 hours.
- No procedures with a 'T' status indicator, except the code for infusion therapy of other than a chemotherapy drug (CPT code 90780) can be reported on the same day or day before observation care is provided.
- Observation time must be documented in the medical record and begins with the beneficiary's admission to an observation bed and ends when he or she is discharged from the hospital.
- The beneficiary must be in the care of a physician during the period of observation, as documented in the medical record by admission, discharge, and other appropriate progress notes that are timed, written, and signed by the physician.
- The medical record must include documentation that the physician explicitly assessed patient risk to determine that the beneficiary would benefit from observation care.

We received numerous public comments on our proposal.

Comment: Most commenters applauded our proposal to eliminate the requirement that specified diagnostic tests be reported in order to receive payment for HCPCS code G0244. However, many commenters expressed disappointment that CMS did not propose to expand the conditions for which separate payment would be provided for observation care. One commenter, representing cancer centers, requested that CMS study febrile neutropenia, chemotherapy hypersensitivity reaction, hypovolemia, and electrolyte imbalance as conditions that would warrant separate payment for observation. A few commenters

supported the APC Panel recommendation that we eliminate altogether the diagnosis coding requirement for APC 0339. One commenter stated that medical care included in hourly observation charges billed under revenue code 762 for syncope and collapse, transient cerebral ischemia, and hypovolemia is medically necessary and distinct from services rendered in the emergency department or a clinic, is similar to that furnished to patients with congestive heart failure, asthma, and chest pain, and should therefore be paid for separately.

Response: We appreciate the support expressed by numerous commenters for the changes in requirements that we proposed for CY 2005 in order for hospitals to receive separate payment for observation services. As we indicate below, we are making final most of the changes that we proposed, with some modifications based on comments that we received. Although we are not going to implement in the CY 2005 OPPS the recommendations made by commenters and the APC Panel to expand separate payment for observation to include conditions in addition to congestive heart failure, asthma, and chest pain, we will continue to analyze our data and study the impact of such a change for reconsideration in future updates of the OPPS.

Comment: Several commenters supported our proposal to change how we define ending time or ''discharge'' from observation care. However, those commenters also requested further clarification of what we mean by ''discharge.''

Response: We carefully considered the thoughtful comments related to our proposal to modify the current policy regarding the time that should be recorded to designate when observation care ends. Based on suggestions from commenters, we are elaborating upon our proposal to define as the end of observation, the time the outpatient is either discharged from the hospital or admitted as an inpatient. Specifically, we consider the time when a patient is ''discharged'' from observation status to be the clock time when all clinical or medical interventions have been completed, including any necessary followup care furnished by hospital staff and physicians that may take place after a physician has ordered that the patient be released or admitted as an inpatient. However, observation care does not include time spent by the patient in the hospital subsequent to the conclusion of therapeutic, clinical, or medical interventions, such as time spent waiting for transportation to go home.

Comment: A few commenters requested clarification of the starting time for observation. One commenter recommended that CMS make it clear that observation time begins with the patient's placement in the bed and initiation of observation care, regardless of whether the bed is in a holding area or is in an actual observation bed or unit, as long as appropriate observation care is being provided. Another commenter asked if CMS will allow providers to document observation start time on any applicable document in the medical record and not limit the start time documentation to the nurse's observation admission note.

Response: We have stated in past issuances and rules that observation time begins at the clock time appearing on the nurse's observation admission note, which coincides with the initiation of observation care or with the time of the patient's arrival in the observation unit (66 FR 59879, November 30, 2001; Transmittal A–02–026 issued on March 28, 2002; and Transmittal A–02–129 issued on January 3, 2003.) In the August 16, 2004 proposed rule, we stated that observation time must be documented in the medical record and begins with the beneficiary's admission to an observation bed (69 FR 50534). We agree with the commenter on the need for clarification, and we will reiterate in provider education materials developed for the CY 2005 OPPS update that observation time begins at the clock time documented in the patient's medical record, which coincides with the time the patient is placed in a bed for the purpose of initiating observation care in accordance with a physician's order.

Comment: One commenter, a hospital trade association, recommended that CMS reconsider requiring hospitals to report one of the ICD–9–CM diagnosis codes designated for payment of APC 0339 as the admitting or principal diagnosis on the hospital claim. The commenter was concerned that, if we restrict the position of the diagnosis code to the admitting or principal field, many claims that otherwise meet the criteria for separate payment of observation will not be payable because coding rules and the frequency by which Medicare beneficiaries with asthma, congestive heart failure or chest pains have other presenting signs, symptoms, and clinical conditions will result in inappropriate placement of the requisite diagnosis code. Therefore, the commenter recommended that CMS accept the required diagnosis code in any diagnosis code field.

Response: Our proposal to require hospitals to report one of the specified ICD–9–CM codes in the admitting or principal diagnosis field is a modification of policy that we implemented in the November 30, 2001 final rule (66 FR 59880). We disagree with the commenter that this requirement will result in many claims for APC 0339 not being paid. Rather, we believe that requiring hospitals to report the signs, symptoms, and conditions that are the reason for the patient's visit will enhance coding accuracy and ensure that we are paying appropriately for APC 0339 by limiting separate payment to those observation services furnished to monitor asthma, chest pain, or congestive heart failure. If we continued to accept the required ICD–9–CM diagnosis code as a secondary diagnosis, we would remain concerned that we may be making separate payment for observation for conditions other than asthma, congestive heart failure or chest pain because these conditions are reported in the secondary diagnosis field even though they are not the clinical reason that the patient is receiving observation services.

Because we want to give hospitals ample time to incorporate this requirement into their billing systems, we will not implement this requirement before April 1, 2005. However, we are making final in this final rule with comment period the requirement that, beginning April 1, 2005, hospitals must report a qualifying ICD–9 CM diagnosis code in Form Locator (FL) 76, Patient Reason for Visit, and/or FL 67, principal diagnosis, in order for the hospital to receive separate payment for APC 0339. If a qualifying ICD–9 diagnosis code(s) is reported in the secondary diagnosis field but is not reported in either the Patient Reason for Visit field (FL 76) or the principal diagnosis field (FL 67), separate payment for APC 0339 will not be allowed.

Comment: One commenter requested that CMS modify the requirement that there be documentation that the physician has explicitly assessed the beneficiary risk to determine that he would benefit from observation care.

Response: We expect that, prior to issuing an order to place a patient in observation status, it is standard procedure for the physician to assess the patient's condition to determine the clinically appropriate intervention that is most likely to result in maximum benefit for the patient given his or her condition at that time. To expect documentation of that assessment in the medical record of a patient for whom an order to receive observation care has been issued is not new, excessive, or

unduly burdensome, but rather is an essential part of the patient's medical record to support the medically reasonable and necessary nature of the services ordered and furnished.

Comment: One commenter requested that CMS allow observation care following surgery if recovery time is longer than expected.

Response: As stated in the proposed rule, this situation is precisely contrary to the purpose of the observation care benefit. We again note that recovery time has been factored into the payment for the surgery. Although there is variation among patients' recovery times, that variation is part of the averaging that is inherent in a prospective payment system. Those costs are not considered as part of the payment for observation care, which serves an entirely different purpose for beneficiaries in the outpatient setting.

Comment: One commenter recommended adding ICD–9–CM diagnosis code 427.31 (Atrial fibrillation) to the list of specified diagnosis codes that could be included on claims for separately payable observation services furnished to patients with congestive heart failure or chest pain, or both.

Response: While many patients may have chronic atrial fibrillation that is asymptomatic, we agree that some patients may present chest pain as a significant symptom associated with atrial fibrillation. Atrial fibrillation may also complicate acute myocardial infarction. Patients who are being evaluated and managed with observation care for chest pain in a hospital may be found to have symptomatic atrial fibrillation as the likely etiology of their chest discomfort following comprehensive assessment. However, we would generally expect that patients with chest pain and atrial fibrillation receiving observation services in the hospital would be receiving these services specifically for their chest pain and that one of the chest pain diagnoses already on our list of diagnosis codes would be present on the claim as the reason for the visit or the principal diagnosis. Similarly, with respect to atrial fibrillation and congestive heart failure, congestive heart failure is an independent predictor of atrial fibrillation. However, as with chest pain and atrial fibrillation, we would generally expect that patients with congestive heart failure and atrial fibrillation receiving observation services in the hospital to be receiving these services specifically for their congestive heart failure and that one of the congestive heart failure diagnoses already on our list of diagnosis codes would be present on the claim as the reason for the visit or the principal diagnosis.

Therefore, while we agree with the commenter's suggestion that code 427.31 could be viewed as a reasonable diagnosis code for chest pain for which separate payment for observation services might be made under the OPPS, we believe it is unnecessary and redundant to add it to the list for chest pain because any of the existing ICD–9–CM diagnosis codes listed in Table 32 for chest pain suffices for purposes of the OPPS observation payment policy. Likewise, we are not adding code 427.31 to the list of acceptable congestive heart failure diagnoses for which separate payment for observation services is made by the OPPS.

Comment: One commenter recommended that diagnostic heart catheterization procedures, CPT codes 93510 through 92529, performed within 24 hours of an observation stay not disqualify separate payment for the observation even though these codes are assigned status indicator ''T,'' because it is not uncommon for patients admitted through the emergency department to observation for chest pain to be followed up with a diagnostic heart catheterization within 24 hours.

Response: This scenario was discussed during the February 2004 APC Panel meeting, although it was not advanced as a formal recommendation. While we are not adopting the commenter's recommendation at this time, we are making final in this final rule with comment period several changes in the requirements for separate payment for observation care, for implementation in CY 2005. We believe further analysis of any impact of such a change, in addition to analysis of the other changes being implemented in CY 2005, is necessary. We note that by the APC Panel may wish to consider this in future meetings.

Comment: One commenter, representing a health system, suggested extensive billing and coding changes to further simplify claims submission for observation services. These suggestions included revision of the definition of HCPCS code G0263 and elimination of HCPCS code G0264 for direct admissions; replacing use of HCPCS code G0244 with a revenue code and CPT codes and letting the OCE determine if the criteria for payment of APC 0339 are met; clarification of billing for postanesthesia care unit (PACU) services; and use of revenue codes to distinguish between observation in a clinic and observation in an emergency department.

Response: We welcome the commenter's suggestions and will endeavor during the next year to evaluate their feasibility and impact of any such changes. However, we recognize that extensive systems changes would be required to implement many of these suggestions, but will consider them for possible implementation in future updates of the OPPS.

After carefully considering the public comments received related to our proposed requirements to receive separate payment for observation services in CY 2005, we are adopting our proposal as final without modification.

BILLING CODE 4120–01–P

Table 38.--CY 2005 Eligible Diagnosis Codes for Billing Observation Services

Required Diagnosis For:	Eligible ICD-9-CM Code	Code Descriptor
Chest Pain	411.0	Postmyocardial infarction syndrome
	411.1	Intermediate coronary syndrome
	411.81	Coronary occlusion without myocardial infarction
	411.89	Other acute ischemic heart disease
	413.0	Angina decubitus
	413.1	Prinzmetal angina
	413.9	Other and unspecified angina pectoris
	786.05	Shortness of breath
	786.50	Chest pain, unspecified
	786.51	Precordial pain
	786.52	Painful respiration
	786.59	Other chest pain
Asthma	493.01	Extrinsic asthma with status asthmaticus
	493.02	Extrinsic asthma with acute exacerbation
	493.11	Intrinsic asthma with status asthmaticus
	493.12	Intrinsic asthma with acute exacerbation
	493.21	Chronic obstructive asthma with status asthmaticus
	493.22	Chronic obstructive asthma with acute exacerbation
	493.91	Asthma, unspecified with status asthmaticus
	493.92	Asthma, unspecified with acute exacerbation
Heart Failure	391.8	Other acute rheumatic heart disease
	398.91	Rheumatic heart failure (congestive)
	402.01	Malignant hypertensive heart disease with congestive heart failure
	402.11	Benign hypertensive heart disease with congestive heart failure
	402.91	Unspecified hypertensive heart disease with congestive heart failure

Required Diagnosis For:	Eligible ICD-9-CM Code	Code Descriptor
	404.01	Malignant hypertensive heart and renal disease with congestive heart failure
	404.03	Malignant hypertensive heart and renal disease with congestive heart and renal failure
	404.11	Benign hypertensive heart and renal disease with congestive heart failure
	404.13	Benign hypertensive heart and renal disease with congestive heart and renal failure
	404.91	Unspecified hypertensive heart and renal disease with congestive heart failure
	404.93	Unspecified hypertensive heart and renal disease with congestive heart and renal failure
	428.0	Congestive heart failure
	428.1	Left heart failure
	428.20	Unspecified systolic heart failure
	428.21	Acute systolic heart failure
	428.22	Chronic systolic heart failure
	428.23	Acute on chronic systolic heart failure
	428.30	Unspecified diastolic heart failure
	428.31	Acute diastolic heart failure
	428.32	Chronic diastolic heart failure
	428.33	Acute on chronic diastolic heart failure
	428.40	Unspecified combined systolic and diastolic heart failure
	428.41	Acute combined systolic and diastolic heart failure
	428.42	Chronic combined systolic and diastolic heart failure
	428.43	Acute on chronic combined systolic and diastolic heart failure
	428.9	Heart failure, unspecified

BILLING CODE 4120–01–C

E. Procedures That Will Be Paid Only as Inpatient Procedures

Before implementation of the OPPS, Medicare paid reasonable costs for services provided in the outpatient department. The claims submitted were subject to medical review by the fiscal intermediaries to determine the appropriateness of providing certain services in the outpatient setting. We did not specify in regulations those services that were appropriate to provide only in the inpatient setting and that, therefore, should be payable only when provided in that setting.

Section 1833(t)(1)(B)(i) of the Act gives the Secretary broad authority to determine the services to be covered and paid for under the OPPS. In the April 7, 2000 final rule with comment period, we identified procedures that are typically provided only in an inpatient setting and, therefore, would not be paid by Medicare under the OPPS (65 FR 18455). These procedures comprise what is referred to as the ''inpatient list.'' The inpatient list specifies those services that are only paid when provided in an inpatient setting. These are services that require inpatient care because of the nature of the procedure, the need for at least 24 hours of postoperative recovery time or monitoring before the patient can be safely discharged, or the underlying physical condition of the patient. As we discussed in the April 7, 2000 final rule with comment period (65 FR 18455) and the November 30, 2001 final rule (66 FR 59856), we use the following criteria when reviewing procedures to determine whether or not they should be moved from the inpatient list and assigned to an APC group for payment under the OPPS:

- Most outpatient departments are equipped to provide the services to the Medicare population.
- The simplest procedure described by the code may be performed in most outpatient departments.
- The procedure is related to codes that we have already removed from the inpatient list.

In the November 1, 2002 final rule (67 FR 66792), we added the following criteria for use in reviewing procedures to determine whether they should be removed from the inpatient list and assigned to an APC group for payment under the OPPS:

- We have determined that the procedure is being performed in multiple hospitals on an outpatient basis; or

• We have determined that the procedure can be appropriately and safely performed in an ASC and is on the list of approved ASC procedures or proposed by us for addition to the ASC list.

In the November 7, 2003 final rule with comment period, we did not implement any changes in our payment policies for the OPPS inpatient list. However, we addressed issues and concerns raised by commenters in response to the August 12, 2003 proposed rule and further clarified payment policies related to the OPPS inpatient list.

At the February 2004 meeting, the APC Panel made the recommendation to remove the following four abscess drainage CPT codes from the inpatient list: 44901, 49021, 49041, and 49061. As discussed in the proposed rule, we agreed with the APC Panel's recommendation and we proposed to remove these four abscess codes from the inpatient list and to assign them to APC 0037 for OPPS payment in CY 2005.

The APC Panel also made a recommendation to either eliminate the inpatient list from the OPPS or to evaluate the current list of procedures for any other appropriate changes. As recommended by the APC Panel, we sought to identify additional procedure codes to propose for removal from the inpatient list, consistent with the criteria listed above. To assist us in identifying procedures that were being widely performed on an outpatient basis for clinical review, we looked for services on the inpatient list that were performed on Medicare beneficiaries in all sites of service other than the hospital inpatient setting approximately 60 percent or more of the time. We relied on CY2003 Medicare Part B Extract and Summary System (BESS) data for this information. We chose 60 percent as a threshold because, in general, we believe that a procedure should be specifically considered for removal from the inpatient list if there is evidence that it is being performed less than one half of the time in the hospital inpatient setting. For procedures where data demonstrate that they are being delivered to Medicare beneficiaries in a safe and appropriate manner on an outpatient basis in a variety of different hospitals, we believe that it is reasonable to consider the removal of these procedures from the inpatient list. After further clinical evaluation of codes that met our 60-percent threshold to ensure that these procedures met our other criteria for removal from the inpatient list and were truly appropriate for consideration, we proposed to place 20 procedures that are on the inpatient list for the CY 2004 OPPS into clinical APCs for payment under the OPPS for CY 2005. We proposed to assign all of these codes the status indicator ''T.'' Two additional services, CPT codes 00174 and 00928, were proposed to be removed and assigned a status indicator ''N'' because, under the OPPS, anesthesia codes are packaged into the procedures with which they are billed.

We proposed not to accept the APC Panel's recommendation to completely eliminate the inpatient list for CY 2005. We solicited comments, especially from professional societies and hospitals, on whether any procedures on the CY 2005 proposed inpatient list were appropriate for removal and whether any other such procedures should be separately paid under the OPPS. We also asked commenters who recommend that a procedure that is currently on the inpatient list be reclassified to an APC to include evidence (preferably from peer-reviewed medical literature) that the procedure is being performed on an outpatient basis in a safe and effective manner. We requested that commenters suggest an appropriate APC assignment for the procedure and furnish supporting data to assist us in determining, based on comments, if the procedure could be payable under the OPPS in CY 2005.

We received a number of public comments on our proposal to retain the inpatient list and to delete 22 procedure codes from the inpatient list and our solicitation of additional procedures currently on the inpatient list that should be reclassified to an APC, with supporting evidence.

Comment: One commenter recommended that CMS remove the following CPT codes for spinal procedures currently on the inpatient list: CPT codes 22554, 22585, 22840, 22842, 22845, 22846, 22855, 63043, 63044, 63075, and 63076. The commenter submitted several published articles related to the performance of these procedures in the hospital outpatient setting.

Response: After careful review of the list of procedures and the accompanying articles submitted by the commenter, we believe these procedures should remain on the inpatient list for CY 2005. All of the procedures recommended by the commenter for removal were performed more than 90 percent of the time in the hospital inpatient setting on Medicare beneficiaries according to our BESS data. There was no evidence submitted to demonstrate that the procedures were being provided safely and effectively to patients demographically similar to Medicare beneficiaries in multiple hospitals in the outpatient hospital setting. We are concerned that none of the published studies, with the exception of one, included patients in the general Medicare-eligible age range of 65 years or older. We do not believe that experience in providing these major spinal procedures to young and middle-aged adults in the outpatient setting can necessarily be generalized as safe and appropriate for typical Medicare beneficiaries.

Comment: One commenter requested that CPT code 58260 (Vaginal hysterectomy) be removed from the inpatient list. The commenter stated that surgeons at the hospital believed that performing this procedure in an outpatient setting has been a standard of practice for a long time.

Response: According to our BESS data, the procedure described by CPT 58260 was performed more than 90 percent of the time in the hospital inpatient setting on Medicare beneficiaries. There was no evidence submitted by the commenter to demonstrate that this procedure was being provided safely and effectively to patients demographically similar to Medicare beneficiaries in multiple hospitals in the outpatient hospital setting. Thus, we believe this procedure should remain on the inpatient list.

Comment: Several commenters, including a hospital association, recommended the elimination of the inpatient list, echoing the APC Panel's recommendation from February 2004. The commenters stated that, while it is appropriate to leave the decision of site of service to the physicians, hospitals are unable to receive payment for services on this list that are performed in the hospital outpatient setting. One commenter argued that the current policy penalizes beneficiaries because they must be admitted as inpatients to receive these procedures, rather than receiving these services in an outpatient setting and being allowed to return home.

Response: In the November 7, 2003 final rule (67 FR 66797), we specified the inpatient list to include services that are payable by Medicare only when provided in an inpatient setting. These are services that generally require inpatient care because of the nature of the procedure, the need for at least 24 hours of postoperative recovery time or monitoring before the patient can be safely discharged, or the underlying physical condition of the Medicare beneficiary. We also listed in the November 7, 2003 final rule (68 FR 63466) the criteria that we use to evaluate whether a procedure should be

removed from the inpatient list. We do not believe that all services can be safely and effectively delivered to Medicare beneficiaries in the outpatient setting. We are concerned that elimination of the inpatient list could result in unsafe or uncomfortable care for Medicare beneficiaries. Among the potential results are long observation stays after some procedures and imposition of OPPS copayments, which could differ significantly from a patient's inpatient cost-sharing responsibilities.

We believe that it is important for hospitals to educate physicians on Medicare services provided under the OPPS to avoid inadvertently providing services in an outpatient setting that are more appropriate to an inpatient setting.

Comment: A few commenters recommended that CMS consider developing an appeals process to address circumstances in which payment for a procedure provided on an outpatient basis is denied because it is on the inpatient list.

Response: We would like to emphasize that procedures on the inpatient list that are performed on a patient whose status is that of an outpatient are not payable under Medicare. CPT codes assigned a status indicator of ''C,'' such as those listed in Addendum E, are not payable under the OPPS, except under conditions described in the November 1, 2002 final rule (67 FR 66799).

Comment: A few commenters requested that CMS clarify the criteria and the sources of data used to determine whether a procedure is appropriate for removal from the list. Other commenters expressed concern with the 60-percent threshold criterion used to evaluate codes for removal from the inpatient list. One commenter recommended that CMS revise its criteria because major teaching hospital outpatient departments often are the first places to perform services that had previously been performed only in the inpatient setting. This commenter argued that there would most likely be a time gap between when these services could be performed safely in teaching hospital outpatient departments and their dissemination to most hospitals' outpatient departments. The commenter recommended that the determining factor regarding whether a procedure should be removed from the inpatient list should be whether the procedure can be performed safely in an outpatient department and not the number of outpatient departments in which the procedure is performed.

Response: We recognize that teaching hospitals may have more technologically advanced equipment, more experienced staff, and greater resources than nonteaching hospitals. These characteristics may lead teaching hospitals to be the first places to perform on an outpatient basis some procedures on the inpatient list. On the other hand, community, nonteaching hospitals have pioneered the movement of some procedures to the outpatient setting, in part because of their responsiveness to identified local needs or their development of specific pathways for care. We cannot expect that all hospitals will have the necessary staff experience, resources, equipment, and interest to move many procedures to the outpatient setting. For these reasons, we do not believe that procedures that have been demonstrated to be performed safely and effectively on an outpatient basis in any single hospital or small group of hospitals alone are routinely appropriate for removal from the inpatient list.

In addition, we want to clarify that the 60-percent threshold discussed in our proposed rule is not an established criterion that we use to determine whether a procedure is appropriate for removal from the inpatient list. The 60-percent threshold was used as an operational tool to identify from the entire inpatient list those procedures that we believe are currently already being performed in the outpatient setting a majority of the time based on our CY 2003 BESS data, so that these services could then undergo clinical review against the criteria for removal from the inpatient list. The BESS database aggregates all physician billing throughout the year for each service provided to Medicare beneficiaries and billed under the Medicare Physician Fee Schedule. Summary data include information regarding the site of service (hospital inpatient, hospital outpatient, physician's office, among others) and specialty of the physician performing the service. We emphasize that our review of the codes recommended by the commenters for removal from the list was not based on this threshold. Rather, our determination was based on the set of criteria described in the November 7, 2003 final rule (68 FR 63466).

We encourage hospitals and physicians to submit recommendations regarding procedures they believe meet our criteria for removal from the inpatient list at any time. We ask that evidence be submitted to demonstrate that the procedure is being performed on an outpatient basis in a safe and appropriate manner in a variety of different types of hospitals.

Comment: Numerous commenters supported the proposed removal of the 22 CPT codes from the inpatient list. In addition, a few commenters expressed support for retaining the list of inpatient procedures. One commenter stated that eliminating the list could create an increase in inappropriate observation stays by assigning observation status to patients whose status should have been inpatient.

Response: We appreciate the commenters' support.

In this final rule, we are finalizing our proposed retention of the inpatient list for the OPPS. We also are finalizing our proposal to remove 22 procedures from the CY 2004 list. Table 39 below lists the procedure codes that are being removed from the inpatient list and their APC assignments, effective January 1, 2005.

BILLING CODE 4120–01–P

Table 39.--Procedure Codes Removed From Inpatient List and APC Assignment, Effective January 1, 2005

HCPCS	Description	APC Assignment	SI
00174	Anesth, pharyngeal surgery	n/a	N
00928	Anesth, removal of testis	n/a	N
21356	Treat cheek bone fracture	0254	T
21557	Remove tumor, neck/chest	0022	T
22222	Revision of thorax spine	0208	T
24149	Radical resection of elbow	0050	T
31292	Nasal/sinus endoscopy, surg	0075	T
43510	Surgical opening of stomach	0141	T

49061	Drain, percut, retroper absc	0037	T

BILLING CODE 4120–01–C

F. Hospital Coding for Evaluation and Management Services

1. Background

Currently, for claims processing purposes, we direct hospitals to use the CPT codes used by physicians to report clinic and emergency department visits on claims paid under the OPPS. However, as discussed in the proposed rule, we have received comments suggesting that the CPT codes are insufficient to describe the range and mix of services provided to patients in the clinic and emergency department setting because they are defined to reflect only the activities of physicians (for example, ongoing nursing care, and patient preparation for diagnostic tests). For both clinic and emergency department visits, there are currently five levels of care. To facilitate proper coding, we require each hospital to create an internal set of guidelines to determine what level of visit to report for each patient (April 7, 2000, final rule with comment period (65 FR 18434)).

We have continued our efforts to address the situation of proper coding of clinic and emergency department visits to ensure proper Medicare payments to hospitals. Commenters who responded to the August 24, 2001 OPPS proposed rule (66 FR 44672) recommended that we retain the existing evaluation and management coding system until facility-specific evaluation and management codes for emergency department and clinic visits, along with national coding guidelines, were established. Commenters also recommended that we convene a panel of experts to develop codes and guidelines that are simple to understand and to implement, and that are compliant with the HIPAA requirements. We agreed with these commenters, and in our November 1, 2002 OPPS final rule (67 FR 66792), we stated that we believed the most appropriate forum for development of new code definitions and guidelines would be an independent expert panel that could provide information and data to us. We believed that, in light of the expertise of organizations such as the AHA and the AHIMA, these organizations were particularly well equipped to do so and to provide ongoing education to providers.

The AHA and the AHIMA, on their own initiative, convened an independent expert panel comprised of members of the AHA and AHIMA, as well as representatives of the American College of Emergency Physicians, the Emergency Nurses Association, and the American Organization of Nurse Executives, to develop code descriptions and guidelines for hospital emergency department and clinic visits and to provide us with the information and data. In June 2003, we received the panel's input concerning a set of national coding guidelines for emergency and clinic visits.

As we noted in the proposed rule, we are still considering the panel's set of coding guidelines. Although we did not propose the panel's set of coding guidelines, we received several comments on the Panel's coding guidelines and are continuing to review these public comments. In the November 7, 2003 OPPS final rule with comment period (68 FR 63463), we also indicated that we would implement new evaluation and management codes only when we are also ready to implement guidelines for their use. As we have not yet proposed new evaluation and management codes, we again note that we will allow ample opportunity for public comment, systems changes, and provider education before implementing such new coding requirements.

2. Proposal for Evaluation and Management Guidelines

In the November 7, 2003 OPPS final rule with comment period (68 FR 63463), we discussed our primary concerns and direction for developing the proposed coding guidelines for emergency department and clinic visits and indicated our plans to make available for public comment the proposed coding guidelines that we are considering through the CMS OPPS Web site as soon as we have completed them.

We received a number of comments on our proposal.

Comment: Many commenters supported the development of evaluation and management codes and guidelines in the hospital outpatient setting and urged CMS to move forward as quickly as possible with reviewing the guidelines presented by the AHA and AHIMA Evaluation and Management Panel. Several commenters expressed concern that the current lack of uniformity impairs CMS' ability to gather consistent, meaningful data on services provided in the emergency department and hospital clinics. Commenters reminded CMS of its commitment to make the evaluation and management codes and guidelines available for public comment and to provide at least 6 to 12 months notice prior to implementation of the new evaluation and management codes and guidelines.

Response: As stated in the August 16, 2004 OPPS proposed rule, we intend to make available for public comment the proposed coding guidelines that we are considering through the CMS OPPS Web site as soon as we have completed them. As stated in the August 16, 2004 OPPS proposed rule, we will notify the public through our ''listserve'' when the proposed guidelines will become available. To subscribe to this listserve, individuals should access the following Web site: *http://www.cms.hhs.gov/medlearn/listserv.asp* and follow the directions to the OPPS listserve. When we post the proposed guidelines on the Web site, we will provide ample opportunity for the public to comment.

In addition, we will provide ample time to train clinicians and coders on the use of new codes and guidelines and for hospitals to modify their systems. We anticipate providing at least 6 to 12 months notice prior to implementation of the new evaluation and management codes and guidelines. We will continue working to develop and test the new codes even though we have not yet made plans for their implementation.

G. Brachytherapy Payment Issues Related to Pub. L. 108–173

1. Payment for Brachytherapy Sources (Section 621(b) of Pub. L. 108–173)

Sections 621(b)(1) and (b)(2) of Pub. L. 108–173 amended the Act by adding section 1833(t)(16)(C) and section 1833(t)(2)(H), respectively, to establish separate payment for devices of brachytherapy consisting of a seed or seeds (or radioactive source) based on a hospital's charges for the service, adjusted to cost. Charges for the brachytherapy devices may not be used in determining any outlier payments under the OPPS. In addition, consistent with our practice under the OPPS to exclude items paid at cost from budget neutrality consideration, these items must be excluded from budget neutrality as well. The period of payment under this provision is for brachytherapy sources furnished from January 1, 2004 through December 31, 2006.

In the OPPS interim final rule with comment period published on January 6, 2004 (69 FR 827), we implemented sections 621(b)(1) and 621(b)(2)(C) of Pub. L. 108–173. We stated that we will pay for the brachytherapy sources listed in Table 4 of the interim final rule with comment period (69 FR 828) on a cost basis, as required by the statute. The status indicator for brachytherapy sources was changed to ''H.'' The definition of status indicator ''H'' was for pass-through payment only for devices, but the brachytherapy sources affected by new sections 1833(t)(16)(C) and 1833(t)(2)(H) of the Act are not pass-through device categories. Therefore, we also changed, for CY 2004, the definition of payment status indicator ''H'' to include nonpass-through brachytherapy sources paid on a cost basis. This use of status indicator ''H'' was a pragmatic decision that allowed us to pay for brachytherapy sources in accordance with new section 1833(t)(16)(C) of the Act, effective January 1, 2004, without having to modify our claims processing systems. We stated in the January 6, 2004 interim final rule with comment period that we would revisit the use and definition of status indicator ''H'' for this purpose in the OPPS update for CY 2005. Therefore, in the August 16, 2004 proposed rule, we solicited further comments on this policy.

We received several public comments on our August 16, 2004 proposal and on the January 6, 2004 interim final rule with comment period.

Comment: One commenter, a hospital association, recommended that CMS establish a new status indicator for brachytherapy sources paid on a cost basis other than the status indicator ''H'', which is also used for device categories paid on a transitional pass-through basis. The commenter noted that, because brachytherapy sources are subject to coinsurance and devices paid on a pass-through basis are not, a separate status indicator is needed for consistency in the classification of status indicators.

Response: The commenter is correct that beneficiaries are not subject to copayment for the cost of device categories with pass-through payment, while beneficiaries are subject to copayment for other separately paid brachytherapy sources. However, our systems' logic incorporates this difference in copayment for pass-through device categories versus nonpass-through brachytherapy sources, even though the status indicator for each is ''H''. Therefore, we are not establishing a separate status indicator at this time. However, we will consider making a change if the need arises.

Comment: A number of commenters on the January 6, 2004 interim final rule with comment period urged us to continue to use, for CY 2005, the C-codes and descriptors that we published in that interim final rule with comment period (69 FR 828) for both prostate and nonprostate brachytherapy that we implemented for CY 2004. Several commenters also suggested that we add the phrase ''per source'' to each of the brachytherapy source descriptors to reinforce that each source equals one unit of payment.

Response: We agree and are retaining the current brachytherapy source C-codes and descriptors with which hospitals are familiar. We have been using these codes and descriptors since we unpackaged brachytherapy sources when the pass-through payment for

these sources ended on December 31, 2002, in addition to other C-codes that we established either for pass-through payment (for example, C2632) or nonpass-through payment (for example, C2633). We also note that, in the August 16, 2004 proposed rule, we proposed adding ''per source'' to each of the applicable brachytherapy descriptors, similar to the APC Panel's recommendation (and the commenter's suggestion) to do so for two new high-activity source categories, discussed below. We are adopting this clarification as final policy in this final rule with comment period and adding ''per source'' to the brachytherapy source descriptors that are paid on a per unit basis for each source.

2. HCPCS Codes and APC Assignments for Brachytherapy Sources

As we indicated in the January 6, 2004 interim final rule with comment period, we began payment for the brachytherapy source in HCPCS code C1717 (Brachytx source, HCR lr-192) based on the hospital's charge adjusted to cost beginning January 1, 2004. Prior to enactment of Pub. L. 108–173, these sources were paid as packaged services in APC 0313. As a result of the requirement under Pub. L. 108–173 to pay for C1717 separately, we adjusted the payment rate for APC 0313, Brachytherapy, to reflect the unpackaging of the brachytherapy source. We received no public comments on this methodology, and we are finalizing the payment methodology in this final rule with comment period.

Section 1833(t)(2)(H) of the Act, as added by section 621(b)(2)(C) of Pub. L. 108–173, mandated the creation of separate groups of covered OPD services that classify brachytherapy devices separately from other services or groups of services. The additional groups must be created in a manner that reflects the number, isotope, and radioactive intensity of the devices of brachytherapy furnished, including separate groups for Palladium-103 and Iodine-125 devices.

We invited the public to submit recommendations for new codes to describe brachytherapy sources in a manner that reflects the number, radioisotope, and radioactive intensity of the sources. We requested commenting parties to provide a detailed rationale to support recommended new codes. We stated that we would propose appropriate changes in codes for brachytherapy sources in the CY 2005 OPPS update.

At its meetings of February 18 through 20, 2004, the APC Panel heard from parties that recommended the addition of two new brachytherapy codes and HCPCS codes for high activity Iodine-125 and high activity Paladium-103. The APC Panel, in turn, recommended that CMS establish new HCPCS codes and new APCs, on a per source basis, for these two brachytherapy sources.

We considered this recommendation and agreed with the APC Panel. Therefore, in the August 16, 2004 proposed rule, we proposed to establish the following two new brachytherapy source codes for CY 2005:

- Cxxx1 Brachytherapy source, high activity, Iodine-125, per source.
- Cxxx2 Brachytherapy source, high activity, Paladium-103, per source.

In addition, we believe the APC Panel's recommendation to establish new HCPCS codes that would distinguish high activity Iodine-125 from high activity Paladium-103 on a per source basis should be implemented for other brachytherapy code descriptors, as well. Therefore, as stated previously, we proposed to include ''per source'' in the HCPCS code descriptors for all those brachytherapy source descriptors for which units of payment are not already delineated.

Further, a new linear source Paladium-103 came to our attention in CY 2003 by means of an application for a new device category for pass-through payment. While we declined to create a new category for pass-through payment, we believe that this source falls under the provisions of Pub. L. 108–173 for separate cost-based payment as a brachytherapy source. Accordingly, we proposed to add, for separate payment, the following code of linear source Paladium-103: Cxxx3 Brachytherapy linear source, Paladium-103, per 1 mm.

We received a number of public comments on our August 16, 2004 proposed rule and on the January 6, 2004 interim final rule with comment period, which deal with these issues.

Comment: In response to the January 6, 2004 interim final rule with comment period, several commenters recommended adding two new brachytherapy source codes and descriptors, to reflect the ranges in radioactive intensities that are frequently required in clinical practice for Iodine-125 and Palladium-103. The recommendations are for high activity payment codes for these two isotopes. The commenters recommended the following specific descriptors:

Cxxx1 Brachytherapy source, Low Dose Rate, High Activity Iodine-125, greater than 1.01 mCi (NIST), per source.

Cxxx2 Brachytherapy source, Low Dose Rate, High Activity Palladium-103, greater than 2.2 mCi (NIST), per source.

The commenters suggested that CMS include in the two proposed APCs and HCPCS codes an appropriate measurement of minimum radioactivity in mCi, based on calibrations establish by the National Institute of Standards and Technology (NIST).

In response to the August 16, 2004 OPPS proposed rule, one commenter agreed with our proposal to create two new brachytherapy codes for high activity Iodine-125 and Palladium-103 sources, but recommended that we change the proposed descriptors. The commenter again recommended that we add the mCi (NIST) descriptions for the high activity ranges to these new high activity Iodine-125 and Palladium-103 sources we proposed.

Response: During its meetings of February 18 through 20, 2004, the APC Panel recommended that CMS establish two new HCPCS codes and APCs for High Activity Iodine-125 and High Activity Palladium-103 on a per source basis, but did not recommend adoption of other specific language regarding mCi in the descriptions above. As previously mentioned, in the August 16, 2004 proposed rule, we noted the APC Panel's recommendation to establish two new HCPCS codes and APCs for these high activity sources, as noted above.

We agree that, with the establishment of these new codes, which are the first to specify high activity, we should provide an appropriate quantitative measurement of minimum source activity to specifically differentiate the high activity sources from other sources with differences in radioactive intensity for the two isotopes.

Accordingly, we are accepting the commenter's suggestion to utilize the calibrations established by the NIST to specify the high activity ranges.

The final code descriptors are:

C2634 Brachytherapy source, High Activity Iodine-125, greater than 1.01 mCi (NIST), per source.

C2635 Brachytherapy source, High Activity Palladium-103, greater than 2.2 mCi (NIST), per source.

Comment: One commenter objected to our proposal to create the two high activity brachytherapy codes based on radioactive intensity and claimed that there is uncertainty regarding availability of radioactive substance and that providers will need to distinguish between low and high activity without a definition of high activity.

Response: We have now defined high activity level in our code descriptors for C2634 and C2635, using calibrations

established by the NIST. We will implement these codes with the definitions described herein.

Comment: One commenter on the January 6, 2004 interim final rule with comment period suggested that we include ''low dose rate'' into the descriptors for each of the existing APCS for which the low dose rate may be applicable, to clarify that those descriptors refer to ''low dose rate'' brachytherapy.

Response: We do not believe that changes in the descriptors of all APCs and HCPCS codes are warranted without evidence that there are alternative low and high dose rate sources requiring a high or low dose rate indicator in the C-code descriptor to distinguish among the sources. In this manner, if there are both low and high dose rate forms, they may be paid on a cost basis for brachytherapy sources described by the same C-code until a new code is indicated for a high dose rate source. If we receive evidence that high dose rate sources are used in clinical practice, we will determine at that time whether to establish new codes and APCs and whether the existing codes need to be modified in some way.

Comment: One commenter on the January 6, 2004 interim final rule with comment period recommended that we establish a new source category for Brachytherapy linear source, Palladium-103, per 10 millimeter length. The commenter claimed that this linear source is provided in 10-millimeter lengths from 10 to 60 millimeters, and not on a ''per seed'' basis. Although the commenter indicated there were dosimetry studies comparing the Palladium-103 linear source to the per seed form, the commenter recommended against using the same Palladium-103 code for both sources, claiming it would cause confusion in billing and cost reporting.

Response: We agree that a separate code for Palladium-103 linear source should be established for payment under Pub. L. 108–173. In our proposed rule, we indicated that we were aware of a new linear source Palladium-103, which came to our attention by means of an application for a new device category for pass-through payment. We stated that, while we decided not to create a new category for pass-through payment, we believed that the new linear source falls under the provisions of Pub. L. 108–173 for separate cost-based payment as a brachytherapy source. Therefore, we proposed to add the following code for linear source Palladium-103: Cxxx3 Brachytherapy linear source, Palladium-103, per 1 mm. We believe that the 1 millimeter increments of payment affords greater flexibility for describing other linear source Palladium-103 sources that may enter the market and be sold in other than 10 mm increments.

We received several public comments in support of our proposed addition and descriptor of Brachytherapy linear source, Palladium-103, per 1 mm. Therefore, in this final rule with comment period, we are establishing the new code and descriptor for this new brachytherapy source, to be paid at cost:

C2636 Brachytherapy linear source, Palladium-103, per 1 mm.

Comment: One commenter on the January 6, 2004 interim final rule with comment period stated that CMS should pay for codes C1715 (Brachytherapy needle) and C1728 (Catheter, brachytherapy seed administration) on a cost basis as well as brachytherapy sources, asserting that these are brachytherapy devices.

Response: Brachytherapy needles and catheters for administration of sources are not brachytherapy devices under section 621(b) of Pub. L. 108–173. Section 1833(t)(16)(C) of the Act specifies that, to qualify for payment at charges reduced to cost, a device of brachytherapy must consist of ''a seed or seeds (or radioactive sources).'' The special payment provision does not include needles or catheters in the definition of devices of brachytherapy. Therefore, in this final rule with comment period, we are not establishing new payment categories for these devices that were formerly paid as transitional pass-through devices.

Comment: One commenter, a developer of a brachytherapy radiation system, recommended that CMS create a C-code and APC for miscellaneous brachytherapy sources for payment of new brachytherapy sources at cost in accordance with Pub. L. 108–173. This commenter contended that such a miscellaneous source code would allow CMS to pay hospitals for new brachytherapy sources in the interval between FDA approval of the source and the development of specific coding for new sources.

Response: Section 621(b) of Pub. L. 108–173 requires us to establish new codes and separate payment for specific seed or seeds or other radioactive sources of brachytherapy. We do not believe that the statute contemplates a separate payment for an over-inclusive (''catch-all'') category such as a miscellaneous brachytherapy source code. Such a category would inappropriately include all new brachytherapy sources until separate payment is established. Moreover, we note that hospitals and brachytherapy source manufacturers might be able to use a miscellaneous category to bill Medicare for brachytherapy systems that do not meet our standard of a separately payable radioactive source of brachytherapy. In addition, new brachytherapy sources may be added more frequently than annually, when we are able to add new codes and payment instructions to our electronic claims processing systems. Therefore, in this final rule with comment period, we are not creating a new code of miscellaneous brachytherapy sources.

Table 40 provides a complete listing of the HCPCS codes, long descriptors, APC assignments and status indicators that we will use for brachytherapy sources paid under the OPPS in CY 2005.

TABLE 40.—SEPARATELY PAYABLE BRACHYTHERAPY SOURCES

HCPCS	Long descriptor	APC	APC title	New status indicator
C1716	Brachytherapy source, Gold 198, per source	1716	Brachytx source, Gold 198	H
C1717	Brachytherapy source, High Dose Rate Iridium 192, per source.	1717	Brachytx source, HDR Ir-192	H
C1718	Brachytherapy source, Iodine 125, per source	1718	Brachytx source, Iodine 125	H
C1719	Brachytherapy source, Non-High Dose Rate Iridium 192, per source.	1719	Brachytx source, Non-HDR Ir-192	H
C1720	Brachytherapy source, Palladium 103, per source	1720	Brachytx source, Palladium 103	H
C2616	Brachytherapy source, Yttrium-90, per source	2616	Brachytx source, Yttrium-90	H
C2632*	Brachytherapy solution, Iodine125, per mCi	2632	Brachytx sol, I–125, per mCi	H
C2633	Brachytherapy source, Cesium-131, per source	2633	Brachytx source, Cesium-131	H

TABLE 40.—SEPARATELY PAYABLE BRACHYTHERAPY SOURCES—Continued

HCPCS	Long descriptor	APC	APC title	New status indicator
C2634**	Brachytherapy source, High Activity, Iodine-125, greater than 1.01 mCi (NIST), per source.	2634	Brachytx source, HA, I–125	H
C2635**	Brachytherapy source, High Activity, Palladium-103, greater than 2.2 mCi (NIST), per source.	2635	Brachytx source, HA, P–103	H
C2636**	Brachytherapy linear source, Palladium-103, per 1MM	2636	Brachytx linear source, P–103	H

* Currently paid as a pass-through device category, scheduled to expire from pass-through payment as of January 1, 2005.
** Newly created brachytherapy payment codes beginning January 1, 2005.

Comment: A few commenters requested that CMS discuss in the OPPS final rule the process for adding other new brachytherapy devices for qualification under the separate cost-based payment methodology under Pub. L. 108–173. The commenters urged CMS to add new brachytherapy devices for separate cost-based payment on a quarterly basis, rather than annually.

Response: In the OPPS interim final rule published on January 6, 2004 that implemented the brachytherapy provisions of Pub. L. 108–173 for CY 2004, we invited the public to submit recommendations for new codes to describe brachytherapy sources in a manner reflecting the number, radioisotope, and radioactivity intensity of the sources (69 FR 828). We requested that commenters provide a detailed rationale to support recommended new codes. The public may send such recommendations to the Division of Outpatient Care, Mailstop C4–05–17, Centers for Medicare and Medicaid Services, 7500 Security Blvd., 21244. We will endeavor to add new brachytherapy source codes and descriptors to our systems for payment on a quarterly rather than an annual basis.

H. Payment for APC 0375, Ancillary Outpatient Services When Patient Expires

In CY 2003, we implemented a new modifier –CA, Procedure payable only in the inpatient setting when performed emergently on an outpatient who dies before admission. The purpose of this modifier is to allow payment, under certain conditions, for outpatient services on a claim that have the same date of service as a HCPCS code with status indicator ''C'' that is billed with modifier –CA. When a procedure with status indicator ''C'' (inpatient services not payable under the OPPS) was billed with modifier –CA, we made payment of a fixed amount, under New Technology APC 0977.

In the November 7, 2003 final rule with comment period, we implemented APC 0375 to pay for services furnished in CY 2004 on the same date billed for a procedure code with modifier –CA (68 FR 63467). We were concerned that our policy of paying a fixed amount under a new technology APC for otherwise payable outpatient services furnished on the same date of service that a procedure with status indicator ''C'' is performed emergently on an outpatient would not result in appropriate payment for these services. That is, continuing to make payment under a new technology APC would not allow us to establish a relative payment weight for the services, subject to recalibration based on actual hospital costs.

We implemented a payment rate of $1,150 for APC 0375, which is the payment amount for the restructured New Technology—Level XIII, APC 1513, that replaced APC 0977, in CY 2004. We also stated that for the CY 2005 update of the OPPS, we would calculate a median cost and relative payment weight for APC 0375 using charge data from CY 2003 claims for line items with a HCPC code and status indicator ''V,'' ''S,'' ''T,'' ''X,'' ''N,'' ''K,'' ''G,'' and ''H,'' in addition to charges for revenue codes without a HCPCS code, that have the same date of service reported for a procedure billed with modifier –CA. We would then determine whether to set payment for APC 0375 based on our claims data or continue a fixed payment rate for these special services.

In accordance with this methodology, for CY 2005 we reviewed the services on the 18 claims that reported modifier –CA in CY 2003. We calculated a median cost for the aggregated payable services on the 18 claims reporting modifier –CA in the amount of $2,804.18. The mix of outpatient services that were reported appeared reasonable for a patient with an emergent condition requiring immediate medical intervention, and revealed a wide range of costs, which would also be expected. As we indicated in the August 16, 2004 proposed rule, we proposed to set the payment rate for APC 0375 in accordance with the same methodology we have followed to set payment rates for the other procedural APCS in CY 2005, based on the relative payment weight calculated for APC 0375.

Comment: A few commenters were concerned whether the proposed rate of $2,757.68 for CY 2005 appropriately reflects the costs incurred by hospitals in cases where the –CA modifier is reported and requested that CMS review the rate and adjust it accordingly for CY 2006.

Response: We appreciate the commenters' concerns. Services with a –CA modifier appended are paid under APC 0375. As we explained in our August 16, 2004 proposed rule, the proposed rate of $2,757.68 for CY 2005 was calculated using actual claims billed in CY 2003. The final payment rate for CY 2005, using the updated data file, is calculated as $3,214.22. As we stated previously, review of the claims data revealed a reasonable mix of outpatient services that a hospital could be expected to furnish during an encounter with a patient with an emergent condition requiring immediate medical intervention, as well as cases with a wide range of costs. We will continue to monitor the appropriateness of this payment rate as we develop future rules.

VIII. Conversion Factor Update for CY 2005

Section 1833(t)(3)(C)(ii) of the Act requires us to update the conversion factor used to determine payment rates under the OPPS on an annual basis. Section 1833(t)(3)(C)(iv) of the Act provides that, for CY 2005, the update is equal to the hospital inpatient market basket percentage increase applicable to hospital discharges under section 1886(b)(3)(B)(iii) of the Act.

The forecast of the hospital market basket increase for FY 2005 published in the IPPS final rule on August 11, 2004 is 3.3 percent (69 FR 49272), the same as the forecast published in the IPPS proposed rule on May 18, 2004 (69 FR 28374) and referenced in the CY 2005 OPPS August 16, 2004 proposed rule. To set the OPPS conversion factor

for CY 2005, we increased the CY 2004 conversion factor of $54.561, as specified in the November 7, 2003 final rule with comment period (68 FR 63459), by 3.3 percent.

In accordance with section 1833(t)(9)(B) of the Act, we further adjusted the conversion factor for CY 2004 to ensure that the revisions we are making to our updates by means of the wage index are made on a budget-neutral basis. For the OPPS proposed rule, we calculated a budget neutrality factor of 1.001 for wage index changes by comparing total payments from our simulation model using the FY 2005 IPPS wage index values to those payments using the FY 2004 IPPS wage index values. For this final rule with comment period, we calculated a budget neutrality factor of 0.9986 for wage index changes by comparing total payments from our simulation model using the revised final FY 2005 IPPS wage index values to those payments using the current (FY 2004) IPPS wage index values. In addition, for CY 2005, allowed pass-through payments have decreased to 0.10 percent of total OPPS payments, down from 1.3 percent in CY 2004. The conversion factor is also adjusted by the difference in estimated pass-through payments of 1.20 percent.

The market basket increase update factor of 3.3 percent for CY 2005, the required wage index budget neutrality adjustment of approximately 0.9986, and the 1.20 percent adjustment to the pass-through estimate result in a conversion factor for CY 2005 of $56.983.

We did not receive any public comments on the proposed conversion factor update for CY 2005.

IX. Wage Index Changes for CY 2005

Section 1833(t)(2)(D) of the Act requires the Secretary to determine a wage adjustment factor to adjust, for geographic wage differences, the portion of the OPPS payment rate and the copayment standardized amount attributable to labor and labor-related cost. This adjustment must be made in a budget neutral manner. As we have done in prior years, we proposed to adopt the IPPS wage indices and extend these wage indices to TEFRA hospitals that participate in the OPPS but not the IPPS.

As discussed in the proposed rule and finalized in section III.B. of this preamble, we standardize 60 percent of estimated costs (labor-related costs) for geographic area wage variation using the IPPS wage indices that are calculated prior to adjustments for reclassification to remove the effects of differences in area wage levels in determining the OPPS payment rate and the copayment standardized amount.

As published in the original OPPS April 7, 2000 final rule (65 FR 18545), OPPS has consistently adopted the final IPPS wage indices as the wage indices for adjusting the OPPS standard payment amounts for labor market differences. As initially explained in the September 8, 1998 OPPS proposed rule, we believed and continue to believe that using the IPPS wage index as a source of an adjustment factor for OPPS is reasonable and logical, given the inseparable, subordinate status of the hospital outpatient within the hospital overall. We also continue to believe that individual hospitals do not distinguish in hiring practices between their inpatient and outpatient departments and that hospitals face one labor market for both inpatient and outpatient services. Further, because hospital staff frequently provide services in both the inpatient and outpatient departments, labor costs associated with the hospital outpatient services are generally reflected in the hospital wage and salary data that are the basis of the IPPS wage index. In accordance with section 1886(d)(3)(E) of the Act, the IPPS wage index is updated annually. In the August 16, 2004 proposed rule, we proposed to use the corrected proposed FY 2005 hospital IPPS wage index for urban areas published in the **Federal Register** on June 25, 2004 (69 FR 35919) and the proposed FY 2005 hospital IPPS wage index for rural areas published in the **Federal Register** on May 18, 2004 (69 FR 28580) to determine the wage adjustments for the OPPS payment rate and the copayment standardized amount for CY 2005.

We customarily publish the wage index tables in the final rule for the OPPS update. We are not including the tables in this final rule with comment period as CMS is in the process of reviewing the wage indices for IPPS. This review may impact the wage index values. We emphasize that our methodology for calculating the wage index for the OPPS has not changed. As noted above, our policy has consistently been to adopt the IPPS wage index for purposes of payment under the OPPS. We will publish finalized tables in a later **Federal Register** document.

We note that the FY 2005 IPPS wage indices reflect a number of changes as a result of the new OMB standards for defining geographic statistical areas, the implementation of an occupational mix adjustment as part of the wage index, and new wage adjustments provided for under Pub. L. 108–173. The following is a brief summary of the changes in the FY 2005 IPPS wage indices and any adjustments that we are applying to the OPPS for CY 2005. (We refer the reader to the August 11, 2004 IPPS final rule (69 FR 49026–49070) and the October 7, 2004 IPPS correction notice (69 FR 60242) for a fuller discussion of the changes to the wage indices.)

A. The use of the new Core Based Statistical Areas (CBSAs) issued by the Office of Management and Budget (OMB) as revised standards for designating geographical statistical areas based on the 2000 Census data, to define labor market areas for hospitals for purposes of the IPPS wage index. The OMB revised standards were published in the **Federal Register** on December 27, 2000 (65 FR 82235), and OMB announced the new CBSAs on June 6, 2003, through an OMB bulletin. In the FY 2005 hospital IPPS final rule, CMS adopted the new OMB definitions for wage index purposes. We treated, as urban, hospitals located in MSAs and treated, as rural, hospitals that are located in Micropolitan Areas or Outside CBSAs. To help alleviate the decreased payments for previously urban hospitals that became rural under the new MSA definitions, we allowed these hospitals to maintain their assignment to the MSA where they previously had been located for the 3-year period from FY 2005 through FY 2007. To be consistent, we are applying the same criterion to TEFRA hospitals paid under the OPPS but not under the IPPS and to maintain that MSA designation for determining a wage index for the next 3 years. This policy will impact four TEFRA providers for purposes of OPPS payment. In addition to this ''hold harmless'' provision, the IPPS final rule implemented a one-year transition for hospitals that experienced a decrease in their FY 2005 wage index compared to their FY 2004 wage index due solely to the changes in labor market definitions. These hospitals received 50 percent of their wage indices based on the new MSA configurations and 50 percent based on the FY 2004 labor market areas. For purposes of the OPPS, we also are applying this 50-percent transition blend to TEFRA hospitals.

B. The incorporation of a blend of an occupational mix adjusted wage index into the unadjusted wage index to reflect the effect of hospitals' employment choices of occupational categories to provide specific patient care. Specifically, OPPS will adopt the 10-percent blend of an average hourly wage, adjusted for occupational mix, and 90 percent of an average hourly wage, unadjusted for occupational mix, as finalized in the IPPS final rule. As discussed in the IPPS final rule, this

blend is appropriate because this was the first time that the occupational mix survey was administered and optimum data could not be collected in the limited timeframe available. In addition, CMS had no baseline data to use in developing a desk review program that could ensure the accuracy of the occupational mix survey data. Moving slowly to implement the occupational mix adjustment is also appropriate because of changing trends in the hiring nurses due changes in State law governing staffing levels and physician shortages. Finally, the blend minimizes the impact of the occupational mix adjustment on hospitals' wage index values without nullifying the value and intent of the adjustment.

C. The reclassifications of hospitals to geographic areas for purposes of the wage index. For purposes of the OPPS wage index, we are adopting all of the IPPS reclassifications in effect for FY 2005, including reclassifications that the Medicare Geographic Classification Review Board (MGCRB) approved under the one-time appeal process for hospitals under section 508 of Pub. L. 108–173.

D. The implementation of an adjustment to the wage index to reflect the ''out-migration'' of hospital employees who reside in one county but commute to work in a different county with a higher wage index, in accordance with section 505 of Pub. L. 108–173 (August 11, 2004 IPPS final rule (69 FR 49061 through 49067), as revised and corrected on October 7, 2004 (69 FR 60242)). Hospitals paid under the IPPS located in the qualifying section 505 ''out-migration'' counties received a wage index increase. We are applying the same criterion to TEFRA hospitals paid under the OPPS but not paid under the IPPS. Therefore, TEFRA hospitals located in a qualifying section 505 county will also receive an increase to their wage index under OPPS.

We will use final revised IPPS indices to adjust the payment rates and coinsurance amounts that we are publishing in this OPPS final rule with comment period for CY 2005.

In general, geographic labor market area reclassifications must be done in a budget neutral manner. Accordingly, in calculating the OPPS budget neutrality estimates for CY 2005, we have included the wage index changes that result from MGCRB reclassifications, implementation of section 505 of Pub. L. 108–173, and other refinements made in the IPPS final rule, such as the 50-percent transition blend for hospitals with FY 2005 wage indices that decreased solely as a result of the new MSA definitions. However, we did not take into account the reclassifications that resulted from implementation of the one-time appeal process under section 508 of Pub. L. 108–173. Section 508 set aside $900 million to implement the section 508 reclassifications. We considered the increased Medicare payments that the section 508 reclassifications would create in both the IPPS and OPPS when we determined the impact of the one-time appeal process. Because the increased OPPS payments already counted against the $900 million limit, we did not consider these reclassifications when we calculated the OPPS budget neutrality adjustment.

We received a number of public comments on the application of the FY 2005 IPPS wage indices under the OPPS.

Comment: In general, commenters approved of CMS' adoption of the FY 2005 final rule wage indices for IPPS. Several commenters requested clarification that CMS would adopt the temporary, 1-year relief for hospitals with wage areas changing due to the revised labor market definitions provided in the FY 2005 IPPS final rule.

Response: We are adopting the IPPS temporary, 1-year relief provision of a 50/50 blend of old and new wage indices in this OPPS final rule with comment period. Hospitals billing Medicare under IPPS in FY 2005 will receive the same wage index for OPPS.

Comment: One commenter requested clarification that CMS would adopt the technical correction to the IPPS wage index to include counties incorrectly excluded from the out-migration adjustment under section 505 of Pub. L. 108–173.

Response: In this OPPS final rule with comment period, we are adopting all technical corrections to the FY 2005 IPPS final rule wage indices, including the referenced correction to the out-migration counties.

Comment: Several commenters requested clarification that CMS would adopt the wage index provisions for ''Special Circumstances of Hospitals in All-Urban States.''

Response: We are adopting all of the changes to the IPPS wage indices discussed in the FY 2005 IPPS final rule and any subsequent corrections to that final rule, including calculation of a wage index floor for hospitals in all-urban States.

Comment: One commenter noted that the wage index listed in the impact file that we made available on the CMS Web site for the August 16, 2004 proposed rule listed a different wage index from the wage index adopted in the FY 2005 IPPS final rule and requested clarification that the hospital would receive the IPPS final rule wage index.

Response: We note that the proposed wage indices have to be assembled before the IPPS wage indices are finalized in order to model impact tables for the OPPS proposed rule. The final wage indices used for payment in CY 2005 for OPPS will reflect the wage indices in the FY 2005 IPPS final rule and any subsequent corrections to that final rule.

Comment: Several commenters, specifically individual hospitals adversely impacted by the final FY 2005 IPPS wage index, requested that CMS address several issues beyond the scope of the OPPS proposed rule, such as exempting hospitals from the new wage indices and employing former wage indices, calculating new wage indices or recalculating the current wage indices with additional provider or providers removed, calculating new ''in-migration'' adjustments, and, where permanent wage indices changes are not possible, providing a transition period beyond the 1-year 50/50 blend discussed above or extending ''hold harmless'' provisions. One commenter also requested that adversely impacted hospitals be able to bill under the provider numbers of affiliated institutions.

Response: As noted earlier in this section of the preamble, we believe, and other commenters concurred, that hospitals face the same labor costs for their inpatient and outpatient departments and that separate wage indices are not appropriate for different integrated components of the same institution. It is for this reason that we have always adopted the same wage index for both the IPPS and the OPPS payment systems. Moreover, our policy has consistently been to use the IPPS wage indices and, to the extent these wage indices are used, the IPPS process provides an opportunity for hospitals to comment specifically on the construction of the IPPS wage indices.

Comment: Several commenters requested that CMS reduce the labor-related share from the current 60 percent to some smaller percentage, frequently 52 percent or less, for outpatient payment purposes for hospitals in areas with a Medicare wage index of 1.0 or lower to maintain consistency with the inpatient hospital policy.

Response: Section 403 of Pub. L. 108–173 mandated that the IPPS make a change to the labor-related share of the wage index, reducing the percentage from 71 to 62 for hospitals in areas with a wage index of 1.0 or lower. However, as discussed in the IPPS final rule (69

FR 49069, August 11, 2004), prior to this mandate, we had determined that the labor-related share was increasing for inpatient services, not declining. Unlike IPPS, OPPS has no mandate to reduce the labor-related share, and we believe the current 60 percent labor-related share remains appropriate for OPPS payment purposes. We recognize that the IPPS final rule discusses CMS' current analyses of the labor-related share, and we will carefully consider any research findings in light of their appropriateness for OPPS.

Comment: Several commenters expressed concern that CMS proposed to adopt the IPPS proposed wage index rather than the IPPS final wage index.

Response: As we have stated previously in this section of the preamble, we note that we are adopting the final IPPS wage indices and any subsequent corrections for the OPPS.

X. Determination of Payment Rates and Outlier Payments for CY 2005

A. Calculation of the National Unadjusted Medicare Payment

The basic methodology for determining prospective payment rates for OPD services under the OPPS is set forth in existing regulations at §§ 419.31 and 419.32. The payment rate for services and procedures for which payment is made under the OPPS is the product of the conversion factor calculated in accordance with section VIII. of this final rule with comment period, and the relative weight determined under section III. of this final rule with comment period. Therefore, the national unadjusted payment rate for APCs contained in Addendum A to this final rule with comment period and for payable HCPCS codes in Addendum B to this final rule with comment period (Addendum B is provided as a convenience for readers) was calculated by multiplying the CY 2005 scaled weight for the APC by the CY 2005 conversion factor.

To determine the payment that will be made in a calendar year under the OPPS to a specific hospital for an APC for a service other than a drug, in a circumstance in which the multiple procedure discount does not apply, we take the following steps:

Step 1. Calculate 60 percent (the labor-related portion) of the national unadjusted payment rate. Since initial implementation of the OPPS, we have used 60 percent to represent our estimate of that portion of costs attributable, on average, to labor. (See the April 7, 2000 final rule with comment period (65 FR 18496 through 18497), for a detailed discussion of how we derived this percentage.)

Step 2. Determine the wage index area in which the hospital is located and identify the wage index level that applies to the specific hospital. The wage index values assigned to each area reflect the new geographic statistical areas as a result of revised OMB standards (urban and rural) to which hospitals would be assigned for FY 2005 under the IPPS, reclassifications through the Medicare Classification Geographic Review Board, LUGAR, and section 401 of Pub. L. 108–173, and the reclassifications of hospitals under the one-time appeals process under section 508 of Pub. L. 108–173. Assess whether the previous MSA-based wage index is higher than the CBSA-based wage index, and, if higher, apply a 50/50 blend. The wage index values include the occupational mix adjustment described in section IX. of this final rule with comment period that was developed for the IPPS.

Step 3. Adjust the wage index of hospitals located in certain qualifying counties that have a relatively high percentage of hospital employees who reside in the county but who work in a different county with a higher wage index, in accordance with section 505 of Pub. L. 108–173. This step is to be followed only if the hospital has chosen not to accept reclassification under step 2 above.

Step 4. Multiply the applicable wage index determined under Steps 2 and 3 by the amount determined under Step 1 that represents the labor-related portion of the national unadjusted payment rate.

Step 5. Calculate 40 percent (the nonlabor-related portion) of the national unadjusted payment rate and add that amount to the resulting product of Step 4. The result is the wage index adjusted payment rate for the relevant wage index area.

B. Hospital Outpatient Outlier Payments

For OPPS services furnished between August 1, 2000, and April 1, 2002, we calculated outlier payments in the aggregate for all OPPS services that appear on a bill in accordance with section 1833(t)(5)(D) of the Act. In the November 30, 2001 final rule (66 FR 59856 through 59888), we specified that, beginning with CY 2002, we calculate outlier payments based on each individual OPPS service. We revised the aggregate method that we had used to calculate outlier payments and began to determine outlier payments on a service-by-service basis.

As explained in the April 7, 2000 final rule with comment period (65 FR 18498), we set a projected target for outlier payments at 2.0 percent of total payments. For purposes of simulating payments to calculate outlier thresholds, we set the projected target for outlier payments at 2.0 percent for CYs 2001, 2002, 2003, and 2004. For reasons discussed in the November 7, 2003 final rule with comment period (68 FR 63469), for CY 2004, we established a separate outlier threshold for CMHCs. For CY 2004, the outlier threshold is met when costs of furnishing a service or procedure by a hospital exceed 2.6 times the APC payment amount or when the cost of furnishing services by a CMHC exceeds 3.65 times the APC payment amount. The current outlier payment is calculated to equal 50 percent of the amount of costs in excess of the threshold.

As we proposed, for CY 2005, we are continuing to set the projected target for outlier payments at 2.0 percent of total OPPS payments (a portion of that 2.0 percent, 0.6 percent, will be allocated to CMHCs for partial hospitalization program (PHP) services).

Outlier payments are intended to ensure beneficiary access to services by having the Medicare program share in the financial loss incurred by a provider associated with individual, extraordinarily expensive cases. They are not intended to pay hospitals additional amounts for specific services on a routine basis. In its March 2004 Report, MedPAC found that 50 percent of OPPS outlier payments in CY 2004 were for 21 fairly common services that had relatively low APC payment rates, such as plain film x-rays and pathology services. We remain concerned by the MedPAC findings which indicate that a significant portion of outlier payments are being made for high volume, lower cost services rather than for unusually high cost services, contrary to the intent of an outlier policy. (A full discussion of the 2004 MedPAC recommendations related to the OPPS and the CMS response to those recommendations can be found in section XII. of this preamble.)

In light of the MedPAC findings, in the August 16, 2004 proposed rule, we proposed to change the standard we have used to qualify a service for outlier payments since the OPPS was originally implemented. That is, in addition to the outlier threshold we have applied since the beginning of the OPPS, which requires that a hospital's cost for a service exceed the APC payment rate for that service by a specified multiple of the APC payment rate, we proposed to add a fixed dollar threshold that would have to be met in order for a service to qualify for an outlier payment. Section 1833(t)(5)(A) of the Act gives the

Secretary the authority to impose a fixed dollar threshold in addition to an APC multiplier threshold. By imposing a dollar threshold, we expect to redirect outlier payments from lower cost, relatively simple procedures to more complex, expensive procedures for which the costs associated with individual cases could be exceptionally high and for which hospitals would be at greater risk financially.

In the proposed rule, we proposed to require that, in order to qualify for an outlier payment, the cost of a service must exceed 1.5 times the APC payment rate and the cost must also exceed the sum of the APC rate plus a $625 fixed dollar threshold. Based upon our review of the data, a proposed threshold of $625 best met our 2.0 percent projected target. When the cost of a hospital outpatient service exceeds these thresholds, we proposed to pay 50 percent of the amount by which the cost of furnishing the service exceeds 1.5 times the APC payment rate (the APC multiple) as an outlier payment.

However, in this final rule, we are increasing the proposed APC multiplier of 1.5 to 1.75 and the fixed-dollar threshold from $625 to $1,175. This revision to the proposed rule estimates results from the inclusion of a charge inflation factor of 18.76 percent to account for charge inflation between the CY 2003 claims data that we used to model the outlier thresholds and their application in CY 2005. As we note below, many hospital associations expressed concern that the proposed $625 threshold for outlier payments was too high and suggested that OPPS consider the decision in the IPPS final rule to lower the charge inflation assumption from 31.1 percent to 18.76 percent. These same commenters suggested that we provide the details of the assumptions used to set outlier thresholds and asked that we ensure that the charges used to set outlier thresholds were not inappropriately inflated.

Previously, OPPS has not used a charge inflation factor to adjust charges on the claims used to model the payment system to reflect current dollars. We have historically set the projected target for outlier payments at 2 percent of the estimated spending under the proposed payment system, but have modeled that projected target without inflating charges on the claims, which usually lag behind the proposed system by 2 years. This year, we used CY 2003 claims to model the CY 2005 payment system. When we modeled the thresholds discussed in the August 16, 2004 proposed rule, we did not include a charge inflation factor. By not adjusting for charge inflation between CY 2003 and CY 2005, the estimated service costs will be lower than those that will be billed under OPPS next year. Underestimated service costs also led us to underestimate our outlier thresholds. As reflected in the comments, we should have included a charge inflation factor similar to that used in the IPPS outlier calculation when we developed the proposed outlier payments. In this final rule with comment period, we have done so as explained below, which results in an APC multiplier of 1.75 and a fixed-dollar threshold of $1,175.

To calculate the 1.75 multiple and $1,175 fixed-dollar thresholds, we first estimated the 2-percent projected target for outlier payments by estimating 2 percent of total spending in CY 2005 using the CY 2005 APC payment rates in this final rule with comment period and services in the CY 2003 claims. We then inflated the charges on these claims by 18.76 percent, which is the estimated increase in charges between CY 2003 and CY 2005 used in the outlier policy for the IPPS final rule. We believe the use of this estimate is appropriate for OPPS because, with the exception of the routine service cost centers, hospitals use the same cost centers to capture costs and charges across inpatient and outpatient services. As also noted in the IPPS final rule, we believe that this inflation factor is more appropriate than an adjustment to costs because charges increase at a faster rate than costs. We then used the same CCRs that we used to adjust charges to costs in our ratesetting process to estimate a cost for each service from the inflated charges on the CY 2003 claims. Although these CCRs are based largely on CY 2002 cost report data, we did not adjust them for probable increases in charges relative to costs between CY 2002 and CY 2005. Finally, we estimated a multiple threshold and fixed-dollar threshold that would produce outlier payments that met our 2-percent projected target amount.

The large increase in the fixed-dollar threshold is largely a function of the additive impact of increasing all estimated outlier payments by 18.76 percent and restricting increased estimates of outlier payments to a fixed, projected target of 2 percent, as well as the addition of a fixed-dollar threshold to determine outlier eligibility instead of using only a multiple threshold to determine outlier payment. As charges are inflated, each estimated outlier payment is higher by some proportional amount, but the total dollar increase varies with the magnitude of the difference in the cost of the service and APC payment rate. The addition of the fixed-dollar threshold policy ensures that outlier payments are made for high-cost services, thereby increasing the dollar amount of outlier payments and the total dollar impact of 18.76 percent that must be contained within the projected outlier target. Further, the actual based on outlier payment for a service is not affected by the fixed-dollar threshold but, rather, is the difference between the hospital's cost and the product of the multiple threshold and the APC payment rate. Changing the fixed-dollar threshold does not impact the amount of outlier payment. Adding the inflation adjustment to charges also increases the number of services eligible for an outlier payment under the proposed 1.5 multiple and $625 fixed-dollar thresholds. The combined impact of more services and higher payments greatly increases estimated outlier payments. Therefore, in order to reduce the number of services eligible for higher payments and the payments themselves to stay within our projected target of 2 percent of total OPPS payments, we had to raise both the fixed-dollar and multiple thresholds.

We are setting the dollar threshold at a level that will, for all intents and purposes, exclude outliers for a number of lower cost services. For example, under the CY 2004 methodology, a service mapped to an APC with a payment rate of $20 would only have to exceed $52 (2.6 × APC payment amount) in order to qualify for an outlier payment. Our final policy for CY 2005 with the additional fixed dollar threshold will require that the service in this example exceed $1,195 in order to qualify for an outlier payment. That is, the cost of the service will have to exceed both 1.75 times the APC payment rate, or $35, and $1,195 ($20 + $1,175).

The dollar threshold will also enable us to lower the APC multiplier portion of the total outlier threshold from 2.6 to 1.75. We have chosen a multiple of 1.75 because this continues to recognize some variability relative to APC payment implicit in the current statute, but limits its impact in determining outlier payments. Under the changes to the outlier methodology, it will also be easier for the higher cost cases of a complex, expensive procedure or service to qualify for outlier payments because the $1,175 threshold is a small portion of the total payment rate for high cost services. For example, under the CY 2004 methodology, a service mapped to an APC with a payment rate of $20,000 would have to exceed $52,000 in order to qualify for an outlier

payment but, as proposed for CY 2005, will have to exceed only $35,000. That is, the cost of the service will have to exceed both 1.75 times the APC payment rate, or $35,000, and $21,175 ($20,000 + $1,175). Further, outlier payments for unusually expensive cases would be higher because the APC multiplier for outlier payment would decrease from 2.6 to 1.75 times the APC payment rate.

Comment: Many commenters, including MedPAC, favored our proposed outlier policy that redirects outlier payments to expensive procedures for which hospitals' financial risk is potentially greater. (Under the proposed rule, outlier payments would be made when the cost of a separately payable service exceeds both 1.5 times the APC payment and a fixed dollar amount.) Several commenters agreed with this revision in policy, but requested that CMS monitor the impact of the new policy on hospitals with a relatively high volume of low cost cases and find some way to ensure that providers of less-intensive services be afforded outlier ''protection.''

Response: As noted above, outlier payments are intended to ensure beneficiary access to services by having the Medicare program share in the financial loss incurred by a provider associated with individual, extraordinarily expensive cases. They are not intended to pay hospitals additional amounts for specific services on a routine basis, and we demonstrated in Table 39 of the proposed rule that this policy moderately redistributes outlier dollars to providers of high-cost, complex services, such as teaching hospitals. We will continue to model the distribution of outlier payments among hospitals. However, the purpose of the new policy is to limit financial risk attributable to patients whose costs are extraordinarily high. Therefore, our goal is to redirect outlier payments to those services that better meet our goal of providing outlier payments to those costly services with high financial risk. The intent is not to continue to provide a significant portion of outlier payments to high volume, low cost services.

Using the final rule data and updated charge inflation estimates, we have modeled a fixed-dollar threshold of $1,175 for CY 2005.

Comment: Several commenters requested data that support the presumption that the revised outlier methodology will definitely result in payment of 2 percent of total OPPS payments. The commenters also urged CMS to release data on actual outlier payments made in CY 2004 and in prior years, and to continue to report this data in the future.

Response: The outlier thresholds and payment percentages are determined each year based on our best estimate of the thresholds and payment percentages needed to achieve the projected target of outlier payment. As discussed above, in order to estimate the outlier multiple and fixed-dollar thresholds, we first estimated 2 percent of the total spending using the APC payment rates in this final rule with comment period and the services in the CY 2003 claims. Using this estimate, we inflated the charges on the CY 2003 claims to reflect CY 2005 dollars using the 1.1876 inflation adjustment used in the IPPS final rule. We then applied the overall CCR for each hospital based on their most recently submitted cost report, whether tentatively settled or final, and if tentatively settled, adjusted by a submitted-to-settled ratio taken from the previous year's cost report. These are the same CCRs that we use in our ratesetting process. We then estimated outlier payments for various combinations of multiple and fixed-dollar thresholds until we reached the targeted outlier expenditures.

Interested parties may calculate the amount of outlier spending from previous years. Such information is available in the claims data, not the limited data set, available from CMS for this final rule with comment period.

Comment: Several commenters were concerned that the proposed fixed-dollar threshold of $625 was too high. Specifically, the commenters were concerned that CMS had overstated its charge inflation estimates in calculating the fixed dollar threshold, as had been done in the FY 2005 IPPS proposed rule. The commenters requested that CMS review its estimates and make comparable adjustments to these in the FY 2005 IPPS final rule.

Response: As noted previously, the OPPS had not used a charge inflation factor. In this final rule with comment period, we realized that we should have adopted a charge inflation estimate. We used the charge inflation estimate used in the IPPS final rule of 18.76 percent to update charges on the CY 2003 claims that we used to model the fixed-dollar threshold in order to reflect CY 2005 dollars. Comparable to IPPS, we did not update the CCRs that we employed to estimate costs from these inflated charges. The CCRs are based on hospitals' most recently submitted cost report, frequently CY 2002, adjusted by the most recent settled-to-submitted ratio, and were not updated for changes in relative costs and charges since the cost report year.

Comment: One commenter supported the proposed change, but urged CMS to adopt MedPAC's recommendation to fully eliminate outpatient outlier payments and to increase the base APC rates by a commensurate amount. The commenter asserted that the separate payment of services under OPPS eliminates the need for an outlier policy.

Response: We believe that an outlier policy is necessary and appropriate under the OPPS. Outlier payments dampen the financial risk of and improve beneficiary access to expensive, complex outpatient services. The range of services provided in the outpatient setting continues to expand, continually including more services previously performed in the inpatient setting. Many of these procedures are high-cost, extensive, and as complex as inpatient procedures. The device-dependent APCs provide a good example. We agree that separate payment for many individual services under OPPS reduces the need for an extensive outlier policy, but do not believe it eliminates the need entirely. We believe that the lower outlier payment percentage under the OPPS of 50 percent relative to 80 percent under the IPPS and the smaller OPPS projected outlier target of 2 percent relative to the IPPS projected target of between 5 and 6 percent reflect the more limited outlier liability associated with the outpatient payment system.

Comment: One commenter disagreed with our proposed policy and noted that it will substantially restrict outlier payments for a lot of outpatient services and recommended that CMS remove the fixed-dollar threshold and apply outlier payments only when the cost of a service exceeds 1.5 times the APC payment.

Response: We disagree with the commenter as removing the fixed-dollar threshold and relying only on a multiple of 1.5 or 1.75 would result in outlier payments well in excess of the proposed 2-percent projected target. To meet the projected target, we would have to raise the multiple threshold to 2.95 if we eliminated the fixed dollar threshold.

Comment: Several commenters requested that CMS release limited data set data files in a more timely manner.

Response: We have always attempted to, and will continue to, provide data necessary for evaluation of the OPPS in a timely manner. For example, this year, several data files were available through CMS' Web site before the publication of the proposed rule.

Comment: Several commenters recommended that CMS consider reinstating outlier payments at the claim

level, rather than at the individual service level, resulting in easier administration of outliers and payments that are more equitable for high cost patients.

Response: We believe that calculating outliers on a service-by-service basis is the most appropriate way to calculate outliers for outpatient services. Outliers on a claim or bill basis requires both the aggregation of costs and the aggregation of OPPS payments thereby introducing some degree of offset among services; that is, the aggregation of low cost services and high cost services on a bill may result in the claim or bill not meeting the outlier criterion. While the implementation of service-based outliers is somewhat more complex because it involves allocating the costs of packaged services across multiple payable codes, we believe that under this approach, outlier payments are more appropriately directed to those specific services for which a hospital incurs significantly increased costs. We also believe that the introduction of the fixed dollar threshold improves payment for expensive patients by targeting outlier payments to the more high-cost, complex services.

Comment: One commenter requested that CMS demonstrate the accuracy of its assumption that providers are receiving inappropriate outlier payments and suggest that the distribution of packaged costs on a claim could be affecting the outlier determination and payment. The commenter specifically requested that CMS exempt all drug administration APCs from the new fixed-dollar threshold methodology.

Response: We agree that the allocation of packaged costs could modestly under or overestimate the cost of a single procedure for purposes of determining outlier payments. However, this observation cannot explain the huge concentration of services in low-cost, simple procedures receiving outlier payments observed by MedPAC in its March 2004 report referenced above. This concentration is clearly a function of the multiple threshold policy.

In accordance with section 1833(t)(5) of the Act, we have set a uniform fixed-dollar outlier threshold that applies to all OPPS services in a given calendar year. We cannot exempt specific services from the outlier methodology because the statute does not provide for different thresholds for different types of OPPS services. Further, the magnitude of the multiple and fixed dollar thresholds is determined prospectively before the beginning of each year based on all OPPS services qualifying for outlier payments in that year.

Comment: One commenter was concerned that CMS does not provide information to determine how the amounts that are actually spent on pass-through and outlier payments compare to the amount that is carved out of the total amount allowed OPPS payment for these projected payments. The commenter was concerned that the amounts carved out for these purposes may not actually be spent and thus, would be lost to hospitals.

Response: We are required by law to estimate the amounts that we expect to spend on pass-through and outlier payments each year before the start of the calendar year. We share the commenter's interest in assuring that those estimates are made as accurately as possible to ensure that hospitals receive the amount to which they are entitled by law. We make our final estimate for each calendar year to the best of our ability based on all of the best data available at the time we prepare our final rule, including comments we receive in response to our proposed rule. With respect to the availability of data for modeling our outlier estimates, we have established limited data sets which include the set of claims we used first for the proposed rule estimates and, ultimately, for those for our final rule with comment period. For example, the CY 2003 claims used in ratesetting and modeling for this final rule with comment period for CY 2005 OPPS will be available to the public in a limited data set format. However, estimates of total outlier payments made in previous years are not available in the limited data set, in no small part because outlier payments on these claims would underestimate total outlier payments. Interested parties can estimate total outlier expenditures from a full year of OPPS claims data. We will continue to assess the means by which we provide data.

Comment: One commenter who did not support the proposed outlier policy suggested that the payment for outliers in low-cost services could be an indication that the APC payment rate is too low for these services. The commenter also wondered if the concentration of outlier payments in low-cost services was the result of high packaged costs appearing with these separately payable services, and indicated that one example might include packaged observation services. Ultimately, this commenter suggested that a better understanding of why outlier payments are directed to common services is necessary before a change in policy can be supported.

Response: As MedPAC discussed in its March 2004 report, the main reason to include outlier policies with prospective payment systems is to limit providers' financial risk attributable to patients whose costs are extraordinarily high relative to the median cost of providing the service. We believe that such risk is more substantial in high cost procedures. When the financial risk of providing a service becomes too high, providers may choose not to provide the service, an outcome that can harm beneficiary access.

The CY 2004 outlier policy does not distinguish between high cost services and low cost services. In fact, MedPAC found that 50 percent of OPPS outlier payments in CY 2004 were for services in low-paying APCs. These observations suggested the need to modify the outlier policy to provide better protection against financial risk. The fixed-dollar threshold limits financial risk to providers who provide high-cost services.

Although it is possible that extensive packaged costs have created the current concentration of outliers in low cost services, it is unlikely in most circumstances. Separately payable services consistently billed with extensive packaged costs would ultimately increase payment rates as packaged costs were incorporated in the cost of the payable service. Although packaged observation services can be extensive, the review of OPPS claims data indicates that there are too many outlier payments to be associated with the limited number of claims with packaged observation services. We believe the current policy creates an easy threshold for low-cost services to qualify for outlier payments and does little to protect hospitals against the financial risk associated with complex and high-cost services.

C. Payment for Partial Hospitalization

1. Background

Partial hospitalization is an intensive outpatient program of psychiatric services provided to patients as an alternative to inpatient psychiatric care for beneficiaries who have an acute mental illness. A partial hospitalization program (PHP) may be provided by a hospital to its outpatients or by a Medicare-certified CMHC. Section 1833(t)(1)(B)(i) of the Act provides the Secretary with the authority to designate the hospital outpatient services to be covered under the OPPS. Section 419.21(c) of the Medicare regulations that implement this provision specifies that payments under the OPPS will be made for partial hospitalization services

furnished by CMHCs. Section 1883(t)(2)(C) of the Act requires that we establish relative payment weights based on median (or mean, at the election of the Secretary) hospital costs determined by 1996 claims data and data from the most recent available cost reports. Payment to providers under the OPPS for PHPs represents the provider's overhead costs associated with the program. Because a day of care is the unit that defines the structure and scheduling of partial hospitalization services, we established a per diem payment methodology for the PHP APC, effective for services furnished on or after August 1, 2000. For a detailed discussion, see the April 7, 2000 OPPS final rule (65 FR 18452).

2. PHP APC Update for CY 2005

As proposed, for calculation of the CY 2005 per diem payment in this final rule, we used the same methodology that was used to compute the CY 2004 per diem payment. For CY 2004, the per diem amount was based on three quarters of hospital and CMHC PHP claims data (for services furnished from April 1, 2002, through December 31, 2002). We used data from all hospital bills reporting condition code 41, which identifies the claim as partial hospitalization, and all bills from CMHCs because CMHCs are Medicare providers only for the purpose of providing partial hospitalization services. We used CCRs from the most recently available hospital and CMHC cost reports to convert each provider's line item charges as reported on bills, to estimate the provider's cost for a day of PHP services. Per diem costs are then computed by summing the line item costs on each bill and dividing by the number of days on the bill.

Unlike hospitals, CMHCs do not file cost reports electronically and the cost report information is not included in the Healthcare Cost Report Information System (HCRIS). The CMHC cost reports are held by the Medicare fiscal intermediaries. In a Program Memorandum issued on January 17, 2003 (Transmittal A–03–004), we directed fiscal intermediaries to recalculate hospital and CMHC CCRs using the most recently settled cost reports by April 30, 2003. Following the initial update of CCRs, fiscal intermediaries were further instructed to continue to update a provider's CCR and enter revised CCRs into the outpatient provider specific file. Therefore, for CMHCs, we use CCRs from the outpatient provider specific file. For CY 2005, we analyzed 12 months of data for hospital and CMHC PHP claims for services furnished between January 1, 2003, and December 31, 2003. Updated CCRs reduced the median cost per day for CMHCs. The revised medians are $310 for CMHCs and $215 for hospitals. Combining these files results in a median per diem PHP cost of $289. As with all APCs in the OPPS, the median cost for each APC is scaled to be relative to a mid-level office visit and the conversion factor is applied. The resulting APC amount for PHP is $281.33 for CY 2005, of which $56.33 is the beneficiary's coinsurance.

Comment: One commenter summed payments for three Group Therapy Sessions (APC 0325) and one Extended Individual Therapy Session (APC 0323) and requested that amount as the minimum for a day of PHP.

Response: We do not believe this is an appropriate comparison. It is important to note that the APC services cited by the commenter (APC 0325 and APC 0323) are not PHP services, but rather single outpatient therapeutic sessions. As stated earlier, we used data from PHP programs (both hospitals and CMHCs) to determine the median cost of a day of PHP. PHP is a program of services where savings can be realized by hospitals and CMHCs over delivering individual psychotherapy services. In addition, a minimal day of PHP treatment does encompass three services.

Comment: One commenter requested that the same provisions given to rural hospital outpatient departments also be given to rural CMHCs.

Response: We believe the commenter may be referring to the statutory hold harmless provisions. Section 1833(t)(7)(D) of the Act authorizes such payments, on a permanent basis, for children's hospitals and cancer hospitals and, through CY 2005, for rural hospitals having 100 or fewer beds and sole community hospitals in rural areas. Section 1866(t)(7)(D) of the Act does not authorize hold harmless payments to CMHC providers.

3. Separate Threshold for Outlier Payments to CMHCs

In the November 7, 2003 final rule with comment period (68 FR 63469), we indicated that, given the difference in PHP charges between hospitals and CMHCs, we did not believe it was appropriate to make outlier payments to CMHCs using the outlier percentage target amount and threshold established for hospitals. There was a significant difference in the amount of outlier payments made to hospitals and CMHCs for PHP. Further analysis indicated the use of outlier payments was contrary to the intent of the outlier policy as discussed previously in section X.B. above. Therefore, for CY 2004, we established a separate outlier threshold for CMHCs. We designated a portion of the estimated 2.0 percent outlier target amount specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS in CY 2004, excluding outlier payments.

As stated in the November 7, 2003 final rule with comment period, CMHCs were projected to receive 0.5 percent of the estimated total OPPS payments in CY 2004. The CY 2004 outlier threshold is met when the cost of furnishing services by a CMHC exceeds 3.65 times the APC payment amount. The current outlier payment percentage is 50 percent of the amount of costs in excess of the threshold.

CMS and the Office of the Inspector General are continuing to monitor the excessive outlier payments to CMHCs. However, we do not yet have CY 2004 claims data that will show the effect of the separate outlier threshold for CMHCs that was effective January 1, 2004. Therefore, for CY 2005, as discussed in section X.B. of this preamble, we are continuing to set the target for hospital outpatient outlier payments at 2.0 percent of total OPPS payments. We are also allocating a portion of that 2.0 percent, 0.6 percent, to CMHCs for PHP services. We are adopting as final 0.6 percent for CMHCs because the percentage of CMHC's payment to total OPPS payment rose slightly in the CY 2003 claims data. In the absence of CY 2004 claims data, we developed simulations for CY 2005. As discussed in section X.B. of this final rule, we are establishing a dollar threshold in addition to an APC multiplier threshold for hospital OPPS outlier payments. However, because PHP is the only APC for which CMHCs may receive payment under the OPPS, we would not expect to redirect outlier payments by imposing a dollar threshold. Therefore, we are not establishing a dollar threshold for CMHC outliers. In this final rule, we are setting the outlier threshold for CMHCs for CY 2005 at 3.5 percent times the APC payment amount and the CY 2005 outlier payment percentage applicable to costs in excess of the threshold at 50 percent.

Comment: One commenter expressed concern about a separate outlier threshold for partial hospitalization services because many partial hospitalization programs are hospital based. The commenter recommended that CMS use the same threshold for all hospital services.

Response: We agree that the same outlier policy should apply to all

hospital services. Under OPPS, we establish two sets of outlier thresholds, one for hospitals and one for CMHCs. The higher multiple threshold of 3.5 is reserved for services provided by CMHCs only. Hospitals billing for partial hospitalization will be subject to the outlier thresholds and payment percentages identified for all hospital services.

XI. Beneficiary Copayments for CY 2005

A. Background

Section 1833(t)(3)(B) of the Act requires the Secretary to set rules for determining copayment amounts to be paid by beneficiaries for covered OPD services. Section 1833(t)(8)(C)(ii) of the Act specifies that the Secretary must reduce the national unadjusted copayment amount for a covered OPD service (or group of such services) furnished in a year in a manner so that the effective copayment rate (determined on a national unadjusted basis) for that service in the year does not exceed specified percentages. For all services paid under the OPPS in CY 2005, the specified percentage is 45 percent of the APC payment rate. The statute provides a further reduction in CY 2006 so that the national unadjusted coinsurance for an APC cannot exceed 40 percent in CY 2006 and in calendar years thereafter. Section 1833(t)(3)(B)(ii) of the Act provides that, for a covered OPD service (or group of such services) furnished in a year, the national unadjusted coinsurance amount cannot be less than 20 percent of the OPD fee schedule amount.

Comment: One commenter expressed concern that the law does not further reduce the maximum coinsurance rate for CY 2007. The commenter believed that this may cause coinsurance rates to stagnate at 40 percent for a few years. The commenter indicated that its organization will continue to advocate for a legislative change that would accelerate the copayment buy-down.

Response: We understand the concerns of this organization. In CY 2004, we determined that 63 percent of APCs had a national unadjusted coinsurance rate of 20 percent. Therefore, we will continue to apply our current methodology for calculating national unadjusted coinsurance rates, as explained in earlier **Federal Register** notices, which ensures that the copayments of the remaining 37 percent of APCs will continue to decrease relative to increases in payment rates.

B. Copayment for CY 2005

For CY 2005, we determined copayment amounts for new and revised APCs using the same methodology that we implemented for CY 2004 (see the November 7, 2003 OPPS final rule with comment period, 68 FR 63458). The unadjusted copayment amounts for services payable under the OPPS effective January 1, 2005 are shown in Addendum A and Addendum B of this final rule with comment period.

XII. Addendum Files Available to the Public Via Internet

The data referenced for Addendum C to this final rule with comment period are available on the following CMS Web site via Internet only: *http://www.cms.hhs.gov/providers/hopps/*. We are not republishing the data represented in this Addendum to this final rule with comment period because of its volume. For additional assistance, contact Chris Smith Ritter at (410) 786–0378. Addendum C—Healthcare Common Procedure Coding System (HCPCS) Codes by Ambulatory Payment Classification (APC).

This file contains the HCPCS codes sorted by the APCs into which they are assigned for payment under the OPPS. The file also includes the APC status indicators, relative weights, and OPPS payment amounts.

XIII. Collection of Information Requirements

This document does not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995.

XIV. Regulatory Impact Analysis

A. OPPS: General

We have examined the impacts of this final rule with comment period as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), and Executive Order 13132.

1. Executive Order 12866

Executive Order 12866 (as amended by Executive Order 13258, which merely reassigns responsibility of duties) directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year).

We estimate the effects of the provisions that will be implemented by this final rule with comment period will result in expenditures exceeding $100 million in any 1 year. We estimate the total increase (from changes in this final rule with comment period as well as enrollment, utilization, and case-mix changes) in expenditures under the OPPS for CY 2005 compared to CY 2004 to be approximately $1.5 billion. Therefore, this final rule with comment period is an economically significant rule under Executive Order 12866, and a major rule under 5 U.S.C. 804(2).

2. Regulatory Flexibility Act (RFA)

The RFA requires agencies to determine whether a rule would have a significant economic impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of $6 million to $29 million in any 1 year (65 FR 69432).

For purposes of the RFA, we have determined that approximately 37 percent of hospitals would be considered small entities according to the Small Business Administration (SBA) size standards. We do not have data available to calculate the percentages of entities in the pharmaceutical preparation manufacturing, biological products, or medical instrument industries that would be considered to be small entities according to the SBA size standards. For the pharmaceutical preparation manufacturing industry (NAICS 325412), the size standard is 750 or fewer employees and $67.6 billion in annual sales (1997 business census). For biological products (except diagnostic) (NAICS 325414), with $5.7 billion in annual sales, and medical instruments (NAICS 339112), with $18.5 billion in annual sales, the standard is 50 or fewer employees (see the standards Web site at *http://www.sba.gov/regulations/siccodes/*). Individuals and States are not included in the definition of a small entity.

3. Small Rural Hospitals

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a

significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we previously defined a small rural hospital as a hospital with fewer than 100 beds that is located outside of a Metropolitan Statistical Area (MSA) (or New England County Metropolitan Area (NECMA)). However, under the new labor market definitions that we are adopting in this final rule with comment period (consistent with the FY 2005 IPPS final rule), we no longer employ NECMAs to define urban areas in New England. Therefore, we now define a small rural hospital as a hospital with fewer than 100 beds that is located outside of an MSA. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent NECMA. Thus, for purposes of the OPPS, we classify these hospitals as urban hospitals. We believe that the changes in this final rule with comment period will affect both a substantial number of rural hospitals as well as other classes of hospitals and that the effects on some may be significant. Therefore, we conclude that this final rule with comment period will have a significant impact on a substantial number of small entities.

4. Unfunded Mandates

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in an expenditure in any 1 year by State, local, or tribal governments, in the aggregate, or by the private sector, of $110 million. This final rule with comment period does not mandate any requirements for State, local, or tribal governments. This final rule with comment period also does not impose unfunded mandates on the private sector of more than $110 million dollars.

5. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it publishes any rule (proposed or final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications.

We have examined this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that it would not have an impact on the rights, roles, and responsibilities of State, local or tribal governments. The impact analysis (see Table 41) shows that payments to governmental hospitals (including State, local, and tribal governmental hospitals) will increase by 3.7 percent under this final rule with comment period.

Comment: One commenter expressed concern that CMS had removed the eye and ear specialty hospital category from our regulatory impact analysis and requested that we reinstate this line-item. They further requested information on why specific analyses were retained for cancer and children's hospitals.

Response: We removed the specific regulatory impact analysis of eye and ear hospitals because, unlike cancer and children's hospitals, they are not specifically protected by statute. Section 1833(t)(7)(D) of the Act holds harmless cancer hospitals, children's hospitals, small rural hospitals with less than 100 beds, and sole community hospitals in rural areas. These hospitals cannot receive less payment in CY 2005 than they did in the CY 2004. However, because hold harmless provisions for cancer and children's hospitals are permanent, we will not specifically identify these hospital classes in future impact analyses.

Comment: One commenter expressed concern about the observed impact on teaching hospitals, specifically the observed increase of 2.9 percent under the proposed system, which is less than the overall increase modeled for all hospitals of 4.6 percent in the proposed rule. This commenter requested that CMS conduct analyses assessing the need for an adjustment for specific classes of hospitals, which is within CMS' regulatory authority. The commenter further suggested that these analyses assess whether teaching hospitals rely more on pass-through, outlier, transitional corridor, and device-dependent APC payments, and suggested that an adjustment is necessary if this is the outcome.

Response: We agree that it is important to monitor ongoing trends for specific classes of hospitals, and we are especially concerned when hospitals experience a negative increase. In this specific instance, major teaching hospitals are experiencing a positive increase in payments. We also agree that major teaching hospitals may be more dependent on costs estimated outside of the primary impact tables provided in the regulation. However, we are not convinced that a reliance on pass-through, outlier, or transitional corridor payments is a reason to propose an adjustment. This is especially true in light of the outlier policy as proposed, which redirects money to complex and costly procedures that are more likely to be performed at academic medical institutions.

B. Impact of Changes in This Final Rule With Comment Period

We are adopting as final the proposed changes to the OPPS that are required by the statute. We are required under section 1833(t)(3)(C)(ii) of the Act to update annually the conversion factor used to determine the APC payment rates. We are also required under section 1833(t)(9)(A) of the Act to revise, not less often than annually, the wage index and other adjustments. In addition, we must review the clinical integrity of payment groups and weights at least annually. Accordingly, in this final rule with comment period, we are updating the conversion factor and the wage index adjustment for hospital outpatient services furnished beginning January 1, 2005, as we discuss in sections VIII. and IX., respectively, of this final rule with comment period. We also have revised the relative APC payment weights using claims data from January 1, 2003, through December 31, 2003. Finally, we are removing 6 device categories and 13 drugs and biological agents from pass-through payment status. In particular, see section V.A.2 with regard to the expiration of pass-through status for devices and see section IV.A.2 with regard to the expiration of pass-through status for drugs and biological agents.

Under this final rule with comment period, the update change to the conversion factor as provided by statute as well as the additional money for the OPPS payments in CY 2005 as authorized by Pub. L. 108–173, including money for drugs and increases in the wage indices, will increase total OPPS payments by 4.0 percent in CY 2005. The changes to the wage index and to the APC weights (which incorporate the cessation of pass-through payments for several drugs and devices) would not increase OPPS payments because the OPPS is budget neutral. However, the wage index and APC weight changes would change the distribution of payments within the budget neutral system as shown in Table 41 and described in more detail in this section.

C. Alternatives Considered

Alternatives to the changes we are making and the reasons that we have chosen the options we have are discussed throughout this final rule with comment period. Some of the

major issues discussed in this final rule with comment period and the options considered are discussed below.

1. Payment for Device-Dependent APCs

We package payment for an implantable device into the APC payment for the procedure performed to insert the device. Because almost all devices lost pass-through status at the end of CY 2002, we discontinued use of separate codes to report devices in CY 2003. We have found that claims that we use to set payment rates for device-dependent APCs frequently have packaged costs that are much lower than the cost of the device. This is attributed, in part, to variations in hospital billing practices. In response, we reestablished device codes for reporting on a voluntary basis in CY 2004.

The APC Panel recommended that we use CY 2004 device-dependent APC rates updated for inflation as the CY 2005 payments. We considered this option but did not adopt it because it would not recognize changes in relative cost for these APCs and would not advance us towards our goal of using unadjusted claims data as the basis for payment weights for all OPPS services.

In addition to consideration of the APC Panel's recommendation, we considered using CY 2002 claims to calculate a ratio between the median calculated using all single bills and the median calculated using only claims with HCPCS codes for devices on them, and applying that ratio to the median calculated using CY 2003 claims data. We rejected this option because it assumes that the relationship between the costs of the claims with and without codes for devices is a valid relationship not only for CY 2002 but CY 2003 as well. It also assumes no changes in billing behavior. We have no reason to believe either of these assumptions is true and, therefore, we did not choose this option. We also considered using external data provided by manufacturers and other stakeholders as the estimated device cost. We did not choose this alternative because we believe that, in a relative weight system, there should be a single stable and objective source of data for setting relative weights for all items and services for which payment is made in the system.

We do not believe that any of the above options would help us progress toward reliance on our data. Rather than adopt any of those approaches, we developed an option to adjust the payment for only those device-dependent APCs that have the most dramatic decreases for CY 2005. We believe that the better payment approach for determining median costs for device-dependent APCs in CY 2005 is to base these medians on the greater of: (1) Median costs calculated using CY 2003 claims data; or (2) 95 percent of the APC payment median used in CY 2004 for these services. We believe that this adjustment methodology provides an appropriate transition to eventual use of all single bill claims data without adjustment.

We are also requiring hospitals to report C-codes for device categories used in conjunction with procedures billed and paid for under the OPPS. We have decided to implement edits, starting April 1, to enforce the reporting of C-codes to bill for most of the device-dependent procedures for which we adjusted the medians for CY 2005, as well as for a few APCs that require devices that are coming off pass-through payment in CY 2005 (a continuation of current billing practice). We believe that adoption of our proposal will mitigate barriers to beneficiary access to care while encouraging hospitals to bill correctly for the services they furnish. For a more detailed discussion of this issue, see section III.C. of this final rule with comment period.

2. Hospital Outpatient Outlier Payments

In its March 2004 Report, MedPAC made a recommendation to the Congress to eliminate the outlier provision under the OPPS. MedPAC made its recommendation after studying outlier payments on claims for services furnished during CY 2002 and concluding that in 2002, 50 percent of outlier payments were paid for 21 fairly common services that had relatively low APC payment rates, while high cost services accounted for only a small share of outlier payments. However, outlier payments are required under the statute. Therefore, we cannot discontinue outlier payments absent a legislative change by the Congress.

In light of the MedPAC findings, we are adopting a fixed-dollar threshold in addition to the threshold based on a multiple of the APC amount that we have applied since the beginning of the OPPS. A fixed-dollar threshold will redirect OPPS outlier payments toward the complex and expensive services that can create high financial risk for a hospital. In its comments on the proposed rule, MedPAC recognized that elimination of the outlier policy for OPPS requires a legislative change and approved of the proposed policy to adopt a fixed-dollar threshold. For a more detailed discussion of this issue, see section X. of this final rule with comment period.

D. Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the policy changes, as well as the statutory changes that would be effective for CY 2005, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per service while holding all other payment policies constant. We use the best data available but do not attempt to predict behavioral responses to our policy changes. We also do not make adjustments for future changes in variables such as service volume, service mix, or number of encounters.

E. Estimated Impacts of This Final Rule With Comment Period on Hospitals

The estimated increase in the total payments made under OPPS is limited by the increase to the conversion factor set under the methodology in the statute. The distributional impacts presented do not include assumptions about changes in volume and service-mix. However, total payments actually made under the system also may be influenced by changes in volume and service-mix, which CMS cannot forecast. The enactment of Pub. L. 108–173 on December 8, 2003, provided for the payment of additional dollars in 2004 and 2005 to providers of OPPS services outside of the budget neutrality requirements for both specified covered outpatient drugs (see section V.A.3.a. of this final rule with comment period) and the wage indexes for specific hospitals through reclassification reform in section 508 of Pub. L. 108–173 (see section IX. of this final rule with comment period). Table 41 shows the estimated redistribution of hospital payments among providers as a result of a new APC structure and wage indices, which are budget neutral; the estimated distribution of increased payments in CY 2005 resulting from the combined impact of APC recalibration and wage effects, and market basket update to the conversion factor; and estimated payments considering all payments for CY 2005 relative to all payments for CY 2004. In some cases, specific hospitals may receive more total payment in CY 2005 than in CY 2004, while, in other cases, they may receive less total payment than they received in CY 2004. However, our impact analysis suggests that no class of hospitals would receive less total payments in CY 2005 than in CY 2004. Because updates to the conversion factor, including the market basket and any reintroduction of pass-through dollars, are applied uniformly, observed redistributions of payments in the impact table largely depends on the

mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services would change) and the impact of the wage index changes on the hospital. However, the extent to which this final rule redistributes money during implementation will also depend on changes in volume, practice patterns, and case-mix of services billed between CY 2003 and CY 2005.

Overall, the final OPPS rates for CY 2005 will have a positive effect for all hospitals paid under OPPS. Adopted changes will result in a 4.0 percent increase in Medicare payments to all hospitals, exclusive of outlier and transitional pass-through payments. As described in the preamble, budget neutrality adjustments are made to the conversion factor and the relative weights to ensure that the revisions in the wage indices, APC groups, and relative weights do not affect aggregate payments. The impact of the wage and APC recalibration changes are fairly moderate across most classes of hospitals.

To illustrate the impact of the CY 2005 changes adopted in this final rule with comment period, our analysis begins with a baseline simulation model that uses the final CY 2004 weights, the FY 2004 final post-reclassification IPPS wage indices, as subsequently corrected, without changes in wage indices resulting from section 508 reclassifications, and the final CY 2004 conversion factor. Columns 2 and 3 in Table 41 reflect the independent effects of the changes in the APC reclassification and recalibration changes and the wage indices, respectively. These effects are budget neutral, which is apparent in the overall zero impact in payment for all hospitals in the top row. Column 2 shows the independent effect of changes resulting from the reclassification of HCPCS codes among APC groups and the recalibration of APC weights based on a complete year of CY 2003 hospital OPPS claims data. We modeled the independent effect of APC recalibration by varying only the weights, the final CY 2004 weights versus the final CY 2005 weights, in our baseline model, and calculating the percent difference in payments. Column 3 shows the impact of updating the wage indices used to calculate payment by applying the final FY 2005 IPPS wage indices, as subsequently corrected. In addition to new wage data, the new IPPS wage indices use the CBSA system as the basis for geographic adjustment for wages, rather than the MSA designations used previously. The FY 2005 IPPS wage indices also include the new adjustment for occupational mix, the reclassifications of hospitals to geographic areas by the MGCRB, the increased payment authorized by section 505 of Pub. L. 108–173 for out-migration, hold-harmless provisions for hospitals redesignated from urban to rural by the new labor market definitions, and the one-year transition, 50/50 blend for hospitals that experienced a decrease in their FY 2005 wage index compared to their FY 2004 wage index due solely to the changes in labor market definitions. The OPPS wage indices used in Column 3 do not include wage increases due to reclassification of hospitals through section 508 of Pub. L. 108–173. We modeled the independent effect of introducing the new wage indices by varying only the wage index between years, using CY 2004 weights, and a CY 2004 conversion factor that included a budget neutrality adjustment for changes in wage effects between 2004 and 2005.

Column 4 demonstrates the combined ''budget neutral'' impact of APC recalibration and wage index updates on various classes of hospitals, as well as the impact of updating the conversion factor with the market basket. We modeled the independent effect of budget neutrality adjustments and the market basket update by using the weights and wage indices for each year, and using a CY 2004 conversion factor that included a budget neutrality adjustment for differences in wages and the market basket increase. Finally, column 5 depicts the full impact of final CY 2005 policy on each hospital group by including the effect of all the changes for CY 2005 and comparing them to the full effect of all payments in CY 2004, including those authorized by Pub. L. 108–173. Column 5 shows not only the combined budget neutral effects of APC and wage updates, and the market basket update, but it also shows the effects of additional monies added to the OPPS as a result of Pub. L. 108–173 and pass-through money returned to the conversion factor from CY 2004. We modeled the independent effect of all changes using the final weights for CY 2004 and CY 2005 with additional money for drugs authorized by section 621 of Pub. L. 108–173, final wage indices including wage index increases for hospitals eligible for reclassification under section 508 of Pub. L. 108–173, and the CY 2005 conversion factor of $56.983.

Column 1: Total Number of Hospitals

Column 1 in Table 41 shows the total number of hospital providers (4,296) for which we were able to use CY 2003 hospital outpatient claims to model CY 2004 and CY 2005 payments by classes of hospitals. We excluded all hospitals for which we could not accurately estimate CY 2004 or CY 2005 payment and entities that are not paid under the OPPS. The latter include critical access hospitals, all-inclusive hospitals, and hospitals located in Guam, the U.S. Virgin Islands, and the State of Maryland. This process is discussed in greater detail in section III.B of this final rule with comment period. In prior years, we displayed non-TEFRA hospitals paid under PPS separately from TEFRA hospitals in our impact and outlier tables. The distinction between TEFRA and non-TEFRA holds little value for OPPS as all hospitals are treated equally under the OPPS payment system. For this reason, we did not include TEFRA hospitals as a distinct hospital category in Table 41. The impact on this specific class of hospitals is captured in the rows addressing disproportionate share (DSH) as we only calculate a DSH variable for hospitals participating in the IPPS. Finally, of the hospitals displayed in Table 41 and Table 42, it is important to note that section 1833(t)(7)(D) of the Act holds harmless cancer hospitals, children's hospitals, small rural hospitals with less than 100 beds, and sole community hospitals in rural areas. The hold harmless provisions for cancer and children's hospitals are permanent; these hospitals cannot receive less payment in CY 2005 than they did in the CY 2004. For this reason, we will not specifically identify these classes of hospitals in future impact analyses.

Column 2: APC Recalibration

The APC reclassification and recalibration changes tend to favor rural hospitals especially those characterized as small, although the overall redistribution impact is modest. Rural hospitals show a 0.6 percent increase, which is somewhat less than that observed in the proposed rule of 0.9. Specifically, rural hospitals with 50 to 100 beds show a 0.8 percent increase and rural hospitals with 101 to 149 beds show a 0.7 percent increase attributable to the APC recalibration. Mid-volume hospitals performing between 11,000 and 20,999 services experience an increase of 1.0 percent. Rural hospitals also show overall increases by region, with the East North Central and East South Central regions benefiting by at least 0.9 percent and the South Atlantic and West North Central regions benefiting by 0.7 percent.

Urban hospitals show, on an average, a 0.2 percent decrease, which is comparable to that observed in the

proposed rule. This decrease is spread among all urban hospitals. Large urban hospitals experience a decline of 0.1 percent and ''other'' urban hospitals experience a decline of 0.2 percent. Urban hospitals with greater than 200 beds show decreases, and the largest urban hospitals with bed size greater than 500 report a decrease of 0.9 percent. The smallest urban hospitals report a positive percent increases. Urban hospitals providing the lowest volume of services and those providing the highest also demonstrate negative impacts from APC recalibration. Decreases for urban hospitals are also concentrated in some regions, specifically, the South Atlantic, West South Central, Mountain, and Pacific experience decreases of at least 0.1 percent. West South Central loses the most, 0.9 percent.

The largest observed impacts among other hospital classes resulting from APC recalibration include declines of 1 percent for major teaching hospitals and 2.3 percent for hospitals without a valid DSH variable, most of which are TEFRA hospitals. Hospitals treating more low-income patients (high DSH percentage) also demonstrate declines of 0.8 percent. However, hospitals treating fewer low-income patients experience positive impacts from APC recalibration. Government hospitals demonstrate a decline of 0.8 percent. The specialty hospitals, cancer and children's hospitals, also would experience declines of 2.4 and 1.5 percent due to APC recalibration, respectively, if they were not held harmless under section 1833(t)(7)(D) of the Act.

In general, APC changes effect the distribution of hospital payments by increasing payments to small rural hospitals while decreasing payments made to large urban hospitals, including major teaching hospitals and those serving a high percentage of low-income patients.

Column 3: Wage Effect

Changes introduced by the new IPPS wage indices had a modest impact, but the distributions have changed since the proposed rule with the changes and additional provisions included in the final IPPS wage indices. Decreases in OPPS payment due to the new wage indices are generally located in rural hospitals, although specific classes of other hospitals also experience declines. Overall, urban hospitals experience no change in payments as a result of the new wage indices. However, large urban hospitals experience an increase of 0.1 percent. We estimate that rural hospitals will experience a decrease in payments of 0.2 percent. This pattern of urban gain and rural loss is evident in all of the urban and rural comparisons. Low-volume urban hospitals with fewer than 5,000 services and urban hospitals in the West South Central region show the largest percentage increase of 0.5.

Rural hospitals show modest decreases for most bed sizes but show the largest losses for hospitals with more than 200 beds. The new wage indices result in a 0.5 percent decrease for the largest rural hospitals. Similarly, high volume rural hospitals demonstrate an anticipated decline of 0.4 percent. Hospitals located in the New England and Middle Atlantic regions show a negative impact due to wage index changes regardless of urban or rural designation. However, rural hospitals in New England and the Middle Atlantic experience the largest decreases among regions of 0.7 and 0.6 percent, respectively. Rural hospitals in the South Atlantic, East North Central, East South Central, and Mountain regions also experience decreased payments. Rural sole community hospitals show the same impact as other rural hospitals; they experience a decline of 0.2 percent.

Looking across other categories of hospitals, major teaching hospitals are estimated to lose 0.3 percent. Almost all hospitals serving low-income patients lose 0.1 percent. Hospitals for which DSH is not available, mostly TEFRA hospitals, lose 0.3 percent.

Column 4: Budget Neutrality and Market Basket Update

In general, the market basket update alleviates any negative impacts on payments created by the budget neutrality adjustments made in columns 2 and 3. As column 4 demonstrates, with the addition of the market basket update, we do not expect any class of hospital providers to experience an overall negative impact as a result of the proposed changes to OPPS for CY 2005. Further, the redistributions created by APC recalibration tend to offset those created by the new wage indices. For example, rural hospitals gain 0.6 percent from the APC changes but lose 0.2 percent as a result of changes to the wage indices, leading to an overall adjustment of 3.7 percent with the addition of the market basket. Urban hospitals show a decrease of 0.2 percent resulting from APC recalibration and no change as a result of the new wage index, leading to an update in column 4 of 3.2 percent.

For several classes of hospitals, positive or neutral wage effects do not offset the larger impacts of APC recalibration leading to lower update amounts. For example, low volume urban hospitals experience a negative APC recalibration effect of 1.1, but a positive wage effect of 0.5. The result is an overall update of 2.6, which is less than the market basket. A few hospital providers may experience much lower and much higher update amounts than the market basket because the combined impact of the budget neutrality adjustments for the APC recalibration and the new wage index are reinforcing. Urban hospitals with more than 500 beds show a gain of 2.2 percent because the impact of APC recalibration was −0.9 percent and the new wage indices added −0.1 percent. Major teaching hospitals experience a decline in payment due to APC recalibration of −1.0 and a decline due to wage indices of −0.3 resulting in an overall, budget neutral update of 2.0. Hospitals for which we have no DSH variable, mostly TEFRA hospitals, will experience a decrease in payments due to both APC recalibration and the new wage indices, leading to a budget neutral increase of 0.7 percent. Hospitals serving a high number of low-income patients experience an overall update of 2.4 percent. Finally, cancer hospitals show an update of only 0.2 percent, and children's hospitals, of only 2.0 percent, but statutory provisions ensure that each of these hospitals is ''held harmless'' relative to last year's payments.

A few hospitals may also gain from the combined positive effect of the APC recalibration and the wage effect. Overall, mid-volume urban hospitals and urban hospitals with a small number of beds, rural hospitals in the East South and North Central, West North and South Central, and nonteaching hospitals experience positive impacts from both APC recalibration and the new wage indices.

Column 5: All Changes for CY 2005

Column 5 compares all changes for CY 2005 to a final simulated payment for CY 2004 and includes all additional dollars resulting from provisions in Pub. L. 108–173 in both years and the difference in pass-through estimates. Overall, we estimate that hospitals will gain 4.0 percent under this final rule with comment period relative to total spending with Pub. L. 108–173 dollars for drugs and wage indices in CY 2004. Hospitals do receive a 4.5-percent increase in dollars (3.3 percent for the market basket and 1.2 percent for pass-through dollars returned to the conversion factor), which is reflected in the conversion factor. However, hospitals received more additional money from provisions in Pub. L. 108–173 for spending on drugs and wage

indices in CY 2004 than in CY 2005. This is largely a result of the decline in the statutory minimum payment for sole source specified covered outpatient drugs from 88 percent to 83 percent of AWP. The observed 4.0 percent reflects this difference in spending.

Some hospitals experience large increases in addition to those already garnered under budget neutrality. In rural areas, hospitals providing between 11,000 and 20,999 services are projected to experience an increase of 5.1 percent. Rural hospitals in the East South Central, West North Central, and West South Central are all projected to experience an increase of at least 5 percent. Very small urban hospitals, less than 99 beds, will experience an increase of 4.9 percent. On the other hand, a handful of types of hospitals will experience much smaller updates. Large urban hospitals will receive an update of 3.9 percent. Urban hospitals in the Middle Atlantic and Mountain regions will experience updates less than or equal to 3.5 percent. Rural hospitals in New England and the Middle Atlantic also have updates less than or equal to 3.5 percent.

Major teaching hospitals are projected to experience a smaller increase in payments, 2.6 percent, than the 4.0 percent aggregate for all hospitals due to negative impacts from both the APC recalibration, the new wage indices, and most probably the decline in spending for drugs under Pub. L. 108–73. Hospitals serving a disproportionate share of low-income patients also experience a lower increase, 3.4 percent. Hospitals for which there is no DSH information, mostly TEFRA hospitals, are estimated to receive an update of 0.3 percent. This low-observed increase appears to be largely due to APC recalibration issues and declines in the payment for drugs. The impact of final payment on the specialty hospitals, cancer and children's hospitals, is not shown. If these hospitals were paid under OPPS, the cancer hospitals would experience a negative impact. However, these hospitals are held harmless and, therefore, will not experience any decline in payment. As noted above, we do not intend to specifically identify these hospitals in our future impact analyses.

F. Projected Distribution of Outlier Payments

As stated in section X.B. of this preamble, we have a projected target of 2 percent of the estimated CY 2005 expenditures to outlier payments. For CY 2005, we are adopting a fixed-dollar threshold. As discussed in section X.B. of the preamble, we are changing our current policy, which sets the outlier threshold using only a multiple of the APC payment rate, to a policy that includes both a multiple of the APC payment rate and a new fixed dollar threshold. This policy will better target outlier payments to higher cost, complex cases that create greater financial risk for hospitals.
